Polyporus (*pol'-ip-ō-er*) [*polyp*; *porus*, pore]. A genus of fungi. *P. amanita*, a common agaric, used for killing flies, has marked irritant and narcotic properties. It has been used topically in cancer of the nose and internally in epilepsy, skin diseases, scabies, and tuberculosis. It contains the alkaloids muscarin and amanitin. See *Boletus muscaria*, *Bug agaric*, *Fly agaric*. *P. cornalis*, grows on the laminae of a common cooking agaric. It is used in night blindness, tuberculosis. Dose of *Frudentius* tincture (2.00-1.0 G.).

Polyposis (*pol-e-pō'-sis*) [*poly*; *posis*, disease]. 1. Excessive thirst, polydipsia. 2. Polyp. The condition of being affected with polyps. *P. ventriculi*, a polypoid condition of the gastric mucosa associated with hypertrophy and catarrh. Syn. *Enterocolonoid*.

Polypus (*pol'-e-pus*). See *Polyp*.

Polyrrhea (*pol-e-rē'-ah*) [*poly*; *rrhēa*, a flow]. An excessive secretion of fluid.

Polysaccharid (*pol'-e-sak'-er-id*). See *Carbohydrate*.

Polysarcia (*pol-e-sar'-che*) [*poly*; *sarx*, flesh]. Excessive corpulence, plumpness.

Polysarcous (*pol-e-sar'-chus*) [*polysarcia*]. Corpulent, exhibiting polypnea.

Polyscelia (*pol-e-sel'-ē-ah*) [*poly*; *skelos*, leg]. Excess in the number of legs.

Polyscelus (*pol-e-sel'-us*) [*polyscelia*]. A monster having supernumerary legs.

Polyscope (*pol'-e-skop*) [*poly*; *skopein*, to observe]. An instrument provided with electric light which is introduced into a canal in order to illuminate its internal surface.

Polyserositis (*pol-e-ser-ō'-sis*). Polyserous, exuberant inflammation of the serous membranes. See *Chondritis*.

Polysinusitis, **Polysinusitis** (*pol-e-sin-ō'-sis*) [*poly*; *sinus*, sinus]. Simultaneous inflammation of several sinuses.

Polysolvol (*pol-e-sol'-vōl*). A thick liquid which has the property of dissolving large quantities of glass, rubber, gutta serena, etc. It is composed by treating caustic oil successively with a strong alkali, sulfuric acid, ethanol and acetic acid, the resulting acid distillate with sodium hydroxide. *Ammonium sulfide*, *acetone*, *benzene*, *nitrobenzene*.

Polysoomia (*pol-e-sō'-mē-ah*) [*poly*; *soōma*, body]. A monster having more than a single head or trunk.

Polyspermism (*pol-e-sper'-mizm*) [*poly*; *spermia*, seed]. An excessive emission of spermatozoa.

Polystichia (*pol-e-stīk'-ē-ah*) [*poly*; *stichos*, row]. A condition in which the elements are arranged in two or more rows.

Polytrichia, Polytrichosis (*pol-e-trīk'-ē-ah, pol-e-trīk'-ō-sis*) [*poly*; *trichos*, hair]. Excessive development of hair.

THE SEMIPRONE OR SIMS' POSTURE (ANTERIOR VIEW).

THE HORIZONTAL POSTURE.

THE TRENDLENBURG POSTURE.

THE GENUPECTORAL POSTURE.

THE KNEE-ELBOW POSTURE.

THE SEMIPRONE OR SIMS' POSTURE (POSTERIOR VIEW).

THE DORSAL ELEVATED POSTURE.

THE DORSAL RECUMBENT POSTURE.

THE DORSOSACRAL POSTURE (LATERAL VIEW).

EDEBOHLS' POSTURE.

P., Obstetric, one in which the patient lies on the left side with the right thigh and knee drawn up. **P., Lithotomy, P., Dorsosacral**, one in which the patient lies on the back with the legs flexed on the thighs and the thighs flexed on the abdomen and abducted. **P., Simon's**, one in which the patient lies on the back with the legs flexed on the thighs and the thighs on the abdomen, the hips being elevated and the thighs strongly abducted. **P., Sims', P., Semiprone**, one in which the patient lies on the left side with the right knee and thigh drawn up and the left arm placed along the back, the chest is inclined forward so that the patient rests upon it. **P., Trendelenburg's**, one in which the patient lies on the back on a plane inclined about 45°, the feet and legs hanging over the end of the table. **P., Walcher's**, a dorsal posture with the hips at the edge of the table and lower extremities hanging.

Positive (*pos'itive*) [*positivus*, from *ponere*, to place] Real, existing, actual. In mathematics and physiology, denoting one of two quantities or conditions assumed as primary or fundamental, opposed to one assumed as negative, denoting a quantity greater than zero, to be added, additive. **P. Electricity**, the kind of electricity developed by rubbing glass with silk. **P. Electrode, P. Pole**, the electrode or pole connected with the negative plate of a battery. **P. Element, P. Plate**, that plate of a battery which is acted upon by the fluid, e. g., the zinc plate in the zinc-carbon battery.

Posner's Reaction for Peptones and Albumins. Alkalize the urine, pour it into a test tube, and overlay it very carefully with a very dilute, almost colorless solution of copper sulfate. In the presence of peptone a violet zone will form even in the cold, the same reaction is yielded by albumin upon warming.

Posology (*pos-ol-og-ee*) [*pono*, how much, *logos*, science] That branch of medical science dealing with the dosage of medicines.

Post- (*pos't-*) [*pos*]. A prefix denoting after, behind.

Postaccessual (*pos'tak-sesh'-u-ah*) [*post*, accessio, a proccession] Occurring after a proccession.

Postanal (*pos'ta-nal*) [*post*, anus] Situated behind the anus.

Postaxial (*pos'tak-sial*) [*post*, axis] Situated behind the axis, in the axis, behind the ulnar aspect, in the leg, behind the fibular aspect.

Postcentral (*pos'tsen'tral*) [*post*, center] 1. Situated behind a center. 2. Situated behind the fissure of Rolando, or central fissure of the brain, as the *postcentral convolution*.

Postcibal (*pos't-sib'al*) [*post*, cibum, food] Occurring after meals.

Postclavicular (*pos't-klav'-ik'l'*) [*post*, clav, a bone] Situated behind the clavicle.

Postconvulsive (*pos't-kon-vul'sh'-iv*) [*post*, convulsio] Coming on after a convulsion.

Postcornu (*pos't-kor'-nu*). See *Cornu occipitale*.

Postdiastolic (*pos't-di-as-toh'-ik*) [*post*, diastole] Occurring after the diastole.

Postdicrotic (*pos't-di-kro'tik*) [*post*, diastole] Occurring after the diastole wave of the pulse, as the *postdicrotic wave* in the sphygmograph tracing.

Postdiphtheric (*pos't-di-thēr'-ik*) [*post*, diphtheria] Occurring after an attack of diphtheria, as *postdiphtheric paralysis*.

Postembryonic (*pos't-em-bri-on'-ik*) [*post*, embryo] Occurring after the embryonic stage.

Postepileptic (*pos't-ep-i-lep'tik*) [*post*, epilepsia] Occurring after an epileptic attack.

Posterior (*pos't-er'-i-or*) [*posterius*, after, behind]. Placed behind or to the back of a part.

Postero- (*pos't-er-o-*) [*posterum*]. A prefix meaning posterior.

Posteroexternal (*pos't-er-o-ekst'-er-nal*) [*posterus*, external]. Occupying the posterior and a back part, as the *posteroexternal column* of the spinal cord.

Posterointernal (*pos't-er-o-int'-er-nal*) [*posterus*, internal]. Occupying the inner and a back part, as the *posterointernal column* of the spinal cord.

Posterolateral (*pos't-er-o-lat'-er-al*) [*posterus*, lateral]. Situated behind and at the side of a part.

Posteromedian (*pos't-er-o-med'-i-an*) [*posterus*, in the middle of a posterior aspect].

Posteroparietal (*pos't-er-o-par'-i-et-al*) [*posterus*, parietal]. Situated at or near the posterior part of the parietal bone.

Posterosuperior (*pos't-er-o-super'-i-or*) [*posterus*, superior]. Situated behind and above a part.

Posterotemporal (*pos't-er-o-temp'-or-al*) [*posterus*, temporal]. Situated at or near the posterior part of the temporal bone.

Postfebrile (*pos't-feb'-ril*) [*post*, febris, a fever] Occurring after a fever.

Postgenium (*pos't-je-ni-um*) [*post*, genu, knee, two]. The posterior part of the body of the corpus quadrifidum.

Postgeniculum, Postgeniculum (*pos't-je-nik'-u-lum*, *pos't-je-nik'-u-lum*) [*post*, genu, knee]. The internal process of the genu.

Postglenoid (*pos't-glen'-oid*) [*post*, glenoid] Situated behind the glenoid fossa, as the *postglenoid tubercle* also called *anterior glenoid*.

Posthemiplegic (*pos't-hem-i-pleg'-ik*) [*post*, hemiplegia] Occurring after or following an attack of hemiplegia. **P. Chorea**, a chorea movements in paralyzed limbs.

Posthetomy (*pos't-het'-o-mi*) [*post*, hetos, a cutting]. Circumcision.

Posthitis (*pos't-hit'-is*) [*post*, pro, before, *itis*, inflammation] Inflammation of the prepuce.

Postolith (*pos't-the-lith*) [*post*, pro, before, *lith*, a stone]. A preputial calculus.

Posthumous (*pos't-hu-mus*) [*post*, after the death] Occurring after the death. **P. Child**, one born after the death of the mother, as taken by cesarean operation from the body of its mother after her death.

Posthyoid (*pōst-hī'oid*). Posterior to the hyoid bone.

Posthypnotic (*pōst-hīp-not'ik*) [*post*; *ὑπνος*, sleep]. Succeeding the hypnotic state; acting after the hypnotic state has passed off, as *posthypnotic* suggestion.

Posticus (*pos-tī'kus*) [L.]. Posterior.

Postischial (*pōst-is't-ke-āl*). Dorsad of the ischium.

Postmortem (*pōst-mor'-tem*) [*post*; *mors*, death]. 1. Occurring after death. 2. An examination of the body after death; an autopsy.

Postnasal (*pōst-nas'-āl*) [*post*; *nasus*, nose]. Situated behind the nose. **P. Catarrh**, catarrhal inflammation of the nasopharynx.

Postocular (*pōst-ok'-u-lar*) [*post*; *oculus*, the eye]. Behind or beneath the eye.

Postotic (*pōst-ō't-ik*) [*post*; *οὖς*, ear]. Behind the auditory vesicle.

Postparalytic (*pōst-par-ah-lī't-ik*) [*post*; *paralysis*]. Following an attack of paralysis.

Postpartum (*pōst-par'-tum*) [*post*; *partus*, birth]. Following childbirth, as *postpartum* hemorrhage.

Postpharyngeal (*pōst-far-in'-je-āl*) [*post*; *pharynx*]. Situated behind the pharynx.

Postpneumonic (*pōst-nu-mon'-ik*). Following pneumonia.

Postpone (*pōst-pōn'*) [*post*; *ponere*, to place]. Of a process, to occur after the regular time.

Postponent (*pōst pō'-nent*) [see *Postpone*]. Delayed in recurrence.

Postpyramidal (*pōst-pi-ram'-id-āl*) [*post*; *pyramid*]. Situated behind the pyramidal tract. **P. Nucleus**, the nucleus funiculi gracilis.

Postscarlatinal (*pōst-skar-lat'-e-nāl*). Occurring after scarlatina.

Posttarsal (*pōst-tar'-sal*). Located behind the tarsus.

Posttyphoid (*pōst-tī'-foid*). Following typhoid.

Postulate (*pos'tu-lāt*) [*postulare*, to demand]. A self-evident proposition.

Postural (*pos'tūr-āl*) [*ponere*, to place]. Pertaining to posture or position; performed by means of a special posture, as *postural* treatment.

Posture (*pos'tūr*). See *Position*.

Postuterine (*pōst-u'-ter-in*) [*post*; *uterus*]. Situated behind the uterus.

Potable (*po't-ābl*) [*potare*, to drink]. Drinkable; fit to drink.

Potain's Syndrome. Dyspepsia and dilation of the right ventricle, with accentuation of the pulmonary sound, observed during the digestive process in cases of gastrectasis.

Potamophobia (*pot-am-oj-ō'-be-ah*) [*ποταμός*, river; *φῆδος*, fear]. The morbid fear of sheets of water.

Potash (*po't-ash*) [Irish, *pota*, a pot; *ash*]. 1. Potassium hydroxid; caustic potash. 2. Potassium carbonate.

Potassa (*po-tas'-ah*). Potash. See *Potassium Hydroxid*.

Potassiocupric (*po-tas-e-o-ku'-prik*). Containing potassium and copper.

Potassium (*po-tas'-e-um*) [*potassa*, potash]. A silver-white, soft, very ductile metal, belonging

to the alkali group, and having a sp. gr. of 0.865; quantivalence 1; atomic weight 39; symbol K (from the Latin *kali*um). It forms compounds with nearly all nonmetals. **P. Acetate** (*potassii acetat*, U. S. P., B. P.), $KC_2H_3O_2$, used in rheumatism, as a diuretic in dropsy, and in cutaneous diseases. Dose 20 gr.—1 dr. (1.3–4.0 Gm.). **P. Arsenate**, K_2HAsO_4 , extremely poisonous crystals, soluble in water; used as an antiperiodic and alterative. Dose $\frac{1}{10}$ – $\frac{1}{15}$ gr. (0.003–0.006 Gm.). **P. Arsenite**, Solution of (*liquor potassii arsenitis*, U. S. P.), Fowler's solution. Dose 3 min. (0.2 Cc.). **P. Bicarbonate** (*potassii bicarbonat*, U. S. P., B. P.), $KHCO_3$, used as an antacid. It is also highly recommended in influenza and to abort colds. Dose 20 gr.—1 dr. (1.3–4.0 Gm.). **P. Binorate**, salt of sorrel, a constituent of wood-sorrel. **P. Bisulfate**, $KHSO_4$, has been used as a laxative and refrigerant. Dose 1–2 dr. (4–8 Gm.). **P. Bitartrate** (*potassii bitartras*, U. S. P., B. P.), cream of tartar, $KHC_4H_4O_6$, used as a cathartic, as a diuretic in dropsy, and for making refrigerant drinks in febrile affections. It is an ingredient of *pulvis jalapa compositus* (U. S. P.). Dose 1 dr.— $\frac{1}{2}$ oz. (4–16 Cc.). **P. Bromid**. See *Bromidum, Potassii*, under *Bromin*. **P. Camphorate**, $K_2C_{10}H_{16}O_6$, white, antiseptic crystals, soluble in water, used in night-sweats of tuberculosis, gonorrhea, etc. Dose 10–30 gr. (0.65–2.0 Gm.). **P. Carbolate**, C_6H_5OK , white, antiseptic crystals, soluble in water; used in diarrhea and dysentery. Dose 1–5 gr. (0.065–0.32 Gm.). **P. Carbonate** (*potassii carbonat*, U. S. P., B. P.), used as an antacid in dyspepsia and as an antilithic. **P. Chlorate** (*potassii chlorat*, U. S. P., B. P.), $KClO_3$, used locally and internally in various forms of stomatitis, in mercurial ptyalism, and in pharyngitis. Dose 10–20 gr. (0.65–1.3 Gm.). In overdoses it is an irritant poison. From it are prepared *trachisci potassii chloratis* (U. S. P.). **P. Citrate** (*potassii citras*, U. S. P., B. P.), $K_2C_6H_5O_7 + H_2O$, used as a diaphoretic in fevers, in bronchitis, and in rheumatism, the uric-acid diathesis, etc. Dose 20–30 gr. (1.3–2.0 Gm.). **P. Citrate, Effervescent** (*potassii citras effervescent*, U. S. P.), is used like the preceding. Dose 1–2 dr. (4–8 Cc.). **P. Citrate, Solution of** (*liquor potassii citratis*, U. S. P.), an aqueous liquid containing 8% of anhydrous potassium citrate with small amounts of citric and carbonic acids. *Neutral mixture* is prepared by substituting lemon-juice for the citric acid. Dose $\frac{1}{2}$ –1 oz. (16–30 Cc.). **P. Cobaltinitrate**, has been employed in asthma, nephritis, and valvular heart disease. Dose $\frac{1}{4}$ – $\frac{1}{2}$ gr. (0.016–0.032 Gm.). **P. Cyanid** (*potassii cyanidum*, U. S. P., B. P.), KCN , is similar in properties to hydrocyanic acid. It is also used locally in neuralgia. Dose $\frac{1}{4}$ gr. (0.008 Gm.). **P. Dichromate**, **P. Bichromate** (*potassii dichromat*, U. S. P., B. P.), $K_2Cr_2O_7$, used as a caustic, and for the preparation of battery-fluids and of preserving-fluids for tissues; it

was formerly employed as an alternative.

P. Diiodoresorcin-monosulfate. See *Picro-*

P. Dithiocarbonate, K_2CO_3 , an orange-red, crystalline powder, used externally in skin diseases: eczema, 5 to 10% ointment, psoriasis, 20% ointment.

P. Ferricyanid, $K_3Fe(CN)_6$, is used in the arts and as a reagent.

P. Ferrocyanid (*potassii ferrocyanidum*, U. S. P., B. P.), $K_4Fe(CN)_6 + 3H_2O$, yellow prussiate of potash, has been used in the night sweats of tuberculosis. Dose 10-15 gr. (0.65-1.0 Gm.). It is extensively employed in the arts, as a reagent, and in pharmacy to prepare diluted hydrocyanic acid.

P. Fluoresceinate, $K_2C_{20}H_{10}O_8$, the potassium salt of fluorescein; a yellowish-red powder, soluble in water. It is used to detect corneal ulcerations.

P.-guaiacol Sulfonate, a fine white powder, soluble in water, containing 60% of guaiacol. Dose 5-15 gr. (0.32-0.97 Gm.).

P. Hydroxid (*potassii hydroxidum*, U. S. P., B. P.), KOH, caustic potash. This is a white solid, usually occurring in the form of pencils, and having powerful escharotic properties.

P. Hypochlorite, KOCl, a substance which in solution forms Javelle water.

P. Hypophosphite (*potassii hypophosphis*, U. S. P., B. P.), KH_2PO_2 . Dose 10-30 gr. (0.65-2.0 Gm.). See *Hypophosphite*.

P. Iodate, is used in stomatitis and pharyngitis as a substitute for potassium chlorate. Dose 4-8 gr. (0.26-0.52 Gm.).

P. Iodid (*potassii iodidum*, U. S. P., B. P.), KI, is used as an alternative in syphilis, in chronic poisoning by lead or mercury; as an absorbent of inflammatory exudates; in chronic rheumatism, etc. Dose 7-10 gr. (0.45-0.65 Gm.).

in syphilis several drams may be administered daily. From it are prepared *unguentum iodi* and *unguentum potassii iodidi* (U. S. P.).

P. Nitrate (*potassii nitrat*, U. S. P., B. P.), KNO_3 , saltpeter, is used as a refrigerant diuretic and diaphoretic, in asthma the inhalation of fumes produced by burning inter paper (paper dipped in a solution of the nitrate and dried) is useful. Dose 10-20 gr. (0.65-1.3 Gm.).

From it is prepared *argenti nitras nitigatus* (U. S. P.).

P. Nitrite, KNO_2 , white, amorphous sticks, soluble in water, used in asthma, epilepsy, etc. Dose 1-2 gr. (0.065-0.13 Gm.) several times daily.

P. Nitroprussiate, $K_2Fe(CN)_5 \cdot NO + 2H_2O$, garnet-red crystals, soluble in water or alcohol, used as a test for albumin in urine.

P. Perchlorate, $KClO_4$, white crystals, slightly soluble in water, antipyretic, antiperiodic, sedative, and diuretic. Dose 5-15 gr. (0.32-1.0 Gm.). Syn., *Hypochlorite of potassium*.

P. Permanganate (*potassii permanganas*, U. S. P., B. P.), $KMnO_4$, is a salt of permanganic acid, which is derived from the manganese heptoxide, Mn_2O_7 . It is used as an antiseptic and deodorant, in emmenorrhea, and as an antidote to opium-poisoning and poisoning by snake-bites. Dose as an emmenagogue 1-2 gr. (0.065-0.13 Gm.). It is also employed as a reagent.

Cond's fluid is an aqueous solution of potassium permanganate 2 parts in 100.

P. Phosphate, K_2HPO_4 , has been used as an alternative in scrofula and pulmonary tuberculosis. Dose 10-30 gr. (0.65-2.0 Gm.).

P. Selenate, K_2SeO_4 , a white powder, soluble in water or alcohol, antiperiodic, analgesic, antirheumatic. Dose 0-15 gr. (0-1.0 Gm.).

P. Silicate, K_2SiO_3 , (approximately 80% in glass, is used as in plaster of paris for making fixed dressings for fractures.

P. and Sodium Tartrate (*potassii et sodii tartarus*, U. S. P., B. P.), $KNaC_4H_4O_6 + 2H_2O$, rock candy, is used as a saline cathartic. It is an ingredient of sennitz powder. Dose 4-10 gr. (0.26-0.65 Gm.).

P. Soziodolate, $KHC_6H_4SO_3$, a white crystalline powder containing 28.8% of active 20% of phenol, and 7% of sodium, soluble in hot water, melts at 100° C. It is antiseptic and is used externally in 5% ointment.

P. Sulfate (*potassii sulphas*, U. S. P., B. P.), K_2SO_4 , is used as a laxative and purgative. Dose 4-4 dr. (2-16 Gm.).

P. Sulfite, $K_2SO_3 + 2H_2O$, is antiseptic and laxative and used in acid fermentation of the stomach. Dose 15-65 gr. (1-4 Gm.).

P. Sulfobenzate, $KC_6H_4SO_3 + 5H_2O$, soluble in water or alcohol, used as a wash, 4 to 5% solution, in skin diseases.

P. Sulfo-carbulate, $K_2SO_3 + H_2O$, white crystals, soluble in water or alcohol. It is antiparasitic, germicidal, and antiseptic.

P. Sulfo-carbonate, K_2SO_3 , yellow crystals, soluble in water, used in skin diseases.

P. Sulfo-cyanate, $KSCN$, colorless needles, soluble in water or alcohol; it is a constituent of saliva, sedative, antispasmodic, and anesthetic. Dose 4-10 gr. (0.26-0.65 Gm.).

maximum dose 24 gr. (1.5 Gm.) daily. **P. Sulfophenate**. See *P. Sulfocyanate*.

Tartrate (*potassii tartarus*, B. P.), $K_2C_4H_4O_6 + 2H_2O$, is used as a mild purgative in chronic affections. Dose 1 dr. (4-10 Gm.).

P. Valerate, $KC_4H_7O_5$, used as a stimulant in low fevers, hysteria, etc. Dose 2-5 gr. (0.13-0.32 Gm.) several times daily.

Potato Culture. A culture of tubercle bacilli on potato. **P. Treatment** of diabetes, a daily diet of 1-2 pounds of potatoes and the exclusion of bread.

Potency (*po'ten-see*) [see *Potential*]. Power, efficacy.

Potential (*po'ten-shal*) [*potenz, able*]. 1. Capable of acting or doing work, as potential energy. 2. In electricity, a state of tension or of potential energy capable of doing work.

If two bodies of different potential are brought together, a current is established between them that is capable of doing work.

Potio (*po'theo*) [L.]. A potion.

Potion (*po'thun*) [*potio*]. A drink or draught.

Potocytosis (*po-to-si-toe-eez*) [*potocytosis*]. The ability of cells to drink solutions.

Potomania (*po-to-mid'-ee-ah*) [*potom, mania*]. Delirium tremens.

Pott's Aneurysm (Pott's Aneurysm, Pott's Aneurysm). Aneurysm of the aorta. Pott's Aneurysm.

ture, **P.'s Gibbus**, the deformity of Pott's disease. **P.'s Disease**, caries of the vertebrae, generally of tuberculous origin. The symptoms are stiffness of the spinal column, pain on motion, tenderness on pressure, undue prominence of one or more of the spines; in certain cases spasmodic pain in the abdomen; formation of abscess; occasionally, in late stages, paralysis. **P.'s Fracture**. See *Fracture, Pott's*. **P.'s Gangrene**, senile gangrene. **P.'s Paraplegia**, paraplegia caused by spinal caries. **P.'s Puffy Tumor**, circumscribed superficial swelling of the scalp connected with osteomyelitis of the skull.

Pouch [Fr., *poche*, a pocket]. A sac or pocket. **P., Broca's**. See *Broca's Pouch*. **P., Pressure**, a bulge in the wall of the esophagus due to weakness. **P. of Douglas**, **P., Rectouterine**. See *Culdesac, Douglas'*. **P., Laryngeal**, a blind pouch of mucosa opening into the ventral part of the ventricle of the larynx.

Poultice (*pōi'-tis*) [*puls*, porridge]. A soft, semiliquid mass made of some cohesive substance mixed with water, and used for application to the skin, for the purpose of supplying heat and moisture or acting as a local stimulant. Syn., *Cataplasm*.

Pound [AS., *pund*]. A unit of measure of weight. The *troy pound* contains 12 oz., or 5760 grains; the *avoirdupois pound* contains 16 oz., or 7000 grains. Symbol lb. See *Weights and Measures*. **P., Foot-**, the force necessary to raise one pound through the height of one foot.

Poupart's Ligament. See *Ligament, Poupart's*.

Powder [Fr., *poudre*, from *pulvis*, powder]. 1. A collection of fine particles. 2. In pharmacy, a collection of fine particles of one or more substances capable of passing through a sieve having meshes of a certain fineness; also a single dose of such a substance. **P., Aromatic**. See *Pulvis aromaticus*. **P., Dover's** (*pulvis ipecacuanhæ et opii*, U. S. P.). See *Opium, Powder of Ipecac and*. **P., Dupuytren's**, a caustic powder consisting of arsenic trioxide, 1 part; calomel, 200 parts. **P., Gregory's**, compound powder of rhubarb, consisting of rhubarb, 2 oz.; light magnesia, 6 oz.; ginger, 1 oz. **P., James'**. See *Antimony, Powder of*. **P., Lucas-Championnière's Antiseptic**, consists of equal parts of magnesium carbonate, iodoform, powdered benzoin, and powdered gray cinchona. **P., Portland**, a gout remedy consisting of equal parts of the tops and leaves of *Foeniculum chamædrys*, and *Erythraea centaurium*, the leaves of *Ajuga reptans*, and the roots of *Gentiana lutea*, and *Aristolochia rotunda*. Dose 1 dr. (3.8 Gm.) daily before breakfast for 6 months; 2 scruples (1.2 Gm.) for 3 months; 1 dr. (1.0 Gm.) for 6 months, and finally 1/2 dr. (1.0 Gm.) every other day for a year. **P., Seidlitz-**. See *Pulvis effervescentis compositus*. **P., Tully's**, a powder composed of camphor, prepared chalk, licorice, and morphin sulfate, 1 part. It is used as a substitute for Dover's powder.

Pox [*pocks*, pl. of *pock*, a vesicle or pustule]. 1.

A term applied to any disease possessing a vesicular or pustular eruption. 2. Vulgarly, syphilis. **P., Chicken-**. See *Varicella*. **P., Cow-**. See *Cowpox*. **P., Small-**. See *Varicella*.

Practice (*prak'-tis*) [*practicare*, to practice]. The practice of medicine; the application of the principles of medicine to the diagnosis and treatment of disease.

Practician (*prak'-tish'-an*). See *Practitioner*.

Practise (*prak'-tis*) [see *Practice*]. To perform the duties of a physician.

Practitioner (*prak'-tish'-on-er*) [see *Practice*]. One who practises medicine.

Præ- (*pre-*) [L.]. See *Pre-*.

Præputium (*pre-pu'-she-um*). See *Prepuce*.

Prævia (*pre'-ve-ah*) [fem. of *prævius*, from *præ*, before; *via*, a way]. Coming before; standing before. **P., Placenta**. See *Placenta prævia*.

Prairie-itch. A name applied to various forms of skin diseases associated with pruritus, occurring in men engaged in work on prairies, among lumbermen, and others, and either due to scabies or pruritus hiemalis.

Prasoid (*pra'-soid*). 1. A solution of globularin and globularetin; used in acute gout and rheumatism. Dose 15-20 drops 3 times daily. 2. [*præon*, the leek; *eidōs*, likeness.] The color of a leek; leek-green.

Pravaz's Syringe. A hypodermic syringe with a long trocar and cannula.

Praxinoscope (*praks-in'-o-skōp*) [*praxis*, a doing; *ōkeinōn*, to examine]. A modification of the zoetrope adapted to the purposes of laryngologic instruction.

Pre- (*præ-*). A prefix signifying before.

Prealbuminuric (*pre-al-bu-mîn-u'-rik*). Occurring before the appearance of albuminuria.

Preataxic (*pre-at-aks'-ik*) [*pre-*; *ataxia*]. Occurring before ataxia.

Preaxial (*pre-aks'-a-al*) [*pre-*; *axis*]. Situated in front of the axis; in a limb, situated on the internal or anterior aspect—in the arm, on the radial, in the leg, on the tibial, side.

Prebacillary (*pre-bus'-il-a-re*) [*pre-*; *bacillus*]. Occurring before the invasion of the system by bacilli.

Precancerous (*pre-kan'-ser-us*) [*pre-*; *cancer*]. Occurring before the development of a carcinoma.

Precardiac (*pre-kar'-de-ak*) [*pre-*; *kardîa*, heart]. Anterior to the heart.

Precentral (*pre-sen'-tral*) [*pre-*; *centrum*, center]. Situated in front of the central fissure of the brain. **P. Convolution**, a convolution in front of the central fissure of the brain; the ascending frontal convolution.

Precipitant (*pre - sip' - ti - ant*). See under *Precipitation*.

Precipitate (*pre-sip'-ti-ti*) [*precipitare*, from *præ*, before; *caput*, head]. 1. The solid substance thrown down from a solution of a substance on the addition of a reagent which deprives it of its solubility. 2. To throw down in an insoluble form. 3. Headlong; hasty.

P. Labor. See *Labor*. **Precipitate. P., Red**, hydrargyrum oxidum rubrum. See *Mercury Oxid, Red*. **P., White**, $N_2(Hg)_2Cl_2$, hydrar-

gyrum ammoniatum. See *Mer.*, *Ammoniated*.

Precipitation (*pre-sip-it'-shun*) [*precipitate*]. The process of throwing down solids from the liquids which hold them in solution. Precipitates are crystalline, amorphous, curdy, flocculent, granular, or gelatinous, according to the form assumed. The agent causing precipitation is the *precipitant*, the solid thrown down, the *precipitate*.

Precipitin (*pre-sip'-it-in*). Any specific precipitating bodies, which, according to the Ehrlich lateral-chain theory, are unieceptors, composed of a haptophore group and a conjugative complex.

Precipitogen, Precipitogenous (*pre-sip'-it-o-gen*, *pre-sip-it'-en-us*). Capable of producing a precipitin.

Preclavicular (*pre-kla-vik'-u-lar*). Ventrad of the clavicle.

Preconvulsant (*pre-kon-vul'-sant*). Relating to the stage of a disease preceding convulsions.

Precordia (*pre-kor'-de-ih*) [*pre-*, *cor*, the heart]. 1. A name applied by the ancients to the diaphragm, the thoracic viscera, or the epigastric region. 2. The area of the chest overlying the heart.

Precordial (*pre-kor'-de-ih*) [*precordia*]. Pertaining to the precordia.

Precordium (*pre-kor'-de-um*). Syn., *Precordia*.

Precornu (*pre-kor'-nu*) [*pre-*; *cornu*, a horn].

Anterior horn of lateral ventricle of the brain.

Precuneus (*pre-ku'-ne-us*) [*pre-*; *cuneus*, a wedge]. The quadrate lobule of the parietal lobe situated in front of the cuneus of the occipital lobe.

Predialstolic (*pre-di-as-tol'-ik*) [*pre-*; *diastole*]. Occurring before the diastole.

Predicrotic (*pre-di-kro'-tik*). Preceding the diastolic wave or elevation of the sphygmographic tracing.

Predigest (*pre-di-jest*). To digest by artificial means before introducing into the body.

Predisposing (*pre-dis-poi'-zesh*) [*pre-*; *disposition*]. Rendering susceptible or liable to attack.

Disposition (*pre-dis-po-zi-sh'-un*) [*pre-*; *disponere*, to dispose]. The state of having a susceptibility to disease.

Precipiglottic (*pre-ep-i-glot'-ik*). Ventrad of the epiglottis.

Preeruptive (*pre-erup'-tiv*). Preceding eruption.

Prefrontal (*pre-fron'-tal*) [*pre-*; *frons*, forehead]. 1. Situated in the anterior part of the frontal lobe of the brain. 2. The middle part of the ethmoid.

Pregeminum (*pre-jem'-in-um*) [*pre-*; *geminus*, twin]. The anterior part of the corpora quadrigemina, considered as forming a single organ.

Pregenitulum, Pregeniculum (*pre-jen-ik'-u-lu-m*, *pre-jen-ik'-u-lum*) [*pre-*; *geniculum*, geniculate]. The external geniculate body.

Preglobulin (*pre-glob'-u-lin*) [*pre-*; *globulin*]. An albuminous body found in cell protoplasm, insoluble in water, soluble in a 10% sodium chloride solution and in dilute alkaline solution.

Pregnancy (*preg'-nan-se*) [*pregnans*, from *græc.*, before, *gignere*, to beget]. The state of being pregnant, or with child. The state of the woman from conception to the expulsion

of the ovum. The normal duration of pregnancy is 280 days, or 10 lunar months, or 9 calendar months. **P.**, **Abdominal**, in which the fetus lies in the abdominal cavity. **P.**, **Extrauterine**, ectopic gestation, the development of the ovum outside of the wall of the uterus. **P.**, **Falae**, any condition of the abdomen that simulates pregnancy. **P.**

INTERSTITIAL PREGNANCY - (Ruled after Evans)
1. Uterine cavity. 2. Fallopian tube. 3. Ovary.
4. Vagina.

Interstitial, pregnancy occurring in the part of the tube that traverses the uterine wall. **P.**, **Intramural**, interstitial pregnancy. **P.**, **Mesenteric**, tuboligamentary pregnancy. **P.**, **Molar**, pregnancy in which the ovum is converted into a mole. **P.**, **Multiple**, that in which the uterus contains two or more developing ova. **P.**, **Mural**, a variety of extrauterine pregnancy in which the ovum develops in the wall of the uterus. **P.**, **Ovarian**, pregnancy occurring in the ovary. **P.**, **Parietal**, interstitial pregnancy. **P.**, **Sarcotetal**, that in which both a fetus and a mole are present. **P.**, **Sarcobysteric**, a pregnancy due to a mole. **P.**, **Signs of**, those clinical manifestations by which the existence of pregnancy may be determined. There are three so-called abnormal signs: lotterment, fetal movements, and the heart-sounds. **P.**, **Tubal**, pregnancy which takes place within the fallopian tube. **P.**, **Tuboligamentary**, that in which there is secondary invasion of the tube. **P.**, **Uter-abdominal**, that in which there is no fetus in the uterus and another in the abdominal cavity. **P.**, **Uteroovarian**, that in which there is one fetus in the uterus and another in the ovary. **P.**, **Uterotubal**, that in which there is in the uterus and another in the tube. **Pregnant** (*preg'-nant*) [*see Pregnant*]. A woman with child, gravid.

Prehemiplegic (*pre-hem-i-plē'-ik*) [*pre-*; *hemo*,

ELY'S TABLE OF THE DURATION OF PREGNANCY.

EXPLANATION.—Find in the upper horizontal row the date of last menstruation; the figure beneath will show the expiration of 280 days or ten months of 28 days each.

	January	February	March	April	May	June	July	August	September	October	November	December

PREGNANCY

789

PRESBYCUSIS

- plegia**. Occurring before an attack of hemiplegia, as *prehemiplegic chorea*.
- Prehensile** (*pre-hen'-sil*) [*see Prehension*]. Adapted for grasping.
- Prehension** (*pre-hen'-shun*) [*prehendere*, to lay hold of]. The act of grasping or seizing.
- Prelimbic** (*pre-lim'-bik*) [*pre-*; *limbus*, a border; a band]. Lying in front of a border or band.
- Prelum** (*pre'-lum*) [L.]. A press. **P. abdominale**, the squeezing of the abdominal viscera between the diaphragm and the rigid abdominal wall, as in the processes of defecation, micturition, and parturition.
- Premalignant** (*pre-mal-ig'-nant*). Occurring before the development of malignancy.
- Premature** (*pre'-ma-tür*) [*pre-*; *mature*, to ripen]. Occurring before the proper time, as *premature labor*.
- Premaxilla** (*pre-maks-il'-ah*). The intermaxillary bone.
- Premenstrual** (*pre-men'-stru-al*). Preceding menstruation.
- Premolar** (*pre-mo'-lar*) [*pre-*; *molar*]. 1. Situated in front of the molar teeth. 2. One of the two anterior permanent molars.
- Premonitory** (*pre-mant'-it-o-ry*) [*pre-*; *monere*, to warn]. Forewarning; foreboding, as *premonitory symptoms*, those which forebode the onset of an attack of a disease.
- Prenatal** (*pre-na'-tal*) [*pre-*; *natus*, born]. Existing or occurring before birth.
- Preoblongata** (*pre-ob-lon-gah'-tah*). The cephalic portion of the oblongata; situated mainly between the pons and the fourth ventricle.
- Preoccupation** (*pre-ok-u-pa'-shun*). The condition of being so engrossed in one's own thoughts as not to answer or hear when accosted.
- Preovarian** (*pre-o-va'-re-an*). Situated in front of the ovary.
- Preparation** (*prep-ar-a'-shun*) [*preparare*, to make ready]. 1. The act of making ready. 2. Anything made ready, especially, in anatomy, any part of the body prepared or preserved for illustrative or other uses.
- Prepatellar** (*pre-pat-el'-ar*) [*pre-*; *patella*]. Situated in front of the patella, as *prepatellar bursa*.
- Preperitoneal**. *See Properitoneal*.
- Prepuberal** (*pre-pu'-ber-al*). Prior to puberty.
- Prepuce** (*pre'-piis*) [*præputium*, *prepuce*]. The foreskin of the penis, a fold of skin lined by mucous membrane and covering the glans penis.
- Preputial** (*pre-pu'-she-al*) (*prepuce*). Pertaining to the prepuce.
- Presbycusis**, **Presbykousis** (*pres-by-koo'-sis*) [*presbys*, old; *akouo*, to hear].

- The lessening of the acuteness of hearing that occurs in old age.
- Presbyope** (*prez'-be-ōp*) [see *Presbyopia*]. One who is presbyopic.
- Presbyopia** (*prez-be-ō'-pe-ah*) [*πρεβυψία*, old; *ὤψ*, eye]. The condition of vision in the aged, due to diminished power of accommodation from impaired elasticity of the crystalline lens, whereby the near-point of distinct vision is removed farther from the eye.
- Presbyopic** (*prez-be-ōp'-ik*). Affected with presbyopia.
- Presbytic** (*pres-bit'-ik*). Suffering from presbyopia.
- Presbytism** (*pres-bit-izm*). Presbyopia.
- Prescription** (*pre-skrīp'-shun*) [*pre-*; *scribere*, to write]. A formula written by the physician to the apothecary, designating the substances to be administered. A prescription consists of the heading, usually the symbol *R* (standing for the Latin word *recipe*, imperative of *recipere*, to take), the names and quantities of the ingredients, the directions to the apothecary, the directions to the patient, the date and the signature.
- Presenile** (*pre-se-nīl*) [*pre-*; *senilis*, age]. Prematurely old.
- Presenility** (*pre-sen-il'-it-e*). Premature old age. See *Progeria*.
- Present** (*pre-zent'*) [*præsentare*, to place before]. Of a part of the fetus, to appear first at the os uteri.
- Presentation** (*pre-sen-tā'-shun*) [see *Present*]. In obstetrics, that part of the fetal body which presents itself to the examining finger at the os uteri.
- Presphenoid** (*pre-sf'-noid*). The anterior part of the body of the sphenoid bone.
- Pressor** (*pres'-or*) [*premere*, to press]. 1. Stimulating. 2. A substance found in the infundibular part of the hypophysis; it produces a rise in blood-pressure. Cf. *Depressor*. **P. Nerve**. See under *Nerve*.
- Pressure** (*presh'-ur*) [*premere*, to press]. Force, weight, or tension. **P., Bipolar**, pressure on the two ends of a bone. It is used in differentiating fractures from contusions, producing pain in the case of the former. **P.-sense**, the sense by which knowledge is obtained of the amount of weight or pressure which is exerted upon a part of the body.
- Presternum** (*pre-ster'-num*). The manubrium or superior segment of the sternum.
- Preston's Salt**. Ammonium carbonate.
- Presylvian Fissure**. See *Fissure*, *Presylvian*.
- Presystolic** (*pre-sis-tol'-ik*) [*pre-*, *systole*]. Preceding the systole of the heart, as the *presystolic murmur*, *presystolic thrill*.
- Pretibial** (*pre-tib'-e-ul*) [*pre-*; *tibia*]. Situated in front of the tibia.
- Pretuberculous** (*pre-tu-ber'-ku-lus*) [*pre-*; *tuberculosis*]. Preceding the development of tuberculosis.
- Preventive** (*pre-ven'-tiv*) [*prævenire*, to anticipate; to prevent]. Warding off. **P. Medicine**, the department of medicine dealing with the means and methods of preventing disease.
- Prevertebral** (*pre-ver'-te-bral*) [*pre-*, *vertebra*]. Situated in front of the vertebrae.
- Prevertiginous** (*pre-ver-tij'-in-us*) [*pre-*, *vertigo*]. Dizzy, with a tendency to fall into a circle.
- Prevost's Symptom**. Conjugate deviation of eyes and head, which look away from the diseased extremities and toward the affected hemisphere; it is noted in cerebral hemorrhage.
- Preyer's Test for Carbon Monoxid in the Blood**. Warm three or four drops of the expected blood for five minutes at 30° C. with 1 Cc. of water and 5 Cc. of potassium cyanide solution (1 : 2). The spectrum of normal blood when so treated, loses the absorption band of oxyhemoglobin and in its place shows a broad absorption band, while the spectrum of carbon monoxid blood remains unchanged.
- Priapism** (*pri-āp-izm*) [*πρεζαπίζμ*, *πρῶτος*, first]. Persistent erection of the penis, usually unaccompanied by sexual desire. It is caused by injuries to the spinal cord or to the penis and by vesical calculus.
- Prickle-cell**. A cell possessing delicate rod-shaped processes by which it is connected with neighboring cells.
- Prickle-layer**. The lowest stratum of the epidermis. It is formed of prickles.
- Prickly Heat**. See *Miliaria*.
- Priestley's Mass**. A green or greenish mass deposit sometimes seen, especially in young individuals, on the upper and lower incisors and canine teeth; it is due to a growth of chromogenic fungi in Nasmyth's membrane.
- Primæ viæ** (*pri'-me vi'e*) [*l.*, "the primary passages"]. The alimentary canal.
- Primary** (*pri'-ma-ry*) [*primus*, first]. First in time or in importance. **P. Amputation**, one that is done before the development of inflammation, usually within the first 24 hours.
- P. Bubo**, a simple adenitis of an inguinal lymphatic gland, resulting from mechanical irritation. Syn., *Bubon d'embles*. **P. Dementia**, a form of insanity occurring in old adults, and characterized by an extreme degree of apathy, the patient lying motionless, absolutely listless, without wants, and acting without perception of his surroundings.
- P. Lesion**, the original lesion which forms the starting-point for secondary lesions. **P. Sore**, the initial sclerosis or changes of a venereal sore.
- Primigravida** (*pri-me-grav'-id-ah*) [*primus*, first; *gravidus*, pregnant]. A woman pregnant for the first time.
- Primipara** (*pri-mip'-ar-ah*) [*primus*, first; *parere*, to bear]. A woman bearing or giving birth to her first child.
- Primiparous** (*pri-mip'-ar-us*) [*primus*, first; *parere*, to bear]. Pregnant or in labor for the first time.
- Primisternal, Primisternalis** (*pri-me-ster-na'-lis*). Relating to the manubrium of the sternum.
- Primitive** (*prim'-it-iv*) [*primus*, first]. First formed; original. **P. Groove**, the first rudiment and deepening of the primitive streak.
- P. Streak, P. Trace**, a streak appearing at the end of the germinal disc, and marking the first trace of the embryo.

Primordial (*pri-mar'-de-ol*) [*primus*, first; *or-di*, to rise]. Existing in the beginning; first-formed; primitive, original; of the simplest character. **P. Kidney**, the wolfian body. **P. Ovums**, cells lying among the germ-epithelium of the surface of the embryonic ovary.

Primula (*prim'-u-luh*) [*primus*, first]. Primrose, a genus of the *Primulaceae*. Many species contain saponin and other bitter principles and salicylates. *P. obconica* is a well-known irritant poison, the symptoms resembling those of saponin poisoning, and is used in the treatment of skin diseases.

Princeps (*prin'-seps*) [L., "a leader"]. First; original. **P. cervicis**, a branch of the occipital artery supplying the trapezius muscle. **P. pollicis**, a branch of the radial artery going to the palmar surface of the thumb.

Principle (*prin'-si-pl*) [*principium*, from *prin-ceps*]. A constituent of a compound having a definite composition and representing its essential or characteristic properties. **P.**, **Proximate**. See *Proximate Principle*. **P.**, **Ultimate**, any one of the elements which a compound body contains.

Prinos (*pri'-nos*) [L.]. Black alder, a shrub of the order *Agnetaceae*. The bark and the berries of *P. verticillatus* have been employed as tonics and astringents in diarrhea, and locally as an application to ulcers. Dose $\frac{1}{2}$ -1 dr. (2-4 Cc.); of a decoction 1-2 oz. (32-64 Cc.).

Prism (*prim*) [*πρῖσμα*, from *πρίσσειν*, to saw]. A solid whose bases or ends are similar plane figures and whose sides are parallelograms. In optics, a transparent solid with triangular ends and two converging sides. It breaks up white light into its component colors, and bends the rays of light toward the side opposite the angle (the base of the prism), and is used to measure or correct imbalance of the ocular muscles. **P.-diopter**, **P.-dioptry**, a unit of prismatic refractive power: the refractive power of a prism that deflects a ray of light one centimeter on a tangent plane situated at a distance of one meter. **P.**, **Enamel-**, one of the prismatic columns of from four to six sides composing the enamel of teeth, closely packed together and generally vertical to the surface of the underlying dentin. **P.**, **Nicol's**. See *Nicol's Prism*.

Prismatic (*priz-mat'-ik*) [*prism*]. Prism-shaped; produced by the action of a prism, as *prismatic colors*.

Prismometer (*priz-mop-tom'-et-er*) [*prism*; *μέτρον*, eye; *μέτρον*, a measure]. An instrument for estimating refractive defects of the eye by means of two prisms placed base to base.

Prismosphere (*priz-mo-sfer*). A combination of a prism and a globular lens.

Pro- [L.]. A prefix meaning for, before, in front of.

Probang (*pro'-bang*) [*probare*, to test]. A rod of whalebone or other flexible material used for making local applications to the esophagus or larynx or for removing foreign

bodies. **P.**, **Ball-**, a probang having an ivory bulb attached to one end. **P.**, **Bristle-**, **P.**, **Horsehair-**, one having on the end a sheath of bristles or horsehair that can be made to spread like an umbrella as the instrument is drawn out. **P.**, **Sponge-**, one provided with a small sponge at one end.

Probe (*pröb*) [*probare*, to test]. A slender, flexible rod for exploring a channel. **P.**, **Anel's**, a delicate probe for exploring or dilating the lacrimal punctums and lacrimal canals. **P.**, **Blunt**, one with a blunt extremity. **P.**, **Bowman's**, one of a series of graduated probes used for dilating the nasal duct. **P.**, **Drum-**, one provided with a drum or reverberator to enable the ear to detect contact with foreign bodies. **P.**, **Electric**, one having two insulated wires, so that contact with a bullet or metal completes the circuit, and thus indicates the presence of such a foreign body. **P.**, **Eyed**, a probe having a slit at one end through which a tape or ligature can be passed. **P.**, **Lacrimal**, one used for dilating the lacrimal passages. **P.**, **Meerschmum**, a probe, the end of which is tipped with meerschmum, which becomes streaked with the lead by contact with a bullet. **P.**, **Nélaton's**, one that is capped with unglazed porcelain upon which a leaden ball makes a metallic streak. **P.**, **Vertebrate**, one made of small links so jointed together that it is very flexible.

Process (*pros'-es*) [*processus*, from *procedere*, to go]. 1. A course of action; a group of phenomena, as the *inflammatory process*. 2. A prominence or outgrowth, as the spinous process of a vertebra, the axis-cylinder process of a nerve. **P.**, **Alveolar**. See *Alveolar Process*. **P.**, **Anconal**, the olecranon. **P.**, **Auditory**, the curved plate of bone surrounding the external auditory meatus for the greater part of its circumference, and serving for the attachment of the cartilage of the external ear. **P.**, **Axis-cylinder**, that process of a nerve-cell which becomes the axis-cylinder of a nerve. **P.**, **Basilar**. See *Basilar Process*. **P.**, **Caudate**. 1. The caudate lobe of the liver. 2. The lower end of one of the divisions of the antihelix of the external ear. **P.**, **Ciliary**. See *Ciliary Process*. **Processes**, **Clinoid**, projections on the body and lesser wings of the sphenoid bone. There are three: 1. The *anterior*, formed by the inner extremity of the lesser wings. 2. The *middle*, a small eminence on each side bounding the sella turcica anteriorly. 3. The *posterior*, a tubercle on each side of the posterior part of the sella turcica. **P.**, **Conoid**. See *Conoid Tubercle*. **P.**, **Coracoid**. See *Coracoid Process*. **P.**, **Coronoid**. 1. A thin, flattened process projecting from the anterior portion of the upper border of the ramus of the lower jaw, and serving for the attachment of the temporal muscle. 2. A triangular projection from the upper end of the ulna, forming the lower part of the greater sigmoid cavity. **P.**, **Cricoid**, a slight

projection on the lower border of the thyroid cartilage. **P., Cubital**, the lower and articular end of the humerus. **P., Cuneiform**. 1. The unciform process of the ethmoid. 2. The basilar process of the occipital bone. **P., Deiters'**, the axis-cylinder process of a nerve-cell. **P., Dendritic**. See *P., Protoplasmic* (1). **P., Dentate**, the odontoid process. **P., Ensiform**, the cartilaginous tip at the lower end of the sternum. **P., Ethmoid**, one of the projections from the superior border of the inferior turbinate bone. **P., External Angular**, the projection on the outer extremity of the supraorbital arch of the frontal bone. **P., Falciform**. 1. A process of the fascia lata of the thigh, forming the outer and upper margin of the saphenous opening. Syn., *Falciform process of Burns*. 2. The falx cerebri. **P., Foliateous**, a process of bone on the lower extremity of the frontal cells. **P., Folian**. See *Folian Process*. **P., Hamular**. 1. A hook-like process of bone on the lower extremity of the internal pterygoid plate, around which the tendon of the tensor palati turns. 2. Of the lacrimal bone, the hook-like termination of the lacrimal crest. **P., Inferior Vermiform**, the central projection on the lower surface of the cerebellum, between the two hemispheres. **P., Internal Angular**, the inner extremity of the supraorbital arch of the frontal bone. **P., Jugal**. 1. The zygoma. 2. The external angular process. 3. The malar process of the superior maxilla. **P., Jugular**. See *Jugular Process*. **P., Lacrimal**, a short process of the inferior turbinate bone that articulates with the lacrimal bone. **P., Lenticular**, the extremity of the long process of the incus, covered with cartilage and articulating with the stapes. **P., Long (of the Incus)**, a slender process that descends vertically from the body of the incus and articulates, by the lenticular process, with the head of the stapes. **P., Long (of the Malleus)**, a long, delicate process that passes from the neck of the malleus outward to the glaserian fissure, to which it is connected by cartilaginous and ligamentous fibers. **P., Malar**, a triangular eminence of the superior maxilla by which it articulates with the malar bone. **P., Mamillary**, one of the tubercles on the posterior part of the superior articular processes of the lumbar vertebrae. **P., Mastoid**. See *Mastoid Process*. **P., Maxillary**, a thin plate of bone descending from the ethmoid process of the inferior turbinate bone, and hooking over the lower edge of the orifice of the antrum. **P., Nasal (of the Superior Maxilla)**, a thick, triangular process of bone that projects upward, inward, and backward by the side of the nose, forming a part of its lateral wall. **P., Odontoid**, the tooth-like process of the axis which ascends and articulates with the atlas. **P., Olecranon**, the olecranon. **P., Olivary**, a small oval eminence situated behind the optic groove of the sphenoid bone.

P., Orbicular (of the Incus). See *P., Lenticular*. **P., Orbital (of the Palate Bone)**, a process directed upward and outward from the upper portion of the palate bone. **P., Orbital (of the Superior Maxilla)**, a process projecting from the orbital margin of the superior maxilla. **P., Palatal**, a thick process projecting horizontally inward from the inner surface of the superior maxillary bone, and forming part of the floor of the nostril and the roof of the mouth. **P., Pineal**, the epiphysis. **P., Postglenoid**, a small tubercle separating the glenoid fossa from the auditory process. **P., Protoplasmic**. 1. Any one of the processes of nerve-cells that are continued as axis-cylinders. 2. A pseudopod of an amoeboid cell. **P., Pterygoid (of the Palate Bone)**, a pyramidal process projecting from the posterior border of the palate bone and articulating with the sphenoid bone. **P., Pterygoid (of the Sphenoid Bone)**, see descending perpendicularly from the point of junction of the body with the greater wing of the sphenoid bone, and consisting of an external and an internal plate. **P., of Ram**. Synonym of *P., Long (of the Malleus)*. **P., Short (of the Incus)**, a conic process projecting almost horizontally backward from the body of the incus and attached to the alveolar fibers to the margin of the opening leading into the mastoid cells. **P., Short (of the Malleus)**, a slight projection from the root of the manubrium of the malleus, being in contact with the tympanic membrane. **P., Sphenoid**, a thin plate of bone directed upward and inward from the vertical plate of the palate bone. **P., Sphenomaxillary**, an inconstant downward prolongation of the greater wing of the sphenoid. **P., Spinous (of the Ilium)**, a prominent eminence on the anterior or posterior border of the ilium. The upper process on the anterior border is the *anterior superior spinous process*; below it is the *anterior inferior spinous process*. On the posterior border there are also two processes—a *posterior superior* and a *posterior inferior*. **P., Spinous (of the Sphenoid Bone)**, a rough prominence descending from the anterior part of the greater wing of the sphenoid bone. It receives the attachment of the internal lateral ligament of the jaw and the tensor palati muscle. **P., Spinous (of the Tibia)**, an eminence of bone on the inner surface of the tibia, between the two articular surfaces, and nearer to the posterior than the anterior border. **P., Spinous (of a Vertebra)**, the prominent backward process from the middle of the posterior part of the arch of a vertebra. **P., Styloid (of the Fibula)**, a pointed eminence projecting forward from the posterior portion of the head of the fibula. **P., Styloid (of the Radius)**, a projection from the external border of the lower extremity of the radius. **P., Stylus (of the Temporal Bone)**, a short process about an inch in length, descending a little forward, forward, and inward from the *glaserian*

surface of the petrous portion of the temporal bone. **P., Styloid (of the Ulna)**, a projection from the inner and posterior portion of the lower extremity of the ulna. **P., Sulcate**, an inconstant process of the palate bone connecting the orbital process with the sphenoid process. **P., Superior Maxillary**, an eminence on the face of the embryo which gives rise to the superior maxilla and the malar bone. **P., Superior Vermiform**, the upper part of the median lobe of the cerebellum, connecting the two lateral hemispheres. **P., Temporal**, the posterior angle of the malar bone by which it articulates with the zygomatic process of the temporal bone. **P., Transverse**, a process projecting outward from the side of a vertebra, at the junction of the pedicle and the lamina. **P., Trochlear**, Hyrtl's name for a groove in a bone for the reception of a tendon. **P., Unbranched**. Synonym of **P., Axis-cylinder**. **P., Unciform (of the Ethmoid Bone)**, a hook-like projection from the inferior portion of each lateral mass of the ethmoid bone. It articulates with the ethmoid process of the inferior turbinate bone. **P. Unciform (of the Hippocampal Gyrus)**, a hook-like projection from the anterior end of the hippocampal convolution. **P., Unciform (of the Unciform Bone)**, a hook-like projection from the palmar surface of the unciform bone. **P., Vaginal (of Peritoneum)**, the process of peritoneum which the testicle in its descent carries in advance, and which in the scrotum forms the tunica vaginalis testis. **P., Vaginal (of the Sphenoid Bone)**, a projection from the inferior surface of the body of the sphenoid bone, running horizontally inward from near the base of the pterygoid process. **P., Vaginal (of the Temporal Bone)**, a sheath-like plate of bone which extends from the carotid canal to the mastoid process. It separates behind into two laminae that inclose the styloid process. **P., Xiphoid**, the ensiform cartilage. **P., Zygomatic (of the Malar Bone)**, a long, serrated process which articulates with the zygomatic process of the temporal bone. **P., Zygomatic (of the Temporal Bone)**, a long projection from the lower part of the squamous portion of the temporal bone, articulating with the malar bone.

Processus (pro-ses'-us) [L.]. A process. **P. ad cerebrum**, the superior cerebellar peduncle. **P. ad medullam**, the inferior peduncle of the cerebellum. **P. ad pontem**, the middle peduncle of the cerebellum. **P. ad testes**, the superior cerebellar peduncles. **P. clavatus**, a thickening on the posterior pyramid of the medulla near the apex of the fourth ventricle. **P. cochleariformis**, a thin plate of bone separating the canal for the eustachian tube from that for the tensor tympani muscle. **P. e cerebello ad cerebrum**, the superior cerebellar peduncle. **P. e cerebello ad medullam**, the inferior cerebellar peduncle. **P. e cerebello ad pontem**, the middle cerebellar peduncle.

P. e cerebello ad testes, the superior peduncles of the cerebellum. **P. gracilis**, a long delicate process passing from below the neck of the malleus to the glaserian fissure. **P. hamatus**. Synonym of **Process, Unciform**.

Prochoresis (pro-ko-re'-sis) [επαχρησις, a going on or advancing]. The motor activity of the stomach.

Procidencia (pro-se-den'-she-ah) [pro-; cadere, to fall]. Prolapse.

Procreation (pro-kre-a'-shun) [procreate, to bring forth]. The act of begetting offspring.

Proctagra (proh-to'-grah) [procto-; ἄγρα, a seizure]. Sudden pain in the anal region.

Proctalgia (prok-tal'-je-ah) [procto-; ἄλγος, pain]. Neuralgic pain in the anus or rectum.

Proctatresia (prok-tat-re'-se-ah) [procto-; atresia]. An imperforate condition of the anus or rectum.

Proctectomy (prok-tek'-to-me) [procto-; ἐκτομή, excision]. Excision of the anus or rectum.

Procteuryster (prok-tu-rin'-ter) [procto-; εὐρύς, to widen]. An instrument for dilating the anus.

Proctitis (prok-ti'-tis) [procto-; εἴτις, inflammation]. Inflammation of the anus or rectum.

Procto- (prok-to) [πρωκτός, anus]. A prefix signifying relating to the anus or rectum.

Proctoceles (prok'-to-sel) [procto-; κήλη, hernia]. Prolapse of the rectum.

Proctococcyperxy, Proctococcyperia (prok-to-koh'-se-peks-e, prok-to-koh-se-peks'-e-ah) [procto-; coccyx; πίξις, a fixing in]. Suturing of the rectum to the coccyx.

Proctocolonoscopy (prok-to-ko-lon-as'-ko-pe) [procto-; colon; σκοπεῖν, to examine]. Inspection of the interior of the rectum and colon.

Proctocystotomy (prok-to-sis-tof'-o-me). Lithotomy in which the incision is made through the walls of the rectum.

Proctodeum, Proctodæum (prok-to-de'-um) [procto-; ὅδιος, by the way]. An invagination of the ectoderm in the embryo that grows inward toward the cloaca until the ectoderm and endoderm come into contact, the membrane formed between the two finally breaks through, the gut then opening externally.

Proctodynia (prok-to-din'-e-ah) [procto-; ὀδύνη, pain]. Pain about the anus or in the rectum.

Proctology (prok-tol'-o-je) [procto-; λόγος, science]. The science of the anatomy, functions, and diseases of the rectum.

Proctoparalysis (prok-to-par-al'-is-is). Paralysis of the sphincter muscle of the anus.

Proctopexy, Proctopexia (prok'-to-peks-e, -e-ah) [procto-; πίξις, a fixing in]. The fixation of the rectum to another part by sutures.

Proctoplasty (prok'-to-plas-te) [procto-; πλάσσειν, to form]. Plastic surgery of the anus.

Proctoptosis (prok-to-tof'-sis) [procto-; πτώσις, a falling]. Prolapse of the rectum.

Proctorrhaphy (prok-tor'-a-je) [procto-; ραφή, suture]. Suture of the rectum or anus.

Proctoscope (prok'-to-skop) [procto-; σκοπεῖν, to examine]. An instrument for inspection of the rectum.

Proctoscopy (*prok-toſ'-ko-pe*). Ocular inspection of the rectum with the aid of special instruments.

Proctosigmoidectomy (*prok-to-sig-moid-ek'-ō-me*). Excision of the anus and sigmoid flexure.

Proctostomy (*prok-toſ'-to-me*) [*procto-*; *stoma*, a mouth]. The establishment of an opening into the rectum.

Proctotomy (*prok-toſ'-ō-me*) [*procto-*; *tomē*, a cutting]. Incision into the rectum, especially for stricture. **P.**, **External**, the operation of dividing the rectum and the anus and the tissue lying between the anus and the tip of the coccyx. **P.**, **Internal**, division of the parts as in external proctotomy, but without cutting the sphincters. **P.**, **Linear**, an incision of the dorsal rectal wall and of all the tissues lying between the anus and a subcutaneous opening made in front of the coccyx.

Procurive (*pro-kur'-siv*) [*pro-*; *currere*, to run]. Running forward, as *procurive* epilepsy, a form in which the patient runs during the epileptic attack.

Procurvation (*pro-kur-ŭſ'-shun*) [*procurvare*, to bend forward]. A forward inclination of the body.

Prodromal (*pro-dro-mal*) [*prodrome*]. **Procurvatory**; of the nature of a prodrome.

Prodrome (*pro'-drom*) [*prodrōmōs*, a running forward]. A forerunner of a disease, a symptom indicating the approach of a disease.

Product (*prod'-ukt*) [*productive*]. Effect; result. **P.**, **Addition**, a compound resulting from the direct union of two bodies.

Productive (*pro-duk'-tiv*) [*pro-*; *ducere*, to lead]. Forming, especially forming new tissue, as a *productive* inflammation.

Proeminent (*pro-em'-ent*) [*pro-*; *eminens*, prominent]. Projecting. **P.** **Vertebra**, the seventh cervical vertebra, so called because its spinous process projects beyond the others.

Proencephalus (*pro-en-ſel'-d-us*) [*pro-*; *ēnkephalos*, brain]. A monster characterized by a protrusion of the brain through a fissure in the frontal region.

Professional (*pro-fesh'-un-ul*) [*profiteri*, to profess]. 1. Pertaining to a profession, especially to the medical profession; in keeping with medical ethics. 2. Produced by the practice of a profession, as *professional* neuritis (writers' cramp, telegraphers' cramp, etc.).

Profeta's Law. Healthy born children of syphilitic parents possess a certain immunity to syphilis infection.

Profundus (*pro-fun'-dus*) [L., "deep"]. Deep-seated; applied to certain muscles and nerves, and in the feminine, *profunda*, to certain arteries and veins. See under *Artery*.

Progenitor (*pro-jen'-itor*) [*progeny*]. Ancestor or forefather.

Progeny (*pro'-en-e*) [*pro-*; *gignere*, to beget]. Offspring, descendants.

Progeria (*pro-je'-re-ia*) [*progeros*, premature

old age]. A rare form of senilism, of unknown onset, with retention of intelligence and without any perceptible cause, marked by loss of the hair, shriveling of the skin, and emaciation. Cf. *Geromorphum*.

Proglossis (*pro-glos'-is*) [*pro-*; *glossa*, the tongue]. The tip of the tongue.

Proglottis (*pro-glot'-is*) [*pro-*; *glossa*, tongue; pl., *proglottides*]. A mature segment of a tape-worm.

Prognathous (*prog-nath-us*) [*pro-*; *gnathos*, jaw]. Having a projecting lower jaw.

Prognosis (*prog-noſ'-is*) [*pro-*; *gnosis*, knowledge]. A judgment in advance concerning the duration, course, and termination of a disease.

Prognostic (*prog-noſ'-tik*) [*prognosis*]. Pertaining to prognosis.

Prognosticate (*prog-noſ'-nb-ſt*) [*prognosis*]. To give a prognosis.

Progression (*pro-gresh'-un*) [*progreſsi*, to advance]. The act of advancing or moving forward. **P.**, **Backward**, a backward motion, a rare symptom of certain nervous diseases. **P.**, **Cross-legged**, walking with the legs almost crossing, a condition sometimes observed in bilateral hip-disease and in cerebral spastic palsy.

Progressive (*pro-gresh'-iv*) [see *Progressum*]. Gradually extending. **P.** **Muscular Atrophy**, chronic anterior poliomyelitis in which the large ganglion-cells of the anterior horns are gradually destroyed, which leads to atrophy of the muscles. **P.** **Ossifying Myositis**, a chronic inflammation of muscle associated with a tendency to bony changes in them.

Proititis, **Prolites** (*pro-ſit'-shun*) [*pro-*; *pro-* (*pro-*), earliness]. Sexual precocity.

Projectile (*pro-jek'-tſl*) [*pro-*; *jacere*, to throw]. Throwing forward. **P.** **Vomiting**, a vomiting sometimes observed in diseases of the brain in which the material is suddenly projected out of the mouth to some distance, generally without nausea.

Projection (*pro-jek'-shun*) [see *Proiection*]. The act of throwing forward. 1. A part extending beyond the level of the surrounding surface. 2. The referring of impressions made on the organs of sense to the position of the object producing them. **P.** **System**, the name given to the pathways connecting the cerebral cortex with the periphery. The first projection system corresponds to pyramidal fibers passing through the corpus callosum; the second, to the tracts proceeding backward to the gray matter from the lateral ventricle to the end of the spinal cord; the third, to the peripheral nerves.

Prolabium (*pro-la'-be-um*) [*pro-*; *labium*, lip]. The red exposed part of the lip, also the central prominence of the lip.

Prolapse (*pro-laps*) [*pro-*; *lapsus*, to slip down]. The falling forward or downward of a part. **P.** of the **Cord**, premature extrusion of the umbilical cord during parturition. **P.**, **Uterine**, uterine displacement in which the vagina is

inverted and forms a bag hanging from the vulva, at the bottom of which lies the uterus, generally retroverted, but otherwise unaltered. **P. of the Iris**, protrusion of the iris through a corneal wound.

Proleptic (*pro-lep'tik*) [*pro-*; *προληπτικόν*, to seize]. 1. Prognostic. 2. Returning before the expected time.

Proliferate (*pro-lif'er-āt*) [*proles*, offspring; *ferre*, to bear]. To multiply, to generate.

Proliferation (*pro-lif'er-a'shun*) [*proliferate*]. The act of proliferating or multiplying, as *proliferation* of cells. **P.**, **Atrophic**, the multiplication of cells in atrophic tissues.

Proliferative, Proliferous (*pro-lif'er-a-tiv, pro-lif'er-us*) [*proliferate*]. Multiplying; characterized by the formation of new tissues or by cell-proliferation. **P. Cyst**, a cyst in which the lining epithelium proliferates and produces projections from the inner surface of the cyst.

Prolific (*pro-lif'ik*) [*proliferate*]. Fruitful.

Proligerous (*pro-lif'er-us*) [*proles*, offspring; *gerere*, to bear]. Germinating; producing offspring. **P. Disc**. See *Discus proligerus*.

Prominence (*prom'in-ens*) [*pro-*; *minere*, to jut]. 1. A projection on the surface of a part, especially on a bone. 2. The state of being prominent. **P.**, **Genital**, an accumulation of cells on the ventral aspect of the embryonic cloaca, from which the generative organs are developed.

Promnesia (*pro-ne'se-ah*) [*pro-*; *μνήσις*, remembrance]. The paradoxical sensation of remembering scenes or events which are occurring for the first time.

Promontory (*prom'on-to-re*) [*pro-*; *mons*, a mountain]. A projecting prominence. **P. of the Sacrum**, **P.**, **Sacrovertebral**, the prominence formed by the angle between the upper extremity of the sacrum and the last lumbar vertebra.

Pronæus (*pro-ne'-us*) [*πρηναιος*, the first room of a temple]. The vagina; also, the vestibule of the vagina.

Pronate (*pro'-nāt*) [see *Pronation*]. To place in a prone position.

Pronation (*pro-na'shun*) [*prone*, to bend forward]. 1. The condition of being prone; the act of placing in the prone position. 2. Of the hand, the turning of the palm downward.

Pronatoflexor (*pro-na-to-fleks'-or*). Relating to the pronator and flexor muscles.

Pronator (*pro-na'tor*) [see *Pronation*]. That which pronates, a term applied to several muscles. See under *Muscle*.

Prone (*prōn*) [*pronus*, prone]. Lying with the face downward; of the arm, having the palm directed downward; the opposite of supine.

Pronephron, Pronephros (*pro-ne'fon, pro-nef'-rois*) [*pro-*; *νεφρός*, a kidney]. The anterior of the three segments of the wolfian body, opening by means of the müllerian duct into the cloaca. It is the first part of the

urogenital system to be differentiated in the vertebrate embryo.

Pronucleus (*pro-nu'-kle-us*) [*pro-*; *nucleus*]. One of the two nuclear bodies of a newly fecundated ovum, the male pronucleus and the female pronucleus, the fusion of which results in the formation of the germinal nucleus.

Proof-spirit. See *Spirit*.

Prootic (*pro-o'tik*) [*pro-*; *οὖς*, ear]. In front of the ear.

Proovarium. See *Parovarium*.

Propago (*pro-pa'-go*) [L., "a slip or shoot"; pl., *propagines*]. An offset; applied to the smaller branches of vessels or nerves.

Propane (*pro'-pān*) [*propionic*]. C_3H_8 . A hydrocarbon, the third member of the marsh-gas series, occurring in petroleum.

Prop-cells. Columnar or fusiform cells placed in the intervals of the rods and hair-cells of the organ of Corti. They are also known as supporting cells and cells of Deiters.

Propenyl (*pro'-pen-il*). See *Glyceryl*.

Propepsin (*pro-pep'-sin*). The zymogen of pepsin, found in the cells of the gastric glands.

Propeptone (*pro-pep'-tōn*). See under *Peptone*.

Propeptonuria (*pro-pep-ton-u'-re-ah*) [*propeptone*; *ουρον*, urine]. The appearance of propeptone in the urine. It is said to occur in fevers, diphtheria, osteomalacia, and during the administration of styrax or phosphorus.

Properitoneal (*pro-per-it-on-e'-al*) [*pro-*; *peritoneum*]. Situated in front of the peritoneum. **P. Hernia**, a hernia the sac of which extends in various directions within the abdominal walls.

Prophase (*pro'-fāz*) [*pro-*; *φαίνω*, to show]. The first stage of karyokinesis or indirect cell-division.

Prophylactic (*pro-fil-ak'-tik*) [see *Prophylaxis*]. 1. Pertaining to prophylaxis. 2. A remedy or agent that prevents the development of disease.

Prophylactol (*pro-fil-ak'-tol*). A proprietary liquid said to consist of 20% of protargol and glycerol with the addition of mercury bichlorid in the proportion of one part to 2000. It is used by injection in diseases of the urinary tract.

Prophylaxis (*pro-fil-aks'-is*) [*προφυλάσσειν*, to keep guard before]. Prevention of disease; measures preventing the development or spread of disease.

Propionate (*pro'-pi-on-āt*). A salt of propionic acid.

Propione (*pro'-pe-ōn*) [*πρώτος*, first; *πῶν*, fat]. C_4H_8O . Diethyl ketone, a liquid obtained by the distillation of calcium propionate. Dose, as hypnotic, 8-45 gr. (0.5-3.0 Gm.); as sedative, 8 gr. (0.5 Gm.).

Propionic Acid (*pro-pe-on'-ik*). See *Acid, Propionic*.

Proprietary Medicine. A medicine that is trade-marked, patented, or secret.

Proprius (*pro'-pri-us*) [L.]. Individual; special, as flexor proprius pollicis, the special flexor of the thumb.

Proptosis (*pro-to'-sis*) [*pro-*; *πτῖσις*, a falling]. A falling downward; prolapse.

Propulsion (*pro-pul'-shun*) [*pro-*, *pellere*, to push]. 1. The act of pushing or driving forward. 2. A falling forward in walking, a condition seen in paralysis agitans. See *Festination*.

Propyl (*pro'-pil*) [*propionic*], C_3H_7 . The radical of propane.

Propylamin (*pro-pil'-am-in*) [*propyl*; *amin*]. 1. A liquid basic compound having the formula C_3H_7N , and existing in two forms, a normal propylamin, boiling at $47^\circ C$, and isopropylamin, boiling at $31.5^\circ C$. Normal propylamin has been obtained from cultures of bacteria of feces; isopropylamin has been found among the distillation-products of beet-root molasses. See under *Ploniam*. 2. A misnomer for an aqueous solution of trimethylamin, a colorless, caustic, antiseptic liquid.

Propylene (*pro'-pil-ēn*) [*propyl*], C_3H_6 . A gaseous hydrocarbon belonging to the series of the olefins.

Pro re nata (*pro ra na' tah*) [L.]. A phrase signifying "according to the circumstances of the case."

Prorennin (*pro-ren'-in*) [*pro-*; *rennin*]. The mother-substance, zymogen or preliminary material of rennin or chymosin.

Proscelix (*pro-ske'-leks*) [*pro-*; *scelix*, a worm, pl., *proscelices*]. The embryo of a cestode worm immediately after leaving the egg.

Prosector (*pro-sek'-tor*) [*pro-*; *sector*, cutter]. An officer of a medical college who prepares subjects for anatomic dissection or to illustrate didactic lectures.

Proencephalon (*pro-en-sef'-al-on*) [*pro-*; *ēnkephalos*, brain]. The forebrain, that part of the anterior cerebral vesicle from which are developed the hemispheres, the corpus callosum, the anterior commissure, the fornix, the septum lucidum, the anterior perforated space, the olfactory lobes, and the corpus striatum.

Prosopalgia (*pros-op-al'-i-ah*) [*prosopos*, the face; *algos*, pain]. Neuralgia pain in the distribution of the trigeminal nerve. Syn. *Facial neuralgia*; *Tic douloureux*.

Prosopic (*pro-sop'-ik*) [*prosopos*, the face]. Relating to the face; facial.

Prosopothoracopagus (*pros-op-o-tho-rak-op'-ag-us*) [*prosopos*, the face; *thorax*, *thoracic*, that which is joined]. A double fetal monster in which the twins are united by the upper abdomen, chest and face.

Prosphysectomy (*pro-si-phi-to-me*) [*pro-*; *physis*, a growing toe, an appendage; *ēktomē*, excision]. Appendectomy.

Prostaden (*pros'-tad-en*) [*prostata*; *adix*, a gland]. An extract of prostate gland used in prostatic hypertrophy. Dose: 3 gr. (2 Gm.) daily.

Prostatagia (*pros-tat'-i-ah*) [*prostate*; *dyor*, pain]. Pain in the prostate gland.

Prostate, **P. Gland** (*pro'-stat*) [*pro-*; *statanai*, to stand]. The organ surrounding the neck of the bladder and beginning of the urethra

(*prostatic urethra*). It consists of two lateral lobes and a middle lobe, and is composed of muscular and glandular tissue, a distinct capsule surrounds it. The prostate often becomes enlarged in advanced age, and may then interfere with the emptying of the bladder.

Prostatectomy (*pros-tat'-ek-tomē*) [*prostat*; *ēktomē*, excision]. Excision of the prostate.

Prostatic (*pros-tat'-ik*) [*prostate*]. Relating to the prostate. **P. Calculus**, a stone found in the prostate gland. **P. Plexus**, a collection of veins surrounding the neck of the base of the bladder and the prostate gland. 2. A plexus of nerves derived from the sacral plexus, and distributed to the prostate gland, seminal vesicles, and erectile tissue of the penis. **P. Urethra**, that portion of the urethra surrounded by the prostate gland.

Prostatism (*pros'-tat-izm*). A medical condition due to prostate disease.

Prostatitis (*pros-tat'-it-is*) [*prostate*; *itis*, inflammation]. Inflammation of the prostate gland.

Prostatocystotomy (*pros-tat'-o-si-to-mē*) [*prostate*; *cystostomy*]. Surgical incision into the prostate and bladder.

Prostatomegaly (*pros-tat'-meg'-al-ē*) [*prostate*; *megaly*, great]. Prostatic hypertrophy.

Prostatomyectomy (*pros-tat'-o-mēk-tomē*) [*prostate*; *myectomy*]. Removal of a prostatic myoma.

Prostatorrhea (*pros-tat'-or-rē-ah*) [*prostate*; *rhoe*, flow]. A thin urethral discharge coming from the prostate gland in cases of prostatic or masturbatory.

Prostatotomy (*pros-tat'-o-tomē*) [*prostate*; *tomē*, a cutting]. Incision into the prostate gland.

Prostatovesiculitis (*pros-tat'-o-ves-i-cu-lit-is*) [*prostate*; *vesicula*, bladder]. Inflammation of the seminal vesicles combined with prostatitis.

Prosthesis (*pro'-sthe-sis*) [*pro-*, to put, a placing]. Replacement of a missing part by an artificial substitute. **P.**, **Germans' Prosthesis**, the replacement of the missing portion of the nasal septum by cartilage.

Prosthetic (*pro-s-thet'-ik*) [*prosthesis*]. Relating to prosthesis.

Prosthetics (*pro-s-thet'-iks*) [*prosthesis*]. The branch of surgery that deals with prostheses.

Prostholytic (*pros-thet'-ik*) [*prosthesis*; *lytic*, to break]. Prosthesis breaker.

Prostrate (*pro'-strat*) [*pro-*; *stratus*, to stretch out]. Lying at full length.

Prostration (*pro-strat'-shun*) [*prostrate*]. 1. The condition of being prostrate. 2. Extreme exhaustion of nervous or muscular force. **P.**, **Nervous**, general exhaustion due to excessive expenditure of nervous energy.

Protagon (*pro'-tag-on*) [*protos*, first; *gon*, a head]. $C_{10}H_{16}N_4PO_8$. A crystalline salt found in nervous tissue, and melting and boiled with borax the decomposition products of leithan.

Protal (*pro'-tal*) [*protos*, first]. First normal constituent.

Protalbumose (*pro-tal'-bu-mose*) [*protal*; *albumose*]. See under *Albumin*.

Protamin (*pro'-ta-min*) [*πρωτος*, first; *amin*], $C_{16}H_{27}N_5O_7$. An organic base found with nuclein in the spawn of salmon.

Protargol (*pro-tar'-gol*). A silver albumose occurring as a yellow powder, containing 8% of silver; freely soluble in water. It is recommended in gonorrhea in 0.25 to 1% solutions.

Protean (*pro'-te-an*) [*proteus*]. Taking on many shapes, as a *protean* disease, *protean* eruption.

Protease (*pro'-te-az*). A diastase produced by *Aspergillus niger*. It resembles in its properties papain and the proteolytic enzyme of malt. It acts upon gelatin, nuclealbumins, globulin, and albuminates, but not upon albumin, whereby it is distinguished from pepsin.

Protectin (*pro-tek'-tin*). Tissue-paper with a coating of adhesive rubber mixture on one side.

Protective (*pro-tek'-tiv*) [*protect*]. Covering, so as to shield against harm; guarding against harm, as a *protective* dressing. **P.**

Proteid. See *Proteid*, *Defensive*.

Proteic (*pro-te'-ik*). Relating to protein. **P.** Substances, *proteids*.

Proteid (*pro'-te-id*) [*πρωτος*, first]. Any one of the important and essential nitrogenous constituents of animal (*animal proteid*) and vegetable (*vegetable proteid*) tissues. They are colloid, noncrystallizable, and levorotatory, are precipitated from solutions by alcohol and various metallic salts, and coagulated by heat and mineral acids. *Proteids* are divided by Landois into: (a) *native albumins*: serum-albumin, egg-albumen, met-albumin, and paralbumin; (b) *derived albumins*, or *albuminates*: acidalbumin, syn-tonin, alkali-albumin, and casein; (c) *globu-lins*: crystallin, vitellin, paraglobulin, or serum-globulin, fibrinogen, myosin, globin; (d) *fibrins*; (e) *coagulated proteids*; (j) *albumoses* and *peptones*; (g) *lardacein*. **P.**, **Bacterial**, one formed by the action of a microorganism. **P.**, **Bacterial Cellular**, any proteid found in the bodies of bacteria. **P.s**, **Coagulated**. See *Coagulated Proteids*. **P.s**, **Compound**, a class of bodies more complex than simple *proteids*, which yield as nearest splitting products, simple *proteids* on one side and nonproteid bodies, such as coloring-matters, carbohydrates, xanthin bases, etc., on the other. They are divided into three groups—the hemoglobins, glycoproteids, and nucleoproteids. **P.**, **Defensive**, one of the *proteids* existing in the blood and rendering the system immune to infectious diseases.

Protein (*pro'-te-in*) [*proteid*]. A substance formerly regarded as a *proteid* deprived of its sulfur, and looked upon as an alkali-albumin. **P.**, **Pyocyanous**, a preparation made from cultures of *Bacillus pyocyanus* by means of potash solutions. It is recommended in the treatment of suppurating ulcers.

Proteolysis (*pro-te-ol'-is-is*) [*πρωτος*, first; *lysis*,

solution]. The change produced in *proteids* by ferments that convert them into diffusible bodies.

Proteolytic (*pro-te-o-lit'-ik*) [*proteolysis*]. Pertaining to, characterized by, or effecting *proteolysis*.

Proteose (*pro'-te-ös*) [*πρωτος*, first]. Any one of a group of bodies formed in gastric digestion, intermediate between the food *proteids* and the *peptones*, called *antipeptone*, *hemipeptone*, etc.

Proteosuria (*pro-te-o-su'-re-ah*) [*proteose*; *οὐρον*, urine]. The presence of *proteoses* in the urine.

Proteuria (*pro-te-u'-re-ah*). The presence of *proteids* in the urine.

Proteus (*pro'-te-us*) [L.]. A genus of bacteria. See under *Bacteria*.

Prothesis (*proth'-es-is*). See *Prosthesis*.

Prothetic (*pro-thet'-ik*). See *Prosthetic*.

Prothrombin (*pro-throm'-bin*). A nucleoproteid enzyme of the blood-plasma which brings about coagulation by changing fibrinogen into fibrin by combining with soluble lime salt, and thus forming fibrin-ferment or thrombin.

Protiodid (*pro-ti'-o-did*) [*πρωτος*, first; *iodid*]. A salt containing the least amount of iodine of the *iodids* of the same base. See *Proto*.

Proto- (*pro-to-*) [*πρωτος*, first]. 1. A prefix signifying first. 2. In chemistry, a prefix signifying the lowest of a series of compounds of the same elements, as *protiodid*, *protchlorid*, *protoxid*.

Protoalbumose (*pro-to-al'-bu-mös*). See *Albumose*.

Protoblast (*pro-to-blast*) [*proto-*; *βλαστος*, germ]. A cell without a cell-wall.

Protocatechuic Acid (*pro-to-kat-e-chu'-ik*) [*proto-*; *catechu*], $C_7H_6O_4$. Dioxylbenzoic acid, an acid sometimes occurring in the urine.

Protchlorid (*pro-to-klo'-rid*). See *Proto-* (2).

Protogaster (*pro-to-gas'-ter*) [*proto-*; *γαστρ*, stomach]. The primitive intestinal cavity of a gastrula.

Protogen (*pro'-to-jen*) [*proto-*; *γενειν*, to produce]. 1. Any albuminoid compound which does not coagulate when heated in aqueous solution. 2. A dietetic obtained by action of formaldehyd on egg-albumen.

Protoglobulose (*pro-to-glob'-u-lös*). One of the primary products of the digestion of globulin.

Protoiodid (*pro-to-i'-o-did*). See *Protiodid*.

Protoleukocyte (*pro-to-lu'-ko-sit*). One of the minute lymphoid cells found in the red bone-marrow and also in the spleen.

Protometer (*pro-tom'-et-er*) [*proto-*; *μετρον*, a measure]. An instrument for measuring the forward projection of the eyeball.

Protomyosinose (*pro-to-mi-o'-sin-ös*) [*proto-*; *myosin*]. A product of the primary digestion of myosin.

Protonephron (*pro-to-ne'-ron*) [*proto-*; *νεφρον*, kidney]. The pronephron, metanephron, and mesonephron taken together; the primitive kidney.

Protoneuron (*pro-to-nu'-ron*) [*proto-*; *νῆρον*, nerve] One of a peculiar type of bipolar neurons or ganglion-cells of the cerebro-spinal system, characterized by the entrance of the axis-cylinder of an afferent nerve-fibril through one of its prolongations, terminating in its endoplasm. It constitutes a primary independent centripetal end organ.

Protonuclein (*pro-to-nu'-kle-in*). $C_{20}H_{30}N_{10}P_4O_{12}$. A preparation from the lymphoid tissues of animals with the addition of milk-sugar and gum-benzoin. It is used as an invigorator. Dose 3-10 gr. (0.2-0.65 Gm.) several times daily. Applied also in substance to cancerous wounds.

Protopathic (*pro-to-path'-ik*) [*proto-*; *πάθος*, disease] Primary, relating to the first lesion; idiopathic; opposed to deuteropathic.

Protopin (*pro'-to-pin*) [*proto-*; *ῥῶν*, opium]. $C_{20}H_{27}NO_2$. An alkaloid from opium, it is hypnotic and analgesic. Dose 10-150 gr. (2.5-10 Gm.)

Protoplasm (*pro'-to-plazm*) [*proto-*; *πλάσμα*]. 1. The viscid material constituting the essential substance of living cells, upon which all the vital functions of nutrition, secretion, growth, reproduction, irritability, and motility depend. When highly magnified, the protoplasm of most cells appears as a network (*spongoplasm*), containing a more fluid substance (*hyaloplasm*) in its meshes. 2. Those portions of the cell-body adjacent to the nucleus, or, the primary active portion of the cell as distinguished from the paraplasm or secondary and passive portion.

Protoplasmic (*pro-to-plaz'-mik*) [*protoplasm*]. 1. Pertaining to protoplasm. 2. Composed of protoplasm. **P. Process**. See *Process*, *Protoplasmic*.

Protoplastin (*pro-to-plast'-in*) [*protoplasm*]. The basal substance of protoplasm.

Protoprotein (*pro-to-pro'-te-in*). That material which, converted into organized nucleoproteids, forms living matter.

Protospasm (*pro'-to-spazm*) [*proto-*; *σπασμός*, spasm]. A spasm beginning in one part and extending to others.

Protosulfate (*pro-to-sul'-fāt*). See *Proto-* (2).

Protothrombin. See *Protothrombin*.

Prototoxins (*pro-to-tox'-ins*) [*proto-*; *toxins*]. The action products of toxins differing from deuterotoxins and tritoxins in having a stronger affinity than either for the antitoxins.

Prototoxoid (*pro-to-tox'-oid*) [*proto-*; *toxoid*]. A transformation product of prototoxin in which toxicity is lost, but the combining power retained.

Prototrophic (*pro-to-tro'-fik*) [*proto-*; *τροφή*, nourishment]. Applied to organisms which do not require organic matter or have not the faculty of decomposing protein stuff.

Prototype (*pro'-to-tipo*) [*proto-*; *τύπος*, a type]. An original type, a type after which others are copied.

Protoxid (*pro-tox'-id*). See *Proto-* (2).

Protozoid (*pro-tox'-oid*). Same as *Prototoxoid*.

Protozoa (*pro-to-zo'-ah*). Plural of *Protozoon*.

Protozoon (*pro-to-zo'-on*) [*proto-*; *ζῷον*, pl., *protosoon*]. One of the lowest forms of animal kingdom, comprising organisms which consist of simple cells or colonies of cells which possess no nervous system and no culatory organs.

Protropin (*pro-tro'-pin*). See *Prototropin*.

Protrypsin (*pro-trif'-sin*). See *Protrypsin*.

Protyl (*pro'-til*) [*pro-*; *τύλος*, first]. The most primitive universal element.

Protylin (*pro'-til-in*). A synthetic product containing 27% of phosphorus and used in the treatment of neurasthenia. Dose 2-3 gr. (0.06-0.075 Gm.)

Proud Flesh. *Proud flesh* is a term used in surgery to designate a growth of granular tissue which forms at the site of a wound.

Provisional (*pro-vish'-en-əl*) [*pro-*; *vision*, to see]. Pertaining to or as if seen; temporary.

Proximad (*prok'-sim-əd*) [see *Proximal*]. word the proximal end.

Proximal (*prok'-sim-əl*) [*proximus*, near]. Nearest to the body or the portion of the body, or some other point considered as the center of a system.

Proximate (*prok'-sim-ət*) [see *Proximal*]. Nearest; immediate, as *proximate cause*.

Principle, a substance existing in a definite form in the animal world or in plants and can be extracted by means not involving destroying its chemical composition.

Prox. luc. Abbreviation of *proximo-lucida*, day before.

Proxonal (*pro-ek'-nəl*) [see *Proximal*]. Applied to nerve-centers lying in front of a zone.

Pruinat (*pru'-in-ət*) [*pruin*, hoar-frost]. Bearing as if covered with hoar-frost.

Prune-juice Expectoration. A peculiar expectoration of a dark purple color, resembling prune-juice. It occurs in low bacillary pneumonia, in gangrene and necrosis of the lung.

Prunum (*pru'-num*) [L.]. Prune. The fruit of the U. S. P. is the fruit of *Prunus domestica*, of the order Rosaceae. Prunes are laxative.

Prunus (*pru'-nus*) [L.]. A genus of trees of the order Rosaceae. *P. domestica* is the common prune. The ripe fruit of *P. domestica* is the *amigdalula dulcis* of the U. S. P. *P. virginiana* yields wild-cherry bark. *P. virginiana* (U. S. P.), wild-cherry, contains cyanide of potassium, hydrocyanic acid, tannin, and other substances. It is used as a mild cathartic in gastric debility and constipation of the system, and as a component of cough-mixtures. Dose of the dried wild-cherry (*Quadriflorum prunum*) (U. S. P.) 12 dr. (4 Gm.), as the *Prunum prunifera*, U. S. P. is a constituent of the group *Pruniflorum prunifera* (P. 4 or 15 Gm.).

Pruriginous (*pu-ri'-jin-əs*) [*prurigo*]. Pertaining to or resembling *prurigo*.

Prurigo (*pu-ri'-jo*) [*pruritus*, to itch]. A chronic inflammatory disease of the skin characterized by small pale papules, sometimes itching. The papules are usually most prominent in the summer months.

the limbs. The disease begins in early life and is usually incurable. 2. Pruritus.

Pruritic (*pru-rit'-ik*) [*pruritus*]. Pertaining to pruritus; itching.

Pruritus (*pru-ri'-tus*) [*prurire*, to itch]. Itching, a peculiar uncomfortable sensation due to irritation of the peripheral sensory nerve, and leading to scratching. It may be a symptom of other diseases of the skin or an independent neurosis. The latter receives its name from the part affected, as *pruritus ani*, *pruritus vaginæ*. **P., Bath**, a burning sensation varying from a slight pricking to an intense itching experienced by some persons after a bath. **P. hiemalis**, a form affecting certain persons only in winter, especially in dry climates. **P. senilis**, the pruritus of the aged, at times due to degenerative changes in the skin. **P. senilis of the Tongue**, a form of glossitis occurring in the aged, characterized by itching and burning of the tongue. **P. vulvæ**, hyperesthesia of the nerves of the vulva accompanied by intense itching.

Prussak's Fibers. The bands which, coming from the roof of the external auditory canal, pass on to the membrana tympani and form the lateral boundaries of Shrapnell's membrane; they are made up of elastic and connective-tissue fibers and contain blood-vessels and nerves. **P.'s Pouch**, **P.'s Space**, the small space formed in the attic of the middle ear by the external ligament of the malleus above, the short process of the malleus below, the neck of the malleus internally, and Shrapnell's membrane externally.

Prussian Blue. Iron used in the arts as a dye; it was formerly employed in medicine as a febrifuge, tonic, and alterative. Dose 3-5 gr. (0.2-0.32 Gm.).

Prussiate (*prus'-i-ät*). A salt of prussic or hydrocyanic acid.

Prussic Acid. See *Acid, Hydrocyanic*.

Prussin (*prus'-in*). See *Cyanogen*.

Psalis (*sa'-lis*) [*ψαλις*, arch]. The cerebral fornia.

Psalterium (*sal-te'-re-um*). See *Manyplies*.

Psamma (*sam'-ah*) [*ψαμμος*, sand]. Sand occurring as a urinary deposit.

Psammocarcinoma (*sam-o-kar-sin-o'-mah*). See *Carcinoma psammosum*.

Psammoma (*sam-o'-mah*) [*ψαμμος*, sand; *δυνα*, tumor]. A firm tumor found in the membranes of the brain, the choroid plexus, and in other parts, and characterized by the presence of peculiar mineral concretions. The tumor is generally a fibrosarcoma.

Psammous (*sam'-us*) [*ψαμμος*, sand]. Sandy; sabulous.

Psallism **Psallismus** (*sal'-izm*, *sel-is'-mus*)

1. Stuttering or speech due to *hæmus mercurius* jerking speech.

2. [*ψευδής*, false].

seud-; acon-

ite], $C_{24}H_{26}NO_{17}$. An extremely poisonous alkaloid from *Aconitum ferox*.

Pseudacousia, **Pseudacousma**, **Pseudacusis** (*su-dak-oo'-e-ah*, *-mah*, *-u'-sis*) [*pseud-; ακουσις*, a hearing]. A disturbance of hearing in which the person's own voice sounds strange or peculiar.

Pseudarthrosis (*su-dar-thro'-sis*) [*pseud-; arthrosis*]. A false joint.

Pseudencephalus (*su-den-sef'-al-us*) [*pseud-; εγκεφαλος*, brain]. A species of monster characterized by a partial development of the frontal, parietal, and occipital bones, while the brain is represented by a bunch of membranes, blood-vessels, connective and possibly nervous tissue at the base of the skull.

Pseudephedrin (*su-del'-ed-rin*). See *Pseudoephedrin*.

Pseudesthesia (*su-des-the'-se-ah*) [*pseud-; αἰσθησις*, feeling]. An imaginary sensation for which there is no corresponding object; a sensation referred to parts of the body that have been removed by accident or surgical operation.

Pseudoactinomycosis, **Pseudactinomycosis** (*su-do-ak-tin-o-mi-ko'-sis*, *su-dak-tin-o-mi-ko'-sis*). A form of pulmonary tuberculosis in which the sputum contains granular bodies resembling the grains of actinomycosis. They consist of a crystalline substance similar to leucin.

Pseudoagraphia (*su-do-ah-gra'-je-ah*). The form of agraphia in which meaningless or disconnected words can be written.

Pseudoakromegaly (*su-do-ak-ro-meg'-al-e*). See *Osteoarthropathy*, *Hypertrophic Pulmonary*.

Pseudoalveolar (*su-do-al-ve'-o-lar*). Simulating alveolar tissue.

Pseudoangina (*su-do-an-ji'-nah*). False angina; hysteric angina; an attack of cardiac pain somewhat resembling angina pectoris but less grave in character, longer in duration, and usually not associated with organic heart disease. It occurs in neurotic women, and is generally brought on by emotional excitement.

Pseudoanorexia (*su-do-an-or-eks'-e-ah*). Rejection of food because of gastric distress.

Pseudoappendicitis (*su-do-ap-en-dis'-tis*). 1. A condition simulating appendicitis, but with no lesion of the appendix. 2. A condition simulating appendicitis occurring in hysteric subjects or associated with secondary syphilis.

Pseudoarthrosis (*su-do-ar-thro'-sis*). See *Pseudarthrosis*.

Pseudotaxia (*su-do-ah-tak'-e-ah*). See *Pseudotabes*.

Pseudobacillus (*su-do-bas-il'-us*). 1. One of the very fine fat crystals sometimes found in sputum, and which stain similarly to tubercle bacilli, from which they are distinguishable by their varying size and their solubility in ether and chloroform. 2. In the plural, *pseudobacilli* (of Hayem), very minute, rod-shaped products of corpuscular fragmentation observed in poikilocytosis.

Pseudobacterium (*su-do-bak-te'-re-um*). Any object resembling a bacterium.

Pseudobulbar (*su-do-bul'-bar*). Not really bulbar. P. Paralysis, symmetric disease of both cerebral hemispheres involving the centers or paths of the nerves of speech, and thus resembling disease of the medulla oblongata.

Pseudocele (*su'-do-sell*) [*pseudo-*; *cellos*, a hollow]. The fifth ventricle of the brain.

Pseudoceliotomy (*su-do-sel'-o'-tomy*). The pretended performance of abdominal section.

Pseudochalazion (*su-do-kal'-a'-zion*). A malignant lesion of the conjunctiva resembling chalazion.

Pseudochancere (*su-do-shang'-ker*). An indurated sore simulating chancre.

Pseudochlorosis (*su-do-klo-ro'-sis*). Leache's term for a form of chlorosis in which there was no diminution of the number of erythrocytes.

Pseudocirrhosis (*su-do-sir'-o'-sis*). A condition marked by ascites, dyspnea, and cyanosis, believed to be due to combined cirrhosis and peritoneal disease.

Pseudoclump (*su'-do-klump*). A clump of bacteria in broth typhoid cultures, which simulates closely the clumps formed by specific typhoid agglutinins.

Pseudocrisis (*su-do-kri'-sis*). A false crisis, a sudden fall of temperature resembling the crisis of a disease, but subsequently followed by a rise of temperature and a continuation of the disease. It is common in pneumonia.

Pseudocroup (*su'-do-kroop*). False croup, laryngismus stridulus.

Pseudocyesis (*su-do-si'-e'-sis*) [*pseudo-*; *cystis*, pregnancy]. False pregnancy, the belief, on the part of a woman, in the existence of pregnancy when none exists.

Pseudocylindroid (*su-do-sil'-in-droid*) [*pseudo-*; *cylindroides*]. A band of mucus or any substance in the urine simulating a renal cast.

Pseudocyst (*su'-do-sist*) [*pseudo-*; *cystis*, a bladder]. In histology, a globular body produced by the breaking up of protoplasm in a filament in certain of the lower plants, an assumed reproductive body.

Pseudodiascope (*su-do-dia'-sh-skop*) [*pseudo-*; *diastasis*, to look through]. An instrument demonstrating the persistence of visual impressions made upon the retina.

Pseudodiphtheria (*su-do-dif'-thir-ee-ah*) [*pseudo-*; *diphtheria*]. An inflammation characterized by the presence of a false membrane not due to the Klebs-Löffler bacillus. P. Bacillus, a non-pathogenic bacillus resembling in form and growth the true diphtheria bacillus. It is now considered an attenuated form of the true bacillus.

Pseudodiphtheric (*su-do-dif'-thir-ik*). Simulating diphtheria, relating to pseudodiphtheria.

Pseudodyspepsia (*su-do-dis'-pep'-ee-sh*) [*pseudo-*; *dyspepsia*]. Nervous dyspepsia or gastric neurasthenia.

Pseudoendometritis (*su-do-en-do-met'-it-iss*) [*pseudo-*; *endometritis*]. A condition resembling endometritis marked by changes in the blood vessels, hyperplasia of the glands, and atrophy

Pseudoephedrin (*su-do-ef'-ed-rin*) ($C_{10}H_{17}N$). An alkaloid found in *Ephedra sinensis* and isomeric with ephedrin.

Pseudoepilepsy (*su-do-ep'-i-lep-si*) [*pseudo-*; *epilepsy*]. Disorders simulating epilepsy wholly or partially of rachitic origin.

Pseudoepithelioma (*su-do-ep-i-thi-o'-ma*) [*pseudo-*; *epithelioma*]. An affection of the skin simulating epithelioma.

Pseudoerysipelas (*su-do-er-i-pi'-el-as*) [*pseudo-*; *erysipelas*]. Inflammation of the cutaneous cellular tissue resembling erysipelas.

Pseudofluctuation (*su-do-fluk'-tu-ash-on*) [*pseudo-*; *fluctuation*]. A tremor simulating fluctuation, sometimes observed in tapping lipomas.

Pseudofracture (*su-do-frak'-chur*) [*pseudo-*; *fracture*]. A spontaneous fracture.

Pseudogelatin (*su-do-jel'-at-in*) [*pseudo-*; *gelatin*]. Any gelatinous substance derived from vegetable tissues.

Pseudogausesthesia (*su-do-gau-sesthe'-ee-ah*) [*pseudo-*; *gausesthesia*, numbness]. A condition in which other sensations accompany the sense of taste.

Pseudoglioma (*su-do-glio'-ma*) [*pseudo-*; *glioma*]. A name given to various changes of the vitreous humor, due to chronic choroiditis, and resembling glioma structure.

Pseudogonococcus (*su-do-gon'-o'-k'us*) [*pseudo-*; *gonococcus*]. A diplococcus resembling the gonococcus found in the normal urethra.

Pseudogonorrhea (*su-do-gon'-o'-r'-ee-ah*) [*pseudo-*; *gonorrhea*]. A simple nongonorrheal urethritis.

Pseudohematocele (*su-do-hem'-a'-sele*) [*pseudo-*; *hematocele*]. Hemorrhage occurring outside of the peritoneal cavity.

Pseudohemoglobin (*su-do-hem'-o'-glo'-bin*) [*pseudo-*; *hemoglobin*]. A brown crystalline of hemoglobin and oxygen having the effect of intermediate step between hemoglobin and ox-hemoglobin, on the reduction of the latter.

Pseudohermaphroditism (*su-do-her'-a'-fro'-dit-izm*) [*pseudo-*; *hermaphroditism*]. A condition simulating hermaphroditism.

Pseudohermia (*su-do-her'-ee-ah*) [*pseudo-*; *hernia*]. An empty hernia containing strangulated bowel when inflamed.

Pseudohyarthrosis (*su-do-hi-art'-hro-sis*) [*pseudo-*; *hyarthrosis*]. Apparent tearing of the knee joint from effusion into the joint between the patella and the tibia, and especially into the lacuna of the synovial bursa.

Pseudohydrophobia (*su-do-hi-dro-fob-ee-ah*) [*pseudo-*; *hydrophobia*]. A condition resembling hydrophobia at times produced by dread of the disease. See, *Lamprophobia*.

Pseudohypertrophic (*su-do-hi-per-tro'-fik*) [*pseudo-*; *hypertrophic*]. Pertaining to or characterized by pseudohypertrophy. P. Muscular Paralysis or Paralysis, Pseudohypertrophic. *Atrophia*.

Pseudohypertrophy (*su-do-hi-per-tro'-fik*) [*pseudo-*; *hypertrophic*]. False hypertrophy, increase in the size of an organ or a part and overgrowth of an important tissue. It is accompanied by diminution in function.

Pseudoileus (*su-do-il'-e-us*) [*pseudo-*; *ileus*].

Reflex ileus due to constriction of the mesentery, or of a diverticulum, or from traction of a pedicled ovarian tumor, contusion of the testicle or abdomen, or from movable kidney.

Pseudoinfluenza (*su-do-in-flu-en'-zah*) [*pseudo-*; *influenza*]. A disease simulating influenza but not due to *Bacillus influenzae*.**Pseudoleukemia** (*su-do-lu-ke'-me-ah*) [*pseudo-*; *leukemia*]. See *Hodgkin's Disease*. **P., Infantile**, von Jaksch's disease, a form of anemia occurring in young children, usually dependent on a rachitic diathesis, and not associated with much leukocytosis.**Pseudoleukocythemia** (*su-do-lu-ko-si-the'-me-ah*). Synonym of *Pseudoleukemia*.**Pseudolien** (*su-do-le'-en*). See *Spleen, Accessory*.**Pseudolipoma** (*su-do-lip-o'-mah*) [*pseudo-*; *lipoma*]. A localized edema resembling an accumulation of fat, occurring above the clavicle and about the knee, especially in cases of rheumatism.**Pseudolupus** (*su-do-lu'-pus*) [*pseudo-*; *lupus*]. A disease simulating lupus vulgaris, produced by a species of oidium. **P. vulgaris**. See *Dermatitis Blastomycetic*.**Pseudomalaria** (*su-do-mal-a'-re-ah*) [*pseudo-*; *malaria*]. A toxic disease simulating malaria.**Pseudomamma** (*su-do-mam'-ah*) [*pseudo-*; *mamma*]. A mamma-like structure sometimes occurring in dermoid cysts.**Pseudomania** (*su-do-ma'-ne-ah*) [*pseudo-*; *μανία*, madness]. 1. A form of insanity in which the patient accuses himself of crimes of which he is innocent. 2. A mania characterized by lying.**Pseudomembrane** (*su-do-mem'-bran*) [*pseudo-*; *membrane*]. A false membrane, such as is seen in diphtheria.**Pseudomembranous** (*su-do-mem'-bran-us*). Characterized by, or pertaining to, false membranes. **P. Inflammation**, any inflammation characterized by the formation of a false membrane.**Pseudomeninx** (*su-do-men'-inks*) [*pseudo-*; *μνίνη*, meninx]. A false membrane.**Pseudomnesia** (*su-do-ne'-ze-ah*) [*pseudo-*; *μνήσις*, remembrance]. Perversion of the memory in which things that never occurred seem to be remembered.**Pseudomonas** (*su-do-mo'-nas*) [*pseudo-*; *μόνος*, monad]. A genus of bacteria.**Pseudomucin** (*su-do-mu'-sin*) [*pseudo-*; *mucin*]. A substance allied to mucin, found in proliferative ovarian cysts.**Pseudomyxoma** (*su-do-miks-o'-mah*) [*pseudo-*; *μύξωμα*]. A tumor containing colloid matter derived from a ruptured mucous cyst.**Pseudoneuroma** (*su-do-nu-ro'-mah*) [*pseudo-*; *neuroma*]. A false neuroma. See *Neuroma*.**Pseudonuclein** (*su-do-nu'-kle-in*). See *Paranuclein*.**Pseudoparalysis** (*su-do-par-al'-is-is*) [*pseudo-*; *paralysis*]. Paralysis of motion, apparently but not really due to a lesion of the nervous

system. **P. agitans**. See *Dystaxia agitans*.

P. myasthenica, bulbar paralysis without apparent anatomic lesion. **P. of Rickets**, the inability to walk in severe cases of rickets, due to distortion of the bones. **P., Syphilitic**, an inflammatory condition of the epiphyses of the bones in syphilis causing a marked impairment of motion.

Pseudoparasite (*su-do-par'-ah-sif*) [*pseudo-*; *parasite*]. Any object resembling a parasite.**Pseudopellagra** (*su-do-pel-a'-grah*) [*pseudo-*; *pellagra*]. An affection regarded by some authorities as distinct from pellagra, but presenting similar skin symptoms.**Pseudophlegmon** (*su-do-pleg'-mon*) [*pseudo-*; *phlegmon*]. A simulated furuncle due to trophic nerve lesion.**Pseudoplegia** (*su-do-ple'-je-ah*) [*pseudo-*; *πληγί*, stroke]. Simulated or hysterical paralysis.**Pseudopod, Pseudopodium** (*su-do-pod, su-do-pu'-de-um*) [*pseudo-*; *πούς*, foot]. A protrusion of a portion of the substance of an amoeboid cell.**Pseudoptosis** (*su-do-to'-sis*) [*pseudo-*; *ptosis*]. A condition resembling ptosis caused by a fold of skin and fat depending below the edge of the eyelid.**Pseudoreaction** (*su-do-re-ak'-shun*) [*pseudo-*; *reaction*]. Agglutination not due to typhoid bacilli. Cf. *Pseudoclump*.**Pseudoscarlatina** (*su-do-skar-la'-te'-nah*) [*pseudo-*; *scarlatina*]. A febrile disease associated with a rash like that of scarlatina, occurring as a result of gonorrhea or after puerperal infection.**Pseudosclerosis** (*su-do-skle-ro'-sis*) [*pseudo-*; *sclerosis*]. An affection similar in symptoms to multiple sclerosis of the nervous system, but without the anatomic lesions.**Pseudosmia** (*su-doz'-me-ah*) [*pseudo-*; *ὀσμή*, smell]. Perversion of the sense of smell; an olfactory hallucination.**Pseudosphincter** (*su-do-sfink'-ter*) [*pseudo-*; *sphincter*]. An imperfect sphincter.**Pseudospleen, Pseudosplen** (*su-do-splen, -splen*). See *Spleen, Accessory*.**Pseudosteogenesis** (*su-dos-te-o-jen'-e-sis*) [*pseudo-*; *ἔσθω*, bone; *γενᾶν*, to produce]. Abnormal bone-formation.**Pseudosteum** (*su-dos'-te-um*). An abnormal bony growth.**Pseudostoma** (*su-dos'-to-mah*) [*pseudo-*; *στόμα*, a mouth]. An apparent aperture between endothelial cells that have been stained with silver nitrate.**Pseudotabes** (*su-do-la-bis*) [*pseudo-*; *tabes*]. 1. A disease simulating tabes dorsalis or tabes mesenterica. 2. The ataxic form of alcoholic multiple neuritis.**Pseudotetanus** (*su-do-tet'-an-us*) [*pseudo-*; *tetanus*]. Escherich's symptom complex. A rare type of tetanus in which the masseters and dorsal muscles are principally involved.**Pseudotrichosis** (*su-do-trih-o'-sis*) [*pseudo-*; *trichosis*]. The growth of hair in an abnormal location.**Pseudotuberculosis** (*su-do-tu-ber-ku-lo'-sis*)

[*pseudo*-; *tuberculosis*]. A disease resembling tuberculosis, but not caused by the tubercle bacillus.

Pseudotumor (*su-do-tu'-mor*) [*pseudo*-; *tumor*]. A phantom tumor; one that changes its location is called an ambulant tumor.

Pseudotyphoid (*su-do-ti'-oid*) [*pseudo*-; *typhoid*]. Spurious typhoid, a disease simulating typhoid fever, but in which the true lesions of this disease as well as the typhoid bacilli are absent.

Pseudovacuoles (*su-do-vak'-u-ölz*) [*pseudo*-; *vacuole*]. Transparent bodies containing pigment found by Laveran in blood of malarial patients.

Pseudovermicule (*su-do-ver'-mik-ül*) [*pseudo*-; *vermes*, worm]. The motile stage in the development of certain plasmodiums, as that produced from the fertilized macrogamete in the case of the malarial parasite and allied organisms.

Pseudoxanthin (*su-do-xan'-thin*) [*pseudo*-; *xanthin*]. 1. $C_8H_8N_2O_2$, a leukomatin isolated from fresh beef. 2. A body isomeric with xanthin, obtained by action of sulfuric acid upon uric acid.

Pseudoxanthoma (*su-do-xan'-tho'-mah*) [*pseudo*-; *xanthoma*]. A rare chronic disease of the skin characterized by an eruption of yellowish plaques, slightly elevated, with an especial predilection for certain parts of the skin, e. g., lower abdomen, axilla, sides of neck, etc., in which it differs from true xanthoma, which affects by preference the flexures of fingers, the extensor surfaces of elbows and knees, etc. It differs histologically from true xanthoma in being a degeneration of the elastic tissue of the skin. Syn., *Pseudoxanthoma elastica*.

Pseudulcus (*süd-ul'-kus*). A false ulcer. **P. ventriculi**, a sensory neurosis of the stomach closely resembling gastric ulcer.

Pseudydrops (*süd-i'-drops*) [*pseudo*-; *ὑδρῶς*, dropsy]. False dropsy.

Psilosis (*si-lo'-sis*) [*ψιλός*, bare]. 1. The removal of the hair from a part; depilation. 2. See *Aplitha tropica*.

Psilothin, **Psilothinum** (*si-lo'-thin*, *si-lo-thi'-num*). A depilatory cerate containing elemi, 40%; benzoin, 10%; resin, 8%; yellow wax, 10%; and diachylon plaster, 30%, applied warm, and when cool, removed with the hair adhering.

Psilothric (*si-lo'-thrik*) [*ψιλοθρίον*, a depilatory]. Depilatory.

Psilotic (*si-lo'-tik*). Relating to psilosis.

Psittacosis (*sit-ak'-o'-sis*) [*ψιττακός*, a parrot]. A disease of birds, transmissible to man, in whom it runs the course of a violent typhoid fever without abdominal symptoms but with pulmonary disorders resembling severe infectious pneumonia. It is due to *Bacillus psittacosis*.

Psoadotomia (*so-ad-o-to'-me-ah*) [*psaos*; *τομή*, a cutting]. Incision of the psoas muscle.

Psoas (*so'-as*) [*ψῶα*, loin]. One of two muscles—*psoas magnus* and *psoas parvus*—of the loins

and pelvis. See under *Muscle*. **P. Abscess**, an abscess, usually dependent upon tubercle disease of a vertebra, making its way along the sheath of the psoas muscle and pointing at the front of the thigh, below Psoas's ligament, to the outer side of the spine of the pubis.

Psodymus (*sod'-im-us*) [*psaos*; *διδυμός*, double]. A monster with two heads and chests and two joined abdominal and pelvic cavities.

Psoitis (*so-i'-tis*) [*psaos*; *ερεγ*, inflammation]. Inflammation of the psoas muscles or of the region of the loins.

Psora (*so'-rah*) [*ψώρα*, the itch]. Scabies.

Psorenteritis (*so-ren-ter-i'-tis*) [*psora*, catarrh]. The intestinal condition in Asiatic cholera.

Psoriasis (*so-ri-as'-ik*). See *Psoriasis*.

Psoriasis (*so-ri-as'-is*) [*psora*]. A chronic inflammatory disease of the skin characterized by the development of reddish patches covered with whitish scales. The disease affects especially the extensor surfaces of the limbs. **P. annularis**. Synonym of *P. circinata*. **P. buccal**, **P. buccalis**. Synonym of *Leukoplakia buccalis*. **P. circinata**, psoriasis in which the central part of the lesions has disappeared, leaving ring-shaped patches. **P. diffusa**, a form in which there is multiplicity of large contiguous lesions. **P. guttata**. See *P. punctata*. **P. gyrata**, psoriasis with a serpentine arrangement of the patches. **P. lotricum**, a form attacking the hands and arms, particularly of washwomen. Syn., *Washwoman's itch*. **P. osteacea**, psoriasis associated with affections of joints. **P. pistorum**, baker's itch. **P. punctata**, a form in which the lesions consist of minute red papules which rapidly become surrounded by dirty scales. **P. universalis**, a form in which the lesions are over all the body.

Psoriatic (*so-ri-at'-ik*) [*psoriasis*]. Pertaining to or affected with psoriasis.

Psorophthalmia (*so-ro-fthal'-me-ah*) [*psora*; *ὀφθαλμία*, eye]. Marginal blepharitis.

Psorosperm (*so'-ro-sperm*) [*psora*, catarrh; *σπέρμα*, seed]. A unicellular organism belonging to the protozoa, a coccidium.

Psorospermial, **Psorospermic** (*so-ro-sperm'-e-ah*, *so-ro-sperm'-ik*) [*psorosperm*]. Pertaining to, or affected with, psorospermus.

Psorospermiasis (*so-ro-sperm-i'-as'-is*) [*psorosperm*]. A state characterized by the presence of psorosperms.

Psorospermosis (*so-ro-sperm-o'-sis*) [*psorosperm*]. A diseased condition associated with the presence of psorosperms. **P.**, **Proliferative Follicular**. Synonym of *Acne vulgaris* and *Darier's Disease*.

Psychalgia (*si-kal'-je-ah*) [*ψυχή*, mind, *ἄλγος*, pain]. Painful cerebration in mania.

Psychalia (*si-ku'-le-ah*) [*ψυχή*, mind]. A maniac condition attended by hallucinations.

Psychasthenia (*si-kas-the'-ne-ah*) [*ψυχή*, mind, *ασθένεια*]. Mental fatigue.

Psyche (*si'-ke*) [*ψυχή*, mind]. The brain and myelon considered as one organ; the cerebro-spinal axis.

Psycheism (si'-ke-izm). Hypnotism.

Psychiatric (si'-ke-at'-rik) [*psychiatry*]. Pertaining to psychiatry.

Psychiatry (si'-ki'-at-re) [*psyche*; *iateriā*, healing art]. The science and treatment of the diseases of the mind.

Psychic, Psychical (si'-kik, si'-kik-al) [*psyche*]. Pertaining to the mind. **P. Blindness.** See *Blindness*. **Psychic.** **P. Deafness.** See *Deafness*. **Psychic.** **P. Infection,** mental infection; the development of a mental condition or disease through an influence acting upon the mind.

Psycho- (si'-ko-) [*ψυχή*, mind]. A prefix denoting connection with the mind.

Psychalgia (si'-ko-al-ga'-le-ah). See *Psychalgia*.

Psychoauditory, Psychauditory (si'-ko-aū'-dit-o-ree, si'-kro-aū'-dit-o-ree) [*psycho-*; *auditory*]. Pertaining to the psychic perception of sound. **P. Area,** the cortical area concerned in the conscious perception of sound.

Psychocortical (si'-ko-kur'-tik-al) [*psycho-*; *cortex*]. Pertaining to that part of the cerebral cortex concerned in the conscious perception of sensations.

Psychology (si'-kul'-o-je) [*psycho-*; *λόγος*, science]. The science having for its object the investigation of the mind or consciousness.

Psychometry (si'-kum'-et-ree) [*psycho-*; *μέτρον*, a measure]. The measurement of the duration of psychic processes.

Psychomotor (si'-ko-mō'-tor) [*psycho-*; *movere*, to move]. Pertaining to voluntary movement, as the *psychomotor* area, disposed chiefly along each side of the central fissure.

Psychoneurosis (si'-ko-nū'-rō'-sis) [*psycho-*; *neurosis*]. Mental disease not dependent on any organic lesion.

Psychopathia (si'-ko-pa'-the-ah) [*psycho-*; *πάθος*, disease]. Psychopathy. **P. sexualis,** psychopathia characterized by perversion of the sexual functions.

Psychopathology (si'-ko-path'-ol'-o-je) [*psycho-*; *pathology*]. 1. The pathology of mental diseases. 2. The legal aspect of insanity.

Psychopathy (si'-kop'-ath-e) [*psycho-*; *πάθος*, disease]. Any disease of the mind.

Psychophysical (si'-ko-fiz'-ik-al) [*psychophysics*]. Pertaining to psychophysics. **P. Law.** See *Law, Fechner's*.

Psychophysics (si'-ko-fiz'-iks) [*psycho-*; *physical*]. The study of mental processes by physical methods; the study of the relation of stimuli to the sensations which they produce, especially the determination of the differences of stimulus required to produce recognizable differences of sensation; experimental psychology.

Psychophysiology (si'-ko-fiz'-e-ol'-o-je). Physiologic psychology, mental physiology.

Psychoplegic (si'-ko-plē'-jik) [*psycho-*; *πληγή*, a blow]. A drug which acts by an elective affinity for the gray matter of the brain, lessening its excitability and suppressing its receptivity.

Psychosensory (si'-ko-sen'-so-re) [*psycho-*; *sen-*

sory]. Pertaining to or concerned in the conscious perception of sensory impulses.

Psychosexual (si'-ko-seks'-u-al). Relating to combined mental and sexual diseases.

Psychosis (si'-ko'-sis) [*psyche*]. A disease of the mind, especially one without demonstrable organic lesions.

Psychotherapy (si'-ko-ther'-ap-e) [*psycho-*; *θεραπεία*, treatment]. The treatment of disease by mental influence or by suggestion.

Psychovisual (si'-ko-vizh'-u-al). Relating to subjective vision or to vision unaccompanied by stimulation of the retina.

Psychralgia, Psychroalgia (si'-kral'-je-ah, si'-kro-al'-je-ah) [*ψυχρός*, cold; *ἄλγος*, pain]. A morbid condition characterized by a painful subjective sense of cold.

Psychro- (si'-kro-) [*ψυχρός*, cold]. A prefix meaning cold.

Psychroesthesia (si'-kro-es-the'-ze-ah) [*psychro-*; *αἰσθησις*, sensation]. Subjective sensation of cold.

Psychrometer (si'-krom'-et-er) [*psychro-*; *μέτρον*, a measure]. An instrument for determining the atmospheric moisture by estimating the amount of cold required to precipitate it.

Psychrophilic (si'-kro-fil'-ik) [*psychro-*; *φιλέω*, to love]. Applied to microorganisms which develop best at room-temperature—15°-20° C.

Psychrophobia (si'-kro-fō'-be-ah) [*psychro-*; *φόβος*, fear]. 1. Morbid dread of cold. 2. Morbid sensibility to cold.

Psychrophore (si'-kro-fōr) [*psychro-*; *φέρω*, to bear]. An instrument for applying cold to deeply seated parts, as a double-current catheter for applying cold to the posterior part of the urethra.

Psychrotherapy (si'-kro-ther'-ap-e) [*psychro-*; *θεραπεία*, treatment]. The treatment of disease by the use of cold.

Psydracia (si'-dra'-se-ah) [*ψύδραξ*, a blister; *a*, pimple]. An old term for eczema.

Ptarmic (tar'-mik) [*πταρμικός*, a sneezing]. 1. Pertaining to the act of sneezing; sternutatory. 2. A substance that produces sneezing.

Ptelein (te'-le-in). An alcoholic extract from the root-bark of *Ptelea trijoliata*, used as a tonic and in dyspepsia. Dose 1-3 gr (0.015-0.2 Gm.).

Ptenium, Ptenum (te'-ne-um, te'-num) [*πτενίς*, winged]. A name given to osmium because of its volatility.

Pteric (ter'-ik). Pertaining to the pterion.

Pterion (te'-re-on). See under *Cranometric Point*.

Pterygium (ter'-ij'-e-um) [dim. of *πτερυγία*, wing]. A triangular patch of mucous membrane growing on the conjunctiva, usually on the nasal side of the eye. The apex of the patch points toward the pupil, the fan-shaped base toward the canthus.

Pterygoid (ter'-ij'-oid) [*πτερυγία*, wing, *είδος*, like]. 1. Wing-shaped, as the *pterygoid* plate of the sphenoid bone. 2. Pertaining to the pterygoid canal, pterygoid plate, pterygoid plexus, etc. **P. Fossa**, the notch separating the ex-

ternal and internal plates of the pterygoid process of the sphenoid.

Pterygomaxillary (*ter-ig-o-maks'-il-a-re*) [*pterygoid*; *maxillary*]. Pertaining to the pterygoid process and the maxilla. **P. Fissure**, an elongated fissure formed by the divergence of the superior maxillary bone from the pterygoid process of the sphenoid bone. **P. Ligament**. See *Ligament*, *Pterygomaxillary*.

Pterygopalatine (*ter-ig-o-pal'-at-in*) [*pterygoid*; *palatine*]. Situated between the pterygoid plate of the sphenoid bone and the palate bone, as the pterygopalatine canal.

Ptilosis (*ti-to'-sis*) [*ptilov*, feather]. Loss of the hair, especially loss of the eyelashes.

Ptisan (*ti'-an*) [*ptisano*, peeled barley]. 1. Barley-water. 2. A decoction of barley used as a medicinal drink. Syn., *Tisane*.

Ptomain (*to'-ma-in*) [*ptoma*, corpse]. A basic compound resembling the alkaloids, formed by the action of bacteria on animal and vegetable tissues; a putrefactive or animal alkaloid. TABLE OF PTOMAINS: **Amido-valerianic acid** ($C_8H_{11}NO_2$), found in putrefying fibrin and meat; nontoxic.

Amylamin ($C_5H_{13}N$), found in cod-liver oil, horn, putrid yeast; toxic. **Asellin** ($C_8H_{13}N_2$), found in cod-liver oil; toxic.

Betain ($C_5H_{13}NO_2$), found in mussels, human urine; nontoxic. **Butylamin** ($C_4H_{11}N$), found in putrefying fish (pike); nontoxic.

Cadaverin ($C_3H_7N_2$), found in putrefying animal tissues and in cultures of comma bacillus; slightly toxic. **Caproylamin**. See *Hexylamin*.

Cholin ($C_5H_{13}NO_2$), found in decomposing animal tissues and in proteus and comma bacillus cultures; toxic. **Collidin** (?) ($C_8H_{11}N$), found in putrid mixture of pancreas and gelatin.

Diethylamin ($C_4H_{11}N$), found in putrefying fish (pike); nontoxic. **Dihydrolutidin** ($C_8H_{13}N$), found in cod-liver oil; toxic.

Dimethylamin (C_3H_7N), found in putrid gelatin, yeast, and fish; nontoxic. **Eczeamin**, a white, crystalline substance, soluble in water, feebly alkaline in reaction, extracted from the urine in eczema; toxic.

Ethylamin (C_2H_7N), found in putrefying yeast and in wheat-flour; nontoxic. **Ethylidenediamin** (?) ($C_2H_5N_2$), found in putrefying haddock; toxic.

Gadinin ($C_7H_{17}NO_2$), found in decomposing haddock; toxic. **Hexylamin** ($C_6H_{15}N$), found in putrid yeast; toxic.

Hydrocollidin (?) (C_4H_9N), found in putrefying mackerel, horse-flesh, and ox-flesh; toxic. **Hydrocoridin** ($C_{10}H_{17}N$), found in agar-culture of *Bacterium album*.

Methylamin (CH_3N), found in putrefying fish; nontoxic. **Methylguanidin** ($C_2H_5N_3$), found in putrefying horse-flesh; toxic.

Morruhic acid ($C_9H_{15}NO_2$), found in cod-liver oil. **Morruhin** ($C_{10}H_{17}N_3$), found in cod-liver oil; diuretic and diaphoretic.

Muscarin ($C_8H_{15}NO_3$), found in decomposing haddock; toxic. **Mydalen**, found in putrefying human organs; toxic.

Mydatoxin ($C_8H_{15}NO_2$), found in putrefying human organs; toxic.

Mydin ($C_8H_{11}NO$), found in putrid human tissues and in blood-serum cultures of bacillus of typhoid fever; nontoxic.

Myttilotoxin ($C_8H_{13}NO_2$), found in poisonous mussel (*Mytilus edulis*); toxic.

Neuridin ($C_8H_{13}N_2$), found in putrefying flesh; nontoxic. **Neura** ($C_8H_{13}NO$), found in putrefying flesh; toxic.

Parvolin (?) ($C_8H_{13}N$), found in putrefying mackerel and horse-flesh. **Peptotoxin**, found in decomposing proteid substances; toxic.

Phlogosin, found in cultures of *Staphylococcus pyogenes aureus*; powerful local irritant.

Propylamin (C_3H_7N), found in gelatin cultures of bacteria of human feces. **Ptomatropin**, found in decomposing meat, in the organs of persons dead of typhoid fever, etc.

It resembles atropin in its physiological and chemic properties. **Putrescin** ($C_4H_{11}N_2$), found in putrefying flesh, gelatin, etc.

slightly toxic. **Pyocyanin** ($C_{15}H_{17}NO_2$), found in cultures of *Bacillus pyocyaneus*; nontoxic.

Pyridin-base (?) (C_5H_5N), found in putrefying sea-polyps.

Pyridin-base (C_5H_5N), found in putrefying sea-polyps. **Saprin** ($C_8H_{13}N_2$), found in putrefying human liver and spleen; nontoxic.

Spasmotoxin, found in cultures of tetanus bacillus; toxic. **Susotoxin** ($C_{10}H_{19}N_2O$), found in cultures of hog-cholera bacillus; toxic.

Tetanin ($C_{11}H_{23}N_2O_4$), found in cultures of tetanus bacillus; toxic. **Tetanol** (C_4H_9N), found in putrefying fish (haddock); nontoxic.

Triethylamin ($C_6H_{15}N$), found in putrefying fish (haddock); nontoxic. **Trimethylamin** (C_3H_9N), found in herring-brine; nontoxic.

Trimethylenediamin ($C_3H_6N_2$) (?), found in beef-broth cultures of comma bacillus; toxic.

Typhotoxin ($C_7H_{11}NO_2$), found in bacillus cultures of bacillus of typhoid fever; toxic.

Tyrotrotoxin, found in poisonous cheese, cream, milk, etc.; toxic. **Unnamed** ($C_8H_{13}N_2O_4$), found in flesh, bones, etc.; toxic.

Unnamed ($C_6H_{13}NO_2$), found in cultures of tetanus bacillus; nontoxic. **Unnamed** ($C_8H_{15}N_2$), found in sugar undergoing alcoholic fermentation; nontoxic.

Unnamed ($C_8H_{15}NO_2$), found in putrefying horse-flesh; toxic. **Unnamed** ($C_7H_{13}N_2O_4$), found in flesh, bones, etc.; toxic.

Unnamed ($C_{10}H_{17}N_3$), found in putrid fibrin; toxic. **Unnamed** ($C_{11}H_{23}N_4$), found in fermenting cane-sugar.

Unnamed ($C_{11}H_{23}N_3O$), found in putrefying flesh. **Unnamed** ($C_{12}H_{25}N_4$), found in putrefying mackerel, horse-flesh, and ox-flesh.

Unnamed ($C_{12}H_{25}N$), found in urine in influenza; toxic. **Unnamed** ($C_{12}H_{25}N_2$), found in sugar undergoing alcoholic fermentation; nontoxic.

Unnamed ($C_8H_{15}NO_2$), found in putrefying horse-flesh; toxic. **Unnamed** ($C_7H_{13}N_2O_4$), found in flesh, bones, etc.; toxic.

Unnamed ($C_{10}H_{17}N_3$), found in putrid fibrin; toxic. **Unnamed** ($C_{11}H_{23}N_4$), found in fermenting cane-sugar.

Unnamed ($C_{11}H_{23}N_3O$), found in putrefying flesh. **Unnamed** ($C_{12}H_{25}N_4$), found in putrefying mackerel, horse-flesh, and ox-flesh.

Unnamed ($C_{12}H_{25}N$), found in urine in influenza; toxic. **Unnamed** ($C_{12}H_{25}N_2$), found in sugar undergoing alcoholic fermentation; nontoxic.

Unnamed ($C_8H_{15}NO_2$), found in putrefying horse-flesh; toxic. **Unnamed** ($C_7H_{13}N_2O_4$), found in flesh, bones, etc.; toxic.

Unnamed ($C_{10}H_{17}N_3$), found in putrid fibrin; toxic. **Unnamed** ($C_{11}H_{23}N_4$), found in fermenting cane-sugar.

Unnamed ($C_{11}H_{23}N_3O$), found in putrefying flesh. **Unnamed** ($C_{12}H_{25}N_4$), found in putrefying mackerel, horse-flesh, and ox-flesh.

Unnamed ($C_{12}H_{25}N$), found in urine in influenza; toxic. **Unnamed** ($C_{12}H_{25}N_2$), found in sugar undergoing alcoholic fermentation; nontoxic.

Unnamed ($C_8H_{15}NO_2$), found in putrefying horse-flesh; toxic. **Unnamed** ($C_7H_{13}N_2O_4$), found in flesh, bones, etc.; toxic.

Unnamed ($C_{10}H_{17}N_3$), found in putrid fibrin; toxic. **Unnamed** ($C_{11}H_{23}N_4$), found in fermenting cane-sugar.

Unnamed ($C_{11}H_{23}N_3O$), found in putrefying flesh. **Unnamed** ($C_{12}H_{25}N_4$), found in putrefying mackerel, horse-flesh, and ox-flesh.

Unnamed ($C_{12}H_{25}N$), found in urine in influenza; toxic. **Unnamed** ($C_{12}H_{25}N_2$), found in sugar undergoing alcoholic fermentation; nontoxic.

Unnamed ($C_8H_{15}NO_2$), found in putrefying horse-flesh; toxic. **Unnamed** ($C_7H_{13}N_2O_4$), found in flesh, bones, etc.; toxic.

Unnamed ($C_{10}H_{17}N_3$), found in putrid fibrin; toxic. **Unnamed** ($C_{11}H_{23}N_4$), found in fermenting cane-sugar.

Unnamed ($C_{11}H_{23}N_3O$), found in putrefying flesh. **Unnamed** ($C_{12}H_{25}N_4$), found in putrefying mackerel, horse-flesh, and ox-flesh.

Unnamed ($C_{12}H_{25}N$), found in urine in influenza; toxic. **Unnamed** ($C_{12}H_{25}N_2$), found in sugar undergoing alcoholic fermentation; nontoxic.

Unnamed ($C_8H_{15}NO_2$), found in putrefying horse-flesh; toxic. **Unnamed** ($C_7H_{13}N_2O_4$), found in flesh, bones, etc.; toxic.

Unnamed ($C_{10}H_{17}N_3$), found in putrid fibrin; toxic. **Unnamed** ($C_{11}H_{23}N_4$), found in fermenting cane-sugar.

Unnamed ($C_{11}H_{23}N_3O$), found in putrefying flesh. **Unnamed** ($C_{12}H_{25}N_4$), found in putrefying mackerel, horse-flesh, and ox-flesh.

Unnamed ($C_{12}H_{25}N$), found in urine in influenza; toxic. **Unnamed** ($C_{12}H_{25}N_2$), found in sugar undergoing alcoholic fermentation; nontoxic.

Unnamed ($C_8H_{15}NO_2$), found in putrefying horse-flesh; toxic. **Unnamed** ($C_7H_{13}N_2O_4$), found in flesh, bones, etc.; toxic.

Unnamed ($C_{10}H_{17}N_3$), found in putrid fibrin; toxic. **Unnamed** ($C_{11}H_{23}N_4$), found in fermenting cane-sugar.

Unnamed ($C_{11}H_{23}N_3O$), found in putrefying flesh. **Unnamed** ($C_{12}H_{25}N_4$), found in putrefying mackerel, horse-flesh, and ox-flesh.

Unnamed ($C_{12}H_{25}N$), found in urine in influenza; toxic. **Unnamed** ($C_{12}H_{25}N_2$), found in sugar undergoing alcoholic fermentation; nontoxic.

Unnamed ($C_8H_{15}NO_2$), found in putrefying horse-flesh; toxic. **Unnamed** ($C_7H_{13}N_2O_4$), found in flesh, bones, etc.; toxic.

of the levator palpebræ superioris. The term is also applied to abnormal depression of other organs; prolapse. **P.**, **Abdominal**, enteroposis, Glénard's disease. **P. iridis**, prolapse of the iris. **P. sympathetica**, ptosis in connection with paresis of the cervical sympathetic nerve and associated with miosis and vasomotor paralysis of the side of the face affected.

Ptyalin (ti'-al-in) [πτάλον, saliva]. A diastatic ferment found in saliva, having the property of converting starch into dextrin and sugar. The starch first becomes converted into achroodextrin and erythroedextrin; these by hydration into maltose, and the latter, by further hydration, into dextrose.

Ptyalinogen (ti'-al-in'-o-jen) [ptyalin; γεννώ, to produce]. The hypothetic antecedent of ptyalin.

Ptyalism, **P.**, **Mercurial** (ti'-al-izm) [πτάλον, saliva]. Salivation.

Ptyalize (ti'-al-iz) [πτάλον, saliva]. To produce ptyalism.

Ptyalogog (ti'-al'-o-gog) [πτάλον, saliva; γωγώ, leading]. A sialagog.

Pubertas (pu-ber'-tas) [L.]. Puberty. **P. plena**, complete puberty. **P. præcox**, puberty at a very early age.

Puberty (pu-ber'-te) [pubertas, from *puber*, adult]. 1. The period at which the generative organs become capable of exercising the function of reproduction, signalized in the boy by a change of voice and discharge of semen, in the girl by the appearance of the menses.

Pubes (pu'-bēs) [L.]. 1. The pubic hair. 2. The hairy region covering the os pubis. 3. The os pubis or pubic bone; that portion of the ingominate bone forming the front of the pelvis.

Pubescence (pu-bes'-ens) [pubescentia]. 1. Hairiness; the presence of fine soft hairs. 2. Puberty, or the coming on of puberty.

Pubic (pu'-bik) [pubes]. Pertaining to the pubes. **P. Bone**, the os pubis.

Pubiotomy, **Pubeotomy** (pu-be'-of-o-me) [pubes; τμήν, a cutting]. The operation of dividing the pubic bone to facilitate delivery in cases of pelvic malformation. See also *Symphysiotomy*.

Pubis (pu'-bis). The pubic bone.

Pubofemoral (pu-ba'-fem'-ar-al) [pubes; femur]. Pertaining to the pubes and the femur.

Pubovesical (pu-bo-ves'-ik-al) [pubes; vesica, bladder]. Pertaining to the pubes and bladder.

Pudenda (pu-den'-dah). See *Pudendum*.

Pudental (pu-den'-dal) [pudenda]. Pertaining to the pudenda.

Pudendum (pu-den'-dum) [pudere, to be ashamed]. The external genital organ, especially of the woman, generally used in the plural, *pudenda*.

Pudic (pu'-dik) [pudenda]. Pertaining to the pudenda, as the *pudic* artery.

Puericulture (pu-er-e-kul'-tūr) [puer, a child; cultura, culture]. That branch of hygiene

which deals with the rearing of children and the care of women during pregnancy that they may bring forth healthy offspring.

Puerile (pu'-er-il) [puer, a child]. Boyish; childish; pertaining to childhood. **P. Respiration**, exaggerated breath-sounds with expiration prolonged and high-pitched, such as is heard in healthy children.

Puerpera (pu-er'-pe-rah) [puer, child; parere, to bear]. A woman who is in labor or has recently been delivered.

Puerperal (pu-er'-pe-ral) [puerpera]. Pertaining to, caused by, or following childbirth, as *puerperal* convulsions, *puerperal* eclampsia. **P. Fever**, an acute, febrile disease of women in childbed, due to septic infection. **P. Insanity**, insanity occurring during the puerperium, usually within five or ten days after delivery. It may take the form of mania (*puerperal* mania), melancholia (*puerperal* melancholia), or dementia (*puerperal* dementia).

Puerperalism (pu-er'-pe-ral-izm). A comprehensive term for all the pathologic conditions incident to the puerperal state. **P.**, **Infantile**, any pathologic condition incident to the newborn. **P.**, **Infectious**, puerperal disease due to infection.

Puerperant (pu-er'-pe-ral). See *Puerpera*.

Puerperium (pu-er'-pe'-re-um) [puerpera]. 1. The state of a woman in labor or of one who has just been delivered. 2. The period from delivery to the time when the uterus has regained its normal size which is about six weeks.

Puffball. See *Lycoperdon*.

Pugil, **Pugillus** (pu'-jil, pu-jil'-us) [L.]. A handful.

Pulex (pu'-leks) [L.]. The flea; an insect parasitic on the skin of man and animals.

P. irritans, a species common in Europe and parasitic on the skin of man; its bite causes severe itching and localized swelling.

P. penetrans, the chigoe, or jigger-flea, a species the female of which burrows under the skin of the feet to deposit its ova, producing a severe irritation that may proceed to serious inflammations.

Pulicaris (pu'-lik-a'-ris) [pulex]. Marked with little spots like flea-bites. **P. morbus**, a name for typhus, applied because of the petechias which occur in that disease.

Pullulation (pul-u-lā'-shun) [pullulare, to put forth; to bud, to sprout]. The act of sprouting or budding, a mode of reproduction seen, e. g., in the yeast-plant.

Pulmometer (pul-mom'-et-er). See *Spirometer*.

Pulmometry (pul-mom'-et-re). See *Spirometry*.

Pulmonary (pul'-mon-a-re) [pulmo, a lung]. Pertaining to or affecting the lungs, as *pulmonary* arteries, *pulmonary* emphysema.

Pulmonectomy (pul-mōn-ek'-to-me). See *Pneumonectomy*.

Pulmonic (pul-mon'-ik) [pulmonary]. 1. Pertaining to the lungs; *pulmonary*. 2. Per-

taining to the pulmonary artery, as *pulmonic valves*. 3. Produced at the pulmonic valve, as *pulmonic murmur*. **P.** Fever, croupous pneumonia.

Pulmonin (*pul'-mon-in*). An organotherapeutic preparation made from calves' lungs, and used in pulmonary affections.

Pulmonitis (*pul-mon-i-tis*). Synonym of *Pneumonia*.

Pulp (*pulp*). 1. The soft, fleshy part of fruit. 2. The soft part in the interior of an organ, as the *pulp of the spleen*, the *pulp of a tooth*.

Pulpefaction (*pul-pe-fak'-shun*) [*pulp*, *puerre*, to make]. Conversion into a pulpy substance.

Pulpitis (*pul-pi-tis*) [*pulp*, *itis*, inflammation]. Inflammation of the dental pulp.

Pulpy (*pul'-py*) [*pulp*]. Resembling pulp; characterized by the formation of a substance resembling pulp.

Pulsatile (*pul'-sat-il*) [*pulsare*, to strike]. Pulsating, throbbing.

Pulsatilla (*pul-sa-till-ah*) [L.]. The herb of *Anemone pulsatilla* and of *Anemone pratensis*, of the order *Ranunculaceae*, containing a crystalline principle, *anemonin*, $C_{15}H_{14}O_6$. Pulsatilla is employed in amenorrhea, dysmenorrhea, and in inflammation of mucous membranes. Anemonin is used in bronchitis and asthma. Dose: 4 gr. (100 mg.) (Gm.). Dose of pulsatilla in powder: 2 gr. (60 mg.) (Gm.).

Pulsating (*pul'-sat-ing*) [see *Pulsation*]. Exhibiting pulsation. **P.** Aorta, the pulsation of the abdominal aorta seen in nervous and anemic persons. **P.** Empyema, an accumulation of pus in the pleural cavity that transmits the pulsations of the heart.

Pulsation (*pul-sa-shun*) [*pulsare*, from *pulsare*, to strike]. A beating or throbbing. **P.** Suprasternal, pulsation at the suprasternal notch. It may be due to aneurism, a dilated aortic arch, or the presence of an anomalous artery.

Pulse, Pulsus (*puls*, *puls'-us*) [*pulsus*, the pulse]. 1. The intermittent change in the shape of an artery due to an increase in the tension of its walls following the contraction of the heart. The pulse is usually counted at the wrist (*radial pulse*), but may be taken over any artery that is palpable, as the temporal, brachial, femoral, dorsalis pedis, etc. 2. [rare], a thick pap made of meal. Leguminous plants or their seeds, as beans, peas, etc. **P.**, Alternating, *Pulsus alternans*, a variety in which a large pulsation alternates with a small one. **P.**, Anacrotic, one the sphygmograph tracing of which is characterized by notches in the ascending limb. **P.**, Angry. Synonym of *P. Brev*. **P.**, Ardent, one with a quick, full wave which seems to strike the finger at a single point. **P.**, Bigeminal, *Pulsus bigeminus*, one in which the heart occurs in pairs so that the longer pause follows every two beats. **P.-breath**, a peculiar audible pulsation of the breath corresponding to the heart beats, observed in cases of dry cavity of the lungs, with thick walls not separated from the heart by permeable lung

tissue. **P.**, Capillary, an intermittent (2) and emptying of the capillaries of the skin. It is common in acute erysipelas and is seen under the finger nail or on the forehead. **Pulsus celer**, a quick, short pulse. **Pulsus celer et altus**, a quick full pulse seen especially in acute erysipelas. **P.**, Contracted, a small pulse with a high tension. **P.**, Cordy, a tense pulse. **P.**, Corrigan's. **P.**, Corrigan's Pulse. **P.-curve**, the tracing, the pulse, called a sphygmogram, from the sphygmograph. **P.**, Depressed, one both deep and weak. **P.**, Diastolic, one in which the diastolic wave or trough is exaggerated. It is observed when the systolic tension is low, and gives to the tracing the impression of two beats. **P.**, Eruptive, a subjective illumination of a dark area of the face with each heart beat, a condition sometimes noted after violent exercise, and due to the mechanical irritation of the retina by the pulsing retinal arteries. **P.**, Febrile, one in which the artery is feverish, soft, and dilated, and exhibiting a well marked contraction. **P.**, Formicant, a small feeble pulse noted in the movements of ants. **P.**, Frequent, *Pulsus frequens*, one recurring at short intervals and differing from a quick pulse in which the pulse-wave has a quick rise. **P.**, Full, one in which the artery is distended with a large volume of blood and causes a feeling of being distended. **P.**, Funic, the systolic tide in the umbilical cord. **P.**, Hard, one characterized by high tension. **P.**, High tension, one due to increase of the peripheral resistance, together with a corresponding increase in the force of the ventricle. It is gradual in its increase, deep in character, slow in extending well up the arm, and the artery between the thumb and the firm round cord. **P.**, Hyperdiastolic, *Pulsus hyperdiastolicus*, a pulse in which the diastolic notch falls below the base line, indicating low tension, a symptom of great aortic regurgitation. **P.**, Infrequent, one the rhythm of which is slower than normal, i. e., in which the heart beats are fewer in a given time than normal. **P.**, Intermittent, one in which one or more beats are dropped. **P.**, Intricate, one irregular, small, infrequent pulse. **P.**, Irregular, one in which the beats occur at irregular intervals, or in which the force, as to rhythm and force, varies. **P.**, Jarring. **P.**, Liberating. **P.**, Jerky, a pulse which the artery is suddenly and rhythmically distended, as in acute erysipelas. **P.**, Jugular, pulsation of the jugular vein in the neck. It is due to transudation of blood. **P.**, Katakrotic, one with a characteristic line of descent in the sphygmogram tracing. **P.**, Locomotive. Synonym of *P. Brev*. **P.**, Low-tension, one which is small, short, and quick, indicating a low tension, elevated by pressure. **P.**, Paradoxical, *Pulsus paradoxus*, one that is weak in inspiration, a condition sometimes observed in adherent pericardium. **Pulsus quiescent**

inus, **P. trigeminus**, a pulse in which a pause occurs after every fourth or third beat respectively. **P., Quick**, one that strikes the finger rapidly, but also leaves it rapidly. **P., Retrosternal**, a venous pulse believed to be due to the pulsation of the left innominate vein, perceived on depressing the integument of the suprasternal notch. **P., Running**, a very weak, frequent pulse with low tension in the arteries, one pulse-wave running into the next with no apparent interval; it is observed after hemorrhage. **P., Senile**, one characteristic of old age. The secondary waves on the descending line of the sphygmogram are prominent and the first descending wave relatively large. **P., Shabby**, an ill-defined pulse due to weak heart and relaxed arteries. **P., Shuttle**, one in which the wave passes under the finger as if floating something solid with a fluid. **P., Slow**, one indicating a lengthened systolic contraction of the heart and prolonged diastole—often used to signify a pulse of slow rate. **P., Soft**, a pulse that is readily compressed. **P., Supradicrotic**, a dicrotic pulse in which the dicrotic wave resembles the cardiac beat. **P., Thready**, one that is scarcely perceptible, feeling like a thread under the finger. **P., Venous**, a pulse observed in a vein. **P., Vibrating**, **Pulsus vibrans**, a tense pulse with a wave arising quickly, giving the impression under the finger of the vibrations of a piece of tense gut. **P., Water-hammer**. See *Corrigan's Pulse*. **P., Wiry**, a small, rapid, tense pulse, feeling like a cord under the finger. It is observed in acute peritonitis.

Pulsimeter (*pul-sim'-et-er*) [*pulse*; *μέτρον*, a measure]. An instrument for determining the rate or force of the pulse.

Pulsus (*pul'-sus*). See *Pulse*.

Pultaceous (*pul-ta'-shus*) [*pulp*]. Having the consistence of pulp; mushy; soft.

Pulver (*pul'-ver*). See *Pulvis*.

Pulverization (*pul-ver-i-zā'-shun*) [*pulvis*, powder]. The act of reducing a substance to powder.

Pulverulence (*pul-ver'-u-lens*). The condition of being reduced to powder.

Pulverulent (*pul-ver'-u-lent*). Resembling or of the nature of a powder.

Pulvillus (*pul-vil'-us*) [L., "a little cushion"]. An olive-shaped pad of lint used in plugging deep wounds.

Pulvinar (*pul'-vin-ar*) [L., "couch"]. The posterior portion of the optic thalamus.

Pulvis [L.; pl. *pulveres*]. A powder. **P. acetanilidi compositus** (U. S. P.), a mixture of acetanilid, caffeine, and sodium bicarbonate. **P. aromaticus** (U. S. P.), a mixture of cinnamon, ginger, nutmeg, and cardamom seeds; used as a carminative. Dose 10-30 gr. (0.65-2.0 Gm.). **P. cretæ compositus** (U. S. P.), consists of prepared chalk, powdered acacia, and sugar and is used as a mild astringent. Dose 10 gr.-1 dr. (0.65-1.0 Gm.). **P. effervescens compositus** (U. S. P.), *Seidlitz powder*, a preparation consisting

of two powders: the white paper contains 35 gr. of tartaric acid, the blue paper, 40 gr. of sodium bicarbonate and 2 dr. of Rochelle salt. **P. glycyrrhizæ compositus** (U. S. P.), consists of senna, licorice, oil of fennel, washed sulfur, sugar; it is used as a laxative. Dose $\frac{1}{2}$ -2 dr. (2-8 Gm.). **P. ipecacuanhæ et opii** (U. S. P.). See *Opium, Powder of Ipecac and*. **P. jalapæ compositus** (U. S. P.), consists of jalap, 35 parts; potassium bitartrate, 65 parts; it is used as a hydragog cathartic. Dose $\frac{1}{2}$ -1 dr. (2-4 Gm.). **P. morphinæ compositus** (U. S. P.), consists of morphin sulfate, camphor, glycyrrhiza, precipitated calcium carbonate, and alcohol. Dose $\frac{1}{2}$ gr. (0.5 Gm.). **P. rhei compositus** (U. S. P.), consists of rhubarb, magnesia, and ginger; it is used as a mild laxative. Dose $\frac{1}{2}$ -1 dr. (2-4 Gm.).

Pumilin (*pu'-mil-in*). The oil from the young branches of *Pinus pumilio*.

Pump. An apparatus either drawing up a liquid into its hollow chamber, or, after sucking up the liquid, forcibly ejecting it from one end. **P., Air-**, one used to exhaust the air from a chamber or to force more air into a chamber already filled with air. **P., Breast-**, a pump for removing milk from the breast. **P., Stomach-**, one for removing the contents of the stomach in cases of poisoning.

Pumpkin-seed. The seed of *Cucurbita pepo* of the order *Cucurbitaceæ*. The seed *pepo* (U. S. P.) is used against tape-worm. Dose 4 oz. (130 Gm.).

Puncta (*punk'-tah*) [pl. of *punctum*, a point]. See *Punctum*. **P. dolorosa**, tender or painful points at the exit or in the course of nerves the seat of neuralgia; also called Val-leix's points. **P. lacrimalia**, the orifices of the lacrimal canaliculi in the eyelids near the inner canthus. **P. vasculosa**, minute red spots studding the cut surface of the white central mass of the brain. They are produced by the blood escaping from divided blood-vessels.

Punctate, **Punctated** (*punk'-tāt*, *punk'-ta-ted*) [*punctum*, point]. Dotted; full of minute punctures.

Puncticulum (*punk'-tik'-u-lum*) [dim. of *punctum*, a point; pl. *puncticula*]. A small point; petechia.

Punctum (*punk'-tum*) [L.] A point. **P. cæcum**. See *Blind Spot*. **P. proximum**. See *Near-point*. **P. remotum**. See *Far-point*.

Puncture (*punk'-chur*) [*pungere*, to prick]. 1. A hole made by a pointed instrument. **P., Exploratory**, the puncture of a cyst or cavity for removal of a portion of its contents for examination. **P., Lumbar**, puncture of the spinal canal for the withdrawal of cerebro-spinal fluid in hydrocephalus, first suggested by Quinke.

Punctured (*punk'-turd*) [*puncture*]. Produced by a prick, as a *punctured wound*.

Pungent (*pun'-jent*) [*pungere*, to prick] Acrid; penetrating; producing a pricking or painful sensation.

Puniceous (*pu-nish'-us*) [*punicus*, red]
Bright-carmine color

Punktograph (*punk'-to-graf*) [*punctum*, point; *γραφειν* to record] A radiographic instrument for the surgical localization of foreign bodies, as bullets embedded in the tissue.

Pupil (*pu'-pil*) [*pupilla*, a little girl, the name is believed to be derived from the small images seen in the pupil]. The aperture in the iris of the eye for the passage of light **P.**, **Argyll Robertson**. See **Argyll Robertson Pupil**. **P.**, **Artificial**, an aperture made by iridectomy when the normal pupil is occluded. **P.**, **Multiple**, the presence of bands dividing the pupil into several portions due to persistence of portions of the fetal pupillary membrane.

Pupillary (*pu'-pil-lar-ee*) [*pupil*] Pertaining to the pupil **P. Membrane**. See **Membrane, Pupillary**. **P. Membrane, Persistent**. See under **Membrane, Pupillary**. **P. Reflex**. See under **Reflex**.

Pupillometer (*pu'-pil-om'-et-er*) [*pupil*]. An instrument for measuring the pupil of the eye.

Pupilloscopy (*pu'-pil-os'-ko-pe*) [*pupil*; *σκοπεω*, to inspect] 1. Examination of the pupil. 2. Retinoscopy.

Pural (*pu'-ral*) Powdered wood charcoal saturated with a mixture of menthol, phenol, and benzoic acid, and compressed into cylinders, which are ignited for disinfecting purposes.

Purgation (*pur-ga'-shun*) [*purge*]. The act of purging.

Purgative (*pur'-ga-tiv*) [*purge*] 1. Producing purgation. 2. A drug producing copious evacuations of the bowel.

Purge (*purj*) [*purgare*, to purge] 1. To cause free evacuation of the bowel. 2. A drug that causes free evacuation of the bowel.

Purgen (*pur'-jen*) See **Phenolphthalein**.

Purging Nut. Curcua, the seed of *Isotropho purgans* or *I. curru*, having cathartic properties. Syn. *Barbados nut*.

Puriform (*pu'-ri-form*) [*pus*; *forma*, form]. Resembling pus.

Purin (*pu'-rin*) A carbon-nitrogen nucleus occurring in many products of tissue changes. **P.-bases**, **P.-bodies**, those derived from purin by simple substitution of the various hydrogen atoms by hydroxyl, amid, or alkyl groups; e. g., adenin, hypoxanthin, guanin, xanthin, and the methylxanthins, theobromin, caffeine, etc., together with uric acid. **P.s**, **Endogenous**, those originating from nucleic cleavage during metabolic processes. **P.s**, **Exogenous**, those derived from the purin-bodies of food stuffs.

Purinometer (*pu'-rin-om'-et-er*) [*purin*; *μετρον*, a measure]. An apparatus consisting of a graduated separator with a uniform bore for the clinical estimation of urinary purin.

Purkinje (*pur'-kin-je*) [J. E. Purkinje, a Bohemian physiologist, 1787-1867]. **P.'s Cells**, large ganglion-cells of the cerebellar cortex, disposed as a single row at the

junction of the nuclear and the molecular layer, and presenting perikaryon or dark-stained bodies, grouped in their largest diameter. **P.'s Corpuscles**, the laminae of the **P.'s Fibers**, anastomosing muscular fibers found in the subendothelial tissue of some arteries. They are made up of polygonal contractile cells, the margins of which contain numerous transversely situated fibers. **P.'s Figures**, the dark lines which are seen on a white background when a candle is held a short distance from the eye in a darkened room. They are produced by the retinal vessels. **P.'s Granular Layer**. See **Cerebellar Intergranular Spaces**. **P.'s Images**, three pairs of images of one object seen in an observed pupil. The first, erect, reflected from the anterior surface of the cornea; the second, erect, reflected from the anterior surface of the lens; the third, inverted, reflected from the posterior surface of the lens. **P.'s Network**, the network of beaded fibers (*Purkinje's fibers*) visible to the naked eye in the subendocardial tissue of the ventricles. **P.'s Vesicle**, the granular vesicle.

Purkinje-Sanson's Images. See **Purkinje's Images**.

Puro (*pu'-ro*). A meat juice, made by expression of the meat. It contains 20% of unchanged albumin.

Puroform (*pu'-ro-form*) An antiseptic and disinfectant said to be a combination of zinc and formaldehyde, thymol, menthol, and eucalyptol.

Puronal (*pu'-ron-al*) A proprietary antiseptic compound said to contain acetaminophen, 97.5% and bismuth subiodide, 2.5%.

Purple, Visual. See **Rhodospin**.

Purpura (*pur'-pur-ah*) [L.] A disease characterized by hemorrhages into the skin, taking the form of petechias, macules, or large patches. It may occur as an independent affection, or be symptomatic of other diseases. **P. fulminans**, a grave form of purpura developing in young children as a sequel to acute infectious diseases. It is of short duration, is marked by extensive extravasations, grave constitutional symptoms, and usually ends fatally. **P. hemorrhagica**, a recurrent disease with marked constitutional symptoms, followed by an eruption of hemorrhagic petechias upon the legs, and extending to successive crops over the whole body, the spots coalescing to form extensive irregular hemorrhagic patches or even raised blebs, etc. Hemorrhages may take place from the mucous surfaces or into the serous cavities. See *Land source*. *Marbout maculatus* (see *Wertho's disease*). **P. urticans**. See *Urticaria hemorrhagica*.

Purpuric (*pur'-pur-ic*) [*purpura*]. Pertaining to or resembling purpura.

Purpurin (*pur'-pur-in*) [*purpura*], C₁₆H₈N₄O₄. 1. A dye present with carotin in the red root, but also prepared artificially. 2. A color, thin, a red coloring matter sometimes present in urinary deposits.

puria (*pur-pu-rin-u'-re-ah*). See *Porphyria*.

Thrill. A fine trembling vibration like purring of a cat, perceived by palpation over the precordium. It may be due to aortic or to valvular heart lesion, especially mitral stenosis.

Purulence (*pur'-u-lens*) [*pus*]. The state of being purulent.

Purulent (*pur'-u-lent*) [*pus*]. Having the character of or containing pus; characterized by formation of pus. **P. Catarrh**, an inflammation of a mucous membrane accompanied by the production of pus. **P. Edema**, a serous infiltration of pus together with much

fluid (*pur'-u-lent*) [*pus*; *edema*, like]. Resembling pus; puriform.

Purulent. A liquid substance consisting of fluid and an albuminous fluid (liquor puris), found in certain kinds of inflammation. See *Purulent Test*. **P., Blue**, pus colored blue by *pyocyanus*. **P.-corpuscles**, the corpuscles found in pus. **P., Curdy**, pus having cheesy-looking flakes. **P., Ichorous**, pus that is thin and acrid. **P., Laudanous**, a whitish, inodorous pus, formerly thought to be essential to the healing of ulcers. **P., Orange**, pus colored by the presence of hematin crystals. **P., Sanious**, pus mixed with blood. **P.-tube**. See *Purulent Tube*.

Purulent (*pus-tu-lah ma-lig'-nah*). See *Purulent*.

Pustule (*pus'-tu-lant*) [*pustule*]. 1. Causing formation of pustules. 2. An irritant substance giving rise to the formation of pustules.

Pustule (*pus'-tu-lar*) [*pustule*]. Characterized by the presence of pustules.

Pustule (*pus-tu-lar-shun*) [*pustule*]. The formation of pustules.

Pustule (*pus'-tu-lah*) [*pustula*, a pustule]. A circumscribed elevation of the skin containing pus. **P., Malignant**, anthrax.

Crustaceous (*pus-tu-lo-kru-sis-shus*) [*crusta*, crust]. Characterized by formation of pustules and crusts.

Pyoderma (*pus-tu-lo-der'-mah*) [*pustule*; *derma*, the skin]. Any skin disease characterized by the formation of pustules.

Purulent (*pu-tu'-men*) [*L.*, "a husk"]. 1. The outer part of a drupe or shell of a nut. 2. The darker part of the lenticular nucleus of the brain.

Dana's Symptom-complex. Complicated by sclerosis of the lateral and posterior horns of the spinal cord.

Putrefaction (*pu-tre-fak'-shun*) [*putrid*; *jacere*, to decay]. The decomposition of nitrogenous organic matter under the influence of microorganisms, accompanied by the development of disagreeable odors, due to the evolution of ammonia, hydrogen sulfid, and other gases, and the production of aromatic bodies. In addition, many other compounds are formed, of which ptomaines are the most impor-

tant. The end-products are water, nitrogen, methane, and carbon dioxide.

Putrefactive (*pu-tre-fak'-siv*) [*see Putrefaction*]. Pertaining to or causing putrefaction.

Putrescence (*pu-tres'-ens*) [*putrescere*, to become rotten]. The state or process of putrefaction.

Putrescent (*pu-tres'-ent*) [*see Putrescence*]. Undergoing putrefaction.

Putrescentia (*pu-tres-en'-she-ah*). See *Putrescence*. **P. uteri**, the severest form of puerperal endometritis, with sanious ulceration of the wall of the uterus extending to the peritoneum.

Putrescin (*pu-tres'-in*) [*see Putrescence*]. $C_4H_9N_2$. A poisonous ptomaine, a clear, rather thin liquid, of a disagreeable odor, boiling at 156° - 157° C. See also under *Ptomaines*, Table of.

Putrid (*pu'-trid*) [*putridus*, rotten]. Rotten; characterized by putrefaction. **P. Fever**. Synonym of *Typhus*.

Putrilage (*pu'-tril-aj*) [*putrid*]. Putrescent material.

Putrilaginous (*pu-tril-aj'-in-us*) [*putrid*]. Gangrenous.

Pyarthrosis (*pi-ar-thro'-sis*) [*πύον*, pus; *άρθρον*, a joint]. Suppuration of a joint.

Pycnomorphous, **Pyknomorphous** (*pik-nomorf'-us*) [*πυκνός*, thick, *μορφή*, form]. Applied to nerve-cells in which the stained parts of the cell-body are compactly arranged.

Pycnosis (*pik-no'-sis*) [*πυκνός*, thick]. Thickening; inspissation.

Pyelitis (*pi-el-i'-tis*) [*πέλος*, a trough; *ίτις*, inflammation]. Inflammation of the pelvis of the kidney. It may be due to the irritation of calculi, to tuberculosis, or to acute specific fevers, but most commonly is secondary to diseases of the bladder. It is marked by pain and tenderness in the lumbar region, by a remittent fever, and by the presence in the urine of albumin, mucus, epithelial cells from the pelvis of the kidney, pus-corpuscles in large amount, and frequently blood. The urine is generally acid. **P., Calculous**, that due to calculi.

Pyelo- (*pi-e-lo-*) [*πέλος*, a trough]. A prefix denoting relation to the kidney.

Pyelocystitis (*pi-el-o-sis-ti'-tis*) [*pyelo-*; *cystitis*]. Pyelitis with cystitis.

Pyelocystostomosis (*pi-e-lo-sist-o-sto-mo'-sis*) [*pyelo-*; *κύστις*, a bladder; *στόμα*, a mouth]. The establishment of direct communication between the kidney and the bladder.

Pyelolithotomy (*pi-el-o-lith-ot'-o-mi*) [*pyelo-*; *lithotomy*]. Removal of a renal calculus through an incision into the pelvis of the kidney.

Pyelometer (*pi-el-om'-et-er*). Synonym of *Pelviometer*.

Pyelonephritis (*pi-el-o-nef-ri'-tis*) [*pyelo-*; *νεφρίτις*]. Inflammation of the kidney and its pelvis.

Pyelonephrosis (*pi-el-o-nef-ro'-sis*). Synonym of *Pyelonephritis*.

Pyelotomy (pi-el-ot'-o-me) [pyelo-; *tomē*, a cutting]. Incision of the renal pelvis.

Pyemia (pi-e-mi-a) [piā, pus, *aima*, blood]. A disease due to the presence of pyogenic microorganisms in the blood and the formation, wherever these organisms lodge, of embolic or metastatic abscesses. The symptoms are intermittent or remittent fever, associated with sweats and chills, rapid emaciation, slight jaundice, abscesses in different parts of the body, and often a purpuric eruption. The disease is generally fatal. **P., Arterial**, a name given to pyemia produced by disorganization of a cardiac thrombus and the dissemination of emboli through the arterial circulation.

Pyemic (pi-em'-ik or pi-e'-mik) [pyemia]. Pertaining to or affected with pyemia.

Pyesis (pi-e'-sis). Synonym of *Suppuration*.

Pygal (pi'-gal) [pygē, buttock]. Pertaining to the buttocks.

Pygalopubic (pi-gal-o-pu'-bit) [pygē, buttock, *pubes*]. Relating to the buttocks and the pubes.

Pygodidymus (pi-go-did'-im-us) [pygē, buttock, *didymos*, twin]. A double monster united by the buttocks.

Pygomelus (pi-gom'-el-us) [pygē, buttock, *melos*, a member]. A monster with a parasite attached to the hypogastric region or to the buttock.

Pygopagus (pi-gop'-ag-us) [pygē, buttock; *pagos*, joined]. A monster with conjoined buttocks or backs.

Pyin (pi'-in) [pū, pus]. An albuminous substance of complex constitution occurring in pus. It may be separated by adding sodium chlorid and filtering.

Pyknomorphous (pik-no-mor'-us). See *Pyknomorphous*.

Pyknosis (pik-no'-sis). See *Pycnosis*.

Pyla (pi'-lah) [pū, a gate]. The orifice by which the mesal portion of the mesocele communicates with the lateral.

Pyle (pi'-le) [pū, a gate]. The portal vein.

Pylema (pi-le'-ma) [pū, *aima*, blood]. The blood of the portal vein.

Pylephlebitis (pi-le-fleb'-i-tis) [pū, *phlebitis*]. Inflammation of the portal vein. The condition is usually secondary to disease of the intestine, is generally suppurative in character, and gives rise to the symptoms of pyemia.

Pylethrombophlebitis (pi-le-throm-bo-fleb'-i-tis) [pū, *thrombosis*, *phlebitis*]. Inflammation and thrombosis of the portal vein.

Pylethrombosis (pi-le-throm-bo'-sis) [pū, *thrombosis*]. Thrombosis of the portal vein.

Pylic (pi'-lik) [pū]. Pertaining to the portal vein.

Pyloralgia (pi-lor-al'-e-ah) [pylorus; *algos*, pain]. Pain in the region of the pylorus.

Pylorectomy (pi-lor-ek'-to-me) [pylorus; *ektomē*, excision]. Excision of the pylorus.

Pyloric (pi-lor'-ik) [pylorus]. Pertaining to the pylorus. **P. Glands**, glands situated in

the region of the pylorus and secreting the gastric juice. **P. Orifice**. See *Pylorus*. **P. Valve**. See *Pylorus*.

Pyloro- (pi-lo-ro-) [pylorus]. A prefix meaning relating to the pylorus.

Pylorocolic (pi-lor-o-kel'-ik). Pertaining to the connection between the pyloric end of the stomach and the transverse colon.

Pylorodiosis (pi-lor-o-dio'-sis) [pylorus; *diōsis*, a pushing through]. *Isotria*, a congenital division of the pyloric orifice forming gastronomy.

Pyloroplasty (pi-lor-o-plas'-te) [pylorus; *plastos*, to form]. Plastic operation upon the pylorus.

Pylorospasm (pi-lor-o-spazm). Spasm of the pylorus.

Pylorus (pi-lo'-rus) [pylorus, a gate]. 1. The circular opening of the stomach into the duodenum. 2. The fold of mucous membrane and muscular tissue surrounding the aperture between the stomach and the duodenum. **P., Antrum of**, the portion of the stomach between the pyloric orifice and the sphincter ani pylorici or transverse colon.

Pyo- (pi-o-) [pū, pus]. A prefix denoting relating to pus.

Pyocolpocoele (pi-o-kol'-po-sē). A suppurative tumor of the vagina.

Pyocolpos (pi-o-kol'-pos) [pyo, *kolpos*, vagina]. An accumulation of pus within the vagina.

Pyoctanin (pi-okt'-an-in). See *Pyoctanin*.

Pyocyanase (pi-o-sai'-an-ase) [pyo, *cyanos*, blue]. The enzyme that converts *Bacillus pyocyanus*. It digests the fibrin of typhoid, diphtheria, and cholera, and the fibrin. It is a yellowish-green acid-soluble phosphorus substance, soluble in water, in which it imparts a greenish tint.

Pyocyanin (pi-o-sai'-an-in) [see *Pyocyanin*, $C_{14}H_{10}NO_2$]. A colored substance derived from blue pus and from cultures of *Bacillus pyocyanus*.

Pyocyte (pi'-o-sē) [pyo, *kytos*, a cell]. A pus corpuscle.

Pyoderma (pi-o-der'-ma-shē) [pyo, *derma*, skin]. Any cutaneous lesion due to pyococcus.

Pyogenesis (pi-o-jen'-e-sis) [pyo, *genesis*, to produce]. The formation of pus.

Pyogenic (pi-o-jen'-ik) [see *Pyogenesis*]. Producing pus. **P. Membrane**. See *Pyogenic Membrane*. **P. Microorganisms**, the microorganisms producing pus. The pyogenic microorganisms are streptococci and staphylococci. Under certain circumstances pus may be produced by the micrococci of Frankel. *Isotria* and *pylorodiosis* are examples of typical pyogenic conditions.

Pyohæmia (pi-o-hē'-mē-shē). See *Pycæmia*.

Pyohemothorax (pi-o-hē-mo-thor'-aks). The presence of pus and blood in the pleural cavity.

Pyoid (pi'-oid) [pyo; *oidos*, like]. Resembling pus.

Pyoktanin (pi-okt'-an-in) [pyo, *kytos*, a cell]. A name given to pyocyanin.

methylene-blue on account of their germicidal properties. Pyoktanin has been used in diphtheria, cystitis, gonorrhea, ulcers, and inflammations of the conjunctiva, and as an infection in carcinoma. **P., Blue**, $C_{12}H_{10}N_2O$, antiseptic, disinfectant, and analgesic. Dose 1-5 gr. (0.065-0.32 Gm.). Dusting-powder, 1:1,000-1:100, aqueous solution, 1-4:10,000. **P.-mercury**, a compound of pyoktanin and mercury. Applied in 1:200 solution or with equal parts of starch. **P., Yellow**, $C_{12}H_{10}N_2O$, antiseptic and disinfectant, but weaker than blue pyoktanin. Dose 1-8 gr. (0.065-0.52 Gm.); aqueous solution, 1-4:10,000; dusting-powder, 1 to 2%; ointment, 2 to 10%.

Pyometra (*pi-o-me'trah*) [*pyo-*; *μήτρα*, womb]. A collection of pus in the uterus.

Pyonephrosis (*pi-o-nef-ro'-sis*) [*pyo-*; *νεφρός*, kidney]. An accumulation of pus in the pelvis of the kidney.

Pyoovarium (*pi-o-o-va'-re-um*) [*pyo-*; *ovarium*, ovary]. Ovarian abscess.

Pyopericarditis (*pi-o-per-e-kar-di'-tis*). Suppurative pericarditis.

Pyopericardium (*pi-o-per-e-kar-de-um*). The presence of pus in the pericardium.

Pyophthalmia (*pi-o-thal'-me-ah*) [*pyo-*; *ὀφθαλμία*, eye]. Purulent ophthalmia.

Pyophylactic (*pi-o-fil-ak'-tik*) [*pyo-*; *φυλάσσειν*, to guard]. Protecting against pus. **P. Membrane**, the pyogenic membrane.

Pyophysometra (*pi-o-fi-so-me'trah*) [*pyo-*; *φύσα*, wind, *μήτρα*, womb]. The presence of pus and gas in the uterus.

Pyopneumopericarditis (*pi-o-nu-mo-per-e-kar-di'-tis*) [*pyo-*; *πνεύμα*, air, *pericarditis*]. Pericarditis complicated by the presence of pus and gas in the pericardium.

Pyopneumothorax (*pi-o-nu-mo-tho'-raks*). An accumulation of air or gas and pus in the pleural cavity. **P., Subphrenic**, a collection of air and pus beneath the diaphragm. See *Pfeiffer's Sign*.

Pyopietic (*pi-o-poi-et'-ik*) [*pyo-*; *ποιεῖν* to make]. Secreting pus; suppurative.

Pyorrhea (*pi-or-e'-ah*) [*pyo-*; *ῥέω*, a flow]. A purulent discharge.

Pyosalpingoophoritis (*pi-o-sal-ping-go-o-fo-r-i'-tis*) [*pyo-*; *σάλπιγξ*, a tube; *oophoritis*]. Combined suppurative inflammation of the ovary and oviduct.

Pyosalpinx (*pi-o-sal'-pink*) [*pyo-*; *σάλπιγξ*, tube]. An accumulation of pus in the oviduct.

Pyosis (*pi-o'-sis*) [*πύον*, pus]. 1. Suppuration. 2. Suppuration of the eye.

Pyostatic (*pi-o-stat'-ik*) [*pyo-*; *στασις*, causing to stand]. 1. Preventing the formation of pus. 2. An agent arresting the secretion of pus.

Pyothorax (*pi-o-tho'-raks*). An accumulation of pus in the pleural cavity; empyema. **P., Subphrenic**, an abscess beneath the diaphragm.

Pyoureter (*pi-o-u-re'-ter*). An accumulation of pus in a ureter.

Pyoxanthin, Pyoxanthose (*pi-o-xan'-thin, pi-*

o-xan'-thōs) [*πύον*, pus; *ξανθός*, yellow]. A yellow substance sometimes found in pus, and resulting from the oxidation of pyocyanin.

Pyraloxin (*pi-ral-oks'-in*). See *Pyragallol, Oxidised*.

Pyramid (*pe'-ram-id*) [*πυραμίδα*]. A solid having a polygonal base and triangular planes for its sides, which meet at a point called the apex or vertex. **P., Anterior**, one of the two pyramidal bundles of white matter on each side of the anterior median fissure of the medulla. **P. of the Cerebellum**, a conic projection forming the central portion of the inferior vermiciform process. **P.s of Ferrein**. See *Ferrein's Pyramids*. **P., Malpighian**, one of the conic masses composing the medullary substance of the kidney. **P., Posterior**, one of the two narrow bundles of white matter placed on each side of the posterior median fissure of the medulla oblongata. They are continuous with the posterior median columns of the spinal cord. **P., Renal**. See *P., Malpighian*, and *Ferrein's Pyramids*. **P., Temporal**, the petrosa. **P., Thyroid**. See *Lalouette's Pyramid*. **P. of the Tympanum**, a hollow conic process on the inner wall of the tympanum; the stapedius muscle passes through an aperture at its apex.

Pyramidal (*pe-ram-id-al*) [*pyramid*]. Shaped like a pyramid. **P. Tract**. See *Tract, Pyramidal*.

Pyramidalis (*pe-ram-id-a'-lis*). Pyramidal, as *pyramidalis* muscle. See under *Muscle*.

Pyramidon (*pe-ram-id-on*). Dimethylamidophenyldimethylpyrazolon, a yellowish-white powder, recommended as an antipyretic. Dose 5-8 gr. (0.32-0.51 Gm.) every 2 hours.

Pyramis (*pi'-ram-is*). See *Pyramid*.

Pyrantin (*pi-ran'-tin*). See *Phenoxazine*. **P., Soluble**, sodium salt of paraethoxyphenylsuccinamic acid. A useful antipyretic. Dose 15-45 gr. (1-3 Gm.) daily.

Pyranum (*pi-ra'-num*). The sodium salt of a combination of benzoic acid, thymol, and salicylic acid; used as an antirheumatic and analgesic. Dose 7-30 gr. (0.45-2.0 Gm.) 2 or 3 times daily.

Pyrazin (*pi-ras'-in*). Antipyrin. **P. Hexahydrid**, piperazin.

Pyrazol (*pi-ras'-al*) [*πύρ*, fire; *αζώτιον*, nitrogen]. $C_4H_4N_2$, a derivative of pyrrol. It is used as a diuretic. Dose 15-30 gr. (1-2 Gm.).

Pyrethrum (*pi-re'-thrum*). Pellitory; the root of *Anacyclus pyrethrum*, a plant of the order *Compositae*. Pyrethrum is used as a sialagog and masticatory in headache, toothache, and neuralgic affections of the face. It is employed either in powder or in the form of the tincture. **P., Tincture of** (*tinctura pyrethri*, U. S. P.), is never given internally.

Pyretic (*pi-ret'-ik*) [*πυρετός*, fever]. Pertaining to or affected with fever.

Pyretin (*pi'-re-tin*) [see *Pyretic*]. An antipyretic said to consist of acetanilid, caffeine, sodium bicarbonate, and calcium carbonate. Dose 3-8 gr. (0.19-0.52 Gm.).

Pyreto- (*pi-ret-o*) [*pyretos*, fever]. A prefix meaning fever.

Pyretogenic, Pyretogenous (*pi-ret-aj-en'-ik*, *pi-ret-aj-en-us*) [*pyretin*, to produce, to produce]. Causing or producing fever.

Pyretogenin (*pi-ret-aj-en-in*) [see *Pyretogenic*]. A substance formed by microorganisms, and said to have the property of producing fever when inoculated into animals.

Pyretologist (*pi-ret-ol'-o-jist*) [*pyretology*]. A specialist in fevers.

Pyretology (*pi-ret-ol'-o-je*) [*pyreto-*; *logos*, a science]. The science of the nature of fevers.

Pyretotyposis (*pi-ret-oti-po'-sis*) [*pyreto-*, *typos*, a forming]. Intermittent fever.

Pyrexia (*pi-rek'-e-ah*) [*pyrexia*, fever]. Elevation of temperature above the normal; fever.

Pyrexial (*pi-rek'-e-ah*). Pertaining to pyrexia.

Pyridin (*pi'-rid-in*) [*pyr*, fire]. C_4H_5N . A liquid base obtained as a distillation product from tobacco, coal tar, and other organic matter, and forming the first of a long and important series of homologous bases. Pyridin has been used in asthma by inhalation. **P. Tricarboxylic Acid**, $C_6H_2(COOH)_3N$, is antiseptic, antipyretic, antiperiodic, and antispasmodic. It has been used in malaria, asthma, and typhoid fever. Dose 2-10 gr. (0.14-0.65 Gm.).

Pyriform (*pi'-ri-form*) [*pyrus*, pear; *forma*, a form]. Pear-shaped.

Pyriformis (*pe-ri-form'-is*). Pyriform, as *pyriformis* muscle. See under *Muscle*.

Pyro- (*pi-ro*) [*pyr*, fire]. A prefix signifying fire or heat.

Pyroarsenic Acid (*pi-ro-ar-sen'-ik*) [*pyro-*; *arsenic*]. H_3AsO_4 . A tetrabasic acid produced when arsenic is heated to $180^\circ C$.

Pyroboric Acid (*pi-ro-bor'-ik*) [*pyro-*; *boron*]. H_3BO_3 . A dibasic acid produced by heating boric acid.

Pyrocatechin (*pi-ro-kat'-e-chin*) [*pyro-*; *catechu*]. $C_6H_2O_2 = C_6H_3(OH)_2$. Catechol, a crystalline substance formed by the dry distillation of catechu and sometimes occurring in the urine. It has been used as an antipyretic. Dose 1-2 gr. (0.065-0.13 Gm.).

Pyrocin (*pi-ro'-din*) [*pyr*, fire]. $C_6H_4 \cdot C_6H_4 \cdot O \cdot N_2H_2$. Hydracetin, acetylphenylhydrazine; a crystalline, poisonous substance, used as a substitute for chloroform in poisons and in other cutaneous affections, also as an antipyretic. Dose $\frac{1}{2}$ gr. (0.03-0.2 Gm.).

Pyroform (*pi-ro-form*). Bismuth oxyiodo-pyrogallol, used in skin diseases and said to be less toxic than pyrogallol.

Pyrogallol (*pi-ro-gal'-ol*). See *Pyrogallol*.

Pyrogallol (*pi-ro-gal'-ol*) [*pyro-*; *galla*, galls]. $C_6H_3(OH)_3$. Pyrogallol acid, a phenol derivative produced by the action of heat on gallic acid. It is used locally in diseases of the skin. **P.-bismuth**, a dark-green powder containing equal parts of bismuth and pyrogallol, used as an intestinal desiccant and wound antiseptic. **P., Oxidized**, a stable brown or black powder, slightly soluble in water,

insoluble in alcohol or ether, used as a substitute for pyrogallol as a desiccant and slightly toxic. Dose $\frac{1}{2}$ gr. (0.03-0.2 Gm.) daily. Ointment in skin diseases 50 gr. (5 Gm.) to 375 gr. (25 Gm.) each of vasoline and lanolin.

Pyrogenic (*pi-ro-jen'-ik*) [*pyro-*; *gennao*, to produce]. Producing fever.

Pyroligneous (*pi-ro-lign'-ous*) [*pyro-*; *lignum*, wood]. Pertaining to the distillation of wood. **P. Acid**, wood vinegar. See *Acid, Pyroligneous*.

Pyromania (*pi-ro-ma'-ni-ah*) [*pyro-*; *mania*, madness]. A mania for fire.

Pyrometer (*pi-ro-m'-e-ter*) [*pyro-*; *metron*, a measure]. An instrument for measuring the intensity of heat of too high a degree to be estimated by the ordinary thermometer.

Pyronyx (*pi-ro-niks'*) [*pyro-*; *nyx*, a piercing]. Iguanodont.

Pyrophosphoric Acid (*pi-ro-fos'-fo'-ik*). See *Acid, Pyrophosphoric*.

Pyrosal (*pi-ro-sal*). Antipyrin salt, $C_{12}H_{11}O_2C_6H_4N_2O$, antipyrine and sodium neutral. Dose 8 gr. (0.5 Gm.) 2 or 3 times daily.

Pyrosis (*pi-ro'-sis*) [*pyr*, fire]. An affection of the stomach characterized by a burning sensation, accompanied by eructations of acid, irritating fluid, heartburn.

Pyrosoma bigeminum (*pi-ro-so-ma'-bi-je-ni-um*) [*pyrus*, pear; *gemma*, a bud]. A parasite which is the cause of Texas fever in cattle.

Pyrotic (*pi-ro'-tik*) [*pyrosis*]. 1. Inflammation. 2. Caustic.

Pyrotoksin (*pi-ro-to-ksin*) [*pyro-*; *toxikon*, a poison]. A toxic agent generated in the course of the febrile process.

Pyrotoxina bacterica (*pi-ro-tox-i-na'-bak-ter-i-ka*) [see *Pyrotoxin*]. A pyrogenic substance believed to be produced by some forms of bacteria.

Pyroxylin (*pi-rok'-sin*) [*pyro-*; *lin*, wood]. Gun cotton, nitrocellulose, a white solid mixture of nitro and cellulose. In the cellulose the cellulose is changed into various compounds. Soluble in acetone, benzene, chloroform, C.S.P. is used in the pyroxylin of collodion. The pyroxylin gun cotton is in hexamethyl collodion.

Pyrozone (*pi-ro-zon*). A pyrogenic separation of hydrogen dioxide or oxygen, antiseptic. It is also used externally in a 5% or a 25% ethereal solution.

Pyrrol (*pi-ro'-l*) [*pyro-*; *oleum*, oil]. C_4H_5N . A liquid base obtained in the distillation of Lupul's oil and other organic substances. **P. Tetraiodid**. See *Iodid*.

Pythogenic (*pi-tho-jen'-ik*) [*pythos*, to decay, to produce]. Producing or caused from decomposition. **P. Fever**. See *Fever of Typhoid type*.

Pyuria (*pi-ur'-e-ah*) [*pyr*, pass, urine, urv]. The passage of urine containing pus.

Q

q. s. Abbreviation of *quantum sufficit*—as much as suffices.

Quack (*kwak*). A pretender of medical skill; a vender of nostrums, a medical charlatan.

Quackery (*kwaik'-er-e*). The practice of medicine by a quack.

Quadrangular (*kwood-rang'-gu-lar*) [*quadrant*]. Having four angles, as the quadrangular lobe, the square lobe of the cerebellum.

Quadrant (*kwood'-rant*) [see *quadratus*]. 1. The fourth part of a circle, subtending an angle of 90 degrees. 2. One of the four regions into which the abdomen may be divided for purposes of physical diagnosis.

Quadrante (*kwood'-rat*) [*quadrant*]. Square; four-sided. **Q. Lobule**. See *Precuneus*.

Quadratus (*kwood-ra'-tus*) [L.]. Squared; having four sides. **Q. Muscle**. See under *Muscle*.

Quadri- (*kwood-re-*) [L.]. A prefix denoting four or four times.

Quadrilobate (*kwood-re-ha'-sib*) [*quadri-*; *basis*, base]. In chemistry, applied to an acid having four replaceable hydrogen-atoms.

Quadriceps (*kwood'-re-seps*) [*quadri-*; *caput*, head]. Four-headed, as a quadriceps muscle. See under *Muscle*.

Quadrigeminial (*kwood-re-jem'-in-al*) [see *Quadrigenium*]. Fourfold; consisting of four parts, as the quadrigeminial bodies. See *Corpora quadrigemina*.

Quadrigenium (*kwood-re-jem'-in-um*) [*quadrigenius*, fourfold]. One of the corpora quadrigemina.

Quadrilateral (*kwood-re-lat'-er-al*). Having four sides.

Quadrille (*kwood-ril*) [Fr.]. An embryologic term designating the complex movement undergone by the dividing centrosomes previous to the formation of the cleavage centrosomes.

Quadrurate (*kwood-re-ul-rat*) [*quadri-*; *urate*]. A term applied to the hyperacid urate of human urine and the urine of birds and reptiles. The quadrurates have the general formula of $MH(C_2H_3N_2O_2)_2 \cdot H_2C_2H_3N_2O_2$.

Quadrivalent (*kwood-riv'-al-ent*) [*quadri-*; *valere*, to be worth]. In chemistry, having a combining power equivalent to that of four hydrogen-atoms.

Quadruplet (*kwood-ra'-plet*) [*quadruplare*, to make fourfold]. Any one of four children born at one birth.

Quain's Fatty Heart. Fatty degeneration of the cardiac muscular fibers.

Quaker-button. A popular name for nux vomica.

Qualitative (*kwool'-it-a-tiv*) [*qualitas*, quality]. Pertaining to quality. **Q. Analysis**. See *Analysis*, *Qualitative*.

Quantitative (*kwon'-til-a-tiv*) [*quantus*, how

much]. Pertaining to quantity. **Q. Analysis**. See *Analysis*, *Quantitative*.

Quantivalence (*kwon'-tiv'-al-ens*) [*quantus*, how much; *valere*, to be worth]. The combining power of an element or radicle expressed in terms of the number of atoms of hydrogen with which it will unite. *Univalent* or monad atoms, as chlorine, are saturated with one atom; *bivalent* or diad atoms require two; *trivalent* or triad, as boron, take three; *quadrivalent* or tetrad, *quintivalent* or pentad, *sextivalent* or hexad, require two, three, four, five, and six atoms of hydrogen respectively.

Quantum (*kwon'-tum*) [L.]. As much as. **Q., Normal**, a constant quantity or standard.

Quarantine (*kwoor'-an-tin*) [It., *quaranta*, forty].

1. The time (formerly forty days) during which vessels or travelers from ports infected with contagious or epidemic diseases are required by law to remain outside the port of their destination, as a safeguard against the spreading of such diseases. 2. The place of detention. 3. The act of detaining vessels or travelers from suspected ports or places for purposes of inspection or disinfection. **Q., Land**, the isolation of a person or district on land for purposes similar to those of detention of persons arriving at a place by sea.

Quart (*kwoor*) [*quartus*, fourth]. The fourth part of a gallon.

Quartan (*kwoor'-tan*) [*quartus*]. 1. Recurring on the fourth day. 2. A form of intermittent fever the paroxysms of which occur every fourth day. **Q., Double**, quartan fever characterized by milder and severer paroxysms, each occurring every fourth day. **Q. Fever**. See *Quartan* (2).

Quarter-evil (*kwoor'-ter-e-vil*). A synonym of *Black-leg*.

Quartipara (*kwoor-tip'-ar-ah*) [*quartus*; *parere*, to bring forth]. A woman in her fourth pregnancy. See *Multipara*.

Quartiparous (*kwoor-tip'-ar-us*) [*quartipara*]. Pregnant four times.

Quartisternum (*kwoor-te-ster'-num*) [*quartus*, fourth; *sternum*]. A part of the sternum having a special center of ossification corresponding with the fourth intercostal space.

Quassation (*kwas'-a-shun*) [*quassatio*, a shaking or shattering]. The reduction of barks, roots, and other drugs to morsels, in preparation for further pharmaceutical treatment. Syn., *Cassation*.

Quassia (*kwoosh'-e-sh*) [after *Quassi*, a negro slave who first used it]. The wood of several trees of the order *Simarubaceae*. The quassia of the U. S. P. and B. P. is the wood of *Picrasma excelsa*, known as Jamaica quassia, or of *Quassia amara*, known as Surinam quassia. It is a simple bitter, and is used in dyspepsia and constipation; in the form

of an enema it is employed against seatworms.

Q., Extract of (*extractum quassia*, U. S. P., B. P.). Dose 1-3 gr. (0.065-0.2 Gm.). **Q., Fluidextract of** (*fluidextractum quassia*, U. S. P.). Dose $\frac{1}{2}$ -1 dr. (2.4 Cc.). **Q., Infusion of** (*infusum quassia*, B. P.). Dose 2 oz. (60 Cc.). **Q., Tincture of** (*tinctura quassia*, U. S. P.). Dose 1 dr. (4 Cc.).

Quassin (*kwass'-in*), $C_{20}H_{20}O_8$ (?). The active principle of quassia, very bitter, white crystals, soluble in alcohol and chloroform, used as a tonic. Dose $\frac{1}{2}$ -1 gr. (0.002-0.02 Gm.).

Quaternary (*kwa-ter'-no-re*) [*quaterni*, four each]. 1. Consisting of four elements. 2. Fourth in order.

Quatuor (*kwaat'-u-or*) [L.]. Four. **Q. Pills**, pills made up of iron sulfate, quinin, aloes, and nuxvomica.

Quebrabunda (*ka-bruh'-bun'-dah*) [Port.]. Straddling disease, a tropical disease similar to beriberi which attacks horses and pigs.

Quebrachamin (*ka-brah'-kam-in*). See under *Quebracho*.

Quebrachin (*ke-brah'-kin*). An alkaloid of quebracho (q. v.). It is used internally and hypodermatically in dyspnea. Dose $\frac{1}{2}$ -1 gr. (0.04-0.1 Gm.).

Quebracho (*ke-brah'-ko*) [from Pg. *quebra-hacho*, ax-breaker]. The name of several hardwooded trees of South America. The white quebracho (*quebracho blanco*) is *Aspidosperma quebracho*, of the order *Apocynaceae*. It contains the following alkaloids: *aspidospermin*, $C_{21}H_{30}N_2O_2$; *aspidospermutin*, $C_{21}H_{28}N_2O_2$; *aspidosamin*, $C_{21}H_{28}N_2O_2$; *quebrachin*, $C_{21}H_{28}N_2O_2$, and *quebrachamin*, $C_{21}H_{28}N_2O_2$. It is used in emphysema, bronchitis, and in asthma. See *Aspidospermin*.

Queen's-delight, **Queen's-root**. See *Stillingia*.

Quercin (*kwer'-sin*) [*quercus*], $C_6H_4(OH)_2$. A bitter, crystallizable carbohydrate extracted from acorns and oak-bark.

Quercitannic Acid (*kwer-si-tan'-ik*) [*quercus; tannin*], $C_{17}H_{14}O_8$. A variety of tannic acid found in oak bark.

Quercite (*kwer'-sit*) [*quercus*], $C_6H_7(OH)_2$. A sweet principle found in acorns.

Quercitol (*kwer'-sit-ol*). See *Quercite*.

Quercitrin (*kwer'-sit-rin*) [*quercus; citrus, lemon*], $C_{17}H_{14}O_8$. A glucosid found in the bark of *Quercus tinctoria* and in many other plants.

Quercus (*kwer'-kus*) [L., "the oak"]. The *quercus* of the U. S. P. is the dried bark of *quercus alba*. **Q., Fluidextract of** (*fluidextractum quercus*, U. S. P.). Dose 15 min. (1 Cc.). See *Oak*.

Quick (*kwek*) [AS., *cwic*, alive]. A sensitive, vital, tender part, as the flesh under a nail.

Quickening (*kwek'-en-ing*) [see *Quick*]. The first feeling on the part of the pregnant woman of fetal movements, occurring between the fourth and fifth months of pregnancy.

Quicklime [*quick; lime*]. Calcium oxid. See under *Lime*.

Quicksilver [*quick, silver*]. The popular name for mercury.

Quillaia, Quillaja (*kweil'-a'-yah*) [Ch., *quilla*, lean, to wash]. A genus of trees of the order *Rosaceae*. The *quillaia* of the U. S. P. is the dried bark of *Quillaja saponaria*. It contains saponin and produces a froth when agitated in water. It is used in pulmonary affections and as a sternutatory, and it also acts as a substitute for soap. See *Quilla bark*. **Q., Fluidextract of** (*fluidextractum quillaja*, U. S. P.). Dose 3 min. (0.1 Cc.). **Q., Tincture of** (*tinctura quillaja*, U. S. P.). Dose 1 dr. (4 Cc.).

Quill-suture. See *Suture, Quill*.

Quina (*kwin'-ah*). Same as *Cinchona*. **Q. calisaya**, yellow cinchona bark. **Q. colorada**, red cinchona bark.

Quinacetic Sulfate (*kwin'-as'-et-in*), $C_{12}H_8NO_2 \cdot H_2SO_4 \cdot H_2O$. An antipyretic and analgesic. Dose 5-15 gr. (0.32-0.97 Gm.).

Quinaldin (*kwin'-al'-din*), $C_{11}H_9N$. Mercaptoquinolin.

Quinaphenin (*kwin'-af'-en-in*). A white tasteless powder, obtained by action of quinine on the hydrochlorate of diphenylacetic acid. Used in whooping-cough. Dose for young children 1-2 gr. (0.065-0.13 Gm.); for older children 2-3 gr. (0.13-0.2 Gm.).

Quinaphthol (*kwin'-af'-thol*). See *Chrysarbin*.

Quinaquina (*kwin'-ah-kwin'-ah*). Cinchona.

Quinaseptol (*kwin'-ah-sep'-tol*). See *Quinine*.

Q., Argentic, an odorless, harmless, antiseptic and hemostatic which promotes granulation.

Quinate (*kwin'-at*). A salt of quinine.

Quince-seed (*kwin'-sed*). See *Cyanine*.

Quincke's Disease. Angioneurotic edema. It is an acute circumscribed edema. Q.'s *Palm* rhythmic reddening and blanching of finger-nails depending upon oscillations of blood-pressure which are propagated through capillaries, it is found in acute urticaria.

Q.'s Spinal Puncture. See *Puncture, Spinal*.

Quinia (*kwin'-ah*). See *Quinine*.

Quinic (*kwin'-ik*) [Peruvian, *quina*, bark]. Pertaining to quinin. **Q. Acid**, $C_7H_5O_4$, a triacid occurring in cinchona bark, in oak, elm, ash, coffee-plant, etc.

Quinidin (*kwin'-id-in*) [*quinin*], $C_{20}H_{27}N$. An alkaloid of cinchona bark isomeric with quinin, which it resembles in action, but is only in being less powerful. **Q. Sulfate**, used as an antiperiodic in doses of 20-60 (1.3-4.0 Gm.). **Q. Tannate**, is used in dysentery, nephritis, and malaria. Dose 2-6 (0.1-0.8 Gm.) twice daily.

Quinin (*kwin-en*) [Peruvian, *quina*, bark], $C_{20}H_{27}N_3O_2 \cdot 3H_2O$. Quinine (quining) is a bitter amorphous or crystalline alkaloid obtained from the bark of various species of cinchona. It is soluble in water, but is readily soluble in alcohol, ether, and chloroform, and gives a beautiful emerald-green color when it or its salts are treated with a solution of chlorine and then with sodium hydroxide. Quinin acts as a stimulant to the nervous system, causing in large doses vomiting and lessening of the reflex action, and a slight respiratory stimulant and a febrile

to the circulation; it lessens the ameboid movement of the white corpuscles, and during fever is strongly antipyretic; it also possesses antiseptic properties. In large doses it causes ringing in the ears, a feeling of fullness in the head, dizziness, slight deafness, and at times disturbances of vision; occasionally also a rise of temperature (*quinin-fever*). It is used as an antiperiodic in malaria, in which disease it has a specific action; it is also employed as an antipyretic in other febrile affections, as a tonic in convalescence, as a stimulant to the uterus during parturition, in whooping-cough, coryza, and hay-fever.

Q. Acetate, $C_{20}H_{24}N_2O_7 \cdot C_2H_3O_2$. Dose 1-15 gr. (0.065-1.0 Gm.). **Q. Albuminate**. Dose 1-15 gr. (0.065-1.0 Gm.). **Q. Bisulfate**

(*quinine bisulphas*, U. S. P.). Dose same as that of the sulfate. **Q. Bromate**, $C_{20}H_{24}N_2O_7 \cdot HBrO_3$, antiseptic and antipyretic. Dose 1-30 gr. (0.065-2.0 Gm.). **Q. Camphorate**, ($C_{20}H_{24}N_2O_7$)₂ · $C_{10}H_{16}O_6$, antiseptic and antipyretic. Dose 1-30 gr. (0.065-2.0 Gm.). **Q. Carbolate**, $C_{20}H_{24}N_2O_7 \cdot C_6H_6O$, antiseptic and antipyretic. Dose 1-30 gr. (0.065-2.0 Gm.). **Q. Chlorate**, $C_{20}H_{24}N_2O_7 \cdot HClO_3 + 12H_2O$, explosive white crystals, soluble in water and alcohol; used in fevers with symptoms of angina. **Q. Chlorophosphate**, $C_{20}H_{24}N_2O_7 \cdot HCl \cdot 2PO_4H_3 + 3H_2O$; used in obstinate cases of malaria. **Q. Cinamate**, $C_{20}H_{24}N_2O_7 \cdot C_9H_8O_2$, antipyretic and antiseptic. Dose 1-30 gr. (0.065-2.0 Gm.). **Q. Citrate**, ($C_{20}H_{24}N_2O_7$)₂ · $C_6H_8O_7 + 7H_2O$. Dose 2-20 gr. (0.13-1.3 Gm.). **Q. Ethylsulfate**, $C_{22}H_{26}N_2O_8$, obtained from a hot alcoholic solution of sodium sulfovinat and quinin sulfate; recommended for subcutaneous use. Dose 3-8 gr. (0.19-0.52 Gm.). **Q. Ferrocyanid**, $C_{20}H_{24}N_2O_7 \cdot H_4Fe(CN)_6 + 3H_2O$, used in night-sweats of tuberculosis. Dose 5-10 gr. (0.32-0.65 Gm.). **Q. Formate**, $C_{20}H_{24}N_2O_7 \cdot CH_3O_2$, used as is the sulfate. **Q. Glycerophosphate**, ($C_{20}H_{24}N_2O_7$)₂ · $C_3H_7O_2 \cdot PO_3$; used in malaria, neuralgia, etc. Dose 2 gr. (0.1 Gm.). **Q. Hydrobromid** (*quinine hydrobromidum*, U. S. P.), $C_{20}H_{24}N_2O_7 \cdot HBr + H_2O$. Used in the same doses as the sulfate. **Q. Hydrochlorid** (*quinine hydrochloridum*, U. S. P.), given as is the sulfate. **Q. Hydrochlorosulfate**, $C_{20}H_{24}N_2O_7 \cdot HCl \cdot H_2SO_4 + 3H_2O$; for hypodermatic use as causing less pain than any other salt of quinin. **Q. Hydroiodate**, $C_{20}H_{24}N_2O_7 \cdot HI$, used as a nervous sedative and in neuralgia internally or subcutaneously. Dose 1-1½ gr. (0.06-0.1 Gm.). **Q. Lygosinate**, a combination of quinin and lygosin, a fine, orange-yellow powder. It is bactericide and antiseptic and is used as a dusting-powder. **Q. Muriate**. See *Q. Hydrochlorid*. **Q. Oleate** (*oleatum quinine*, U. S. P.), a mixture of exsiccated quinin, 1 part, and oleic acid, 3 parts, used in the administration of quinin by inunction. **Q. Peptonate**, a brown powder containing 80% of peptone and 20% of quinin; *nutrient and tonic*. Dose 5-60 gr.

(0.32-4.0 Gm.). **Q. Phenate**, **Q. Phenolate**. See *Q. Carbolate*. **Q. Phosphate**, ($C_{20}H_{24}N_2O_7$)₂ · $H_3PO_4 + 8H_2O$, antiperiodic. Dose 1-30 gr. (0.065-2.0 Gm.). **Q. Phthalate**, ($C_{20}H_{24}N_2O_7$)₂ · $C_8H_4O_4$; used as is the sulfate. Dose 1-30 gr. (0.065-2.0 Gm.). **Q. Quinate**, $C_{20}H_{24}N_2O_7 \cdot C_7H_{12}O_4 + 2H_2O$; used subcutaneously. Dose, as the sulfate. **Q. Quinovate**, $C_{20}H_{24}N_2O_7 \cdot C_{21}H_{22}O_6$ (?), antiperiodic. Dose 1-30 gr. (0.065-2.0 Gm.). **Q. Saccharate**, **Q. Saccharinate**, $C_{20}H_{24}N_2O_7 \cdot C_6H_{10}O_6$, antipyretic and antiseptic. Dose 1-30 gr. (0.065-2.0 Gm.). **Q. Salicylate** (*quinina salicylas*, U. S. P.), $2C_{20}H_{24}N_2O_7 \cdot C_7H_5O_3 + 11H_2O$; antiperiodic, and used to relieve the pains of rheumatism and gout. Dose as an antirheumatic 2-10 gr. (0.13-0.6 Gm.). **Q. Stearate**, $C_{20}H_{24}N_2O_7 \cdot C_{18}H_{36}O_2$; used as is the sulfate, but by inunction. **Q. Sulfate** (*quinine sulphas*, U. S. P., B. P.), is the salt most commonly employed. Dose in malaria 5-24 gr. (0.32-1.6 Gm.) before the paroxysms; as a prophylactic 2-4 gr. (0.13-0.26 Gm.); as a tonic 1-2 gr. (0.065-0.13 Gm.); in whooping-cough 1½ gr. (0.1 Gm.) for each year of the child's age, or locally in solution of 1 2 gr. (0.065-0.13 Gm.) to the ounce (32 Cc.) by the atomizer. **Q. Sulfochlorhydrate**, used by injection in carcinoma. Dose 0.5-0.60 gr. every other day. **Q. Sulfocresotate**, an intestinal antiseptic. **Q. Sulfoethylate**. See *Q. Ethylsulfate*. **Q. Sulfomuriate**. See *Q. Hydrochlorosulfate*. **Q. Sulfotartrate**, a compound of quinin sulfate and tartaric acid; antipyretic, antiseptic. Dose 1-30 gr. (0.065-2.0 Gm.). **Q. Sulfovinat**. See *Q. Ethylsulfate*. **Q. Tanate**, used in whooping-cough. **Q. Thymate**, used as is the sulfate. Dose 1-30 gr. (0.065-2.0 Gm.). **Q. and Urea Hydrochlorate**, employed chiefly for hypodermatic use. **Q. urethane**, a nonirritant compound made by heating 3 parts of quinin hydrochlorid with 15 parts of urethane and 3 parts of water; used for intravenous injection. **Q. Valerianate**, used in doses of 1-2 gr. (0.065-0.13 Gm.) in nervous debility and hemiparesis.

Quininism, **Quinism** (*kin-in'-izm*, *kin'-izm*). Cinchonism.

Quinochloral (*kin-o-klo'-ral*). See *Chinoral*.

Quinoform (*kin'-o-form*). See *Chinoform*.

Quinoidin (*kin-oi'-din*). See *Chinoidin*. **Q., Animal-**, a basic substance obtained from animal tissues and having the property of fluorescence like quinin.

Quinol (*kin'-ol*). See *Hydroquinone*.

Quinolin (*kin'-o-lin*) [*quinin*], C_9H_7N . A liquid alkaloid obtained in the destructive distillation of quinin, or cinchonin, with potassium hydroxid; it occurs also in coal-tar. It is antipyretic and antiseptic. Dose 1-10 min. (0.2-0.6 Cc.). **Q.-bismuth Sulfocyanate**, ($CHN \cdot HSCN$), $Bi(SCN)_3$, a granular, orange-red powder, insoluble in water, alcohol, or ether; melts at 76° C. It is used in the treatment of gonorrhea, skin diseases, and ulcers in 0.5 to 1% solution. **Q.**

Monohypochlorite. See *Chind.* **Q. Salicylate**, C_6H_7N , $C_7H_5O_2$, antiseptic and antirheumatic. Dose 8-15 gr. (0.5-1.0 Gm.). Application, 0.7% aqueous solution. **Q. Sulfate**, C_6H_7N , H_2SO_4 , antiseptic and used as is quinsin. **Q. Tartrate**, $(C_6H_7N)_2$, $(C_4H_4O_6)_2$, antipyretic and antiseptic. Dose 5-15 gr. (0.32-1.0 Gm.). Injection in gonorrhea, 0.7% aqueous solution.

Quinon (*kin'on*) [*quinin*], $C_{10}H_6O_2$. A yellow, crystalline substance obtained by heating quinic acid with manganese dioxide and sulfuric acid. It is the lowest member of a series of bodies known as *quinones*.

Quinopyrin (*kin-o-pi'rin*). A concentrated aqueous solution of quinin hydrochlorid and antiovin, used subcutaneously in malaria.

Quinosol (*kin'o-sol*). 1. $C_{10}H_6N$, OSO_2K , H_2O . Oxyquinolin potassium sulfate, a yellow powder, soluble in water; antipyretic, antiseptic, styptic, and desiccant. Syn., *Chinamol*. 2. The proprietary name for a neutral combination of trisresol sulfonate and quinolin, with trisresol. It is not caustic, and is soluble in water to the extent of 1 in 25. A disinfectant for surgical instruments, and bactericide. Application, 0.1 to 2% solutions.

Quinotannic Acid (*kin-o-tan'ik*) [*quinin; tannin*]. A form of tannic acid found in cinchona bark.

Quinotropin (*kin-at-ro-pin*). Urotropin quininate.

Quinovin (*kin'o-vin*) [Peruvian, *kina*, bark], $C_{10}H_{12}O_{10}$. Kinosin, a bitter glucosid found in cinchona bark.

Quinquaud's Disease. A disease of the hair-follicles attended with concretization of the skin. Syn., *Azoe decalvans*, *Folliculitis decalvans*. **Q.'s Panaris**, phlegmonous inflammation of the fingers and toes of neuropathic origin, differing from Morvan's disease in that it is painful and never accompanies parietic phenomena, and ordinarily does not entail necrosis of the phalanges.

Quinquevalent (*kwín-kwín'-al-ent*) [*quinque*,

five; *valere*, to be worth]. Having a valence of five, capable of combining with five atoms of hydrogen or their equivalent.

Quinsy (*kian'ze*) [*ra*, with, *zy*, yes, to cheer]. Acute inflammation of the tonsils, usually tending to suppuration.

Quintan (*kwin'tan*) [*quintus*, fifth]. As a tertian fever the paroxysms of which recur every four days, *i. e.*, on the fifth and thirteenth, etc.

Quintessence (*kwin-tés'ens*) [*quintus*, the essence, essence]. The active principle of a substance, concentrated to the utmost degree.

Quintipara (*kwin'tip'ar-ah*) [*quintus*, five, *parere*, to bring forth]. A woman who has been in labor five times.

Quintisternum (*kwin-tist'ernum*) [*quintus*, fifth; *sternum*]. A part of the sternum having a special center of ossification corresponding with the fifth intercostal space.

Quintuplet (*kwin-tup'let*) [*quintus*, five, *plures*, fold]. One of five children born at one time.

Quinoln (*ke'o-nin*). "Tartarless quinine," a mixture of cinchona alkaloids, principally cinchonidin.

Quiz (*kwi*) [*quære*, I ask]. A recreation conducted by questions and answers by which the student familiarizes himself with his studies.

Quizzer (*kwi'ez*) [*quis*]. One who conducts a quiz.

Quotidian (*kwin-tid'ee-an*) [*quod*, as many a day, day]. 1. Recurring every day. 2. An intermittent fever, the paroxysms of which occur daily. **Q., Double**, a fever having two paroxysms a day, usually differing in intensity.

Quotient (*kwin-shent*) [*quære*, how much]. The result of the process of division.

Q. Blood, the result obtained by dividing the quantity of hemoglobin in the blood by the number of erythrocytes, expressed in per cent as a percentage of the normal value.

Q., Proteid, the result of dividing the amount of globulin in the blood-plasma by the amount of albumin in it.

R

R. The abbreviation of *recipe*, take, of *right*, of *Reimann*, and of *resistance* (electrical).

Raabe's Test For Albumin. Place in a test-tube 1 Cc. of the liquid to be tested, on the addition of a small piece of trichloroacetic acid a white mass or ring will be formed in the presence of albumin. The ring produced by acetic acid is diffused and not sharply defined.

Rabbling (*rab'-el-ing*) [*RE*, *rebound*, to

push back]. The interlocking of the beveled edges of a fractured bone.

Rabelaisin (*rab-el'-ee-in*). A name for the bark of *Lumnitzera* (of the *Simarubaceæ*), the bark is used as a substitute for the cinchona bark and as an arrow-poison in some parts.

Rabic (*rab'ik*) [*rabus*]. Pertaining to a rabid virus.

Rabid (*rab'it*) [*rabus*]. Affected with rabies.

or hydrophobia; pertaining to rabies, as *rabid virus*.

Rabies (*rab'-e-ēs*) [L.]. *Lyssa* or hydrophobia. The latter term is generally applied to the human disease consequent upon the bite of a rabid dog or other animal. Rabies is an acute infectious disease of animals dependent upon a specific agent, *Bacillus lyssa*, and communicable to man by inoculation. All animals are liable to the disease, but it occurs most frequently in the wolf, the cat, and the dog, and is chiefly propagated by the latter, which is specially susceptible. The toxin has a special affinity for the nervous system, and is found in the secretions, particularly in the saliva. See *Hydrophobia*.

Rabuteau's Test for Hydrochloric Acid in the Contents of the Stomach. Make a solution containing 50 Cc. of starch mucilage, 1 Gm. of potassium iodate, and 0.5 Gm. of potassium iodid; add to it the filtered contents of the stomach. The solution will become blue in the presence of free HCl.

Racemose (*ras'-e-mōs*) [*racemus*, a bunch of grapes]. Resembling a bunch of grapes, as a *racemose gland*. **R. Aneurysm**, aneurysm by anastomosis.

Rachi- (*ra-ke-*) [*rachis*]. A prefix meaning relating to the spine.

Rachiaagra (*ra-ke-a'-grah*) [*rachi-*; *ἀγρα*, a seizure]. Gouty or rheumatic pain in the muscles of the spine.

Rachialgia (*ra-ke-al'-je-ah*) [*rachi-*; *ἄλγος*, pain]. Neuralgic pain in the spinal column.

Rachicocainization (*ra-ke-ko-ka-in-i-sa'-shun*) [*rachi-*; *cocainization*]. The induction of anesthesia by the injection of a solution of cocaine hydrochlorid into the subarachnoid space by means of a lumbar puncture.

Rachidial (*ra-keid'-e-al*) [*rachis*]. Pertaining to the spine.

Rachidian (*ra-keid'-e-an*) [see *Rachidial*]. Spinal; vertebral.

Rachylisis (*ra-kill'-is-is*) [*rachi-*; *λίσσις*, a loosening]. A method of correcting lateral curvature of the spine by appropriate traction and pressure.

Rachiocampsis (*ra-ke-o-kamp'-sis*) [*rachi-*; *καμπήσις*, a curving]. Curvature of the spine.

Rachiochysis (*ra-ke-ok'-is-is*). See *Hydro-rachis*.

Rachiodynia (*ra-ke-a-din'-e-ah*) [*rachi-*; *δύνη*, pain]. Spasmodic pain in the spinal column.

Rachiooplegia (*ra-ke-a-ple'-je-ah*) [*rachi-*; *πληγή*, stroke]. Spinal paralysis; paraplegia.

Rachiotomy (*ra-ke-al'-o-me*) [*rachi-*; *τομή*, to cut]. 1. The operation of cutting into or through the vertebral column. 2. The operation of cutting through the spine of the fetus to facilitate delivery.

Rachipagus (*ra-kip'-ag-us*) [*rachi-*; *χῆρος*, that which is fixed]. A twin monster joined at the spines.

Rachis (*ra'-kis*) [*ῥάχις*, the spine]. The vertebral column.

Rachischisis (*ra-kis'-kis-is*). See *Spina bifida*.

Rachitic (*ra-kill'-ik*) [*rachitis*]. Affected with, resembling, or produced by rachitis; rickety.

R. Rosary, the row of nodules appearing on the ribs, at their junction with the cartilages, in rachitis.

Rachitis (*ra-kill'-tis*) [*rachi-*; *τις*, inflammation]. Rickets, a constitutional disease of infancy, characterized by impaired nutrition and changes in the bones, the symptoms being a diffuse soreness of the body, slight fever, and profuse sweating about the head and neck, and changes in the osseous system, consisting in a thickening of the epiphyseal cartilages and periosteum and a softening of the bones. Through the action of the muscles on the soft bones various deformities are produced, while the periosteal hyperplasia leads to nodular hyperostoses, especially about the head, giving the latter a square appearance (*caput quadratum*). Dentition and closure of the fontanels are delayed. Nervous symptoms are often present, as feverishness, laryngismus stridulus, and convulsions. The liver and spleen are usually enlarged. The etiology is obscure—it has been ascribed to deficiency in the earthy salts, to defect in the osteoblasts, and to microorganismal infection. **R. adulatorum**, osteomalacia; mollities ossium.

Rachitism (*ra'-kill'-izm*). Rachitis.

Rachitol (*ra'-kill'-ol*). An extract of suprarenal glands; used in the treatment of rachitis.

Rachitome (*ra'-kill'-ōm*) [*rachi-*; *τέμνω*, to cut]. An instrument for opening the spinal canal.

Rachitropacocainization (*ra-ke-tro-pa-ko-ka-in-i-sa'-shun*). Subarachnoid cocainization by means of tropacocain.

Radal (*ra'-dal*). A 20% solution of protargol; used as a prophylactic in gonorrhea.

Radesyge (*rah-da-se'-ge*) [Norwegian]. A disease also known as Skandinavian syphilis, or Norwegian leprosy, and characterized by ulceration and other cutaneous lesions. It is probable that under this name are included syphilitic and leprosy lesions.

Radial (*ra'-de-ad*) [*radius*, a spoke; *ad*, toward]. Toward the radial side.

Radial (*ra'-de-al*) [*radius*]. 1. Radiating; diverging from a common center. 2. Pertaining to or in relation with the radius or bone of the forearm, as the *radial artery*.

Radiant (*ra'-de-ant*; [*radius*]). 1. Radiate. 2. Emitting rays. **R. Energy**, a form of energy emitted by all bodies in proportion to their temperature, and propagated by undulations in the luminiferous ether. When the body reaches 600° C., it begins to radiate light as well as heat. That portion of radiant energy which does not produce the sensation of light is generally spoken of as *radiant heat*, in distinction from *radiant light*.

Radiate (*ra'-de-āt*) [see *Radiation*]. Diverging from a central point.

Radiation (*ra-de-a'-shun*) [*radiare*, to radiate]. 1. The act of radiating or diverging from a central point, as *radiation of light*.

divergence from a center; having the appearance of rays. 2. In cerebral anatomy, certain groups of fibers that diverge after leaving their place of origin. **R., Optic**, a large strand of fibers continuous with those of the corona radiata, derived mainly from the pulvinar, the external and internal geniculate bodies, and the optic tract, and radiating into the occipital lobes. **R., Striothalamic**, a system of fibers connecting the corpus striatum with the optic thalamus and the subthalamic region. **R., Tegmental**, the radiating fibers of the hind portion of the internal capsule. **R., Thalamic**, certain tracts of fibers from the optic thalamus that radiate into the hemispheres.

Radical (*rad'-ik-ul*) [*radix*, a root]. 1. Belonging to the root; going to the root, or attacking the cause of a disease, as a *radical* operation. 2. See *Radicule* (2).

Radicule (*rad'-ik-l*) [dim. of *radix*]. 1. A little root, as the *radicula* of a nerve, one of the ultimate fibrils of which a nerve is composed; *radicula* of a vein, one of the minute vessels uniting to form a vein. 2. An atom or group of atoms constituting the essential part of the molecule of a compound; a group of atoms that remain intact in the ordinary decomposition of the molecule; especially a group of atoms that acts in combination as a simple element, but is incapable of existence in the free state, as NH_4 , ammonium, C_6H_5 , phenyl. **R.s., Acid**, a group of nonmetallic atoms, especially one containing carbon, which may in many reactions remain unaltered and pass from one compound to another. **R., Alcohol**, one that forms an alcohol when combined with the elements of water. **R., Alkali**, one that produces an alkali when substituted for an atom of hydrogen in water.

Radiculaigia (*rad-ik-u-lal'-je-ah*) [*radicula*, a little root; *algos*, pain]. Neuralgia affecting the nerve-roots.

Radicular (*rad-ik'-u-lar*). Pertaining to a root or to a radicle; specifically, pertaining to the roots of the spinal nerves.

Radio- (*ra-de-o-*) [*radiare*, to emit rays]. 1. A prefix meaning pertaining to radiant energy or to radium. 2. A prefix meaning relating to the radius.

Radioactive (*ra-de-o-ak'-tiv*) [*radio-*; *active*]. Exhibiting radiant energy.

Radioactivity (*ra-de-o-ak-tiv'-it-e*). The property of exhibiting radiant energy.

Radiobicipital (*ra-de-o-bi-sip'-it-ul*) [*radio-*; *biceps*]. Pertaining to the radius and the biceps.

Radiocarpal (*ra-de-o-kar'-pal*) [*radio-*; *corpus*]. Pertaining to the radius and the carpus.

Radiochronometer (*ra-de-o-kro-nom'-et-er*) [*radio-*; *chronometer*]. An instrument for testing the character of roentgen-tubes.

Radiode (*ra'-de-od*) [*radio-*; *odōs*, a way]. An electric attachment for the application of radium.

Radiodermatitis (*ra-de-o-der-mat-i-tis*). See *Actinodermatitis*.

Radiodiagnosis (*ra-de-o-di-ag-no'-sis*) [*radio-*; *diagnosis*]. The diagnosis of a lesion by means of radiography or radioscopy.

Radiodigital (*ra-de-o-dij'-it-ul*) [*radio-*; *digital*]. Pertaining to the radius and the finger.

Radiograph (*ra'-de-o-graf*) [*radio-*; *graphein*, to write]. The picture obtained by action of radiant energy upon a sensitive plate.

Radiography (*ra-de-og'-ra-fe*). See *Diatrope*.

Radiohumeral (*ra-de-o-hu'-mer-ul*) [*radio-*; *humerus*]. Pertaining to the radius and the humerus.

Radiology (*ra-de-ol'-o-je*) [*radio-*; *logos*, science]. The science of radiant energy.

Radiolus (*ra-de'-o-lus*) [dim. of *radius*, a ray]. A probe or sound.

Radiometer (*ra-de-om'-et-er*) [*radio-*; *metron*, a measure]. An instrument for testing the penetration in radiography; a thermopile.

Radiomuscular (*ra-de-o-mus'-ku-lar*) [*radio-*; *musculus*]. Relating to the radius and the muscles of the forearm.

Radiopalmar (*ra-de-o-pal'-mar*) [*radio-*; *palm*]. Pertaining to the radius and the palm.

Radiopraxis (*ra-de-o-praks'-is*) [*radio-*; *praxis*, action; practice]. The art of applying radiant energy either in therapeutics or for other purposes.

Radioscopy (*ra-de-os'-ko-pe*) [*radio-*; *scopos*, to view]. The process of securing an image of an object upon a fluorescent screen by means of radiant energy.

Radiotherapeutic (*ra-de-o-ther-ap-u-tik*) [*radio-*; *therapeutic*]. Having reference to the therapeutic use of radiant energy.

Radiotherapy (*ra-de-o-ther'-o-pe*). The treatment of disease by means of radiant energy.

Radioulnar (*ra-de-o-ul'-nar*) [*radio-*; *ulna*]. Pertaining to the radius and ulna.

Radium (*ra'-de-um*) [*radium*, to emit rays]. An elementary body from pitchblende characterized by the phenomenon of radioactivity. It is obtained by the fractional precipitation or recrystallization of the barium chloride prepared from pitchblende.

Radius (*ra'-de-us*) [L., "a spoke of a wheel"]. 1. A ray. 2. The outer of the two bones of the forearm.

Radix (*ra'-diks*) [L.]. A root.

Radzyge (*rad-zig'-e*). See *Radesyge*.

Rag-picker's Disease. An acute febrile disease occurring in workmen engaged in picking rags in paper-factories. It is supposed to be due to the inhalation of anthrax bacilli spores, and is characterized by an abscess into the pulmonary tissue, bronchitis, and pleural cavity. Syn., *Haderbald's Disease*.

Railway Sickness. See *Cervicogenic*. **Spine**, a term given by Erichsen to a group of spinal symptoms consequent upon slight injuries or concussions received in railway accidents. The condition is associated with the traumatic neuroses and a form of neurasthenia. It is frequently a source of litigation. See *Erichsen's Disease*.

Rainey's Capsules. See *Miescher's*. **Raisins** (*ra'-zins*). Dried grapes.

Rale (*rahl*) [Fr., *râler*, to rattle]. An adventitious sound heard over the chest during respiration and indicating some local disturbance. Rales are either *dry* or *moist* (produced by the bubbling of air through liquid), *sonorous* or *sibilant*. They are also classified according to their place of production into *laryngeal*, *tracheal*, *bronchial*, *vesicular*, *cavernous*, *pleural*, *pericardial*. **R., Amphoric**, a large, musical, tinkling rale, heard in inspiration and expiration, in tuberculous and abscess cavities, produced by movement of air in a tense-walled cavity containing air and communicating with a bronchus. **R., Bubbling, Large**, a moist rale, larger than the medium bubbling, heard in inspiration and expiration in bronchitis and pulmonary engorgement; produced by passage of air through frothy mucus in the trachea and larger bronchi. **R., Bubbling, Medium**, a moist rale larger than the small bubbling, heard in inspiration and expiration in capillary bronchitis, especially in children, produced by the passage of air through mucus in the larger tubes. **R., Bubbling, Small**, a small, moist rale, sounding like the bursting of small bubbles, heard in inspiration and expiration in capillary bronchitis, especially in children; produced by the passage of air through mucus in the bronchioles. **R., Cavernous**, a hollow, metallic rale, heard in inspiration and expiration in the third stage of pulmonary tuberculosis; produced by the passage of air through a small cavity with flaccid walls that collapse with expiration. **R., Clicking**, a small, sticky rale heard in inspiration in the early stage of pulmonary tuberculosis; caused by passage of air through softening material in the smaller bronchi. **R., Consonating**, a bright, clear, ringing rale, heard in inspiration and expiration in tuberculous pneumonia; produced when the bronchial tubes are surrounded by consolidated tissue. **R., Crackling, Dry**, a sharp, short, clicking rale, heard in inspiration in the second or softening stage of pulmonary tuberculosis and in pulmonary gangrene; produced by the breaking down of lung tissue. **R., Crackling, Large**, a dry rale larger than the medium crackling, heard in inspiration and expiration, in pulmonary tuberculosis and pneumonia, after the formation of small cavities; produced by fluid in very small cavities. **R., Crackling, Medium**, a dry rale, larger than the small crackling, heard chiefly in inspiration, in softening of tuberculous deposit or pneumonic exudation; caused by fluid in the finer bronchi. **R., Crackling, Small**, a small, dry rale, sounding like the breaking of small shells, heard chiefly in inspiration, in softening of tuberculous deposit or pneumonic exudation; produced by fluid in the finer bronchi. **R., Crepitant**, a small rale, sounding like the rubbing of hair between the fingers, heard at the end of inspiration in pneumonia, early stage, edema of the lungs, hypostatic pneumonia; localized in pul-

monary tuberculosis. Produced by the passage of air into vesicles, collapsed or containing fibrinous exudation; usually at the base of the lungs. **R., Dry**, a large and sonorous, or small and hissing or whistling rale heard in inspiration and expiration in bronchitis and asthma, localized in beginning pulmonary tuberculosis; produced by narrowing of the bronchial tubes from thickening of the mucous lining, from spasmodic contraction of the muscular coat, viscid mucus within, or pressure from without. **R., Extrathoracic**, one produced in the trachea or larynx. **R., Friction**, a grazing, rubbing, grating, creaking, or crackling rale heard in inspiration and expiration, most distinct at the end of inspiration, in pleurisy and pericarditis; produced by the rubbing together of serous surfaces, roughened by inflammation or deprived of their natural secretion. **R., Gurgling**, a moist rale, larger than the large bubbling, sounding like the bursting of large bubbles, heard in inspiration and expiration in pulmonary tuberculosis after the formation of large cavities. **R., Guttural**, one produced in the throat. **R., Moist**, one produced by the passage of air through bronchi containing fluid. **R., Mucous** (of Laennec), a modification of the subcrepitant rale, heard in inspiration and expiration in pulmonary emphysema; produced by viscid bubbles bursting in the bronchial tubes. **R. redux**, a crackling, unequal rale, heard in inspiration and expiration in the resolution stage of pneumonia; produced by the passage of air through fluid in a bronchial tube. Syn., *Rale de retour*. **R., Sibilant**, a high pitched and even hissing or piping rale, heard in inspiration and expiration in bronchitis, asthma, and localized in beginning pulmonary tuberculosis; produced by narrowing of the smaller bronchi from viscid mucus adhering to the walls, from thickening of the lining membrane, or spasmodic contraction. **R., Sonorous**, a low-pitched, snoring rale, heard in inspiration and expiration, most frequently in bronchitis and spasmodic asthma; produced by lessened caliber of the larger bronchi, from spasm, tumefaction of mucous lining, or external pressure. **R., Subcrepitant**, a small, moist rale heard in inspiration and expiration in capillary bronchitis, produced by the passage of air through mucus in the capillary bronchial tubes. **R., Subcrepitant, Hirtz's**, a moist, metallic rale, pathognomonic of tuberculous softening.

Ramal (*ra'-mal*) [*ramus*, a branch]. Pertaining to a ramus. **Ramalis vena**, the portal vein and its branches.

Ramification (*ram-if-ik-a'-shun*) [*ramus*; *jacere*, to make]. 1. The act or state of branching. 2. A branch.

Ramify (*ram'-e-fi*) [see *Ramification*]. To form branches; to branch.

Ramini's Test for Formaldehyd. Add 1 Cc. of a 1% solution of phenylhydrazin hydrochloride and 3 or 4 drops of freshly

prepared sodium nitroprussiate solution to 15 Cc liquid, then make alkaline with concentrated NaOH, and warm. In the presence of formaldehyd, milk thus tested turns blue to ash gray, changing after fifteen minutes to red.

Ramolissement (*rah-mo-lès-mon* (g)) [Fr.]

Morbid softening of any tissue or part.

Ramón y Cajal's Cells. Fusiform or triangular ganglion-cells lying near the surface of the cerebral cortex and giving off branched processes parallel to it.

Ramose (*ra' mōz*) [*ramus*]. Having many branches; branching.

Ramus (*ra'mus*) [L.; pl. *rami*]. 1. A branch, especially of a vein, artery, or nerve. 2. A slender process of bone projecting like a branch or twig from a large bone, as the *ramus* of the lower jaw, ascending *ramus* of the ischium; ascending or horizontal *ramus* of the pubes.

R. communicans, a branch of a spinal nerve connecting it with the sympathetic ganglions.

Rancid (*ran'sid*) [*rancidus*, sour]. Having a rank or musty smell or taste, a term applied to fats and oils that have undergone decomposition with the development of volatile principles.

Rancidity (*ran'sid'-it-ē*) [*rancid*]. The state of being rancid.

Range (*ranj*) [Fr., *ranjer*, to dispose]. Scope; extent. **R. of Accommodation.** See *Accommodation*, *Range of Relative*.

Ranine (*ran' in*) [*rana*, a frog]. 1. Pertaining to a frog. 2. Pertaining to a ranula or to the region in which a ranula occurs, as *ranine* artery.

Ranula (*ran'-u lah*) [*rana*, a frog]. A cystic tumor beneath the tongue, due to the occlusion of the duct of the sublingual or submaxillary gland, or of a mucous gland of the floor of the mouth. Syn., *Frog tongue*.

Ranunculus (*ran-unj' kus-lus*) [L.] A genus of acid herbs. Many of the species are poisonous and have been used as counterirritants and vesicants. *R. acris* is very irritant and causes erythema aestivum.

Ranvier's Accessory Plexus (*ranj'-gē-se-ōz*). The superficial stroma plexus of the cornea.

R.'s Crosses, black, crucial figures seen at Ranvier's nodes on staining with silver nitrate. The transverse branch of the cross is represented by the line of constriction, and the longitudinal branch by the axis-cylinder.

R.'s Nodes, annular constrictions of the neurilemma, with discontinuity of the medullary sheath of the nerve-fiber.

R.'s Tactile Discs, nerve-endings consisting of small, cup-shaped bodies, the concave side of which is directed toward the free surface of the epidermis.

Rape (*rap*) [*rapere*, to seize]. Sexual intercourse without consent.

Raphania (*rah-at'-ne-ah*) [*radicula*, radish]. A nervous affection attended with spasmodic disorder of the joints and the limbs. It has been attributed to a poisonous principle in the seeds of the wild radish, which become

mixed with grain. The affection is allied to ergotism and pellagra.

Raphe (*ray'-ū*) [*raphe*, a seam]. A seam or ridge, especially one intersecting the line of junction of two symmetrical halves.

Raptus (*rap'-tus*) [*raptus*, seized]. A sudden attack or seizure, *raptus*.

Rarefaction (*rar'-e-fik'-shun*) [*rare*, to rare, to make rare, to make]. The act of rarefying or of decreasing the density of a substance, especially the air. **R. of Bone**, the process of rendering bone more porous.

Rarefy (*rar'-ē fī*) [see *Rarefaction*]. To make less dense or more porous.

Rarefying Osteitis. See *Osteoporosis*.

Rasceta (*ras'-et-ah*) [L.] The transverse lines or creases on the inner side of the wrist.

Rasch's Sign. Fluctuation obtained by applying two fingers of the right hand to the umbilicus in ballottement, and drawing the umbilicus through the abdomen with the left hand. It depends upon the presence of the foetus in situ, and is an early sign of pregnancy.

Rash (OF., *rasche*, from *radere*, to scrape). A superficial eruption of the skin or mucous membrane. **R., Amygdalotomy**, one generally appears on the second or third day after the operation, on the neck, and is a hair attributed to the infant about the hairs of certain caterpillars. **R., Drug**, one produced by drugs. **R., Medicinal**. See *R., Drug*. **R., Mulberry**, a disease resembling an exanthem of measles, sometimes occurring in typhus. **R., Nettle**, or *Nettle-rash*. **R., Rose**. See *Rose*. **R., Scarlet**. See *Scarletina*. **R., Tonsillotomy**. See *R., Amygdalotomy*. **R., Tooth**, a tooth attributed to dentition.

Rasion (*ra'shon*) [*radere*, to scrape]. To scraping of drugs with a file.

Rasmussen's Aneurysm. Dilatation of an artery in a tuberculous cavity. The rupture is a frequent cause of hemorrhage. **R.'s Test for Urobilin**, shake together thoroughly equal parts of urine and a solution has been added 6 or 7 drops of saturated iodine. Allow it to stand until the urine separates into an upper layer of colorless urine and a lower one of urine. In the presence of bile the lower layer turns green if the verdin also exists.

Raspail's Reaction for Albumins. They are colored red by sugar and concentrated sulfuric acid.

Raspatory (*ras'-pā-tōr-ē*) [*raspativum*, to scrape, to scrape]. A rasp or file for rasping the rough surfaces of bones or for rasping the pericosteum.

Raspberry (*ras'-ber-ē*). The fruit of *Rubus idaeus*, a plant of the order *Rosales*. It is used as a vehicle and as a diuretic.

Rasura (*ra-sa'-e-ah*) [L.]. 1. The process of rasping, shaving, or scraping. 2. Scraping, filings.

Ratany, Ratanhia (*rat'-an-e, rat-an'-he-ah*).
See *Krameria*.

Rathke's Duct (*rat'-kēs*). See *Duct, Rathke's*.
R.'s Folds, two projecting folds of the fetal mesoderm which are placed between the orifice of the intestine and the allantois and unite in the median line to form Douglas' septum.
R.'s Glands. See *Jacobson's Organ*. **R.'s Pouch**, in the embryo, the diverticulum of the pharyngeal membrane which is connected with the midbrain, and ultimately forms the anterior lobe of the hypophysis.

Rational (*ra'-shun-al*) (*ratio, reason*). Based upon reason; reasonable. In therapeutics, opposed to empiric. **R. Formula**. See *Formula, Constitutional*. **R. Symptoms**, the symptoms elicited by questioning the patient, as opposed to those ascertained by physical examination.

Ratsbane (*rats'-bān*). 1. Arsenic trioxid. 2. A name given to any rat-poison containing arsenic.

Rattle (*rat'-l*) [*AS., hratelan, to rattle*]. A rale. **R., Death-**, a gurgling sound observed in dying persons, due to the passage of the air through mucus in the trachea.

Rau's Process. See *Folian Process*.

Rauber's Layer. A superficial stratum of flat cells occurring in the center of the embryonal spot at an early stage in the development of the blastodermic membranes.

Rauschbrand. The German name for black-leg.

Ray (*rā*) (*radius, a ray*). 1. A beam of light or heat, one of the component elements of light or heat. 2. One of a number of lines diverging from a common center. **R.s, Actinic**. See *R.s, Chemic*. **R.s, Alpha-**, rays discovered by Rutherford, emanating from uranium, thorium, and radium, and differing from kathode rays in having much less penetrating power and in not being deviated ordinarily either by a magnet or an electrically charged body. **R.s, Becquerel**, invisible radiations of electrified particles or ions projected from radioactive bodies, such as uranium, radium, polonium, or their salts, without evident cause, and persisting over long periods. **R.s, Beta-**, Rutherford's name for the kathode rays emitted by radioactive substances. They differ from the alpha-rays in greater penetrating power, weaker electric power, and in carrying a negative charge. **R.s, Chemic**, solar rays that produce chemic change. See *Phototherapy*. **R.s, Diakathodic**, bluish rays obtained by directing the ordinary kathode rays upon a piece of wire gauze or upon a spiral of wire which is itself negatively electrified. They are not directly affected by a magnet. **R.-fungus**. See *Actinomyces*. **R.s, Gamma-**, a type of Becquerel rays more highly penetrating than the alpha-rays and beta-rays, but insignificant in energy compared with them. **R.s, Goldstein**, kathode rays which have been altered by being passed through a perforated metallic plate. **R.s,**

Hard, roentgen rays coming from a tube the exhaustion of which is sufficient to cause a considerable difference in the potential between the kathode and the anode and in the velocity of the kathode rays. They have high penetrating powers. Cf. *R.s, Soft*. **R.s, Kathode**, the stream of negatively electrified particles emanating from the kathode of a Crookes tube and passing in straight lines regardless of the anode. They are capable of deflection with a magnet and produce fluorescence and heat wherever they impinge.

R., Medullary, of the Kidney, any one of the bundles of tubules that are the continuation into the cortex of the malpighian pyramids. **R.s, N-**, a form of ether-waves discovered by Blondlot (1903) and named after the initial letter of Nancy, in the university of which his researches were conducted. They increase the brightness of an electric spark or the luminosity of phosphorescent bodies; they are emitted by the roentgen-ray tube, by an Auer-Welsbach incandescent gas-mantle, by the ordinary gas-flame, but not by a Bunsen burner; the sun emits these in abundance, as does the Nernst lamp. Compression, torsion, and strain of many solids will cause the emission of the rays; living bodies, plants, and animals emit them.

R.s, Photographic. See *R.s, Ultraviolet*. **R.s, Positive**. See *R.s, Goldstein*. **R.s, Roentgen-**, the ether-rays or waves discovered by Roentgen, of Wurzburg, and named by him x-rays. A vacuum-tube of glass (called a *Geissler tube*, a *Hittor*) or a *Crookes tube* is used with two wires sealed through the glass. These wires are connected with the two poles of a battery, and Roentgen found that the rays from the kathode (*kathode rays*) had peculiar penetrative powers through matter opaque to other ether-rays, and that by means of these rays photographs ("shadowgrams") may be taken of bones, metallic substances, etc., situated in the tissues: they readily traverse living tissues and influence the nutrition of the deeper ones; they have no appreciable effect on the vitality of bacteria. Herz, and especially Lenard, prior to Roentgen, had discovered this penetrating power of the kathode rays, but failed to make the application suggested by Roentgen. **R.s, Soft**, rays coming from a tube the pressure in which is fairly low; they are readily absorbed. Cf. *R.s, Hard*. **R.s, Ultraviolet**, waves of the luminiferous ether which do not affect the retina. They can be reflected, refracted, and polarized; they will not traverse many bodies that are pervious to the rays of the visible spectrum; they produce photographic and photochemic effects, and destroy rapidly the vitality of bacteria. Syn., *Actinic rays; Photographic rays*. **R.s, Uranium**. See *R.s, Becquerel*. **R.s, X-**. See *R.s, Roentgen*.

Ray's Mania. Moral insanity, regarded by Ray as a distinct form of mental disorder.

Raynaud's Disease (*ra-nō*). 1. A trophoneu-

rosis characterized by three grades of intensity: (a) Local syncope, observed most frequently in the extremities, and producing the condition known as dead fingers or dead toes. (b) Local asphyxia, which usually follows local syncope, but may develop independently. The fingers, toes, and ears are the parts usually affected. In the most extreme degree the parts are swollen, stiff, and livid, and the capillary circulation is almost stagnant. (c) Local or symmetric gangrene. Small areas of necrosis appear on the pads of the fingers and of the toes, also at the edges of the ears and tip of the nose. Occasionally symmetric patches are seen on the limbs or trunk, and in severe cases terminate in extensive gangrene. Some cases are attended by hemoglobinuria. The pathology of the disease is obscure. 2. Paralysis of the muscles of the throat following parotitis. **R.'s Gangrene.** See *R.'s Disease* (1).

Re-. A Latin prefix signifying back or again.

Reaction (*re-ak'shun*) [*re*, again, *agere*, to act] 1. Counteraction, opposite action, interaction. 2. The response of an organ or part to a stimulus. 3. In chemistry, (a) interaction of two or more substances when brought in contact; (b) the response to a certain test, as *acid reaction*, *alkaline reaction*, responding to the test for acid and alkali respectively. **R., Addition**, the direct union of two or more molecules to form a new molecule. **R., Amphigenous**, **R., Amphiteric**, a double reaction occurring occasionally in the urine, owing to the presence of substances by which the liquid responds to both the acid and alkaline tests. **R., Bareggi's.** See *Bareggi's Reaction*. **R., Bechterew's.** See *Bechterew's Reaction*. **R., Chameleon**, the peculiar change of color observed in cultures of *Pseudomonas pyocyanea*, from green to brown and back again. **R., Chemic.** See *Reaction* (1). **R., Clump**, the agglutination of bacteria or of leukocytes as the result of the action of certain enzymes, lysins, or toxins. **R., Consensual**, reaction which is independent of the will. **R. of Degeneration**, the reaction obtained when an electric stimulus is applied to a muscle deprived of its trophic nerve influence. It is characterized by the following conditions: diminution or abolition of the excitability of the muscles for the faradic current, with a temporary increase in excitability for the galvanic current. In the nerves there is a diminution or abolition of both faradic and galvanic excitability. The reactions of the muscle to the galvanic current (the true reaction of degeneration) may be formulated as follows:

An(C)C = An(C)C	Muscle normal
An(C)C = An(C)C	Muscle in first stage of
An(C)C = An(C)C	degeneration
An(C)C = An(C)C	Muscle in more advanced
An(C)C = An(C)C	stage of degeneration

An(C)C = anodal closing contraction. An(C)C = anodal opening contraction. K(C)C = cathodal closing contraction. K(C)C = cathodal opening contraction.

See *Pflüger's Law of Contraction*. **R., Electric**, a response in a muscle or a part produced by electric stimulation. **R. of Exhaustion**, a variety of reaction to electric stimulation, seen in states of exhaustion, in which a reaction produced by a given current strength cannot be reproduced without increasing the current strength. **R., Franklinic**, of *Degeneration*, a rare form of reaction of degeneration produced by static electricity, and similar to that obtained by the faradic current. **R., Hemianopic Pupillary**, of *Widal*, a reaction obtained in some cases of hemianopia in which a pencil of light directed at the blind side of the retina gives rise to no movement in the iris, but thrown upon the normal side, produces contraction of the iris. It indicates that the lesion producing the hemianopia is situated at or anterior to the geniculate bodies. **R., Mixed**, a reaction obtained in the nerve and altered in the muscle. It is called by Erb the middle form of degenerative reaction. **R., Myasthenic**, one in which the normal tetanic contraction of a muscle under faradic stimulation becomes less intense and of shorter duration, and every consecutive stimulus and tetanus weakens the muscle being exhausted. See *Exhaustibility*. **R., Myotonic**, a reaction seen in Thomson's disease, in which there is quantitative increase in the faradic excitability. See *Ebb's Waves*. **R., Neurotonic**, in electrotherapy, a tonic persistence of contraction, after the current has been broken upon galvanic and faradic stimulation of the nerve alone, in contradistinction to the myotonic persistency that follows faradic stimulation of the muscle. **R., Neutral**, a reaction indicating the absence of both acid and alkaline properties. **R.-period**, **R. time**, the interval between the termination of a stimulus and the beginning of the responding motor act. **R., Piotrowski's** See *Piotrowski's Reaction*. **R., Thread**, an affilar reaction, consisting in the formation of long interlacing threads produced in some bacteria, *Bacillus coli communis*, *Bacillus proteus*, etc., when brought in contact with blood-serum, especially that of the rabbit, from whom the bacteria were obtained. **R., Widal.** See *Widal's Reaction*.

Reader's Cramp. A cramp of the reader's muscles following prolonged reading.

Reagent (*re-aj'ent*) [*re*, again, *agere*, to act] A substance used to produce a chemical reaction.

Real Focus. See *Focus* (2). **R. Image.** See *Image*, *Real*.

Realgar (*re-al'-gar*) [*Ar*, name of the powder of the mine] Arsenic disulfide, As₂S₂.

Reamputation (*re-am-pu-ta'shun* [*re*, again, *amputare*]) An amputation upon a member in which the operation has been performed twice.

Réaumur's Thermometer. See *Thermometer*, *Réaumur*.

Receiver (*re-se'-ver*) [*recipere*, to receive].

1. The vessel receiving the products of distillation. 2. In an air-pump, the jar in which the vacuum is produced.

Receptaculum (*re-sep-tak'-u-lum*) [L., "a receptacle"]. A receptacle. **R. chyli**, the sac-like beginning of the thoracic duct opposite the last dorsal vertebra. **R. seminis**. See *Cistern, Seminal*.**Receptor** (*re-sep'-tor*) [*recipere*, to receive]. A name given by Ehrlich to the atomic lateral chain or haptophorous group, which, existing in each cell in addition to its nucleus, combines with the intermediary body. **R. of the First Order**, one that unites with a toxin. **R. of the Second Order**, one that has two haptophore groups, one of which unites with a nutritional substance (immune body) and the other with a fermentive substance (complement).**Recession** (*re-sesh'-un*) [*recedere*, to recede]. The gradual withdrawal of a part from its normal position, as the recession of the gums from the necks of the teeth.**Recessus** (*re-ses'-us*) [L.]. A depression or recess. **R. hemiellipticus**. See *Fovea hemielliptica*. **R. hemisphaericus**. See *Fovea hemisphaerica*. **R. pharyngeus**, a pouch-like process of the mucosa of the pharynx situated below the opening of the eustachian tube.**Recidivation** (*re-sid-iv-a'-shun*) [*recidivus*, a falling back]. The relapsing of a disease.**Recipe** (*res'-p-e*). 1. The imperative of *recipere*, used as the heading of a physician's prescription, and signifying take. Symbol R. 2. Also the formula itself.**Reciprocal Proportions, Law of**. See *Dalton's Law*.**Recklinghausen's Canals**. See *Canals of Recklinghausen*. **R.'s Disease**. 1. Neurofibromatosis. 2. Hemachromatosis; an affection characterized by bronzing of the skin, hypertrophic cirrhosis of the liver, enlargement of the spleen, and, in later stages, diabetes from pancreatic sclerosis.**Reclination** (*reh-lin-a'-shun*) [*reclinare*, to recline]. 1. An old operation for cataract, called also "couching," in which the lens was pushed back into the vitreous chamber. 2. The act of lying down.**Reclus' Disease**. Cystic disease of the mammary gland; chronic cystic or interstitial mastitis.**Recomposition** (*re-kom-po-zish'-un*) [*recompone*, to reunite]. Reunion of parts or constituents after temporary dissolution.**Reconstituent** (*re-kon-stit'-u-ent*) [*re-*; *constituere*, to constitute]. A medicine which promotes continuous repair of tissue-waste or makes compensation for its loss.**Recrement** (*rek'-re-ment*) [*recrementum*, from *re*, again; *creescere*, to grow]. A secretion that is reabsorbed after fulfilling its function.**Recrementitious** (*rek-re-men-tish'-us*) [*recrementif*]. Pertaining to or of the nature of a *recrement*.**Recrudescence** (*re-kru-des'-ens*) [*re-*; *crudescere*, to become raw]. An increase in the symptoms of a disease after a remission or a short intermission.**Rectal** (*rek'-tal*). Pertaining to the rectum or performed through the rectum. **R. Alimentation**. See *Alimentation, Rectal*. **R. Crises**, attacks of rectal pain and tenesmus occurring in locomotor ataxia.**Rectalgia** (*rek-tal'-je-ah*) [*rectum*; *ἀλγος*, pain]. Pain in the rectum; proctalgia.**Rectification** (*rek-tif-ik-a'-shun*) [*rectus*, straight; *facere*, to make]. 1. A straightening, as *rectification* of a crooked limb. 2. The redistillation of weak spirit in order to strengthen it.**Rectified Spirit**. Alcohol containing 94.9 % of ethyl-alcohol.**Rectify** (*rek-tif-i*) [see *Rectification*]. To make right or straight; to refine.**Rectitis** (*rek-tif'-tis*). See *Proctitis*.**Recto-** (*rek-to-*) [*rectum*]. A prefix meaning relating to the rectum.**Rectoabdominal** (*rek-to-ab-dom'-in-al*). Relating to the rectum and the abdomen.**Rectocele** (*rek'-to-sel*) [*recto-*; *κύλη*, hernia]. Prolapse of the rectum into the vagina.**Rectococcygeal** (*rek-to-kok-sij'-e-al*) [*recto-*, *coccygeal*]. Pertaining to the rectum and the coccyx.**Rectococcyxepia** (*rek-to-koks-e-pek'-e-ah*) [*recto-*; *κόκυξ*, coccyx; *πῆξις*, a fastening]. Suturing of the rectum to the coccyx.**Rectocolitis** (*rek-to-kol-i'-tis*). Inflammation of the mucosa of the rectum and colon combined.**Rectocolonic** (*rek-to-kol-on'-ik*) [*recto-*; *colon*]. Pertaining to the rectum and the colon.**Rectocystotomy** (*rek-to-sist-ot'-o-me*) [*recto-*; *cystotomy*]. Incision of the bladder through the rectum.**Rectogenital** (*rek-to-jen'-it-al*). Pertaining to the rectum and the genital organs.**Rectolabial** (*rek-to-lab'-e-al*). Relating to the rectum and the labia pudendi.**Rectopexia** (*rek-to-pek'-e-ah*) [*recto-*; *πῆξις*, a fastening]. Surgical fixation of a prolapsed rectum.**Rectoscope** (*rek'-to-skop*) [*recto-*; *σκοπεῖν*, to inspect]. A rectal speculum.**Rectostenosis** (*rek-to-sten-o'-sis*) [*recto-*, *stenosis*]. Stenosis of the rectum.**Rectostomy** (*rek-tos'-to-me*). See *Proctostomy*.**Rectotome** (*rek'-to-tom*) [*recto-*; *τομή*, a cutting]. A cutting instrument used in rectotomy.**Rectotomy** (*rek-tot'-o-me*). See *Proctotomy*.**Rectourethral** (*rek-to-u-re'-thral*) [*recto-*; *urethra*]. Pertaining to the rectum and the urethra.**Rectouterine** (*rek-to-u'-ter-in*) [*recto-*; *uterus*]. Pertaining to the rectum and the uterus.**Rectovaginal** (*rek-to-vay'-in-al*) [*recto-*; *vagina*]. Pertaining to the rectum and the vagina. **R. Fistula**, an opening between the vagina and the rectum.**Rectovesical** (*rek-to-ves'-ik-al*) [*recto-*; *vesica*].

the bladder]. Pertaining to the rectum and the bladder.

Rectum (*rek'-tum*) [*rectus*, straight]. The lower part of the large intestine, extending from the sigmoid flexure to the anus. It begins opposite the left sacroiliac synchondrosis, passes obliquely downward to the middle of the sacrum, and thence descends in the median line to terminate at the anus.

Rectus (*rek'-tus*) [L.]. Straight; applied to anything having a straight course. **R. Muscle.** See under *Muscle*.

Recumbent (*re-kum'-bent*) [*recumbere*, to recline]. Leaning back; reclining.

Recuperate (*re-ku'-per-at*) [*recuperare*, to regain]. To regain strength or health.

Recurrans (*re-kur'-ens*) [see *Recurrent*]. Relapsing fever.

Recurrent (*re-kur'-ent*) [*re*, back; *currere*, to run]. 1. Returning. 2. In anatomy, turning back in its course, as *recurrent laryngeal nerve*. **R. Fever**, relapsing fever.

Red [AS., *redd*]. The least refrangible of the spectral colors; of a color resembling that of the blood. **R. Bark.** See *Cinchona*. **R.-blindness.** See under *Blindness*, *Color*. **R. Gum**, a red, papular eruption of infants. **Syn., Strophulus.** **R. Lead**, red lead oxid, formerly used in plasters. **R. Nucleus.** See *Nucleus, Tegmental*. **R. Pepper.** See *Capiticum*. **R. Precipitate.** See *Mercury Oxid, Red*. **R. Softening**, a form of acute softening of the brain or spinal cord, characterized by a red, punctiform appearance due to the presence of blood.

Redintegration (*red-in-te-grat'-shun*) [*redintegrare*, to renew]. The complete restitution of a part that has been injured or destroyed.

Redressment (*re-dres'-ment*) [Fr., *redressement*]. Correction of a deformity or replacement of a dislocated part. **Redressement force**, the forcible correction of a deformity or restoration of a displaced part.

Reduce (*re-dūs'*) [*re*, back; *ducere*, to lead]. 1. To restore a part to its normal relations, as to *reduce* a hernia or fracture. 2. In chemistry, to bring back to the metallic form; to deprive of oxygen.

Reduced (*re-dūs'd*) [*reduce*]. 1. Restored to the proper place. 2. In chemistry, brought back into the metallic form, as *reduced iron*. 3. Diminished in size. **R. Eye.** See *Eye, Reduced*, of *Donders*.

Reducible (*re-dū'-si-bl*) [*reduce*]. Capable of being reduced.

Reducin (*re-dū'-sin*). A leukomatin, $C_{15}H_{21}N_5O_6$, found in urine.

Reduction (*re-duk'-shun*) [*reduce*]. The act of reducing. **R. en bloc**, **R. en masse**, the reduction of a strangulated hernia still surrounded by its sac, thus failing to relieve the strangulation.

Reduplicated (*re-dū'-plik-a-ted*) [see *Reduplication*]. Doubled, as *reduplicated heart-sounds*. See *Reduplication*.

Reduplication (*re-dū'-plik-a'-shun*) [*re*, again; *duplicare*, to double]. A doubling. **R. of**

the **Heart-sounds**, a doubling of either the first or the second sound of the heart.

Redux (*re'-duks*) [L.]. Returning. **R. Crepitus**, the small mucous rales heard in the early stage of the resolution of lobar pneumonia.

Reed (*red*). See *Abomasum*.

Reel, Cerebellar. The peculiar staggering gait in diseases of the cerebellum, particularly in tumor.

Rees' Test for Albumin. Small amounts of albumin are precipitated by an alcoholic solution of tannic acid.

Reevolution (*re-ev-ol-u'-shun*). Hughlings Jackson's term for a symptom following an epileptic attack, which consists of three stages: (1) Suspension of power to understand speech (word-deafness). (2) Perception of words and echolalia without comprehension. (3) Return to conscious perception of speech with continued lack of comprehension.

Refine (*re-fin'*) [*re*, again; *finire*, to finish]. To purify; to separate a substance from foreign matter.

Reflection (*re-flek'-shun*) [*reflex*]. A bending or turning back; specifically, the turning back of a ray of light from a surface upon which it impinges without penetrating.

Reflector (*re-flek'-tor*). A polished surface to which light is reflected.

Reflex (*re'-fleks*) [*re*, back; *flectere*, to bend].

1. Anything reflected or thrown back. 2. A reflex act.

R., Abdominal, contraction of the muscles about the umbilicus, on sudden stroking of the abdominal wall between the margin of the ribs downward, it shows integrity of the spinal cord from the fifth to the twelfth dorsal nerve. **R. Act**, as following immediately upon a stimulus without the intervention of the will. **R., Ankle-clonic** contractions of the tendo achillis dependent upon alternate contraction and relaxation of the anterior, tibial, and calf muscles; obtained by sudden complete flexion of the foot, by pressing the hand against the sole.

Syn., Ankle-clonus. **R. Arc**, the mechanism necessary for a reflex action; it consists of an afferent or sensory nerve; a nerve center to change this sensory impulse into a motor one; and an efferent or motor nerve to carry a motor impulse to the muscle or group of muscles.

R., Biceps, contraction of the biceps muscle on tapping the tendon of the biceps; a normal reflex, but increased by causes which increase the knee jerk.

R. Bone, a reflex muscular contraction excited by blows over a bone. **R., Bulbocavernosus**. See *R., Virile*. **R., Chin.** See *R., Chin*.

R., Ciliospinal, pupillary dilation on stimulation of the skin of the neck. **R. Corneal.** Same as *R., Eyelid closure*. **R. Cremasteric**, retraction of the testis on stimulation of the skin on the front and inner side of the thigh; it shows integrity of the nerves between the first and second pairs of lumbar nerves. **R. Cremasteric**, retraction of the testis on stimulation of the skin on the front and inner side of the thigh; it shows integrity of the nerves between the first and second pairs of lumbar nerves.

R., Eyelid closure, contraction of the orbicular palpebrarum on stimulation of the skin of the face. **R., Eyelid closure**, contraction of the orbicular palpebrarum on stimulation of the skin of the face.

R., Eyelid closure, contraction of the orbicular palpebrarum on stimulation of the skin of the face. **R., Eyelid closure**, contraction of the orbicular palpebrarum on stimulation of the skin of the face.

R., Eyelid closure, contraction of the orbicular palpebrarum on stimulation of the skin of the face. **R., Eyelid closure**, contraction of the orbicular palpebrarum on stimulation of the skin of the face.

of one side of the body produces a reflex on the opposite side. **R., Deep**, reflexes developed by percussion of tendons or bones. **R., Dorsal**. Same as *R., Erector spinæ*. **R., Epigastric**, dimpling in the epigastrium, due to contraction of the highest fibers of the rectus abdominis muscle, on stimulation of the skin in the fifth or sixth intercostal space near the axilla, it shows integrity of the cord from the fourth to the seventh dorsal nerves. **R., Erector spinæ**, local contraction of erector spinæ muscle on stimulation of the skin along the border, it shows integrity of the dorsal region of the cord. **R., Eyelid-closure**, closure of the lid on irritation of the conjunctiva. **R., Faucial**, vomiting on irritation of the fauces. **R., Femoral**, plantar flexion of the first three toes and of the foot, and extension of the knee-joint upon irritation of the skin on the upper anterior aspect of the thigh; it occurs in disease of the spinal cord, e. g., in some cases of transverse myelitis. **R., Front-tap**. See *R., Tendo achillis*. **R., Gluteal**, contraction of the glutei upon firm, sudden stroking of the skin over the buttock; it shows integrity of the cord at the fourth and fifth lumbar nerves. **R., Guttural**, a reflex observed in cases of diseased genitalia in women, in which the patient is desirous of spitting but cannot. **R., Haab's Pupil**-. See *Haab's Pupil-reflex*. **R., Interscapular**. See *R., Scapular*. **R., Iris-contraction**. See *R., Pupillary*. **R., Jaw**, clonic movements of the inferior maxilla, obtained on a downward stroke with a hammer on the lower jaw hanging passively or gently supported by the hand; it is rarely present in health, increased in sclerosis of the lateral columns of cord. Syn., *Jaw-clonus; Jaw-jerk*. **R., Knee**, contraction of the quadriceps muscle, the foot being jerked forward on striking the patellar tendon after rendering it tense by flexing the knee at a right angle; it is normal in health; *absent* in locomotor ataxia, destructive lesions of the lower part of the cord, multiple neuritis, affections of the anterior gray cornua, infantile paralysis, meningitis, diphtheric paralysis, atrophic palsy, pseudohypertrophic muscular paralysis, diabetes, etc.; *increased* in diseases of the pyramidal tracts, in spinal irritability, tumors of the brain, cerebrospinal sclerosis, lateral sclerosis, after epileptic seizures or unilateral convulsions. Syn., *Knee-jerk*. **R., Laryngeal**, coughing, produced by irritation of the fauces, larynx, etc. **R., Lumbar**. Same as *R., Erector spinæ*. **R., Multiplier**, an apparatus for the registration of tendon-reflexes. **R., Nasal**, sneezing, on irritation of the schneiderian membrane. **R., Obliquus**, contraction of the fibers of the obliquus externus in females (corresponds to cremasteric in males, although it can also be caused in males) on irritation of skin below Poupart's ligament. **R., Ophthalmic**. See *R., Supraorbital*. **R., Palatal**, swallowing

produced by irritation of the palate. **R., Palmar**, contraction of the digital flexors upon tickling the palm; it shows that the cervical region of the cord is normal. **R., Patellar**. Same as *R., Knee*. **R., Patellar, Paradoxical**, contraction of the adductor but not of the quadriceps muscle on percussing the patellar tendon, with the patient in the dorsal decubitus. If the patient is in the sitting posture, the normal reflex is elicited; it shows spinal concussion. **R.s, Pathic**, movements resulting from stimulation of a sensory nerve. **R., Penis**. See *R., Virile*. **R., Periosteal**, sharp contractions of the muscles upon tapping the bones of the forearm or leg; it indicates disease of the lateral columns of the spinal cord. **R., Peroneal**, reflex movements caused by a stroke on the peroneus muscles when tense or when the foot is turned inward. **R., Pharyngeal**, swallowing produced by irritation of the pharynx. **R., Plantar**, contraction of the toes upon stroking the sole of the foot. **R., Platysma**, dilation of the pupil upon pinching the platysma myoides muscle. **R., Pupillary**, contraction of the iris on exposure of the retina to light; it is absent in basal meningitis, etc. **R., Pupillary, Paradoxical**, dilation of the pupil on stimulation of the retina by light. **R., Scapular**, contraction of the scapular muscles on irritation of the interscapular region; it shows integrity of the cord between the upper two or three dorsal and lower two or three cervical nerves. **R., Skin**. See *R., Platysma*. **R., Sole**. Same as *R., Plantar*. **R., Spinal**, those reflex actions emanating from centers in the spinal cord. **R., Superficial**, such as are developed from irritation of the skin. **R., Supraorbital**, a slight contraction of the orbicularis palpebrarum muscle on striking the supraorbital nerve or one of its branches a slight blow. **R., Tendo achillis**, reflex contraction of the gastrocnemius muscle, produced by striking the muscles on the anterior part of leg while in extension, the foot being extended by the hand upon the sole; it is considered a delicate test of heightened spinal irritability. Syn., *Front-tap contraction*. **R., Toe**, involuntary flexion of the foot, then flexion of the leg, and, lastly, flexion of the thigh on the pelvis upon strong flexion of the great toe; it is seen in cases in which the knee jerk and other tendon-reflexes are strongly developed. **R., Triceps**, extension of the forearm on tapping the tendon of the triceps muscle. **R., Virile**, retraction of the bulbocavernous portion upon sharp percussion of the back of the penis, the sheath having been made tense; it occurs in health. **R., Visceral**, one of a group of reflexes, as, *blinking*, from touching the cornea; *penile*, erection on slight contact or produced by passing a catheter; *rectal*, constriction of the bowel following introduction of a foreign body, as a suppository; *sneezing*, that produced by a draft

of cold air or a brilliant light; *vesical*, contraction of the bladder following irritation of the urethral orifice, e. g., incontinence of urine in children, by reason of a long prepuce; *vomiting*, from tickling the fauces. **R.**, **Wrist**, a series of jerking movements of the hand produced by pressing the hand backward to extreme extension; observed in the late rigidity of hemiplegia. Syn., *Wrist-clonus*.

Reflexograph (*refleks'-o-graf*) [*reflex*; *γρᾱφῆν*, to write]. An instrument for measuring, timing, and charting automatically knee-jerks and other tendon-reflexes.

Reflexophil (*refleks'-o-fil*) [*reflex*; *φιλέω*, to love]. Attended by reflex activity.

Reflex (*ref'-fleks*) [*re*, back, *fluere*, to flow]. A return flow.

Refract (*re'-frakt'*) [*re*, back; *frangere*, to break]. 1. To bend back. 2. To change direction by refraction. 3. To estimate the degree of ametropia, heterophoria, and heterotropia present in an eye.

Refracta dosi (*re'-frakt'-tah do'-si*) [L.]. In broken doses.

Refraction (*re'-frakt'-shun*) [*refract*]. 1. The act of refracting or bending back. 2. The deviation of a ray of light from a straight line in passing obliquely from one transparent medium to another of different density. 3. The state of refractive power, especially of the eye; the ametropia, emmetropia, or muscle-imbalance present. 4. The act or process of correcting errors of ocular refraction. **R.**, **Angle of**, the angle formed by a refracted ray of light with the perpendicular at the point of refraction. **R.**, **Double**, the power possessed by certain substances, as Iceland spar, of dividing a ray of light and thus producing a double image of an object. **R.**, **Dynamic**, the static refraction of the eye, plus that secured by the action of the accommodative apparatus. **R.**, **Index of**, the refractive power of any substance as compared with air. It is the quotient of the angle of incidence divided by the angle of refraction of a ray passing through the substance. **R.**, **Static**, that of the eye when accommodation is at rest.

Refractive (*re'-frakt'-iv*) [*refract*]. Refracting; capable of refracting or bending back, pertaining to refraction. **R.**, **Index**. See *Index, Refractive*.

Refractivity (*re'-frakt'-iv-itee*) [*refract*]. Power of refraction; ability to refract.

Refractometer (*re'-frakt'-om'-e-ter*) [*refract*; *μέτρον*, a measure]. 1. An instrument for measuring the refraction of the eye. 2. An instrument for the determination of the refractive indexes of liquids.

Refractory (*re'-frak'-tur* or *re'-frak'-tur-ee*, stubborn). 1. Resisting treatment. 2. Resisting the action of heat. Also to melt.

Refraction (*re'-frak'-tur*) [*re*, back, *frangere*, to break]. The breaking again of fractured bones that have joined by faulty or improper union.

Refrangibility (*re'-frang'-ib-il'-ee-tee*) [*see Refract*]. Capability of undergoing refraction.

Refresh (*ree'-fresh'*) [*re*, again, *fluere*, to flow]. In surgery, to give to an old wound the character of a fresh wound.

Refrigerant (*re'-frij'-ee-ant*) [*see Refrigeration*]. 1. Cooling, lessening fever. 2. A material or agent having cooling properties or tending to lower body-temperature.

Refrigeration (*re'-frij'-ee-ashun*) [*see Refrigerant*]. The act of lowering the temperature of a body by conducting away heat to a surrounding cooler substance.

Refusion (*re'-fu'-shun*) [*see Refuse*, also *flowing*]. The act of withdrawing from the vessels, expelling it to the margin of the air, and passing it back again.

Regeneration (*re'-jen-er-ashun*) [*see Regenerate*, to beget]. The repair of diseased structures.

Regimen (*rej'-im-en*) [*regere*, to rule]. A regulated use of food and the arrangement of surroundings to suit conditions of health or disease.

Region (*re'-jun*) [*regio*, a region]. One of the divisions of the body possessing natural or arbitrary boundaries. **R.** of the **Abdomen**. See under *Abdomen*. **R.**, **Epigastric**. See under *Abdomen*. **R.**, **Hypochondriac**. See under *Abdomen*. **R.**, **Hypogastric**. See under *Abdomen*. **R.**, **Iliac**, the regional terminal to the hypogastric region. **R.**, **Left axillary**, the space between the anterior and posterior axillary lines. **R.**, **Infraclavicular**, the space just below the clavicle. **R.**, **Left mammary**, the space between a line drawn along the upper border of the nipple and the axilla and the margin of the base of the breast. **R.**, **Infrascapular**, the region on each side of the vertebral column below a horizontal line drawn through the inferior angle of the scapula. **R.**, **Infraspinoous**, that between the spine of the scapula and the axilla passing through the angle of the scapula. **R.**, **Inguinal**, the region of the groin. **R.**, **Interscapular**, the space between the scapulas. **R.**, **Ischio-rectal**, the space between the ischium and the rectum. **R.**, **Lower bar**. See under *Abdomen*. **R.**, **Mammary**, the space on the anterior surface of the breast between the third and the sixth ribs. **R.**, **Parotid**. See *R.*, *Retromaxillary*. **R.**, **Pericardial**, the surface of the chest covering the heart. **R.**, **Prevertebral**, the ventral surface of the vertebral column. **R.**, **Pulmonosternal**, the part of the thorax in which the pleura overlaps the origins of the large vessels. **R.**, **Retromaxillary**, the area dorsal to the superior maxilla. **R.**, **Sacrocoxaeal**, the part of the dorsal wall of the pelvis extending to the ventral surface of the sacrum and coccyx. **R.**, **Sternal**, the region of the sternum. **R.**, **Sternal, Inferior**, the part of the sternal region lying between the margins of the third costal cartilage. **R.**, **Sternal, Superior**, that portion of the sternal region lying above the lower margin of the third costal cartilage.

REGIONAL ANATOMY.

1, 1', 2, 2', 3, 3', 4, 4', 5, 5', 6, 6', 7, 7', 8, 8', 9, 9', 10, 10', 11, 11', 12, 12', 13, 13', 14, 14', 15, 15', 16, 16'. Supraclavicular region. 1, 1'. Mammillary region. 2, 2'. Clavicular region. 3, 3'. Epigastric region. 4, 4'. Hypogastric region. 5, 5'. Axillary region. 6, 6'. Infraaxillary region. 7, 7'. Hypochondriac region. 8, 8'. Lumbar region. 9, 9'. Inguinal region. 10, 10'. Suprascapular region. 11, 11'. Interscapular region. 12, 12'. Infrascapular region. 13, 13'. Lumbosacral region. 14, 14'. Sacral region. 15, 15'. Sacral region. 16, 16'.

the third costal cartilages. **R.**, Subclavicular. See *R.*, *Infraclavicular*. **R.**, Submammary. Same as *R.*, *Inframammary*. **R.**, Subscapular. See *R.*, *Infrascapular*. **R.**, Supraclavicular, the space above the clavicle. **R.**, Suprainguinal, that bounded by the rectus abdominis muscle, Poupart's ligament, and a line through the iliac crest. **R.**, Supraspinous, the region corresponding to the supraspinous fossa of the scapula. **R.**, Thoracic, that of the entire surface of the thorax. **R.**, Thyrohyoid, the region around the thyroid cartilage and the hyoid bone. **R.**, Umbilical. See under *Abdomen*.

Regional (*re-jun-uhl*) [*regiun*]. Pertaining to a region. **R.** Anatomy, the branch of anatomy that treats of the relations of the structures in a region of the body to each other and to the body-surface. (See *illustrations* on p. 827.)

Regressive (*re-gres'-iv*) [*ree*, back, *gradis*, to go]. Going back; returning; subsiding.

Regular (*reg'-u-lar*) [*regere*, to rule]. According to rule or custom. **R.** Physician, one belonging to the regular school. **R.** School of Medicine, the great mass of the profession, whose practice is based on the results of experience and experimental research without adherence to any exclusive theory of therapeutics.

Regurgitation (*re-gur-jit-u'-shun*) [*re*, again, *gurgitare*, to engulf]. 1. A back-flow of blood through a heart-valve that is defective.

2. The return of food from the stomach to the mouth soon after eating, without the ordinary efforts at vomiting.

R., Aortic, that of the blood serum through the aorta from incompetence of the valves. **R.**, Functional, a form of mitral regurgitation due to contraction of the chordae tendineae and papillary muscles.

R., Mitral. See *Mitral Regurgitation*.

Reichardt's Test for Arsenic in the Urine. Concentrate 200 Cc. of urine with about 2 Gm. of caustic soda, dissolve the residue in a little water acidulated with hydrochloric acid, and then test in a Marsh's apparatus.

Reichel's Cloacal Duct. See *Duct, Reichel's Cloacal*.

Reichert's Canal. See *Canal, Hensen's*. **R.'s Cartilages**, the hyoid bars which constitute the skeletal elements of the broad branchial arch of the embryo and ultimately become the styloid processes, the stylohyoid ligaments, and the lesser cornua of the hyoid bone. **R.'s Membrane.** See *Bassman's Membrane*.

Reichl's Test for Proteids. To the proteid solution add 2 or 3 drops of an alcoholic solution of benzaldehyde, and then considerable sulfuric acid, previously diluted with an equal bulk of water. Finally, add a few drops of a ferric sulfate solution, and a deep blue coloration will be produced in the cold after some time, or at once on warming. Solid proteids are stained blue by this reaction.

Reichl-Mikrosch's Reagent for Albumins. Benzaldehyde and sulfuric acid containing ferric sulfate.

Reichmann's Disease. A chronic disease of the stomach characterized by gastric hypersecretion associated with distention of the stomach, with thickened walls, and hypertrophy of the pylorus, accompanied by violent attacks of pain, vomiting, and may be followed by the formation of a round ulcer on the wall of the stomach. **R.'s Sign**, the presence in the vomitus before eating in the morning of a liquid mixed with alimentary residues, indicative of gastritis, anastomosis and stenosis.

Reid's Lines. Three imaginary lines for measurements in craniography. One of them, the base line, is from the lower margin of the orbit to the center of the external auditory meatus, just below the external occipital protuberance. The two others are perpendicular to one corresponding to the small occipital process of the external auditory meatus, the other to the posterior border of the occipital process. The fissure of Sylvius is from the upper limit of the posterior line to the point of intersection of the base line and the fissure of Sylvius.

Reil's Ansa. A tract of fibers passing the optic thalamus downward and outward toward the white substance of the hemisphere. *See, also pedunculus, Genua, and*

Covered Band, the lateral longitudinal strias, the longitudinal lines which intersect transverse strias beneath the hemispheres.

R.'s Island. See *Island of Reil*.

Line, a ridge descending posteriorly from the summit of the pyramid of the cerebellum.

R.'s Sulcus, the sulcus in the hemispheric sylvian fissure separating the frontal from the parietal of the hemisphere.

Reimplantation (*re-implan-ta'-shun*) [*re*, again, *plantare*, to plant]. In surgery, the replacing of a detached part.

Reinfection (*re-in-fek'-shun*) [*re*, again, *fectio*]. Infection a second time with the same kind of virus.

Reinoculation (*re-in-oh'-shun*) [*re*, again, *inoculare*, to inoculate]. In surgery, inoculation with the same kind of virus.

Reinsch's Test. A test for arsenic. Suspected fluid is strongly acidulated with hydrochloric acid and heated, and a bright copper lining added, a precipitate on the copper may be shown. The heating is in a glass tube held obliquely, if it is arsenic, a crystalline precipitate sublimates on the glass above the liquid.

Reinversion (*re-in-ver'-shun*) [*re*, again, *verti*]. The act of inclining an organ by the application of pressure to its base.

Reisseisen's Muscles. The muscles of the bronchi.

Reissner's Canal. See *Canal, Membrane of the Cochlea*. **R.'s Membrane**, the vestibular, a delicate membrane which covers the spiral ganglion and is continuous with the scala vestibuli.

Rejuvenescence (*re-ju-ven-es'-ens*) [*re*, again; *juvenesce*, to grow young]. A renewal of youth, a renewal of strength and vigor.

Relapse (*re-laps'*) [*re*, again; *labi*, to fall]. A return of an attack of a disease shortly after the beginning of convalescence.

Relapsing Fever. An acute infectious disease due to *Spirochata obermeieri*. After a period of incubation of from 5 to 7 days, the disease sets in with chill, fever, and pains in the back and limbs. The spleen enlarges, sweats and delirium occur, and the symptoms continue for 5 or 6 days, then suddenly cease by crisis. After a variable interval, usually in about a week, a second paroxysm occurs, which may be followed by a third and fourth. The disease prevails where conditions of overcrowding and defective food-supply obtain; hence the name sometimes given it, *famine-fever*.

Relaxant (*re-laks'-ant*) (see *Relaxation*). 1. Loosening; causing relaxation. 2. An agent that diminishes tension.

Relaxation (*re-laks-a'-shun*) [*re*, again; *laxare*, to loosen]. A diminution of tension in a part; a diminution in functional activity, as *relaxation* of the skin.

Relief (*re-lēf'*) (U.F., *rele*), a raising]. 1. The partial removal of anything distressing; alleviation. **R. Incision**, one to relieve tension, as in an abscess.

Remak's Band (*rem'-ak*). The axis-cylinder of a nerve-fiber. **R.'s Fibers**. See *Fibers of Remak*. **R.'s Fibrils**, the fibrils composing a nonmedullated nerve-fiber. **R.'s Ganglion**. See *Ganglion, Remak's*. **R.'s Layer**, the inner longitudinal fibrous layer of the tunica intima of large arteries. **R.'s Sign**, the production, by the pricking of a needle, of a double sensation, the second being painful, it is noted in *tabes dorsalis*. **R.'s Type of Palsy**, paralysis affecting the muscles of the arm—the deltoid, biceps, brachialis anticus, and supinator longus.

Remedial (*re-mē'-de-āl*) [*remedy*]. Having the nature of a remedy; relieving; curative.

Remedy (*rem'-ed-e*) [*re*, again; *mederi*, to heal]. Anything used in the treatment of disease.

Remijia (*re-mij'-e-ah*) [*Remijā*, a Spanish surgeon]. A genus of rubiaceous shrubs and trees closely related to cinchona.

Remission (*re-mish'-un*) [*re*, back; *mittere*, to send]. 1. Abatement or subsidence of the symptoms of a disease. 2. The period of diminution of the symptoms of a disease.

Remittent (*re-mit'-ent*) [*remission*]. Characterized by remissions. **R. Fever**, a malarial fever characterized by periods of remission without complete apyrexia.

Remulus (*rem'-u-lus*) [L., "a small oar"]. The narrow dorsal portion of a rib.

Ren [L.]. Kidney.

Renaden (*ren'-ad-en*). A proprietary preparation from kidneys, used in chronic nephritis. Dose 1½-2 dr (6-8 Gm).

Renal (*re'-nal*) [*ren*]. Pertaining to the kidney.

R. Calculus, a concretion in the kidney.

R. Inadequacy, the condition in which the amount of urinary solids, and often the quantity of urine itself, is considerably diminished. It is probably due to an exhausted condition of the epithelial cells of the kidney. **R. Plexus**. See *Plexus, Renal*.

Renculin (*ren'-ku-lin*) [*ren*]. An albuminoid said to exist in the suprarenal capsules.

Rendu's Type of Tremor. A hysteric tremor provoked or increased by volitional movements.

Renicapsule (*ren-e-kap'-sūl*) [*ren*; *capsula*, a capsule]. A suprarenal capsule.

Reniform (*ren'-e-form*) [*ren*; *forma*, form]. Kidney-shaped.

Renin (*ren'-in*) [*ren*]. A renal substance used in organotherapy.

Renipuncture (*ren-e-punk'-chur*) [*ren*; *pungere*, to prick]. Puncture of the capsule of the kidney.

Renitent (*ren'-it-ent*) [*reniti*, to resist]. Resistant to pressure.

Rennet (*ren'-et*) [AS., *rinnan*, to run]. The prepared inner membrane of the fourth stomach of the calf, or an infusion of this membrane. It contains a milk-curdling ferment that decomposes casein.

Rennin (*ren'-in*) [see *Rennet*]. The milk-curdling ferment of the gastric juice.

Renninogen, Rennogen (*ren-in'-o-jen, ren'-o-jen*) [*rennet*]. The zymogen whence rennin is formed; it exists in the cells of the mucous membrane of the stomach.

Renocutaneous (*ren-o-ku-ta'-ne-us*) [*ren*; *cutaneous*]. Relating to the kidneys and the skin.

Renogastric (*ren-o-gas'-trik*) [*ren*; *gastri-*, stomach]. Relating to the kidney and the stomach.

Renuent (*ren'-u-ent*) [*renuens*, nodding back the head]. In anatomy, throwing back the head; applied to certain muscles.

Reoch's Test for Albumin. See *Macwilliam*. **R.'s Test for Hydrochloric Acid in the Contents of the Stomach**, on the addition of a mixture of citrate of iron and quinin and potassium sulfocyanid to the gastric juice or contents of the stomach, containing free hydrochloric acid, a red coloration will be produced.

Reorganization (*re-or-gan-iz-a'-shun*) [*re*, again; *organization*]. Healing by the development of tissue elements similar to those lost through some morbid process.

Repellent (*re-pel'-ent*) [*re*, back; *pellere*, to push]. 1. Driving back. 2. Causing resolution of morbid processes.

Repercolation (*re-per-ko-la'-shun*) [*re*, again; *percolare*, to percolate]. Repeated percolation; the passage of a percolate for a second time, or oftener, through the percolator.

Repercussion (*re-per-kush'-un*) [*re*, again; *percussion*]. 1. Ballottement. 2. A driving, in or dispersion of a tumor or eruption.

Repercussive (*re-per-kus'-iv*) (see *Repercussion*). 1. Repellent. 2. A repellent drug.

Repletion (*re-plee'-shun*) [*re*, again; *plere*, to fill]. The condition of being full.

Reposing (*re-po'-zing*) [see *Reposition*]. Returning an abnormally placed part to its proper position.

Reposition (*re-po-zish'-un*) [*re*, back; *ponere*, to place]. The act of returning into place, as *reposition* of the uterus.

Repositor (*re-poz'-shun*) [see *Reposition*]. An instrument for replacing parts that have become displaced, especially for replacing a prolapsed umbilical cord, an instrument used in the replacement of a displaced uterus.

Reproduction (*re-pro-duk'-shun*) [*re*, again, *produce*]. The act of producing again; the procreation of one's kind; the producing of something like that lost.

Reproductive (*re-pro-duk'-tiv*) [*reproduction*]. Pertaining to reproduction, as the *reproductive* organs.

Repulsion (*re-pul'-shun*) [*re*, back; *pellere*, to drive, to push] 1. The act of repelling or driving back or apart. 2. The influence tending to drive two bodies apart, the opposite of attraction.

Resaldol (*res-ald'-dol*). An acetyl derivative of salformin and resorcinol, an intestinal astringent and antiseptic. Dose 8 dr.-2½ oz. (30-75 Gm.) daily.

Resection (*re-sek'-shun*) [*re*, again, *secare*, to cut]. The operation of cutting out. **R. of a joint**, the cutting away of the ends of the bones forming a joint, or a portion of bone, nerve, or other structure.

Reserve Air. See *Respiration*.

Reservoir of Pecquet (*pek-a'*). See *Receptaculum chyli*.

Residual Air (*re-sid'-u-ul*). See under *Respiration*.

Residue, Residuum (*res-id-u*, *res-id'-u-um*) [*residere*, to remain]. That remaining after a part has been removed; balance or remainder.

Resilience (*re-sil'-e-ens*) [*resilient*]. The quality of being elastic or resilient.

Resilient (*re-sil'-e-ent*) [*re*, back; *salire*, to leap]. Rebounding, elastic. **R. Stricture**, one that contracts again immediately after being dilated.

Resin (*res'-in*) [*resina*]. 1. One of a class of vegetable substances exuding from various plants, and characterized by being soluble in alcohol, in ether, and in the volatile oils, and insoluble in water; they are readily fusible and inflammable. They are obtained in pharmacy by treating the substances containing them with alcohol, and then precipitating the alcoholic solution with water. 2. See *Resin*. **R. of Jalap** (*resina jalapo*, U. S. P., B. P.). Dose 2-5 gr. (0.13-0.32 Gm.). **R. of Podophyllum** (*resina podophylli*, U. S. P.). Dose 1-3 gr. (0.068-0.242 Gm.). **R. of Scammony** (*resina scammonii*, U. S. P., B. P.). Dose 1-8 gr. (0.26-0.52 Gm.).

Resina (*res'-in-ah*). Colophony. The residue left after distilling off the volatile oil of turpentine. See *Resin*.

Resinate (*res'-in-ah*). A compound of a resin with a base.

Resineon (*res-an'-e-on*). A volatile oil distilled from resin with potash and freed from water. It is used as a mild antiseptic and in the treatment of skin diseases.

Resinol (*res'-in-ol*). See *Resinoid*.

Resinous (*res'-in-ah*) [*resin*]. Having the character of a resin.

Resistance (*re-sis'-t-ans*) [*resistere*, to stand] 1. Opposition to force or pressure. 2. In electricity, the opposition offered by a conductor to the passage of electric current. **R.-coil**, a coil of wire increasing the resistance in a circuit. **R., Electrolytic**, internal, the resistance to the passage of current within the battery itself. **R., Extraordinary**, the resistance to the passage of current outside of the battery. **R., Isaac's Pole**, of a temporary power of resisting combustion by violent currents of electricity.

Resistivity (*re-sis'-t-iv-ee*) [*resistance*]. The amount or character of electric resistance exhibited by a body.

Resol (*res'-ol*). A disinfectant mixture of purified wood tar and mercuric iodine.

Resolution (*res-ol'-u-shun*) [*resolvere*, to resolve]. The return of a part to the normal state after a pathologic process.

Resolve (*re-solv'-e*) [*resolvere*, to resolve]. To return to the normal state after a pathologic process. 1. To separate a compound into its component parts.

Resolvent (*re-solv'-ent*) [*resolvent*]. 1. That solution or dissipation of tissue. 2. That causing resolution.

Resolving Power. The capability of an instrument of making clear the finer details of an object.

Resonance (*res-on-ans*) [*resonare*, to sound] 1. The condition of a hollow object, especially the chest, in which, on perceiving the chest or after the cessation of the voice as transmitted to the chest, a sound is heard. **R., Cracked**, a sound elicited by perceiving over a cavity, especially the chest, a rattling sound. **R., Hydatid**, a peculiar sound heard on binaural auscultation and percutaneous percussion. It is not heard in natural conditions. **R., Skodatic**, the musical resonance over the upper part of a chest. **R., Tympanic**, a sound elicited on percussion over the lower part of a chest, or over large pulmonary cavities, and over the walls. **R., Vesicular**, the sound elicited on percussion over the lungs. **R., Vesiculatympanic**, a mixture of vesicular and tympanic sounds. **R., Vocal**, the sound elicited on percussion of the chest during vocalization. **R., Whispering**, the sound elicited on percussion of the chest during the whispering.

Resonator (*res'-o-n-ah*). See *Resonance*. An instrument used to intensify sound.

Resopyrin (*res-o-pi'-rin*). A compound of resorcinol and antipyrin. It is used in any condition in which antipyrin and resorcinol are indicated. Dose 5-10 gr. (0.32-0.65 Gm.).

Resorbent (*re-sorb'-ent*) [*resorbere*, to draw to itself]. 1. Favoring resorption. 2. A drug which aids in the process of resorption.

Resorbin (*re-sorb'-in*). A penetrating ointment-base consisting of an emulsion of sweet almond oil, wax, and a dilute aqueous solution of gelatin or soap.

Resorcin (*re-zor'-sin*). See *Resorcinol*.

Resorcinol (*re-zor'-sin-ol*) [*resin*; *orcin*]. 1. $C_6H_4O_2$. A crystalline substance isomeric with pyrocatechin and hydroquinone, and usually prepared by fusing sodium benzene disulfonate with sodium hydroxid. It is an antipyretic and antiseptic, but is chiefly used in ointments for chronic skin diseases. Dose 2-5 gr. (0.13-0.32 Gm.). 2. Equal parts of resorcinol and iodoform fused together; it is used as a surgical dusting-powder. 20 to 50% with starch, or 7 to 15% ointment.

Resorption (*re-sorp'-shun*) [*re*, again; *sorbere*, to absorb]. The absorption of morbid deposits, as of the products of inflammation. **R.-infection**, a mode of infection marked by the development of bacteria at a distance from the point of introduction.

Respirable (*res-pi'-rah-bl* or *res'-pe-rah-bl*) [see *Respiration*]. Capable of being inspired and expired; capable of furnishing the gaseous interchange in the lung necessary for life.

Respiration (*res-pi'-ra'-shun*) [*re*, again; *spirare*, to breathe]. 1. The interchange between the gases of living organisms and the gases of the medium in which they live, through any channel, as *cutaneous respiration*. 2. The act of breathing with the lungs; the taking into and the expelling from the lungs of air. It consists of two acts—*inspiration*, or the taking in of the atmospheric air, and *expiration*, the expelling of the modified air. Expired air contains less oxygen and more carbon dioxide than inspired air. The volume of air taken into the lungs and given out during an ordinary respiration (*tidal air*) is 500 Cc., the volume that can be inspired in addition by a forcible inspiration (*complemental air*) is 1500 Cc.; that which remains in the chest after a normal expiration (*reserve or supplemental air*) is 1500 Cc.; the amount remaining in the chest after the most complete expiration (*residual air*) is from 1200-1600 Cc. The volume of air that can be forcibly expelled after the most forcible inspiration is termed *vital* or *respiratory capacity* and is equal to the tidal air, complemental air, and reserve air, or about 3500 Cc. See *Breath* and *Breathing*. **R.**, **Abdominal**, a type of respiration caused by the contraction of the diaphragm and the elasticity of the abdominal walls and viscera. It is more common in men than in women. **R.**, **Accelerated**, that exceeding 25 a minute. **R.**, **Artificial**, the artificial production of

the normal respiratory movements. See *Artificial Respiration*. **R.**, **Costal**, a type of respiration in which the chest movement predominates over the diaphragmatic movement, seen especially in women. **R.**, **Metamorphosing**, a form of respiration in which inspiration is at first harsh, but toward the end becomes blowing and accompanied by adventitious sounds. It is produced by the entrance of air into a cavity through a narrow opening.

Respirator (*res'-pi-ra-tor*) [*respiration*]. An appliance by which the inspired air, in passing through it, is warmed, purified, or medicated.

Respiratory (*res-pi'-ra-to-re* or *res'-pe-ra-to-re*) [*respiration*]. Pertaining to respiration. **R. Bundle**, the ascending root of the glossopharyngeal nerve, probably arising in the posterior horns of the cord. **R. Center**. See *Center, Respiratory*. **R. Excursion**, the entire movement of the chest during the complete act of respiration. **R. Murmur**, the sound produced by the air entering and escaping from the lungs during respiration. **R. Nerve**, one of two nerves supplying important muscles of respiration: the *external* is the posterior thoracic nerve; the *internal*, the phrenic nerve. **R. Quotient**, the ratio of the amount of oxygen taken in by the lungs to the carbon dioxide given off in the same period of time. **R. Tract**, all the air-passages and air-cells concerned in respiration.

Respirometer (*res-pi-rom'-et-er*) [*respiration*; *μέτρον*, a measure]. A device to determine the character of the respiration.

Rest [ME., *resten*, to rest]. 1. Cessation of labor or action, to sleep; to lie dormant. 2. A mass of embryonic cells which, having been misplaced during organic evolution, remain quiescent and fail to reach their normal evolution. They at times act as foci for the development of newgrowths or other pathologic phenomena. **R.s.**, **Adrenal**, **R.s.**, **Suprarenal**, masses of aberrant adrenal tissue occasionally observed beneath the capsule of the kidney. **R.-cure**. See *Mitchell's Treatment*.

Restibrachium (*res-te-bra'-ke-um*) [*restis*; *brachium*]. The inferior peduncles of the cerebellum.

Restiform (*res'-te-form*) [*restis*; *forma*, form]. Corded or cord-like. **R. Body**, a part of the medulla oblongata, which as the inferior cerebellar peduncle connects the medulla with the cerebellum. It contains fibers from the lateral column of the spinal cord (the lateral cerebellar tract), from the posterior column, and from the inferior olivary nucleus.

Restis (*res'-tis*) [L., "a rope"]. The restiform body.

Restitution (*res-tit-u'-shun*) [*re*, again; *statuere*, to set up]. The act of restoring.

Restorative (*re-slo'-ra-tiv*) [*restore*]. A remedy that is efficacious in restoring health and strength.

Restraining (*re-strin'-jent*) [*restringere*, to restrain]. An astringent or styptic.

Resudation (*re-su-dū-shun*) [*re*, again; *sudor*, sweat]. The return of sweating as a symptom.

Resupinate (*re-su'-pīn-āt*) [*re*, again; *supinare*, to bend backward]. Turned in a direction opposite to normal; as an ovary with its apex downward.

Resuscitation (*re-sus-ū-shun*) [*re*, again; *suscitare*, to raise up]. The bringing back to life of one apparently dead.

Resuscitator (*re-sus-ū-shun*) [see *Resuscitation*]. One who or that which resuscitates. **R.**, **Intragastric**, an apparatus devised by Fenton B. Turk for the purpose of reducing surgical shock and collapse. It consists simply of a double stomach-tube, at one end of which is attached a soft-rubber bag. By this means heat is applied in a uniform and diffuse manner, up to 135° F.

Retamin (*ret-am'in*) (*retama*, the Spanish name for genista). $C_{15}H_{15}N_3O$. An alkaloid from the bark of *Genista sphaerocarpa*.

Retch [*AS*, *heave*], to clear the throat). To strain at vomiting.

Rete (*re'-te*) [*L.*]. A net or net-like structure. **R.** **malpighii**. See *R. mucosum*. **R.** **mirabile**, a cluster of fine vessels produced by the splitting of an artery into numerous branches. If the branches do not reunite, it is called *unipolar rete mirabile*; if they reunite, *bipolar rete mirabile*. **R.** **mirabile duplex**, a rete mirabile consisting both of veins and of arteries. **R.** **mucosum**, the deeper layers of the epidermis. **R.** **testis**, **R.** **vasculosum of the testis**, the network of seminal tubules in the corpus highmorianum.

Retention (*re-ten'-shun*) [*re*, back; *tenere*, to hold]. The act of retaining or holding back. **R.** **Cyst**. See *Cyst*. **Retention**. **R.** **-hypothesis** (of Chauveau). See *Immunologic Theory of Chauveau's Retention*. **R.** **mensium**, a condition in which menstruation occurs but its products are retained in consequence of atresia of the genital canal. **R.** **of Urine**, the holding of the urine in the bladder on account of some hindrance to urination.

Retial (*re'-te-āl*) [*rete*]. Relating to, or of the nature of, a rete.

Reticula (*re-tik'-ul-ā*) [*pl. of reticulum*, a network]. The preferred name for formative reticularis.

Reticular (*ret-ik'-ul-ār*) [*reticulum*]. Resembling a net, formed by a network. **R.** **Formation**. See *Formative reticularis*. **R.** **Lamina**, the membrane covering the organ of Corti. **R.** **Layer of the Skin**, the deep layer of the skin, consisting of interlacing bands of white and yellow fibrous tissue.

Reticulated (*ret-ik'-ul-ēt*) [see *Reticular*].

Reticulum (*ret-ik'-ul-um*) [*reticulum*, dim. of *rete*, net]. A network.

Retiform (*ret'-i-fōrm*). Net-shaped, reticular.

R. **Tissue**, adenoid tissue.

Retina (*ret'-in-ā*) [*rete*]. The delicate membrane of the eye representing the terminal expansion of the optic nerve, and extending

from the point of entrance of the nerve forward to its termination in the ora serrata. It consists of the following layers, arranged from behind forward: (a) the pigment layer, or the neuroepithelial layer, comprising the layer of rods and cones (Jacobi's membrane, bacillary layer), the outer limiting membrane, and the outer nuclear layer. (b) the inner layer, comprising the outer reticular layer (outer granular layer), the inner reticular layer (inner granular layer), the inner nuclear layer, the ganglion-cell layer, the nerve fiber layer. These layers are cemented together by a supporting framework of connective tissue in fibers of Müller, or radiating fibers.

Retinaculum (*ret-in-ū-kl-ū-lum*) [*L.*, the band]. A band or membrane holding back an organ or part. **R.** **ligamenti arcuati**, the external lateral ligament of the testis. **R.** **morgagni**, **R.** **of the ileocecal Valve**, the ridge formed by the meeting together of the valve-segments at each end of the opening between the cecum and the ileum. **R.** **peroneorum inferius**, a fibrous band running over the peroneal tendons as they pass through the grooves on the outer side of the calcaneus. **R.** **peroneorum superius**, the superior annular ligament of the ankle joint. **R.** **tendineum**, the annular ligament of the wrist or ankle.

Retinal (*ret'-in-āl*) [*retina*]. Pertaining to, or affecting the retina. **R.** **Apoplexy**, hemorrhage into the retina.

Retinitis (*ret-in-ī-tis*) [*retina*; *itis*, inflammation]. Inflammation of the retina. **R.** **Albuminuric**, retinitis due to nephritis. **R.** **apoplectica**, retinal apoplexy. **R.** **Centra Recurrent**, a rare form of apoplexy, characterized by a central dark spot which disappears in a few days to return in a few weeks, the attacks becoming more frequent. **R.** **Diabetic**, retinitis occurring in diabetes. **R.** **Hemorrhagic**, retinitis associated with hemorrhages. **R.** **Leukemic**, a form occurring in leukæmia and characterized by loss of the retinal vessels and optic disc and hemorrhages.

Retinochoroiditis (*ret-ino-ko-roi-dī-tis*) [*retina*; *choroiditis*]. Inflammation of the retina and choroid.

Retinol (*ret'-in-ōl*) [*retina*] $C_{20}H_{34}$. A fat hydrocarbon obtained in the steam distillation of resin. It is used as a fixative and has also been employed as a preservative.

Retinoscopy (*ret-in-ō-skō-pē*) [*retina*; *skopein*, to view]. A method of determining the refraction of the eye by observation of the movements of the retinal images and shadows through the ophthalmoscope, or retinoscope.

Retort (*ret'-tōrt*) [*see*, back; *revert*, to turn]. A vessel employed in distillation, consisting of an expanded globular bottom and a long neck, and containing the liquid to be distilled.

Retractile (*ret-ak'-tīl*) [*retract*]. Capable of being drawn back.

retractility (re-trak-til'-it-e) [retract]. The power of retracting or drawing back.

retraction (re-trak'-shun) [retract]. The act of retracting or drawing back; a retraction of the muscles after amputation.

retractor (re-trak'-tor) [retract]. An instrument for drawing back the lips of a wound so as to give a better view of the deeper parts.

retro (re'-tro) [retro, backward]. In or toward the rear.

retrahens aurem (re-tra'-hens aw'-rem). Drawing back the ear. See under *Muscle*.

retrahent (re'-tra-hent) [retrahens, drawing back]. Drawing backward; retracting.

retrenchment (re-trench'-ment) [Fr., retrenchement]. A plastic operation the object of which is to obtain cicatricial contraction by the removal of superfluous tissue.

retro- (re'-tro-). A prefix meaning back, backward, or behind.

retroanteroamnesia (re-tro-an-ter-o-am-ne'-se-ah). See *Amnesia*, *Retroanterograde*.

retroanterograde (re-tro-an'-ter-a-grād) [retro-; anterus, before; gradi, to go]. Reversing the order of succession. **R. Amnesia**. See *Amnesia*, *Retroanterograde*.

retroauricular (re-tro-au-rik'-u-lar). Dorsad of the auricle of the ear or of the heart.

retrobuccal (re-tro-buk'-al) [retro-; bucca, the cheek]. Pertaining to the back part of the mouth or of the cheek.

retrobulbar (re-tro-bul'-bar) [retro-; bulbar]. Situated or occurring behind the eyeball. **R. Neuritis**, inflammation in the orbital part of the optic nerve.

trocecal (re-tro-se'-kal). Pertaining to the back of the cecum.

retrocedent (re-tro-se'-dent) [retro-; cedere, to go]. Going back; disappearing from the surface. **R. Gout**, a form of gout in which the joint-inflammation suddenly disappears and is replaced by affections of the internal organs.

retrocephals (re'-tro-seps) [Fr.]. A variety of obstetric forceps used to grasp the fetal head from behind.

retrocervical (re-tro-ser'-vik-al) [retro-; cervix, neck]. Situated behind the cervix uteri.

retrocession (re-tro-sesh'-un) [retrocede]. The act of going back.

retroclulsion (re-tro-klū'-zhun) [retro-; claudere, to shut]. A form of acupressure in which the needle is passed first above the artery into the tissue on the other side, then below the artery into the tissues upon the side first entered.

retrocolic (re-tro-kol'-ik). Behind the colon.

retrocollic (re-tro-kol'-ik) [see *Retrocollis*]. Pertaining to the muscles at the back of the neck.

R. Spasm, spasm of the muscles at the back of the neck, causing retraction of the head.

retrocollis (re-tro-kol'-is) [retro-; collis, the neck]. Torticollis.

retroversion (re-tro-de-re'-a'-shun) [retro-; vertere, to turn]. Any backward displacement; a reversion or retroversion.

retroversion (re-tro-dis-plas'-ment) [re-

tro-; displacement]. Backward displacement of a part or organ.

Retroesophageal (re-tro-e-soj'-uj'-e-al) [retro-; esophagus]. Located behind the esophagus.

Retroflexion (re-tro-flek'-shun) [retro-; flexion]. The state of being bent backward. **R. of the Uterus**, a condition in which the uterus is bent backward upon itself, producing a sharp angle in its axis.

Retrograde (re'-tro-grād or re'-tro-grād) [retro-; gradi, to go]. Going backward; undoing.

R. Embolism, embolism in which the embolus has gone against the normal direction of the blood-stream.

Retrography (re-trog'-ra-je) [retro-; γράφειν, to write]. Backward writing; mirror-writing.

Retroinsular (re-tro-in'-su-lar) [retro-; insula, island]. Situated behind the island of Reil, as the *retroinsular* convolutions.

Retrojector (re'-tro-jek'-tor) [retro-; jacere, to throw]. An instrument for washing out the uterus.

Retrolingual (re-tro-ling'-gual) [retro-; lingua, the tongue]. Relating to that part of the throat back of the tongue.

Retronasal (re-tro-na'-sal) [retro-; nasus, nose]. Situated behind the nose or nasal cavities.

Retroocular (re-tro-ok'-u-lar). See *Retrobulbar*.

Retroperitoneal (re-tro-per-it-on-e'-al) [see *Retroperitoneum*]. Situated behind the peritoneum.

Retroperitoneum (re-tro-per-it-on-e'-um) [retro-; peritoneum]. The space lying behind the peritoneum and in front of the spinal column and lumbar muscles.

Retroperitonitis (re-tro-per-it-on-i'-tis) [retro-; peritonitis]. Inflammation of the retroperitoneal structures.

Retropharyngeal (re-tro-far-in'-je-al) [retro-; pharynx]. Situated behind the pharynx, as *retropharyngeal* abscess.

Retroplacental (re-tro-pla-sent'-al). Dorsad of the placenta.

Retroposed (re'-tro-pōd) [retro-; ponere, to place]. Displaced backward.

Retropulsion (re-tro-pul'-shun) [retro-; pellere, to drive]. 1. A driving or turning back, as of the fetal head. 2. A running backward; a form of walking sometimes seen in paralysis agitans.

Retrostalsis (re-tro-stal'-sis) [retro-; στήλας, compression]. Reversed peristalsis; peristaltic action that tends to drive the intestinal contents cephalad instead of caudad.

Retrosternal (re-tro-ster'-nal) [retro-; sternum]. Situated behind the sternum.

Retrotarsal (re-tro-tar'-sal) [retro-; tarsus]. Situated behind the tarsus, as the *retrotarsal* fold of the conjunctiva. **R. Fold**. See *Fornix conjunctivæ*.

Retrouterine (re-tro-u'-ter-in) [retro-; uterus]. Behind the uterus. **R. Hematocoele**, a blood-tumor behind the uterus in the pouch of Douglas.

Retrovaccination (re-tro-vak'-sin-a'-shun) [retro-; vaccination]. Vaccination with virus

from a cow that had been inoculated with the virus of smallpox from a human subject.

Retroversioflexion (*re-tro-ver-w-o-flek'-shun*). Combined retroversion and retroflexion.

Retroversion (*re-tro-ver'-shun*) (*retro-; ver-sion*). A turning back. **R. of Uterus**, a condition in which the uterus is tilted backward without curvature of its axis.

Retroverted (*re-tro-ver'-led*). Tilted or turned backward, as a *retroverted* uterus.

Retzius' Brown Strias. Brownish concentric lines in the enamel of the teeth, running nearly parallel to the surface.

R.'s Capsule, the fascial formation investing the intrapelvic and bulbous portions of the urethra and Cowper's glands.

R.'s Fibers, the rigid filaments of Deiters' cells in the organ of Corti.

R.'s Ligament, the outer portion of the anterior annular ligament of the ankle which forms a loop around the peroneus tertius and the extensor digitorum.

R.'s Space, a triangular space the basis of which lies between the spines of the pubes, the apex being from 5 to 7 centimeters above.

In this space, which is filled with connective tissue, the bladder is not covered by the peritoneum.

R.'s Veins, the veins forming anastomoses between the mesenteric veins and the inferior vena cava.

Reusner's Sign of Early Pregnancy. An increase in the volume of the pulsation of the uterine arteries may be perceived through the vagina in the posterior cul-de-sac as early as the fourth week.

Reuss' Formula. The formula by means of which the amount of albumin contained in pathologic exudates and transudates can be approximately calculated when the specific gravity, that depends upon the amount of albumin present, is known.

$E = \frac{1}{2}(S - 1000)$
 $\rightarrow S$, E —percentage of albumin contained in the fluid, S —specific gravity of the fluid.

R.'s Test for Atropin, heat the substance to be tested with sulfuric acid and an oxidizing agent, in the presence of atropin a fragrance as of roses and orange-flowers is given off.

Revellent (*rev-el'-ent*). See *Revulsive*.

Reveillod's Sign. Inability of the patient to close the eye of the affected side only, it is observed in paralysis of the superior facial nerve. *Syn.* *Signe de l'orbiculaire*.

Revivification (*rev-iv'-if-ik'-shun*) (*revivif-icatio*). 1. Restoration to consciousness. 2. The refreshing of surfaces by paring before placing them in apposition.

Revulsant (*rev-ul'-sant*) [see *Revulsion*]. 1. Causing revulsion. 2. See *Revulsive*.

Revulsion (*rev-ul'-shun*) [*re, back, velle, to pluck*]. A plucking or driving backward; specifically, the diverting of disease from one part to another by the sudden withdrawal of the blood from the part.

Revulsive (*rev-ul'-siv*) [see *Revulsion*]. 1. Causing revulsion. 2. An agent that causes revulsion.

Revulsor (*rev-ul'-sor*). 1. An apparatus for

effecting revulsion by the alternate application of heat and cold. 2. A plate or comb with needles, used in producing the revulsion.

Reynold's Test for Acetone. To the liquid to be tested add freshly precipitated mercuric oxide, shake and filter. If acetone is present the filtrate will contain mercury, being the acetone dissolving insoluble precipitated mercuric oxide. The mercury may be detected by overlaying the filtrate with ammonium sulfide, which turns black.

Rhabditis (*rab-dit'-is*) [*rab, rod, a root, a genus of nematode worms a few species of which are parasites in man*].

Rhadium (*rah-de'-um*) [*atom of radioactivity*]. A filter of striped or voluntary muscle.

Rhabdoid (*rab-doid*) [*rab, rod, a rod, a line*]. Rod-like.

Rhabdomyoma (*rab-dom-yo'-ma*) [*rab, rod, myoma*]. A form of myoma characterized by the presence of striated muscle fibers.

Rhabdonema (*rab-don'-e-ma*) [*rab, rod, a thread*]. A genus of parasitic round worms.

Rhachi-. See *Rachis*.

Rhacoma (*rah-bo'-ma*) [*rhachis, to corrupt, corruption, rent, or chapping*]. Also, a pitted condition of the skin.

Rhacous (*rah'-kus*) [*rhachis, a rag*]. Worms lacerated.

Rhagades (*rag'-ad-es*) [*rhachis, fissure*]. Deep cracks or fissures, especially in the skin.

Rhagoid (*rag'-oid*) [*rag, a rag, a crack, a fissure*]. Resembling a rag.

Rhamnin (*ram'-nin*) [*rhamnus*]. A bitter fluidextract of *Rhamnus purshiana*.

Rhamnose (*ram'-nos*) [*rhamnus, C₁₂H₂₂O₁₁*]. One of the glucoses. It results upon the hydrolysis of various glucosides with dilute acids.

Rhamnus (*ram'-nus*) [*ram, to beat, to beat down*]. A genus of trees and shrubs, but common.

R. purshiana (U. S. P.), *Rhamnus purshiana*. The dried bark of *R. purshiana*, the common buckthorn. It is used as a laxative in chronic constipation. Dose, 15 gr. to 1 oz.

Dose of the extract (*extractum rhamni purshiana*, U. S. P.), 4 gr. to 15 gr. to 1 oz.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

fluidextract (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract* (*fluidextractum rhamni purshiana*, U. S. P.), 15 min. to 1 oz. of the *fluidextract*.

Rheo- (*re-o-*) [*ῥέος*, current]. A prefix denoting pertaining to a current.

Rheochord (*re'-o-kord*). See *Rheostat*.

Rheometer (*re-om'-et-er*) [*rheo-*; *μέτρον*, a measure]. 1. A galvanometer. 2. An apparatus for measuring the velocity of the blood-current.

Rheophore (*re'-o-för*) [*rheo-*; *φέρειν*, to bear]. An electrode.

Rheoscope (*re'-o-sköp*) [*rheo-*; *σκοπεῖν*, to see]. An instrument for demonstrating the existence of an electric current; a galvanoscope.

Rheostat (*re'-o-stat*) [*rheo-*; *ἰσθάναι*, to stand]. An instrument introduced into an electric current and offering a known resistance, for the purpose of regulating the strength of the current.

Rheotachygraphy (*re-o-tak-ig'-ra/-e*) [*rheo-*; *ταχὺς*, swift; *γράφειν*, to write]. The registration of the curve of variation in electromotive action of muscles.

Rheotome (*re'-o-töm*) [*rheo-*; *τέμνειν*, to cut]. An instrument for breaking and making a galvanic circuit; an interrupter. **R.**, Differential, one for indicating the negative variation in muscle-currents.

Rheotrope (*re'-o-tröp*) [*rheo-*; *στρέφειν*, to turn]. An apparatus for reversing the direction of an electric current.

Rhestocythemia (*res-to-si-the'-me-ah*) [*ῥαιστέος*, destroyed, *κύτος*, cell; *αἷμα*, blood]. The presence of broken-down erythrocytes in the blood.

Rheum (*re'-um*). 1. See *Rhubarb*. 2. [*ῥέω*, from *ῥέω*, to flow.] Any watery or catarrhal discharge. **R.**, Salt-, eczema.

Rheumagon (*ru'-ma-gon*) [*rheum*; *ἀγεῖν*, to carry off]. A proprietary preparation of sodium iodid and sodium phosphate for use in gout and syphilis.

Rheumarthrititis, **Rheumarthrosis** (*ru-mar-thri'-tis*, *ru-mar-thro'-sis*) [*rheum*; *ῥόγμα*, a joint; *αἷς*, inflammation]. Acute articular rheumatism.

Rheumatalgia (*ru-mat-al'-je-ah*) [*rheum*; *ἄλγος*, pain]. Rheumatic pain.

Rheumatic (*ru-mat'-ik*) [*rheum*]. Pertaining to, of the nature of, or affected with rheumatism. **R.** Diathesis, the condition of body tending to the development of rheumatism. **R.** Fever, acute articular rheumatism. **R.** Gout. Synonym of *Rheumatoid arthritis*.

Rheumatin (*ru'-mat-in*). See *Saloquinin Salicylate*.

Rheumatism (*ru'-mat-izm*) [*rheum*]. A constitutional disease characterized by pain in the joints and muscles, tending to recur, and associated with exposure to cold and wet. **R.**, Acute Articular, a form characterized by fever, by swelling of various joints, beginning usually in one and rapidly spreading to others, by acid sweats, and by a marked tendency to involve the endocardium, less frequently the pericardium, pleura, and peritoneum. The iris and conjunctiva may also become affected. **R.**, Chronic, a chronic form in which the symptoms are milder and

in which the disease attacks either the muscles (*muscular rheumatism*) or the joints (*chronic articular rheumatism*). **R.**, Gonorrheal, joint-inflammation occurring in association with gonorrheal urethritis. It generally involves but one joint; if several are affected, it is usually the smaller joints. The course is chronic. **R.**, Inflammatory, acute articular rheumatism. **R.**, Synovial, a rheumatic disorder of the synovial membranes with serous accumulation.

Rheumatismal (*ru-ma-tis'-mal*) [*rheumatism*]. Pertaining to rheumatism.

Rheumato-, **Rheumo-** (*ru-mat-o-*, *ru-mo-*) [*rheumatism*]. Prefixes meaning relating to rheumatism.

Rheumatoid (*ru'-ma-toid*) [*rheumato-*; *ειδός*, like]. Resembling rheumatism. **R.** Arthritis. See *Arthritis*, *Rheumatoid*.

Rheumatokelis (*ru-mat-o-ke'-lis*) [*rheumato-*; *κηλίς*, a spot]. Purpura occurring in conjunction with rheumatism.

Rheumatophthisis (*ru-mat-öf'-this-is*) [*rheumato-*; *phthisis*]. Atrophy the result of rheumatism.

Rheumatopyra (*ru-mat-o-pi'-rah*) [*rheumato-*; *πῶρ*, fire]. Rheumatic fever.

Rheumatosis (*ru-mat-o'-sis*) [*rheum*]. The condition due to the action of poisons in the blood affecting the articular and endocardial parts.

Rheumatospasm (*ru-mat'-o-spazm*) [*rheumato-*; *σπασμός*, a spasm]. Spasms due to rheumatism.

Rheumic (*ru'-mik*) [*rheum*]. Pertaining to rheum. **R.** Diathesis, one that gives rise to cutaneous eruptions.

Rheumodontalgia (*ru-mo-don-tal'-je-ah*) [*rheumo-*; *odontalgia*]. Toothache of rheumatic origin.

Rheumophthalmia (*ru-möf'-thal'-me-ah*) [*rheumo-*; *ophthalmia*]. Ophthalmia due to rheumatism.

Rheumotylus (*ru-mo-till'-us*) [*rheumo-*; *τύλος*, a knob]. A callus the result of rheumatism.

Rhexis (*reks'-is*) [*ρήξας*, rupture]. Rupture of a vessel or of an organ.

Rhcnosis (*rik-no'-sis*) [*ῥιχνός*, shriveled]. A wrinkling of the skin, the result of muscular atrophy.

Rhigolene (*rig'-o-lén*) [*ῥίγος*, cold]. A very volatile liquid obtained from petroleum by distillation, and used as a local anesthetic. Its rapid evaporation freezes and benumbs the part upon which it is sprayed.

Rhin-, **Rhino-** (*rin-*, *ri-no-*) [*ῥίς*, nose]. A prefix signifying pertaining to the nose.

Rhinalgia (*ri-nal'-je-ah*) [*rhin-*; *ἄλγος*, pain]. Pain in the nose.

Rhinalgin (*ri-nal'-jin*). A nasal suppository, recommended in coryza, said to contain cacao-butter, 1 Gm.; alumol, 0.01 Gm.; menthol, 0.025 Gm.; and oil of valerian, 0.025 Gm.

Rhinedema (*ri-ne-de'-mah*) [*rhin-*; *edema*]. Edema affecting the nose.

Rhinelcos (*ri-nel'-kos*) [*rhin-*; *ἔλκος*, an ulcer]. A nasal ulcer.

Rhinencephalon (*ri-nen-sef'-al-on*) [*rhin-*; *έν-*

ἄσφαλός, brain]. The olfactory lobe of the brain.

Rhinenchysis (*ri-nen'-ki-sis*) [*rhin-*; *ἐγχύν*, to pour in]. The injection of liquid into the nasal cavities.

Rhinesthesia (*ri-nēs-the'-ze-ah*) [*rhin-*; *ῥινοσμία*, sensation]. The sense of smell.

Rhineurynter (*ri-nūrin'-ter*) [*rhin-*; *εὐρύων*, to dilate]. A distensible bag or sac which is inflated after insertion into the nostril.

Rhinematoma (*rin-hem-at-o'-mah*) [*rhin-*; *hematoma*]. An effusion of blood into the nasal cartilage.

Rhinion (*rin'-e-on*) [*ῥίς*, nose]. The lower point of the suture between the nasal bones. See under *Cranio-metric Point*.

Rhinitis (*ri-ni'-tis*) [*rhin-*; *εἴς*, inflammation]. Inflammation of the nasal mucous membrane.

R., Acute, *coryza*, cold in the head. **R., Chronic**, a form usually due to repeated attacks of acute rhinitis, and producing in the early stages hypertrophy of the mucous membrane (*hypertrophic rhinitis*), and in the later stages atrophy (*atrophic rhinitis*), and the presence of dark, offensively smelling crusts. **R., Fibrinous**, a rare form of rhinitis characterized by the development of a false membrane in the nose. **R., Pseudomembranous**. See *R., Fibrinous*. **R., Syphilitic**, a chronic form due to syphilis, and usually attended by ulceration and caries of the bone and an offensive discharge (*ozena*). **R., Tuberculous**, that due to the tubercle bacillus, it is usually associated with ulceration and caries of the bones.

Rhinobyon (*rin-oh'-be-on*) [*rhino-*; *βίων*, to stop]. A nasal plug or tampon.

Rhinocanthectomy (*ri-no-kan-thek'-to-me*). See *Rhinomectomy*.

Rhinocephalus (*ri-no-sef'-al-us*) [*rhino-*; *κεφαλή*, head]. A monster in which the nose resembles a tube and the eyes are fused below the nose.

Rhinocheiloplasty (*ri-no-kē'-lo-plas-te*) [*rhino-*, *cheiloplasty*]. Plastic surgery of the nose and lip.

Rhinocleisis (*ri-no-klē'-sis*) [*rhino-*; *κλείω*, to close]. Nasal obstruction.

Rhinocuesmus (*ri-no-kes'-mus*) [*rhino-*; *κῦμα*, an itching]. Itching of the nose.

Rhinodacryolith (*ri-no-dak'-re-o-lith*) [*rhino-*; *δακρυόλιθος*]. A lacrimal stone in the nasal duct.

Rhinoderma (*ri-no-der'-mah*). See *Keratosis nasalis*.

Rhinodynia (*ri-no-din'-e-ah*) [*rhino-*; *ὄδυν*, pain]. Any pain in the nose.

Rhinolalia (*ri-no-lā'-e-ah*) [*rhino-*; *λάλη*, speech]. Intersect articulation due to undue closure (*rhinolalia contracta*) or undue patulousness (*rhinolalia aperta*) of the posterior nares.

Rhinolaryngitis (*ri-no-lar-in-jī'-tis*) [Simultaneous inflammation of the mucosa of the nose and larynx].

Rhinolaryngology (*ri-no-lar-in-jōl'-o-jē*). The science of the anatomy, physiology and pathology of the nose and larynx.

Rhinolith (*ri'-no-lith*) [*rhino-*; *λίθος*, a stone]. A nasal calculus.

Rhinologic (*ri-no-lōj'-ik*) [*rhinology*]. Pertaining to rhinology.

Rhinologist (*ri-mel'-o-jist*) [*rhinology*]. A specialist in the treatment of diseases of the nose.

Rhinology (*ri-mel'-o-jē*) [*rhino-*; *λογία*, a science]. The science of the anatomy, physiology and diseases of the nose.

Rhinometer (*ri-nom'-e-ter*) [*rhino-*; *μέτρον*, a measure]. An instrument for measuring the nose.

RHINOMETER.

Rhinomiosis (*ri-no-miō'-sis*) [*rhino-*; *μῖος*, a lessening]. Operative shortening of the nose.

Rhinomnectome (*ri-nom-ek'-to-me*). See *Rhinomectomy*.

Rhinomnectomy (*ri-nom-ek'-to-mē*) [*rhino-*; *μῖος*, the eye, *τέμνω*, to cut, to remove]. A cutting out of the mucosa of the inner cartilage of the nose.

Rhinonecrosis (*ri-no-ne-kro'-sis*) [*rhino-*; *nekrosis*]. Necrosis of the nasal bones.

Rhinopharyngitis (*ri-no-far-in-jī'-tis*) [*rhino-*; *pharynx*]. Inflammation of the nasal and pharyngeal cavities.

Rhinopharyngolith (*ri-no-far-in-jī'-lith*) [*rhino-*; *pharynx*, *λίθος*, a stone]. A nasopharyngeal calculus.

Rhinophonia (*ri-no-fō'-nē*) [*rhino-*; *φωνή*, sound]. A nasal tone or speaking.

Rhinophyma (*ri-no-fō'-mah*) [*rhino-*; *φύμα*, tumor]. A form of some diseases of the nose characterized by a marked hypertrophy of the blood vessels and the connective tissue, producing a lobulated appearance of the nose.

Rhinoplasty (*ri-no-plas-te*) [*rhino-*; *πλαστός*, to mold]. A plastic operation upon the nose.

- R.**, Indian. See *Operation, Indian*. **R.**, Tagliacotian. See *Operation, Italian*.
- Rhinopolyp, Rhinopolypus** (ri-no-pol'ip, -us) [rhino-; polyp] Polyp of the nose.
- Rhinoptia** (ri-nop'le-ah) [rhino-; ῥιπτός, seen]. Internal strabismus.
- Rhinorrhagia** (ri-nor-a'-je-ah) [rhino-; ῥιπτοῦναι, to burst forth]. Hemorrhage from the nose.
- Rhinorrhea** (ri-nor-e'-ah) [rhino-; ῥοῖα, a flow]. A mucous discharge from the nose.
- Rhinosalpingitis** (ri-no-sal-pin-jit'is). Simultaneous inflammation of the nasal mucosa and the eustachian tube.
- Rhinosclerin** (ri-no-skle'-rin) [rhinoscleroma]. A preparation from cultures of *Bacillus rhinoscleromatis*; used in the treatment of rhinoscleroma.
- Rhinoscleroma** (ri-no-skle-ro'-mah) [rhino-; σκληρός, hard; ὄμα, tumor]. A newgrowth of almost stony hardness, affecting the anterior nares and adjacent parts. The disease commences in the mucous membrane of the anterior nares and adjoining skin, the lesions consisting of flat, isolated, or coalescent nodules. It is thought to be due to *Bacillus rhinoscleromatis*.
- Rhinoscope** (ri'-no-skop) [rhino-; σκοπεῖν, to examine]. An instrument for examination of the cavities of the nose.
- Rhinoscopy** (ri-no-s'ka-pi) [see *Rhinoscope*]. Examination of the nasal fossas by means of the rhinoscope; that of the anterior nares is termed *anterior rhinoscopy*; that of the posterior nares, *posterior rhinoscopy*.
- Rhinostegnosis** (ri-no-steg-no'-sis) [rhino-; στένωσις, obstruction]. Nasal obstruction.
- Rhinothrix** (ri'-no-thriks) [rhino-; θρίξ, a hair; pl., *trichotriches*]. A hair growing in the nostril.
- Rhizo-** (ri-zo-) [rhizome]. A prefix meaning root.
- Rhizodontology** (ri-zo-don'tol'j-ee) [rhizo-; ὀδός, tooth; ὁλόν, hole]. Surgical puncture of the root of a tooth.
- Rhizome** (ri'-zom) [ῥίζα, root]. A subterranean stem having roots at its nodes and a bud or shoot at its apex.
- Rhizoneure** (ri'-zo-nūr) [rhizo-; νεῦρον, a nerve]. One of those cells that form nerve-roots.
- Rhizoneuron** (ri-zo-nū'-ron) [see *Rhizoneure*]. A neuron the nerve-processes of which leave the spinal cord through the anterior horn; a motor nerve-cell.
- Rhizonychium** (ri-zo-nik'-e-um) [rhizo-; ὄνυξ, the nail]. The root of the nail.
- Rhizopod** (ri'-zo-pod) [rhizo-; πούς, foot]. A member of the *Rhizopoda*, a subclass of protozoa or animalcules.
- Rhodallin** (ro-dal'-in). See *Thiosinamin*.
- Rhodanate** (ro'-dan-āt). A sulfocyanate.
- Rhodesian Cattle Disease**. An African disease of cattle transmitted by the brown tick, *Rhipicephalus shipleyi*.
- Rhodogenesis** (ro-do-jen'-es-is) [ῥόδος, rose; γένεσις, to produce]. The regeneration of visual purple which has been bleached by light.
- Rhodophane** (ro'-do-fan) [ῥόδον, rose; φάνης, appearing]. A red pigment found in the retinal cones.
- Rhodophylaxis** (ro-do-fil-aks'-is) [ῥόδον, rose; φύλαξις, a guarding]. The property possessed by the retinal epithelium of producing rhodogenesis.
- Rhodopsin** (ro-dop'-sin) [ῥόδον, rose; ὤψις, eye]. Visual purple; a retinal substance the color of which is preserved by darkness, but bleached by daylight; it is contained in the retinal rods.
- Rhomboatloideus** (rom-bo-at-loid'-e-us). See under *Muscle*.
- Rhomboid** (rom'-boid) [ῥόμβος, a rhomb; εἶδος, resemblance]. Having a shape similar to that of a rhomb, a quadrilateral figure with opposite sides equal and parallel and oblique angles. **R. Fossa**, the fourth ventricle of the brain. **R. Ligament**. See *Ligament, Rhomboid*.
- Rhomboideus** (rom-boid'-e-us). See under *Muscle*.
- Rhoncal** (rong'-kal). Same as *Rhunchal*.
- Rhunchal** (rong'-kal) [rhanchus]. Relating to or produced by a rhonchus, as *rhunchal fremitus*.
- Rhonchus** (rong'-kus) [ῥόγχος, snore]. A rattling sound produced in the throat or bronchial tubes during respiration. See *Rale*.
- Rhotacism** (ro'-tas-izm) [ῥῶ, the Greek ρ, r]. The use of the r sound in place of other speech-sounds; the too strong utterance of the letter r.
- Rhubarb** (ru'-barb) [ῥήον, rhubarb]. The general name for plants of the genus *Rheum*, of the order *Polygonaceae*. The official drug (*rheum*, U. S. P.; *rhei radix*, B. P.) is the bark of *Rheum officinale* or *Rheum palmatum*; it contains chrysophanic acid, tannic acid (rheotannic acid), and several coloring principles, and is used as a laxative, stomachic, and astringent. Its chief uses are in dyspepsia with constipation, in the diarrhea of children, and in the beginning of bilious fevers. Dose 5-30 gr. (0.32-2.0 Gm.). **R., Extract of** (*extractum rhei*, U. S. P., B. P.). Dose 10-15 gr. (0.65-1.0 Gm.). **R., Fluidextract of** (*fluidextractum rhei*, U. S. P.). Dose 10-30 min. (0.65-2.0 Cc.). **R., Infusion of** (*infusum rhei*, B. P.). Dose 1-2 oz. (32-64 Cc.). **R., Pills of, Compound** (*pilula rhei composita*, U. S. P.), pills of rhubarb and aloes. Dose 2-4 pills. **R., Powder of, Compound** (*pulvis rhei compositus*, U. S. P., B. P.), Gregory's powder. Dose 1-1 dr. (2-4 Gm.). **R. and Soda, Mixture of** (*mistura rhei et sodæ*, U. S. P.). Dose 1-1 dr. (2-4 Gm.). **R., Syrup of** (*syrupus rhei*, U. S. P., B. P.). Dose 1 dr. (4 Cc.). **R., Syrup of, Aromatic** (*syrupus rhei aromaticus*, U. S. P.). Dose 1 dr. (4 Cc.). Both the syrup and the aromatic syrup are used chiefly for children, in the doses given. **R., Tincture of** (*tinctura rhei*, U. S. P., B. P.). Dose 1-2 dr. (4-8 Cc.). **R., Tincture of, Aromatic** (*tinctura rhei aromatica*, U. S. P.). Dose 1-1 dr. (2-4 Cc.). **R., Wine of** (*vinum rhei*, B. P.). Dose 1-4 dr. (4-16 Cc.).

Rhus (*rus*) [*ῥόος*, sumac]. A genus of shrubs or small trees of the order *Anacardiaceae*. The dried fruit of *R. glabra*, sumac, constitutes the *rhus glabra* of the U. S. P., and is used as an astringent in inflammations of the mouth and throat, in the form of a decoction or the official *fluidextractum rhus glabrae*. *R. toxicodendron*, the poison-ivy, is a powerful irritant and produces in susceptible persons a violent dermatitis with vesicles and intense itching (ivy-poisoning). The active agent seems to be an acid called *toxodendric acid*. In overdoses taken internally it acts as a narcotic poison. It has been employed in chronic rheumatism and in incontinence of urine. Unof. *R. venenata*, swamp-sumac, is also poisonous.

Rhyphobia (*ri-po fo-be-ah*) [*ῥῆφος*, filth; *phobos*, to fear]. A morbid dread of filth.

Rhyptic (*rip'-tik*) [*ῥῆτις*, to cleanse]. Detergent; cleansing; cathartic.

Rhythm (*ritm*) [*ῥυθμός*, rhythm]. Action or function recurring at regular intervals.

Rhythmophone (*ritm'-fo-fo-n*) [*ῥυθμός*, *φωνή*, sound]. A form of microphone for studying the heart beat and pulse-beat.

Rhytidosis (*rit-id-o'-sis*). See *Rutidosis*.

Rib (AS., *ribb*). One of the 24 long, flat, curved bones forming the wall of the thorax. **R.s.**, Abdominal, the floating ribs. **R.s.**, Astenal, the false ribs. **R.s.**, Cervical, rib-like processes extending ventrally from the cervical vertebrae. **R.**, False, one of the five lower ribs not attached to the sternum directly. **R.**, Floating, one of the last two ribs which have one end free. **R.s.**, Short, the false ribs. **R.s.**, Sternal, the true ribs. **R.**, True, one of the seven upper ribs that are attached to the sternum. **R.s.**, Vertebrochondral, the highest three false ribs, they are united in front by their costal cartilages.

Ribes' Ganglion. See *Ganglion of Ribes*.

Ribetin (*ri-be'-tin*) [*ribesum*, currant]. The juice of the black currant, *Ribes nigrum*, used for staining microscopic sections.

Rice (*ris*). A plant, *Oryza sativa*, of the *Gramineae*, also its seed. Rice is used as a food, as a demulcent, and, in the form of rice-water, as a drink in fevers. **R.-water Evacu-ations**, the name given to the bowel discharges in cholera.

Richardson's Method of Auscultation. The introduction into the esophagus of an elastic bougie or tube connected with the ear pieces of a stethoscope.

Richter's Hernia. See *Hernia, Richter's*.

Richter-Monro's Line. See *Monro's Line*.

Ricin (*ris'-in*) [*ricinus*, castor-oil]. A poison-ous protein found in the castor-oil bean.

Ricinin (*ris'-in-in*) [*ricinus*]. A poisonous crystalline substance obtained from castor-oil.

Ricinism (*ris'-in-izm*). Poisoning from the seeds of *Ricinus communis*. It is marked by hemorrhagic gastroenteritis and vertigo.

Rictus (*rik'-tus*) [L., "a tick," from the resemblance of the seed to that insect]. A

plant or tree, *R. communis*, or castor-oil plant, of the order *Euphorbiaceae*. **Ricin**. **Oleum** (U. S. P., castor oil, the fixed oil expressed from the seeds of *R. communis*) is used as a cathartic or constipating, and irritative diarrheal. Dose $\frac{1}{2}$ to 1 fl. oz.

Rickets (*rik'-ets*). See *Rachitis*.

Rickety (*rik'-et-ee*) [*rickets*]. Affected with or distorted by rickets.

Ricord's Chancre. The papillomatous lesion of syphilis. Syn., *chancre papillomateux*.

Rictus (*rik'-tus*) [L., from *ringere*, to gape]. A fissure or cleft, a gaping, as of the mouth. **R. lupinus**, cleft palate.

Rider's Bone. An osseous formation in the adductor muscles of the leg from continued pressure of the leg against the saddle.

Ridge (*rip*) [ME., *rise*, the back of a horse's head]. An extended elevation or crest.

Genital, the germ ridge, in front of and external to the Wolffian bodies, from which the internal reproductive organs are developed.

R., **Intervertebral**, that on the vertebral end of a rib dividing the articular surface into two portions.

R., **Maxillary**, the crest, a ridge of vascular fibers between the alveolar processes of the jaws.

R., **Occipital**, the superior and inferior lines of the occipital bone.

R.s., **Palatine**, the central ridge together with the corrugations of the surface of the hard palate; they are especially noticeable in the human fetus.

R., **Temporal**, that extending over the external angular process of the zygomatic bone, across the frontal and parietal bones and terminating in the posterior end of the zygomatic process.

Ridley's Sinus. The circular sinus.

Riedel's Process. A large, rounded process of the liver frequently seen in the enlarged gall bladder in cases of cholecystitis.

Riegel's Syndrome. Respiratory distress, the association of tachycardia with transient stimulating asthma.

Riegler's Test for Albumin. 1. To 10 c.c. of naphtholsulfonate, 8, on a glass slide, add 10 c.c. of distilled water, 200, 10 c.c. of reagent water with 10 to 20 drops of the reagent. If traces of albumin are indicated by a turbidity, larger quantities by a precipitate, the determination may be made with a colorimeter.

2. Ten Gm. benzoin, 100, 10 c.c. of reagent water and are well shaken and filtered. A turbidity or precipitate on adding 20 to 30 drops of reagent to the filtrate indicates albumin.

Sensitivity: 1. Albumoses and peptones react in a similar manner, but the precipitate dissolves on warming and disappears on cooling.

2. **Test for Albumoses and Peptones**. To 10 c.c. of paraformaldehyde in 25 c.c. of water, add 10 c.c. concentrated sulfuric acid and 10 c.c. of water, then a solution of sodium hydroxide in 25 c.c. of water, and make up to 100 c.c. with water. Filter and preserve in the dark.

3. **Max to Cc** reagent with 10 c.c. of water, then add 30 drops of reagent water, and

NaOH—if very small quantities of albumoses or peptones are present, a yellowish orange color develops; with notable quantities a blood-red, even the froth on shaking being red. On now adding excess of H_2SO_4 an orange or brownish precipitate forms. **R.'s Test for Aldehyds and Glucose**, heat 0.1 Gm. phenylhydrazin hydrochlorate, 0.5 Gm. crystal sodium acetate, and 1 Cc. sugar solution until dissolved. When near boiling-point add 20 to 30 drops 10% NaOH without shaking—in a few seconds to 5 minutes liquid becomes violet-red, even if there is but 0.005% sugar present. If no sugar present, color will be a slight pink. For sugar in urine, color must develop within one minute to afford physiologic significance. Reaction also occurs with aldehyds, hence absence of these must be assured. According to Jolles, absence of albumin must also be assured. Reaction uninfluenced by uric acid or creatinin. **R.'s Test for Bile-pigments**, on adding an excess of paradiazotranilin solution to an alkaline solution of bilirubin or biliverdin, intensely colored reddish-violet flocks are precipitated, soluble in chloroform, alcohol, or benzin, and affording reddish-violet or violet solution. **R.'s Test for Nitrites**, 15 Cc. of the fluid to be examined is mixed in a test-tube with 0.02 to 0.03 Gm. of the naphthol reagent (equal parts naphthionic acid and pure betanaphthol) and 2 or 3 drops concentrated HCl, shaken, and 1 Cc. strong NH_3 poured down the side of the tube, while held in a slanting position; presence of nitrites is indicated by appearance of a red zone, and on shaking the whole solution turns red. **R.'s Test for Uric Acid**, paranitranilin, 0.5 Gm.; water, 10 Cc.; pure concentrated H_2SO_4 , 15 drops. Put into a glass flask of 150 Cc. capacity, and heat with agitation until dissolved. Water 20 Cc. is now added, the mixture cooled quickly, 2.5% $NaNO_2$ solution to Cc. is added, and diluted, after 15 minutes, with water 60 Cc. The mixture is shaken up repeatedly and filtered. The formation of a blue or green color on adding the reagent and 10% NaOH solution indicates presence of uric acid.

Rieux's Hernia. Retrocecal hernia.

Riga's Disease. Papillomatous ulceration of the frenum of the tongue, covered with a whitish, diphtheroid exudate.

Rigg's Disease. See *Fouchard's Disease*.

Rigidity (*ri-jid'-it-e*) [*rigidus*, stiff]. Stiffness; immobility. **R.**, Cadaveric, **R.**, Postmortem, rigor mortis.

Rigor (*ri'-gor*) [*rigor*, from *rigere*, to be cold]. Chill. **R. mortis**, the muscular rigidity that occurs a short time after death, due to chemic changes resulting in coagulation of the muscle-plasma and the development of an acid reaction.

Rima (*ri'-mah*). A chink or cleft. **R. glottidis**, the cleft between the true vocal bands; the glottis.

Rimula (*rim'-u-lah*) [*dim. of rima*, a chink],

A small cleft or fissure, especially of the spinal cord or the cerebellum.

Rinderpest (*rin'-der-pest*) [Ger., "cattle-pest"]. An acute infectious disease of cattle, appearing occasionally among sheep and other ruminants.

Rindfleisch's Granule-cells. Eosinophil leukocytes with granulations.

Ring [ME.]. A circular opening or the structure surrounding it. See *Annulus*. **R.-bodies**, peculiar ring-shaped bodies found in the erythrocytes in pernicious anemia, leukemia, and lead-poisoning.

Ringworm. *Tinea trichophytina*, a contagious disease of the skin due to a vegetable parasite, the trichophyton. See *Tinea*.

Rinnmann's Sign of Early Pregnancy. Slender cords radiating from the nipple; they are considered to be hypertrophic acini of the glands.

Rinné's Test (*rin'-né*). A test to determine the condition of the various parts of the ear, performed by applying a vibrating tuning-fork first over the mastoid process, leaving it there until the patient seems no longer to hear the sound, and then as quickly as possible bringing it immediately in front of the external meatus, avoiding all contact with the head or ear. If the patient is then able to hear the sound of the tuning-fork once more, it indicates that the conduction through the air is better than through the bone.

Riolan's Arch. The arch of the mesentery which is attached to the transverse mesocolon.

R.'s Bouquet, the muscular bundle attached to the styloid process and composed of the styloglossus, stylohyoid, and stylopharyngeus.

R.'s Muscle, the ciliary portion of the orbicularis palpebrarum. **R.'s Ossicles**, small bones sometimes found in the suture between the inferior border of the occipital bone and the mastoid portion of the temporal bone.

Ripault's Sign. A change in the shape of the pupil on pressure upon the eye, transitory during life, but permanent after death.

Risorius (*ri-zo'-ri-us*) [*ridere*, to laugh]. Laughing. **R. Muscle.** See under *Muscle*.

Risus (*ri'-zus*) [L.]. A grin or laugh. **R. sardonicus**, the sardonic grin, a peculiar grinning distortion of the face produced by spasm of the muscles about the mouth, seen in tetanus.

Ritter's Disease. Dermatitis exfoliativa of the newborn. **R.'s Fiber**, a delicate fiber regarded as a nerve-fiber, seen in the axis of a retinal rod, near the peripheral end of which it forms a small enlargement. **R.'s Law of Contraction**, stimulation of a nerve occurs both at the moment of closing and of opening of the electric current. **R.'s Tetanus**, tetanic contractions occurring on the opening of the constant current which has been made to pass for some time through a long section of a nerve. In man the phenomenon does not occur under physiologic conditions, but it is seen in tetany.

Ritter-Rollet's Phenomenon. Flexion of the

foot following the application of a mild galvanic current, and extension following that of a strong current.

Ritter-Valli's Law. Section of a living nerve is followed by a gradual loss of irritability, preceded by a slight increase, the phenomenon taking place centrifugally from the divided end.

Riverius' Draft. A solution of sodium citrate.

Rivian Canals, R. Ducts. The ducts of the sublingual gland. **R. Foramen.** See *Bochdalek's Canal*. **R. Glands,** the sublingual glands. **R. Ligament.** See *Shrapnell's Membrane*. **R. Notch, R. Segment,** a notch of irregular outline at the upper border of the sulcus tympanicus, it is marked at each end by a small spine.

Rivolta's Disease. Actinomycosis.

Rizolin (*riks'-ol-in*). A mixture of petroleum and light oil of camphor.

Riziform (*ris'-i-form*). Resembling grains of rice.

Rob. A confection made of fruit-juice, especially of that of the mulberry.

Robert's Pelvis. The transversely contracted or doubly synostotic pelvis; ankylosis of both sacroiliac synchondroses, the sacrum being absent or undeveloped.

Roberts' Test for Albumin. Float the urine on the surface of a saturated common salt solution containing 5% of hydrochloric acid, of specific gravity 1.052. A white ring or zone formed between the two liquids indicates albumin. Roberts suggests that a mixture of 1 part strong nitric acid and 5 parts saturated magnesium sulfate solution may be employed also. **R.'s Test for Glucose in Urine,** find the specific gravity of the urine at a known temperature by means of a urinometer supplied with a thermometer. Acidify slightly with tartaric acid, and add a piece of yeast the size of a pea, and shake. Let it stand in a warm place (20°-22° C.) for 24 hours. Filter through a dry filter and cool to the same temperature at which the specific gravity was previously taken. Take the specific gravity again. Every degree of density lost represents 1 grain of glucose to the ounce of urine.

Robertson's Pupil. See *Argyll Robertson Pupil*.

Robin (*ro'-bin*). A toxic albuminoid from the bark of the locust tree, *Robinia pseudoacacia*; its action is similar to that of abrin and ricin.

Robin's Myeloplaxes. Osteoplasts.

Roborant (*ro'-bor-ant*) [*robor*, strength]. 1. Tonic, strengthening. 2. A tonic or strengthening remedy.

Roborat (*ro'-bor-at*) [see *Roborant*]. An albuminous distillate prepared from maize, containing lecithin and glycerophosphoric acid.

Roborin (*ro'-bor-in*). A grayish-green powder or brown mass, obtained from blood, and said to consist of water, 7.6%, calcium carbonate, 15.23%, common salt, 1.7%, iron oxid, 0.40%, other mineral substances, 1.28%, albuminoids, 78.41%. The last are principally calcic albuminates.

Rocella (*rok-sel'-ah*). A genus of marine algae, the *Korvee*. *R. treacheri* is the *Korvee*.

Rochelle Salt (*ro-shel'*). Potassium and sodium tartrate.

Rock-oil. See *Petroleum*.

Rod [*ME.*]. One of numerous rod-like bacillary structures, as in the *Rod*. **R. and-cone Layer, R. and-cone** See under *Retina*. **R.-granules,** granules of the outer nuclear layer of the retina that are characterized by transverse striations and give off processes connected with the inner fiber layer of the retina. **R.s., Retinae,** cylindrical bodies found in the rods and cones of the retina.

Rodagen (*rod'-ah-jen*). A preparation of goats milk for use as emulsion in infantile nutrition.

Rodent Ulcer. See *Ulcer, Rodent*.

Rodriguez' Aneurysm. Aneurysm occurring in which the sac is immediately adjacent to the artery.

Roederer's Ecchymoses. See *Barnard's Ecchymoses*. **R.'s Obliquity,** obliquity of the chin when the child is engaged at the superior pelvic strait during labor.

Roentgenium (*rent'-gen-ium*) [Wilhelm Conrad Roentgen, a German physicist]. The element of the Roentgen rays in therapeutics.

Roentgen-rays. See *Rays, Roentgen*.

Roentgenography (*rent'-og'-o-gra-fee*). See *Roentgenography*.

Roger's Disease. The presence of a congenital abnormal communication between the ventricles of the heart. **R.'s Symptom,** subnormal temperature during the course of tuberculous meningitis, regarded by Roger as pathognomonic of the disease.

Rokitansky's Disease. A disease of the liver. **R.'s Tumor,** an ovarian tumor made up of a large number of cysts.

Rolandic (*rolan'-dik*) [Louis Rolando, an Italian anatomist, 1753-1841]. Described by Rolando, as the *rolandic fissure*. **R. Angle,** the acute angle formed by the fissure of Rolando with the superior border of the cerebral hemisphere. **R. Area,** the excitomotor area of the cerebral hemisphere comprising the ascending frontal and ascending parietal convolutions.

Rolando's Arciform Fibers. The extreme arcuate fibers of the oblongata. **R.'s Cells,** the ganglion-cells found in Rolando's gelatinous substance. **R.'s Fissure.** See *Fissure, Rolando's*. **R.'s Funiculus,** the *reticularis funiculus*, a longitudinal process extending by Rolando's gelatinous substance to the surface of the oblongata, between the *reticularis funiculus* and the line of passage of the accessory nerve. **R.'s Gelatinous substance,** the elongated substance which is a continuation of the apices of the posterior horns of the spinal cord, extending to the lumbar portion of the cord, and ending in the pons. It consists of reticula and a number of ganglion-cells. **R.'s Tubercle,** a mass of gray matter forming the upper part of the

of Rolando's funiculus. The fibers given off from its cells go to make up the sensory root of the trigeminus.

Rolandometer (*ro-land-om'-et-er*). A device for locating on the head the place of the fissure of Rolando.

Roller's Nucleus. 1. A nucleus situated near the hilum of the olivary body of the oblongata; it is connected with the fibers of the anterolateral fundamental tract of the spinal cord. 2. An aggregation of small ganglion-cells situated anteriorly to the nucleus of the hypoglossal nerve.

Roller-bandage. A bandage made into a cylindric roll.

Rollet's Chancre. One partaking of the characteristics of both simple and true chancre. **R.'s Nerve-corpuscles.** See *Corpuscles, Golgi's*. **R.'s Secondary Substance.** See *Engelmann's Lateral Disc*.

Roman-Delluc's Test for Urobilin in Urine. Shake 100 Cc. urine with 20 Cc. chloroform, after acidulating with 8 to 10 drops acetic acid. Overlay 2 Cc. of clear chloroformic solution with 4 Cc. of 1 : 1000 solution zinc acetate in 95% alcohol. At the line of separation a characteristic green fluorescence will appear if urobilin is present, more easily recognized against a black background. On shaking, fluorescence is more marked and the mixture acquires a pink tint.

Romberg's Disease. Progressive facial hemiatrophy. **R.'s Sign.** 1. Swaying of the body and inability to stand when the eyes are closed and the feet placed together; it is seen in tabes dorsalis, hereditary cerebellar ataxia, etc. It is also called the Brach-Romberg symptom. 2. Neuralgic pain in the course and distribution of the obturator nerve, pathognomonic of obturator hernia. **R.'s Spasm,** masticatory spasm, a spasm affecting the muscles supplied by the motor fibers of the fifth nerve. **R.'s Trophoneurosis.** See *Romberg's Disease*.

Rommelaere's Law. Constant diminution of the nitrogen in the urine in cases of carcinoma. **R.'s Sign,** diminution of the normal phosphates and sodium chlorids in the urine is pathognomonic of cancerous cachexia.

Rongeur Forceps (*rông-zhur*). A strong pair of forceps for breaking off pieces of bone, especially in enlarging a trephine opening.

Root [*leel, rot*]. 1. The descending axis of a plant. 2. The part of an organ embedded in the tissues, as the root of a tooth. **R. of a Nerve,** one of two bundles of nerve-fibers, the anterior and posterior roots, joining to form a nerve-trunk. **R.-sheath,** the epithelium of the hair-follicle. **R.-zone,** a name given to the column of Burdach of the spinal cord.

Rophetic (*ro-jet'-ik*) [*ροφητικός*, given to sopping up]. A mechanic absorbent agent, as a dusting powder, sponge, etc.

Rosa (*ro'-zah*) [*l.*]. A rose. See *Rose*.

Rosacea (*ro-sa'-se-ah*). See *Acne rosacea*.

Rosalia (*ro-sa'-le-ah*). 1. Scarlatina. 2. Measles. 3. Erythema.

Rosanilin (*ro-zan'-il-in*) [*rose; anilin*], $C_{20}H_{10}N_2O$. A colorless, crystalline derivative of anilin. **R. Acetate, R. Hydrochlorid,** the red dye fuchsin.

Rosary, Rachitic. See *Rachitic Rosary*.

Rose (*rôz*) [*ῥόδον*, from *Ar.*, ward, a rose]. A genus of plants of the order *Rosaceæ*. **R.s,** Attar of. See *R., Oil of*. **R.-cold.** See *Hay-fever*. **R., Confection of** (*confectio rosa*, U. S. P.), a confection prepared from the petals of the red rose (*rosa gallica*, U. S. P.). **R., Dog-**, the common wild rose of Europe. The fruit (*rosa canina fructus*, B. P.) is used in Europe as a vehicle. **R., Fluidextract of** (*fluidextractum rosa*, U. S. P.), used as an astringent and vehicle. Dose 1-2 dr. (4-8 Cc.). **R., Honey of** (*mel rosa*, U. S. P.), a syrup made of fluidextract of rose and clarified honey. Dose 1 dr. (4 Cc.). **R., Oil of** (*oleum rosa*, U. S. P.), a volatile oil distilled from the petals of *Rosa damascena*, and employed as a perfume and flavoring agent. Syn., Attar of roses. **R., Red** (*rosa gallica*, U. S. P., *rosa gallica petala*, B. P.), the dried petals are slightly astringent and tonic, but are chiefly employed as a vehicle. **R., Syrup of** (*syrupus rosa*, U. S. P.), a syrup made of fluidextract of rose, diluted sulfuric acid, sugar, and water. **R.-water** (*aqua rose*, U. S. P.). Dose 4 dr. (16 Cc.). **R.-water, Ointment of** (*unguentum aqua rosa*, U. S. P.), cold cream. **R.-water, Triple** (*aqua rosa fortior*, U. S. P.), stronger rose-water.

Rose's Biuret Reaction for Albumins. Alkalinize the albumin solution with soda-lye and add, drop by drop, with constant shaking, a dilute copper sulfate solution (17 or 18 Gm. crystallized cupric sulfate in 1 liter of water). The solution will become rose-red, then violet, and finally blue; the blue appears of a reddish tint when compared with a normal alkaline copper solution.

Rosella (*ro-sel'-ah*). See *Rubella*.

Rosemary (*rôt'-ma-ré*) [*rosmarinus*, marine dew, from *ros*, dew; *marinus*, marine]. The *Rosmarinus officinalis*, a plant of the order *Labiata*. **R., Oil of** (*oleum rosmarini*, U. S. P.), a volatile oil used as a stimulant and in rubefacient liniments. Dose 3-6 min. (0.2-0.3 Cc.). **R., Spirit of** (*spiritus rosmarini*, B. P.), prepared from the oil and used as a perfume and in liniments.

Rosenbach's Disease. A nodular enlargement, painful to the touch, of the dorsal aspect of the proximal ends of the last phalanges. The affection is regarded as identical with Heberden's nodes. **R.'s Modification of Gmelin's Test for Bile-pigments,** when the liquid has all been filtered through a very small filter, apply to the inside of the filter a drop of nitric acid containing only a very little nitrous acid, when a pale yellow spot will form, surrounded by colored rings, which are yellowish-red, violet, blue, and green. **R.'s Sign.** 1. Loss of the abdominal

reflex in inflammatory intestinal diseases. 2. Tremor of the eyelids when the patient is asked to close them, often associated with insufficient closure of the lids. It is seen in neurasthenia. **R.'s Syndrome**, a variety of paroxysmal tachycardia consisting in the association of cardiac, respiratory, and gastric troubles. **R.'s Test for Indirubin**, boil the liquid with nitric acid, and indigo-blue will be formed from indirubin.

Rosenbach-Semon's Law. See *Semon's Law*.

Rosenberg's Method. By requiring the patient to read aloud a difficult passage, the production of the knee-jerk is facilitated.

Rosenheim's Sign. A friction-sound heard on auscultation over the left hypochondrium in fibrous perigastritis.

Rosenmueller's Fossa. A depression behind the pharyngeal orifice of the eustachian tube, frequently the seat of morbid growths.

R.'s Gland. 1. The palpebral portion of the lacrimal gland. 2. The largest of the group of deep sublingual glands in the crural ring.

R.'s Organ, the parovarium, a vestige of the wolffian body and duct. **R.'s Valve**, a semilunar fold of the mucous membrane seen occasionally in the lacrimal duct above its junction with the lacrimal sac.

Rosenthal's Canal. The spiral canal of the cochlea. **R.'s Hyperacid Vomiting.** See *Rosbach's Disease*.

R.'s Sign, the application of a strong faradic current to the sides of the vertebral column causes burning and stabbing pains in cases of spondylitis. **R.'s Vein**, the basilar vein, a branch of Galen's vein.

Roseola (*ro-se'-o-lah*) [*roseus*, rose]. 1. Rose-rash, a name given to any rose-colored eruption. 2. Synonym of *Rubella*. **R. cholericæ**, an eruption sometimes appearing in cholera. **R., Syphilitic**, an eruption of rose-colored spots appearing early in secondary syphilis. **R. typhosa**, the eruption of typhoid or typhus fever. **R. vaccina**, a general rose-colored eruption sometimes occurring during vaccinia.

Roséoles à verre bleu. Faint syphilitic discovered by means of cobalt-blue glasses worn close to the eyes, before they are revealed to the naked eye.

Roser's Position. With head dependent over the end of the table.

Roser-Braun's Sign. Absence of pulsations of the dura in cases of cerebral abscess, tumors, etc.

Roser-Nélaton's Line. See *Line, Nélaton's*.

Rosin (*roz'-in*). The residue left after distilling off the volatile oil from turpentine. See also *Resina*. **R. Cerate** (*er-at-um ro-zin*, U. S. P.), a mixture of rosin, yellow wax, and lard. **R. Cerate, Compound** (*er-at-um ro-zinæ compositum*, U. S. P.), a mixture of rosin, yellow wax, prepared suet, turpentine and linseed oil.

Roxin's Test for Indirubin. Render the liquid alkaline with sodium carbonate and extract with ether, which is colored red by the indirubin.

Rosmarinus (*roz-ma-rī-nus*). See *Rosmary*.

Rosolic Acid (*ro-sol'-ik*), $C_{10}H_8O_4$. A substance used as a test for acids and alkalis; acids decolorize it, with alkalis it gives a red color.

Rosbach's Disease. Gastritis, a tenositis of the stomach attended with paroxysmal hypersecretion.

Rostellum (*ros-tell'-um*) [*dist. of rostrum*]. A little beak, especially the beak-bearing portion of the head of certain worms.

Rostrate (*ros'-trate*) [*rostrum*]. Furnished with a beak or beak-like process.

Rostrum (*ros'-trum*) [*l.*]. A beak, a projection or ridge. **R. sphenoidale**, the vertical ridge on the inferior aspect of the end of the sphenoid bone, which is given off at the upper groove-like border of the vomer. See *Beak of the sphenoid*.

Rot [*AS, rotum, to rot*]. Decay. **R., Potam.** See *Mildew*.

Rotary (*ro'-to-re*) [*rotation*]. Producing or characterized by rotation.

Rotation (*ro-ta'-shun*) [*rotare, to turn, to rotate, a wheel*]. The act of turning about an axis passing through the center of a body. 2. Rotation of the eye, rotation of the arm.

Rotator (*ro-ta'-tor*) [*see Rotation*]. Anything, especially a muscle, that produces rotation.

Rotch's Sign. Dulness on percussion in the right fifth intercostal space in pericardial effusion.

Roth's Disease, R.'s Symptom-complex "Meralgia paresthetica." See *Meralgia Paresthetica*.

R.'s Spots, white spots resembling those of adenomatous retinitis, seen in the region of the optic disc and the macula in cases of septal meningitis. **R.'s Vas aberrans**, an inconstant diverticulum of the anterior portion of the rete testis.

Rötheln (*ro'-teln*). See *Rubella*.

Rottlera (*rot'-le-rah*). See *Kamala*.

Rotlerin (*rot'-le-rah*), $C_{17}H_{14}O_2$. A volatile principle from kamala, used as emmenagogue.

Rotula (*rot'-u-lah*) [*dim. of rota, a wheel*]. The patella.

Rouget's Bulb. See *Bulb, Rouget's*. **R.'s Motorial End-plates**, small conical end-plates connected, within the sarcolemma, with the endings of motor nerves. **R.'s Muscle**, *Mueller's Muscle* (1).

Roughton's Band. Collapse, from atrophy of the tissues, of the zone corresponding to the junction of the alveoli with the interlobular cartilages. The resulting contact of alveoli with the septum causes obstructive respiration.

Rougnon-Heberden's Disease. Arthritis pectoris.

Rouleau (*roo-lé*) [*Fr., pl., rouleau*]. A roll, especially a roll of red blood corpuscles resembling a roll of coins.

Round Ligament. 1. One of the ligaments of the uterus passing through the inguinal canal. 2. One of the ligaments of the pelvis lying in the longitudinal fissure of the greater sciatic foramen of the hip joint—*ligamentum teres*.

Roundworm. The ascaris.

Roup (*roup*). A contagious disease of fowls; it is probably diphtheric.

Rovighi's Sign. Hydatid fremitus; a thrill observed on combined palpation and percussion in cases of superficial hydatid cyst of the liver.

Rubber (*rub'-er*). The elastica of the U. S. P. The prepared milk-juice of several species of *Hevea* Syn., *Caoutchouc*; *India-rubber*; *Para rubber*. **R.-dam**, a sheet of rubber used to confine the flow of secretions or of discharges from a wound.

Rubedo (*ru-be'-do*) [*ruber*, red]. Any diffused redness of the skin.

Rubefacient (*ru-be'-fa'-she-ent*) [*ruber*; *facere*, to make]. 1. Causing redness of the skin. 2. An agent that causes redness of the skin.

Rubella (*ru-bel'-ah*) [dim. of *rubeola*]. An acute contagious eruptive disease, of short duration and mild character. After a period of incubation varying from one to three weeks, the disease sets in abruptly with pains in the limbs, sore throat, and slight fever. The eruption appears at the end of the first day, and consists of red papules, and disappears usually without desquamation in about three days. The disease is associated with enlargement of the superficial cervical and posterior auricular glands. Syn., *Epidemic roseola*; *French measles*; *German measles*; *Rotheln*.

Rubeola (*ru-be'-o-lah*). See *Measles*.

Rubeolin (*ru-be'-ol-in*) [*rubeola*]. A name given to the specific toxin of measles.

Rubescient (*ru-bes'-ent*) [*rubescere*, to become red]. Growing red.

Rubia (*ru'-be-ah*). The *Rubia tinctorum* or dyers' madder, containing the coloring principles alizarin ($C_{15}H_8O_4$) and purpurin ($C_{16}H_8O_5$). It is used as a dye.

Rubidium (*ru-bid'-e-um*) [*rubidus*, red]. A rare alkaline metal, resembling potassium in physical and chemie properties, its salts are used in medicine.

Rubiginous (*ru-bij'-in-us*) [*rubiginosus*, rusty]. Rust-colored.

Rubigo (*ru-hi'-go*) [L.]. Rust.

Rubin (*ru'-bin*). Synonym of *Fuchsin*.

Rubner's Test for Carbon Monoxid in the Blood. Agitate the blood with 4 or 5 volumes of solution of lead acetate for one minute. If the blood contains CO, it will retain its bright color, if it does not, it will turn chocolate-brown. **R.'s Test for Glucose**, add to the liquid an excess of lead acetate, filter, and add to the filtrate ammonium hydrate until no further precipitate is produced. Warm gently, when the precipitate formed will gradually become pink; this color decreases on standing.

Rubor (*ru'-bor*) [L.]. Redness or discoloration due to inflammation. **R.**, **Regional**, isolated spots which become red, with elevation of temperature, observed after local cyanosis.

Rubrescin (*ru-bres'-in*). A combination of resorcinol, 50 Gm., and chloral hydrate, 25 Gm. It is used in 1% solution as an indicator for alkalimetry and acidimetry.

Rubrin (*ru'-brin*). See *Hematin*.

Rubrol. A solution used by injection in gonorrhea, and said to consist of boric acid, thymol, and a coal-tar derivative in water.

Rubrum (*ru'-brum*) [*ruber*, red]. The preferred name for the nucleus ruber.

Rubus (*ru'-bus*) [L.]. Blackberry. A genus of plants of the order *Rosacea*. The *rubus* of the U. S. P. is the dried bark of the rhizome of *R. villosus*, *R. nigrobaccus*, and *R. cuneifolius*. It is used as an astringent tonic in diarrhea. Dose 20-30 gr. (1.3-2.0 Gm.). **R.**, **Fluid-extract of** (*fluidextractum rubi*, U. S. P.). Dose $\frac{1}{2}$ -1 dr. (2-4 Cc.). **R.**, **Syrup of** (*syrupus rubi*, U. S. P.). Dose 1-2 dr. (4-8 Cc.). The fruit of *R. idaeus*, the raspberry, is used to prepare *syrupus rubi idaei*, which is used as a tonic.

Ructus (*ruk'-tus*) [L.]. A belching of gas from the stomach.

Rudimentary (*ru-dim en'-ta-re*) [*rudimentum*, a rudiment]. Undeveloped; unfinished.

Rue (*ru*) [*poth*, rue]. A plant, *Ruta graveolens*, of the order *Rutacea*, yielding an oil (*oleum ruta*, B. P.) which is a local irritant and has been employed in amenorrhea and menorrhagia. Dose 2-5 min. (0.13-0.32 Cc.).

Ruffini's End-organs. See *End-organs*, *Ruffini's*.

Ruga (*ru'-gah*) [L.]. A fold or ridge. **Rugae**, **Palatal**, the elevations upon the mucous covering of the hard palate; they assist in speech and deglutition.

Rugose (*ru'-gäs*) [*ruga*]. Characterized by folds.

Rugosity (*ru-gos'-it-e*) [*ruga*]. A condition of being in folds.

Rugous (*ru'-gus*). See *Rugose*.

Ruhmkorff's Coil. An induction coil.

Rum [abb. from ME. *rumbooz*, alcoholic liquor]. A spirit obtained from the molasses of the sugar-cane by fermentation and distillation.

Rumen (*ru'-men*) [L.]. The first stomach of ruminants, also called the paunch, from which the food is returned to the mouth for remastication.

Rumex (*ru'-meks*) [L.]. Yellow dock, a genus of plants of the order *Polygonaceae*. The root of *R. crispus* is astringent and tonic, and has been employed externally and internally in various diseases of the skin. Dose of the extract 1 dr. (4 Cc.).

Rumin (*ru'-min*) [*rumex*]. A precipitate from a tincture of the root of *Rumex crispus*. It is antiscorbutic, alterative, and astringent.

Rumination (*ru-min-a'-shun*). See *Mercyism*.

Rummo's Disease. Cardiophtosis.

Rump [Icel., *rumpf*]. The region near the end of the backbone; the buttocks.

Rumpf's Sign. Fibrillary twitching of muscles in traumatic neuritis.

Run-around. Suppurative inflammation around a finger-nail.

Runeberg's Type of Pernicious Anemia.

A form of pernicious anemia with remissions.

Rupia (*ru'-pe-ah*) [*ῥῥος*, filth]. A form of

eruption occurring especially in tertiary syphilis, and characterized by the formation of large, dirty-brown, stratified, conic crusts.

Rupial (*ru'-pe-ah*) [*rupia*]. Resembling or characterized by rupia.

Rupophobia (*ru-po-fo'-be-ah*). See *Rhynophobia*.

Rupture (*rup'-tur*) [*rumpere*, to break]. 1. A forcible tearing of a part, as *rupture* of the uterus, *rupture* of the bladder. 2. Hernia.

Rusconi's Anus. The blastopore.

Russell's Bodies. Fuchsin bodies. Roundish colloid or hyaline bodies, of varying size, found in a variety of conditions, notably in carcinomatous growths and certain morbid changes of the mucosa of the nose and stomach.

Rust [*AS*]. 1. The oxid and hydroxid of iron formed on the surface of iron exposed to the air. 2. A disease common on cereals, causing rust-like masses to break out on the tissues of the plant.

Rust's Disease. Tuberculous spondylitis affecting the first and second cervical vertebrae. **R's Symptoms**, at every change of position of the body a patient suffering from

caries or carcinoma of the upper cervical vertebrae supports his head with the hand.

Rut (*rut*) [*OF*, "a mating"]. 1. The state of concomitant menstruation and coition in the lower animals. 2. The condition of a male animal in which it is capable of co-mating.

Ruta (*ru'-tah*). See *Rue*.

Rutidosis (*ru-tid-o-sis*) [*roto*, a wrinkle]. A wrinkling, the contraction or wrinkling of the cornea that just precedes death.

Ruysch's Glomerulus. See *Malpighian Tubule*.

R's Membrane. See *Membrana Respiratoria*.

R's Tube, a minute tubular cavity in the nasal septum, opening by a small round orifice a little below and in front of the upper palatine foramen. It is best seen in the living and represents the rudimentary homolog of Jacobson's organ. **R's Uterine Muscle**, the muscular tissue of the fundus uterini, believed by Ruysch to act independently of the rest of the uterine muscle.

Rye (*rye*) [*AS*, *ryce*]. The plant *Secale cereale* and its grain. The grain is used in the constitution of bread.

Rypia (*ri'-pe-ah*). See *Rupia*.

S

S. 1. The symbol of *sulfur*. 2. An abbreviation of *sanctus*, left, in prescriptions, of *signa*, sign.

S. romanum, the sigmoid flexure of the colon.

Sabadilla (*sab-ad-il'-ah*). *Coccydilla*, *Schannocondon officinale* (*Asagrea officinalis*), a plant of the order *Melanthaceae*, containing the alkaloids veratrin, sabadin, and sabadinin. It is an emetico-cathartic, and was formerly used as a tentacide and to destroy vermin in the hair. Its chief value is as a source of veratrin. It is official in the B. P.

Sabadin (*sab'-ad-in*), $C_{20}H_{31}NO_2$ (Merck). An alkaloid from the seeds of *Schannocondon officinale*, occurring in white, acicular crystals, soluble in water, alcohol, and ether; melts at $120^{\circ}C$. It is sternutatory.

Sabal (*sab'-ah*). Saw palmetto. The *sabal* of the U. S. P. is the partly dried ripe fruit of *Serenoa serrulata*. A thin extract has been recommended in inflammations of the genitourinary tract, atomic impotence, and in bronchitis and pulmonary tuberculosis. Dose 1-2 dr. (4-8 Gm.).

Sabbatia (*sab-at'-the-ah*) [after Liberatus Sabbati, an Italian botanist]. A genus of the order *Gentianaceae*. *S. angulata* is the American centaur.

Sabbatin (*sab'-atin*). A glucoside obtained from *Sabbatia elliptica*, quinin flower; it is antiperiodic and antipyretic.

Sabina (*sa-bi'-nah*). See *Savin*.

Sabulous (*sab'-u-lus*) [*sabulum*, sand]. Gritty; sandy.

Saburra (*sab-ur'-ah*) [*L.*, "coarse sand"].

Foulness of the stomach or of the tongue and teeth, *sordex*.

Saburral (*sab-ur'-ah*) [*saburra*]. 1. Pertaining to or affected with *saburra*. 2. Resembling or pertaining to coarse sand.

Sac (*sak*) [*sa-cu*, a bag]. 1. The bag-like bulging or covering of a natural orifice, the exit of tumor. **S.s. Air**, the air in the lung. **S., Allantoid**, Semioval of *Amphioxus*. **S., Amniotic**, the amnion. **S.s. Auditory**, the rudimentary organs of hearing in the embryo of certain vertebrates. **S., Con-junctival**, that formed by reflection of the palpebral conjunctiva. **S., Dorsal**, a suture between the epiphysis cerebri and the part of the third ventricle. **S.s. Supracardinal**. **S., Embryonic**, the sac-like stage of the embryo, which it presents early in its development, just after the alveolar cavity has closed. **S., Endolymphatic**, a sac of the dura included in the arachnoid of the ventricles. See under *Duct*, *Endolymphatic*. **S. of the Epididymis**, the internal layer of the tunica vaginalis covering the epididymis. **S., Fetal**. See *S. Gestation*. **S., Gestation**, the sac enclosing the embryo in extra-uterine pregnancy. **S., Hernial**, the peritoneal covering of a hernia. **S., Lacrimal**, the distal extremity of the lacrimal duct. **S., Omental**, a sac formed between the ascending and descending portions of the great omentum. **S., Pericardial**, the pericardium. **S., Peritoneal**, the cavity formed by the peritoneal serous membrane. **S., Pleural**, the cavity

ity formed by the pleura. **S. of the Pulmonary Veins**, the left auricle of the heart. **S., Serous**, the closed cavity formed by any serous membrane. **S., Tubotympanic**, the diverticulum of the primitive gut forming the tympanic cavity and the eustachian tube. **S., Umbilical**, the umbilical vesicle. **S. of the Venæ cavæ**, the right auricle of the heart. **S., Vitelline**, the sac inclosing the vitellus or yolk in the embryo.

Saccate, Saccated (*sak'-at, sak'-a-ted*) [*saccus*, a sac]. Sac-shaped; contained in a sac; encysted.

Saccharated (*sak'-ar-a-ted*) [*saccharin*]. Containing sugar. **S. Ferrous Carbonate** (*ferri carbonas saccharatus*, U. S. P.). Dose 4 gr. (0.25 Gm.).

Saccharification (*sak'-ar-i-fik-a'-shun*) [*saccharin*; *jaere*, to make]. The act of converting into sugar.

Saccharimeter (*sak'-ar-im'-et-er*) [*saccharin*; *metron*, a measure]. An apparatus for determining the amount of sugar in solutions, either in the form of a hydrometer, which indicates the strength in sugar by the specific gravity of the solution; or of a polarimeter, which indicates the strength in sugar by the number of degrees of rotation of the plane of polarization. **S. Test**, a solution of dextrose rotates the plane of polarized light to the right.

Saccharin (*sak'-ar-in*) [*sakharon*, sugar], $C_7H_5SO_4N$. A crystalline substance nearly 280 times sweeter than cane-sugar, and used as a substitute for the latter in diabetes. It is also employed as an antiseptic. Syn., *Benzoyl sulfonimid*; *Glucosimid*; *Glusid*; *Orthosulfaminbenzoic anhydrid*; *Saccharinol*; *Saccharinose*; *Sycese*; *Zuckerin*. **S.-sodium**, a soluble powder containing 90% of saccharin, used as an intestinal antiseptic. Dose 15 gr. (1 Gm.) once or twice daily.

Saccharine (*sak'-ar-in*) [*saccharum*]. Containing sugar; sugary; as sweet as sugar.

Saccharomyces (*sak'-ar-o-mi'-ses*) [*saccharum*; *myces*, a fungus]. A genus of unicellular vegetable organisms, of which the yeast-plant is a common example. **S. albicans**, same as *Oidium albicans*, the fungus of thrush. **S. cerevisiæ**, the ferment of beer-yeast. **S. farciminosus**, causes epizootic lymphangitis. **S. granulomatosus**, Sanfelice (1898) obtained from granulomatous nodule of a pig. Inoculated in swine, it produced similar lesions, but was not pathogenic to other animals. **S. lithogenes**, Sanfelice (1895), from a carcinomatous metastasis in an ox, the primary tumor occurring in the liver. It killed white mice in 8 days after subcutaneous inoculation. **S. neoformans**, Sanfelice (1895), isolated from fermenting grape-juice. It produced nodules in all organs of guinea-pigs except brain, heart, and suprarenals; death occurred in 20 to 30 days after inoculation. He emphasized the similarity of the organisms to the so-called cocidia of cancers. **S. niger**, isolated from the tissue of a guinea-pig which died of marasmus. It produced

enlargement of lymph-glands and suppuration at the point of inoculation in guinea-pigs, rabbits, chickens, and dogs. **S. ruber**, Demme (1891), a red, budding fungus found in milk, which produced gastroenteritis in children. Shown by Casagrandi (1897) to be pathogenic for guinea-pigs, dogs, and mice when inoculated subcutaneously or into the abdomen. **S. septicus**, de Galtano, found in urinary sediment. An exceptionally virulent species producing fatal fibrinous peritonitis and septicemia in guinea-pigs in 12 hours. **S. theobromæ**, the yeast causing the fermentation in the curing of cacao. **S. tumefaciens albus**, Foulerton, isolated from patients in cases of pharyngitis.

Saccharomycosis (*sak'-ar-o-mi'-ko'-sis*). A pathologic condition due to yeasts or *Saccharomyces*. **S. hominis**, a name given by Busse (1894) to pyemia produced by a pathogenic yeast. Syn., *Saccharomycosis subcutaneus tumefaciens*, Curtis; *Saccharomycose humaine*, Curtis (1896).

Saccharoscope (*sak'-ar-o-skop*) [*saccharum*; *opsis*, to view]. An instrument for determining and registering the amount of sugar in the urine.

Saccharose (*sak'-ar-ös*) [*saccharum*]. 1. $C_{12}H_{22}O_{11}$. A crystalline carbohydrate, cane-sugar, occurring in the juice of many plants, chiefly in sugar-cane, in some varieties of maple, and in beet root, it melts at 160° C.; at 160°-200° C. it changes into a brown, non-crystallizable mass called caramel, used in coloring liquids. It is not directly fermentable, and does not reduce alkaline copper solutions. 2. Any one of a group of carbohydrates isomeric with cane-sugar.

Saccharosuria (*sak'-ar-o-su'-re-ah*) [*saccharose*; *urine*]. The presence of saccharose in the urine.

Saccharum (*sak'-ar-um*) [*sakharon*, sugar], $C_{12}H_{22}O_{11}$, sugar. The sugar of the pharmacopeia (*saccharum*, U. S. P.; *saccharum purificatum*, B. P.) is the refined sugar obtained from *S. officinarum* and from various species of *Sorghum*. See *Saccharose* (1). **S. lactis** (U. S. P.), milk-sugar.

Sacchorrhea (*sak'-ar-e'-ah*) [*saccharum*; *rhē*, to flow]. Glycosuria.

Sacciform (*sak'-si'-orm*) [*sac*; *forma*, form]. Resembling a sac.

Saccular (*sak'-u-lar*) [*sac*]. Sac-shaped, as a saccular aneurysm.

Sacculated (*sak'-u-la-ted*) [*sac*]. Divided into small sacs.

Sacculation (*sak'-u-la'-shun*) [*sac*]. 1. The state of being sacculated. 2. The formation of small sacs.

Saccule (*sak'-ul*) [*sacculus*, dim. of *sac*, a sac]. 1. A small sac. 2. The smaller of two vestibular sacs of the membranous labyrinth of the ear. See *Sacculus labyrinthi*.

Sacculocochlear (*sak'-u-lo-kuk'-le-ar*). Relating to the sacculus of the vestibule and the cochlea.

Sacculus (*sak'-u-lus*). A sacculus. **S. cæcalis**, *S. laryngis*, the laryngeal pouch between

the superior vocal bands and the inner surface of the thyroid cartilage. **Sacculi** chalicophori, the lacunas of bone. **S.** chyli, **S.** rorifer, the receptaculum chyli. **S. cordis**, the pericardium. **S. ellipticus**, **S. hemiellipticus**. See *Utricle*. **S.**, **Horner's**, the anal pocket, a saccular fold of the rectal mucosa. **S. labyrinthi**, **S. proprius**, **S. rotundus**, **S. sphaericus**, the sacule of the vestibule.

Saccus (sák'-us) [L.]. A sac. **S. endolymphaticus**, a small sac contained in the aqueduct of the vestibule and serving to establish a communication between the endolymph and the subdural space.

Sachse's Solution. See under *S's Test*. **S's Test**, a quantitative test for the determination of sugar in urine, consisting in the reduction of the test solution, a solution of red iodid of mercury 18 Gm., potassium iodid 25 Gm., potassium hydroxid 80 Gm., water to make a liter. The end of the reaction is ascertained by means of a solution of stannous chlorid, supersaturated with sodium hydroxid.

Sacrache (sák'-eák) [sacrum; ache]. Sacral pain in the gravid woman.

Sacral (sá'-kral) [sacrum]. Pertaining to the sacrum.

Sacra media (sá'-krah mé'-de-ah) [arteria understood]. The artery running down the middle of the anterior surface of the sacrum and representing the termination of the aorta.

Sacroctomy (sá'-krok'-to-me) [sacrum; ctomy, excision]. Excision of part of the sacrum. See *Operation, Krutke's*.

Sacro- (sá'-kro-) [sacrum]. A prefix denoting relating to the sacrum.

Sacroanterior (sá'-kro-an-te'-re-or). Applied to a fetus having the sacrum directed forward.

Sacrococcygeal (sá'-kro-kók-sif'-e-ál) [sacro-; coccyx]. Pertaining to the sacrum and the coccyx.

Sacrocoxitis (sá'-kro-kók-sí'-tis). See *Sacro-din Disease*.

Sacrodynia (sá'-kro-dín'-e-ah) [sacro-; dýnag, pain]. Pain referred to the region of the sacrum in cases of hysteria or neurasthenia.

Sacroiliac (sá'-kro-íl'-e-ák) [sacro-; ilium]. Pertaining to the sacrum and the ilium. **S. Disease**, an inflammation, usually tuberculous, of the sacroiliac joint, characterized by pain, tenderness, and swelling and elongation of the limb.

Sacrolumbalis (sá'-kro-lum-bá'-dis). See under *Muscle*.

Sacrolumbar (sá'-kro-lum'-bar) [sacro-; lumbar, loin]. Pertaining to the sacrum and the loins. **S. Angle**, the angle formed by the articulation of the sacrum and the last lumbar vertebra.

Sacroposterior (sá'-kro-pós-te'-re-or) [sacro-; posterior]. Of the fetus, having the sacrum directed backward.

Sacrosciatic (sá'-kro-sí-át'-ik) [sacro-; sciatic]. Pertaining to the sacrum and the sciatic, as the *sacrosciatic notch*, *sacrosciatic ligaments*.

Sacrospinalis (sá'-kro-spi-ná'-dis) [sacro-, spine]. The erector spine muscle.

Sacroctomy (sá'-krok'-to-me) [sacrum; ctomy, excision].

Excision of the lower portion of the sacrum.

Sacrouterine (sá'-kro-ú'-ter-ín) [sacro-; uterus]. Pertaining to the sacrum and the uterus.

Sacrovertebral (sá'-kro-ver'-te-bral) [sacro-; vertebra]. Pertaining to the sacrum and to vertebrae.

Sacrum (sá'-krum) [sacer, as red, as brown understood]. A curved triangular bone composed of five united vertebrae situated between the last lumbar vertebra above, the coccyx below, and the osia innominata on each side, and forming the posterior base of the pelvis.

Sactosalphinx (sák'-to-sáf'-pinkh) [sacro-; crammed, obdurate tube]. The dilatation of a fallopian tube and consequent rupture from retained secretion. **S. hemorrhagica**. See *Hematosalphinx*.

Saddle (sád'-d) [Mk., saddle]. A contrivance secured on the back of a horse or other animal to serve as a seat for a rider.

S.-arch, that form of dental arch the outline of which represents the shape of a saddle.

S.-back, London. **S.-bags**, a pair of leather cases, formerly used and now carried by physicians upon the saddle, and containing their medicines and instruments.

S.-head. See *Chinographium*. **S.-joint**, articulation in which each surface is concave in one direction and convex in the other.

S.-nose, a nose of which the bridge is broken. **S.**, Turkish. See *Sella Turcica*.

Saemisch's Ulcer (sá'-mish). A suppurative infecting ulcer of the cornea.

Seenger's Macula (sá'-jén-er). A bright red spot marking the orifice of the duct of Bartholin's gland in cases of gonorrheal infection. See *Macula gonorrhoea*. **S.'s Pupil Reaction**, for the differential diagnosis of syphilis, gonitis and tabes; in amaurosis and early stages of cerebral syphilis the pupil tends to be

may be preserved and even increased after protracted stay in the dark, which is not the case in tabes dorsalis.

Septon (sá'-p-ten) [Ar. septon, septon]. The Crocus sativus, a plant of the saffron family.

Its stigmas (septa) fl. p. contain a powerful coloring matter, crocin, and a bitter principle.

Saffron is used as a coloring and flavoring agent, and in the form of a tea to treat the eruption of the exanthemata of scarlet fever.

Safranin (sá'-frán-in) [saffron]. $C_{16}H_{11}N_5$, a coal-tar dye used in microscopy, especially in studying karyokinesis. It is a powerful acid and respiratory poison.

Safrene (sá'-frén) [saffron]. $C_{16}H_{11}N_5$. A brown carbon obtained from saffron.

Safrol (sá'-frol) [saffron, safra, oil]. $C_{11}H_{12}O_2$ (U. S. P.). The essential oil of the safra tree, used in headache, rheumatism, and rheumatism.

It is a powerful acid and respiratory poison.

Sagapenum (sá'-gá-pé-num) [saga, to grow]. A resin believed to be the same as the resin of the *Asclepias* and *Gallium*.

Sage (*sāj*) [*salvia*]. *Salvia officinalis*, a plant of the order *Labiata*. Its leaves (*salvia*, U. S. P.) contain several terpenes, an oil, salviol, $C_{10}H_{16}O$, and camphor. Sage is tonic, astringent and aromatic, is used in dyspepsia. Was formerly employed in colliquative sweats. Dose 20-30 gr. (1.3-2.0 Gm.).

Sagittal (*sāj-it-al*) [*sagitta*, an arrow]. 1. Arrow-like, as the *sagittal* suture of the skull. 2. Pertaining to the anteroposterior median plane of the body. **S. Nucleus**, the nucleus of the oculomotor nerve.

Sago (*sā-gō*) [Malay, *sāgu*]. A food and demulcent. **S. spleen**, a spleen presenting on section the appearance of sago-grains, as a result of amyloid degeneration of the malpighian bodies.

Sagotia racemosa (*sā-gō-she-ni*). A South American species of the order *Euphorbiaceae*, used as a tonic and aphrodisiac.

Sagradin (*sag-rah-din*). The proprietary name for a 20% solution of extract of cascara sagrada with spirit of peppermint.

Sahli's Desmoid Test for estimating the functional activity of the stomach. A pill of 0.05 Gm. of methylene-blue and 0.1 Gm. of iodoform is inclosed in a bag of rubber-lam and tied with dry catgut. The gut is digested by gastric juices and not by pancreatic juices. The pill is then absorbed and in about 6 hours the urine is green. The iodine will be found in the saliva in two hours.

Saigon Cinnamon. A variety of cinnamon (*cinnamomum saigonense*, U. S. P.) obtained from Saigon, the capital of French Cochinchina. See *Cinnamon*.

St. Anthony's Fire. Erysipelas; anthrax.

St. Gothard's Disease. Ankylostomiasis.

St. Hubert's Disease. Hydrophobia.

St. Ignatius' Bean. See *Ignatia*.

St. Roch's Disease. Bubbo.

St. Sement's Disease. Syphilis.

St. Vitus' Dance. See *Chorea*. **St. Vitus' Dance of the Voice**, stammering.

Salt [L.]. 1. Salt. 2. Any substance resembling salt. **S. acetosella**, potassium bitartrate. **S. aeratus**, sodium bicarbonate. **S. alembrothi**. See *Alembrothi*. **S. ammoniac**, ammonium chlorid. **S. communis**. See *Salt*, *Common*. **S. de duobus**, potassium sulfate. **S. enzium**, potassium bisulfate. **S. glauveri**. See *Salt*, *Glauber's*. **S. kissingen**, a salt obtained from the mineral springs of Kissingen, in Bavaria. **S. prunellæ**, **S. prunelle**. 1. A fused mixture of potassium nitrate, 128 parts, and sulfur, 1 part. 2. Fused potassium nitrate. **S. rupium**, rock-salt. **S. seignette**, potassium and sodium tartrate. **S. sodæ**. See *Salt of Soda*. **S. volatil**, ammonium carbonate.

Sala's Cells. Stellate connective-tissue cells found in the network of fibers forming the sensory nerve-endings in the pericardium.

Salaam Convulsion (*sā-lahm'*) [Ar., *sālm*, saluting]. A clonic spasm of the muscles of the trunk, producing a bowing movement; it is usually due to hysteria.

Salactol (*sal-ak'-tol*). A combination of the sodium salts of salicylic and lactic acids dis-

solved in a 1% solution of hydrogen dioxide; it is recommended in diphtheria. The solution is applied as a spray or with a brush, and given internally in doses of a tablespoonful (15 Cc.).

Salamandarin (*sal-a-man'-dar-in*). See *Leukomains*, *Table of*.

Salamid (*sal'-am-id*). An amidogen derivative of salicylic acid, which it closely resembles in therapeutic properties, but acts more promptly and in smaller doses.

Salborol (*sal-bo'-rol*). A compound of phenyl salicylate and boric acid, used in rheumatism.

Saldanin (*sal'-dan-in*). A local anesthetic said to be prepared from *Datura arborea*.

Salep (*sal'-ep*) [Ar., *sahleb*]. The dried tubers of various species of the genus *Orchis* and the genus *Eulophia*. It is used as a food, like sago and tapioca.

Salhypnone (*sal-hip'-nōn*), $C_6H_5O(COC_6H_5)COOCH_3$. A benzoylmethylsalicylic ester; long colorless needles, insoluble in water, sparingly soluble in alcohol and ether; melts at 113° - 114° . It is used as an antiseptic.

Salicamar (*sal-ik'-am-ar*), $CH_2OH \cdot CHOH \cdot CH_2O \cdot C_6H_4CO \cdot CH_2 \cdot CHOH \cdot CH_2OH$. A glycerol ether of glycerolsalicylic acid; recommended as a stomachic and antirheumatic.

Salicin (*sal'-is-in*) [*salix*, willow], $C_{13}H_{16}O_7$. A crystalline glucosid found in the bark and leaves of the willow. **Salicin** (*salicinum*, U. S. P., B. P.) is used as a substitute for salicylic acid in doses of 5-30 gr. (0.3-2.0 Gm.); maximum daily dosage 150 gr. (9.7 Gm.).

Salicol (*sal'-ik-of*). A proprietary solution said to consist of methyl-alcohol, salicylic acid, and oil of wintergreen in water; used as an antiseptic and cosmetic.

Salicyl (*sal'-is-il*) [*salicylic acid*], $C_7H_5O_2$. The hypothetical radical of salicylic acid. **S. Acetate**, $C_7H_5 \cdot O \cdot C_2H_5O_2$, acetosalicylic anhydrid. **S. Acetol**, salactol. **S. anilid**, salifebrin. **S. creasote**, a paste prescribed by Unna in skin diseases, consisting of a mixture of salicylic acid, creasote, wax, and cerate. **S. -phenetidin**. See *Malakin*. **S. -quinin Salicylate**. See *Soloquinin Salicylate*. **S. -resorcinol**, $C_{11}H_{10}O_4$, obtained from salicylic acid and resorcinol with heat. It occurs in plates slightly soluble in water; melts at 133° C. It is antiseptic, antipyretic, and analgesic, and used in typhoid, diarrhea, etc. Dose 5-15 gr. (0.32-1.0 Gm.); maximum dose 15 gr. (1 Gm.) single; 60 gr. (4 Gm.) daily. **S. Urate**, a salt of salicyluric acid.

Salicylage (*sal'-is-il-āj*) [*salicylic acid*]. The addition of salicylic acid to foods for their preservation.

Salicylamid (*sal-is-il'-am-id*) [*salicylic acid*], $C_6H_4(OH)CONH_2$. A tasteless compound produced by treating methyl salicylate with an alcoholic solution of ammonia, and used as a substitute for salicylic acid.

Salicylate (*sal-is-il-āt*) [*salicylic acid*]. A salt of salicylic acid. The salicylates of lithium, methyl, and sodium, which are official, and those of ammonium and strontium, which are

unofficial, are used in rheumatism, in doses of 10-15 gr. (0.65-1.0 Gm.). *Bismuth salicylate* is employed as an intestinal antiseptic; *naphthol salicylate* is betol; *phenyl salicylate* is salol.

Salicylated (*sal-is'-il-a-ted*). Impregnated with salicylic acid.

Salicylic Acid (*sal-i-sil'-ik*). See *Acid, Salicylic*. **S.-acid Glycerolester**, recommended as a valuable antirheumatic remedy. **S. Alcohol**. See *Saligenin*. **S. Aldehyd**, salicylic acid; used as an internal antiseptic. Dose 2-8 gr. (0.1-0.5 Gm.) daily. **S.-amid**. See *Salicylamid*. **S. Amylester**. See *Amyl Salicylate*. **S. Anhydrid**. See *S. Aldehyd*. **S. Cream**, an antiseptic mixture of powdered salicylic acid, 2 dr., phenol, 1 dr., glycerol, 10 dr. **S. Naphthyl Ester**. See *Betol*. **S. Phenylester**. See *Salol*. **S. Silk**, a dressing made of silk waste impregnated with 10% salicylic acid and a little glycerol. **S. Suet**, one part of salicylic acid in 49 parts of mutton-suet, used as a dressing for sores. **S. Thymolester**, thymol acetate. **S. Wool**, cotton impregnated with 4 to 10% of salicylic acid and an equal amount of glycerol.

Salicylid (*sal-is'-il-id*). An anhydrid of salicylic acid. **S.-phenetidin**. See *Malucin*.

Salicylize (*sal'-is-il-ize*). To treat with salicylic acid.

Salicylol (*sal'-is-il-ol*). See *Salicylic Aldehyd*.

Salicyluric Acid (*sal-is-il-u'-rik*) [*salicylic; uric*]. A compound of glycol and salicylic acid found in the urine after the administration of salicylic acid.

Salifebrin (*sal-e-jeb'-rin*). Salicylanilid, $C_{10}H_9NO_2$, a white, permanent powder, insoluble in water, freely soluble in alcohol, recommended as an antiparetic and antineuralgic. It colors blue litmus-paper red.

Saliferous (*sal-i-f'er-us*) [*sal, salt; ferre, to bear*]. Producing salt.

Salifiable (*sal-i-f'i-a-bil*) [*sal; feri, to become*]. Forming a salt by union with an acid.

Saliformin (*sal-i-form'in*) [$(CH_3)_2N_2 \cdot C_6H_5 \cdot COH(COOH)$]. A white, crystalline powder, of sour taste, soluble in water and alcohol. It is an antiseptic and urea-solvent. Dose 15-30 gr. (1-2 Gm.). Syn., *Formin salicylate*, *Hexamethylenetetraminsalicylate*; *Urotropin salicylate*.

Saligallol (*sal-e-gal'-ol*). Pyrogallol disalicylate, a resinous solid, soluble in acetone or chloroform. Used as a vehicle for dermic applications and as a varnish.

Saligenin (*sal-i-jen-in*) [*sal-in; yash, to produce*]. $C_6H_5O_2$. Ortho-oxycarbonylphenol, a substance obtained from salol by boiling with dilute hydrochloric or sulfuric acid.

Salimeter (*sal-im-e-ter*) [*saline, salpus, a measure*]. A hydrometer for ascertaining the strength of saline solutions.

Saline (*sal'-en or m'-en*) [*sal, salt*]. 1. Salty, containing salt or substance resembling salt.

2. A salt of an alkali or alkaline earth. **S. Solution**, a 0.6% solution of sodium chloride, *normal salt solution*.

Salipyrin (*sal-i-pi'-rin or sal-i-po'-rin*) [*salicylate, pyro, lit.*]. $C_{10}H_9N_2O \cdot C_6H_5O_2$. Salipyrin salicylate, consisting of 0.7 parts of salicylic acid and 42.3 parts of salipyrin; it is soluble in water, and is used in rheumatism, neuralgia, and as an antiparetic. Dose 15-30 gr. (1-2 Gm.).

Saliretin (*sal-e-ret'-in*) [*saligenin, jure, a resin*]. $C_{14}H_{13}O_2$. An amorphous resinous body produced by treating saligenin with a 10% solution of phosphoric acid.

Salisbury Treatment. The treatment of obesity by meat diet and hot water.

Salitannol (*sal-i-tan'-ol*) [$C_{11}H_{11}O_2$]. A condensation-product of salicylic and glycol, produced by action of phosphorous oxychloride on salicylic acid; an amorphous powder, soluble in organic solvents, caustic alkalis, slightly soluble in water. Recommended as a surgical antiseptic.

Salithymol (*sal-e-thi'-mol*). Thymol salicylate.

Saliva (*sa-li'-va*) [*L.*]. The mixed secretion of the parotid, submaxillary, sublingual, and mucous glands of the mouth. It is a colorless, tasteless, alkaline, and has a specific gravity from 1004 to 1006, and contains serum albumin, globulin, mucin, urea, an amylolytic ferment called ptyalin, and a proteolytic and a lipolytic ferment; also salts, among which is potassium sulfocyanid, derived from the parotid gland. Among the elements are epithelial cells, salivary corpuscles, and bacteria. The functions of saliva are to moisten the food and lubricate the passage, to dissolve certain substances, to facilitate swallowing, to aid in deglutition, and act as a medium to digest starches, which it converts into maltose, dextrin, and glucose.

Salivary (*sal-i-v'ery*) [*saliva*]. Pertaining to or producing saliva, formed from saliva. **Salivary Calculus**, a calcareous concretion found in the salivary ducts.

Salivate (*sal-i-vate*) [*salivare to spit out*]. To cause an excessive discharge of saliva.

Salivation (*sal-i-vation*) [*saliva*]. An excessive secretion of saliva, a condition produced by mercury, pilocarpin, and various other substances. **S., Psychic**. See *Psychic Salivation*.

Salivator (*sal-i-v'ator*) [*salivate*]. An agent causing salivation.

Salivatory (*sal-i-v'atory*) [*saliva*]. Salivating, causing the secretion of saliva.

Salkowski's Modification of Hoppe-Seyler's Test for CO in the Blood. Add to the blood to be tested 20 volumes of water and an equal quantity of a sodium hydroxid solution of specific gravity 1.14. If the mixture is shaken, the mixture will turn to a milky, changing to bright red. On shaking red flakes collect on the surface. Normal blood treated in this way gives a dark brown coloration. **S.'s Reaction for Cholesterolin**, dissolve the substance in alcohol, and add an equal volume of concentrated sulfuric acid. The cholesterolin becomes bluish-red, changing gradually to a brick-red, while the sulfuric acid becomes red with a green fluorescence. **S.'s Test for Indol**, to the fluid mixture add a few drops

of nitric acid, and then, drop by drop, a 2% solution of potassium nitrite. The presence of indol is evinced by a red color, and finally by a red precipitate of nitrosoindol nitrate.

(de) **Salle's Line.** A line beginning at the upper margin of the ala nasi, encircling the angle of the mouth, and ending at the edge of the orbicularis oris. For significance see *Jadelot's Lines*.

Salmiac (*sal'-me-ak*). Ammonium chlorid.

Salmin (*sal'-min*), $C_{30}H_{57}N_3O_6 + 4H_2O$. A protamin from salmon, identical or isomeric with elupein.

Salmon's Back-cut. An incision along the track of an anal fistula.

Salol (*sal'-ol*) [*salix*, willow]. See *Phenyl Salicylate*. **S., Camphorated**, a mixture of 75% of phenyl salicylate with 25% of camphor; an oily liquid, soluble in alcohol, ether, chloroform, or oils, a local anesthetic, antiseptic, and analgesic. Dose 3-10 gr. (0.2-0.65 Gm.). Syn., *Camphor salol*. **S. Tribromid**, $C_6H_4(OH)COO \cdot C_6H_2Br_3$, a white, odorless, tasteless powder, freely soluble in chloroform and glacial acetic acid, insoluble in ether or alcohol. It is a combined hypnotic and hemostatic. Dose 32 gr. (2 Gm.). Syn., *Cordol*.

Salolism (*sal'-lol-izm*). Poisoning by phenyl salicylate, a mixture of salicylism and carbolism in which the symptoms of the latter predominate.

Salophen (*sal'-o-fen*) [*salix*, willow], $C_6H_4(OH) \cdot CO_2 \cdot C_6H_4 \cdot NH(C_2H_5O) = C_{16}H_{15}NO_4$. Acetylparamidophenyl salicylate, a crystalline substance containing 50% of salicylic acid, and used as a substitute for the latter, and as an intestinal antiseptic. Dose 15 gr. (1 Gm.).

Saloquinin (*sal-o-kin'-en*), $C_6H_4(OH) \cdot CO \cdot O \cdot C_{10}H_7N_3O$. The quin in ester of salicylic acid; a crystalline, absolutely tasteless substance, insoluble in water, readily soluble in alcohol or ether, melts at 130° C. It is used as is quinin. Dose 10-30 gr. (0.65-2.0 Gm.) several times daily. **S. Salicylate**, $C_6H_4(OH) \cdot COO \cdot C_{10}H_7N_3O \cdot C_6H_4(OH) \cdot COOH$, crystallizes in white needles, soluble with difficulty in water; melts at 170° C. It is tasteless and recommended in rheumatism. Dose 15 gr. (1 Gm.) 3 times daily. Syn., *Rheumatin*.

Salosantal (*sal-o-san'-tal*). A 33% solution of phenyl salicylate in sandalwood oil with the addition of a little oil of peppermint. It is indicated in cystitis, prostatitis, etc. Dose 10-25 drops 3 times daily after meals.

Salpingectomy (*sal-pin-jek'-to-me*) [*salpinx*; *ektomē*, excision]. Excision of the fallopian tube.

Salpingion (*sal pin'-je-on*). The point at the inferior surface of the apex of the petrosa.

Salpingitic (*sal-pin-jit'-ik*) [*salpinx*; *itis*, inflammation]. Pertaining to or affected with salpingitis.

Salpingitis (*sal-pin-jit'-tis*) [*salpinx*; *itis*, inflammation]. 1. Inflammation of the fallopian tube. 2. Inflammation of the eusta-

chian tube. **S., Chronic Parenchymatous**, pachysalpingitis, chronic interstitial inflammation and thickening of the muscular coat of the fallopian tube. **S., Chronic Vegetating**, excessive hypertrophy of the mucosa of the fallopian tube. **S., Gonorrheal**, that due to infection with gonococci. **S., Hemorrhagic**, hematosalpinx. **S., Interstitial**, that marked by excessive formation of connective tissue. **S., Isthmic Nodular**, follicular inflammation of the small constricted portion (isthmus) of the oviduct, with formation of small nodules of muscular and connective tissue. **S., Mural**. See *S., Chronic Parenchymatous*. **S., Nodular**, a form marked by formation of solid nodules. Cf. *S., Tuberculous*. **S., Parenchymatous**. See *S., Chronic Parenchymatous*. **S., Pneumococcal**, that due to infection with pneumococci. **S., Pseudofollicular**, adenomyoma originating in the tubal epithelium. **S., Purulent**, salpingitis with secretion of pus instead of mucus or serum. **S., Tuberculous**, that marked by the infiltration of the lining membrane and walls of the tube with tuberculous nodules.

Salpingo- (*sal-ping-go-*) [*σαλπιγξ*, tube]. A prefix denoting relation to the fallopian or the eustachian tube.

Salpingocatheterism (*sal-ping-go-kath'-e-ter-izm*). Catheterization of the eustachian tube.

Salpingocele (*sal-ping'-go-sēl*) [*salpingo-*; *κῆλη*, a hernia]. Hernia of the oviduct.

Salpingoophorectomy (*sal-ping-go-o-o-for-ek'-to-me*) [*salpingo-*; *oophoron*; *ektomē*, excision]. Excision of the fallopian tube and the ovary.

Salpingoophoritis (*sal-ping-go-o-o-for-i'-tis*) [*salpingo-*; *oophoron*; *itis*, inflammation]. Inflammation of the fallopian tube and the ovary.

Salpingoophorocoele (*sal-ping-go-o-o-for-o-sēl*) [*salpingo-*; *oophorocoele*]. Hernial protrusion of the ovary and oviduct.

Salpingoperitonitis (*sal-ping-go-per-i-ton-i'-tis*). Inflammation of the peritoneum lining the oviduct.

Salpingoscope (*sal-ping'-go-skōp*) [*salpingo-*; *σκοπεῖν*, to look]. A modified cystoscope provided with an electric lamp of low voltage for exploration of the nasopharynx.

Salpingostaphylinus (*sal-ping-go-staf-il-i'-nus*) [*salpingo-*; *σταφυλή*, uvula]. The abductor muscle of the eustachian tube. **S. internus**. Synonym of *Levator palati*. See under *Muscle*.

Salpingostomy (*sal-ping-go'-to-me*) [*salpingo-*; *στόμα*, mouth]. The operation of making an artificial fistula between a fallopian tube and the body-surface.

Salpingotomy (*sal-ping-got'-o-me*) [*salpingo-*; *τομή*, a cutting]. The operation of cutting into a fallopian tube.

Salpinx (*sal'-pinks*) [*σαλπιγξ*, tube]. A tube, especially the eustachian or the fallopian tube.

Salt (*sal, salt*). 1. Sodium chlorid. 2. Any compound of a base and an acid. **S., Acid**, a salt formed from a dibasic or polybasic acid

in which only a part of the replaceable hydrogen atoms has been replaced by the base. **S., Alkaline.** See **S., Basic.** **S., Aperient, of Frederick,** sodium sulfate. **S. of Barilla,** sodium carbonate. **S., Basic,** a salt containing an excess of the basic element, and formed by the union of a normal salt with a basic oxid or hydroxid. **S., Bay-,** sodium chlorid; also the sea-salt obtained by the evaporation of sea-water by solar heat. **S. of Bones,** ammonium carbonate. **S., Carlsbad,** a salt prepared from one of the springs at Carlsbad or made in imitation of it. Each spring contains in varying degrees carbonates of magnesia, iron, manganese, calcium, strontium, lithium, and sodium, sulfates of sodium and potassium, sodium chlorid, sodium fluorid, sodium borate, and calcium phosphate. **S. of Colcothar,** sulfate of iron. **S., Common,** sodium chlorid. **S., Crab Orchard,** a mild saline purgative produced from the evaporated water of springs at Crab Orchard, Kentucky. It contains magnesium, sodium, and potassium sulfates and a little iron and lithium. **S., Diuretic,** potassium acetate. **S., Double,** one in which the hydrogen atoms of an acid are replaced by two metals. **S., Epsom-,** magnesium sulfate. **S.-frog,** a frog from whose vascular system all blood has been artificially removed and replaced by normal salt solution. Syn., *Cohnheim's frog*. **S., Glauber's,** sodium sulfate. **S., Halogen,** **S., Haloid,** any salt of the halogen elements, bromine, chlorine, fluorine, and iodine. **S.s of Lemon,** potassium bitartrate. **S., Munsell's,** subsulfate of iron, used chiefly in solution as a styptic. **S., Neutral,** one formed by the replacement of all the hydrogen atoms of an acid by a base or a radical. **S., Normal.** Synonym of **S., Neutral.** **S.s, Preston's,** English smelling-salts. **S., Purging, Tasteless,** sodium phosphate. **S.-rheum,** chronic eczema. **S., Rochelle,** sodium and potassium tartrate. **S., Rock-,** native sodium chlorid, occurring in crystalline masses. **S., Sea-,** the sodium chlorid obtained by the evaporation of sea-water. **S., Secondary.** Same as **S., Neutral.** **S.-sickness.** See **Nausea, Salt-**. **S., Smelling-,** any pungent, irritant salt which when inhaled usually acts reflexly as a respiratory or circulatory stimulant. Ammonium carbonate is generally used. **S. of Soda,** sodium carbonate. **S. Solution,** a solution of sodium chlorid in distilled water. One containing from 0.6 to 0.75 % of sodium chlorid is known as a *normal* or *physiologic salt solution*, and is used in physiological experiments on living tissues. In medicine it has been employed to restore to the system the fluids lost by severe hemorrhage or profuse diarrheal discharges. The solution is introduced into the subcutaneous tissues or into a vein, sometimes also into the rectum. **S. of Sorrel,** potassium bitartrate derived from species of *Oxalis* and *Rumex*. **S.s, Spirit of,** hydrochloric acid. **S.-starvation.** See **Hypochlorination.** **S. of Tartar,** pure

potassium carbonate. **S. of Urine,** magnesium carbonate. **S. of Vitriol,** sulfuric sulfate. **S. of Wisdom,** oil of sweetwood. **S. of Wormwood,** potash prepared from wormwood.

Saltans rosa. *Urticaria*

Saltatory, Saltatoric (*salt'at'ory, salt'at'ory*) (*saltare, to dance*) Trancing or dancing.

S., Spasm, a convulsion spasm that causes a patient to leap or jump when he attempts to stand.

Salted. A term applied to animals that have recovered from South African insect bites.

Salter's Incremental Lines. Horizontal lines more or less parallel to the surface of a tooth and produced by imperfectly erupted dentin.

Salt-peter (*salt'p'etre*) (*sal'p'etre*) A name for Potassium nitrate. **S., Chili,** sodium nitrate.

Salts. A saline cathartic, even with magnesium sulfate, sodium sulfate, or sodium chloride.

Salubrin (*sal'u-brin*) [*salubritas*, *beneficence*] A compound said to contain 2 % of potassium acetic acid, 25 % of acetic ether, 75 % of alcohol, and the remainder distilled water. It is antiseptic, astringent, and hemostatic, and is used diluted with water as a gargle and in compresses.

Salubrious (*sal'u-bry-us*) (*salus, health*) Healthful.

Salubrol (*sal'u-brul*) Tetrahydrocannabinol diantipyrin. An analgesic anesthetic powder used in the same way as *iodololol*.

Salufer (*sal'u-fer*) Sodium sulfite.

Salumin (*sal'u-min*). See *Aluminous* *fluoride*.

Salve (*salv*) [*AS, salve*] Ointment. **S., Deshler's,** compound resin ointment.

Salvia (*sal've-sal*) [*l.*] The official name for the dried leaves of *Salvia officinalis*, the Sage.

Salzer's Operation. Division of the sheath of the third division of the fifth nerve.

Sambucin (*sam-bu-sin*) [*Sambucus*, *elder*] An alcoholic fluidextract of the bark of *Sambucus nigra*. It is viscous.

Sambucus (*sam-bu-tus*) [*l.*] Elder, a shrub or tree of the order *Cappelliflorae*. The flowers of *S.* considerably and the berries are subspherical. The latter have been used as a substitute in rheumatism and neuritis. The inner bark has been employed in colic, dropsy, and various chronic diseases. *S. sambucus* (H. P.) is used as a vehicle.

Sanative (*san'at-ive*) [*sanare, to heal*] Promoting health; healing.

Sanatogen (*san-at'og-en*). A dietetic containing 10 % of casein and 5 % of a vegetable glyceride. Dose: 1 teaspoonful 3 or 4 times a day, added to soup, cream, etc.

Sanatolyn (*san-at'ol-in*). A diuretic said to consist of phenol and sodium, and contains percentage of ferrous sulfate.

Sanatorium (*san-at'or-ium*) [*sanare, to heal*] An establishment for the treatment of the sick, especially a private hospital. **S., Sanderson.**

Sanatory (*san'-at-o-re*). See *Sanative*.

Sand [AS.]. An aggregation of fine grains of silicic acid. **S.**, **Auditory**, otoliths.

S.-bath. 1. A vessel containing dry sand in which a substance requiring a slowly rising or uniform temperature may be heated.

S.-blind. See *Metamorphopsia*. **S.-bodies**. See *Corpora aranea*. **S.**, **Intestinal**, gritty material passed with the stools. **S.**, **Pineal**. See *Acervulus*. **S.-tumor**. See *Psammoma*.

Sandalwood. 1. Red saunders (*Santalum rubrum*, U. S. P.; *Pterocarpus ligni*, B. P.), the wood of *Pterocarpus santalinus*, of the order *Leguminosae*. It is used as a coloring agent. 2. The wood of *Santalum album*, of the order *Santalaceae*, containing a volatile oil. **S. Oil** (*oleum santali*, U. S. P., B. P.), used in bronchitis and gonorrhea. Dose 15-20 min. (10-13 Cc.).

Sandarac (*san'-dar-ak*). A white, transparent resin produced by *Callitris quadrivalvis*, a tree of North Africa. It is now little used except as a varnish and incense. **S. Varnish**, in dentistry a solution of sandarac in alcohol used as a separating medium in making plaster casts.

Sandaracin (*san-dar'-as-in*). Giese's name for sandarac which has been exposed to the action of alcohol. It is a mixture of two of the three resins of which sandarac is said to be composed.

Sander's Sign. Undulatory character of the cardiac impulse, most marked in the epigastric region, in adherent pericardium. **S.'s Type of Paranoia**, paranoia appearing in youth. *Syn.*, *Paranoia originaria*.

Sane ('*sān*') [*sanus*, whole]. Of sound mind.

Sanguification (*sang-gwi'-ik-a'-shun*) [*sanguis*, blood; *facere*, to make]. 1. The formation of blood. 2. Conversion into blood, as the *sanguification* of substances absorbed from the intestinal tract.

Sanguimotion (*sang-gwi'-mo'-shun*) [*sanguis*; *motio*]. The circulation of the blood.

Sanguimotory (*sang-gwi'-mo'-tor-e*). Relating to the circulation of the blood.

Sanguinaria (*sang-gwin'-a'-re-ah*) [*sanguis*]. Bloodroot, a genus of plants of the order *Papaveraceae*. The rhizome of *S. canadensis* (*sanguinaria*, U. S. P.) is emetic and narcotic, in large doses it is an irritant and convulsant. It is used chiefly as an expectorant in bronchitis. Dose, as an expectorant, 1-5 gr. (0.065-0.32 Gm.), as an emetic, 5-10 gr. (0.32-0.65 Gm.). **S.**, **Fluidextract of** (*fluidextractum sanguinariae*, U. S. P.). Dose 1-10 min. (0.065-0.65 Cc.). **S.**, **Tincture of** (*tinctura sanguinariae*, U. S. P.). Dose 30-60 min. (2-4 Cc.).

Sanguinarin (*sang-gwin'-a'-rin*), $C_{20}H_{15}NO_4$, the most important alkaloid derived from the rhizome of *Sanguinaria canadensis*. Dose $\frac{1}{2}$ -1 gr. (0.005-0.01-0.05 Gm.) in solution. Small doses expectorant, large doses emetic. **S. Nitrate**, $C_{20}H_{15}NO_4 \cdot HNO_3$, a red, crystalline powder, soluble in water and alcohol. Dosage and uses the same as the alkaloid.

S. Sulfate, ($C_{20}H_{15}NO_4$)₂ · H_2SO_4 , red crystalline powder, soluble in water and alcohol. Dosage and uses the same as the alkaloid.

Sanguine (*sang'-gwin*) [*sanguis*]. 1. Resembling blood; bloody. 2. Hopeful; active, as *sanguine* temperament.

Sanguineous (*sang-gwin'-e-us*) [*sanguis*]. 1. Pertaining to the blood; containing blood. 2. Sanguine. **S. Cyst**, a cyst containing blood-stained fluid.

Sanguino (*sang'-gwin-o*). A proprietary preparation said to contain all iron salts, albumins, fats, and carbohydrates formed in the animal organism.

Sanguinoform (*sang-gwin'-o-form*). A therapeutic preparation of blood said to be obtained from the embryonic blood-forming organs of animals.

Sanguinolent (*sang-gwin'-o-lent*) [*sanguis*]. Tinged with blood.

Sanguis (*sang'-gwis*) [L.]. Blood.

Sanguisuga (*sang-gwi'-su'-gah*). See *Leech*.

Sanies (*sa'-ne-ēs*) [L.]. A thin, fetid, greenish, seropurulent fluid discharged from an ulcer, wound, or fistula.

Sanious (*sa'-ne-us*) [*sanies*]. Pertaining to or resembling sanies, as *sanious* pus.

Sanitarium (*san-it'-a'-re-um*) [*sanitas*, health]. A place where the conditions are such as especially to promote health; a resort for convalescents. **S.**, **Ocean**, a ship so constructed as to be specially adapted to the requirements of invalids or convalescents and to making long cruises.

Sanitary (*san-it'-a-re*) [*sanitas*]. Pertaining to health. **S. Cordon**, a line of guards to control ingress or egress to an infected locality. **S. Science**, the science that includes a consideration of all that can be done for the prevention of disease and the promotion of the public health.

Sanitation (*san-it'-a'-shun*) [*sanitary*]. The act of securing a healthful condition; the application of sanitary measures.

Sanity (*san'-it-e*) [*sanitas*, from *sanus*, sound]. Soundness of mind.

Sanmethyl (*san-meth'-il*). A proprietary preparation said to consist of methylene-blue, copaiba, phenyl salicylate, oils of sandalwood and cinnamon, and the oleoresins of cubebs and matico. It is used in gonorrhea. Dose in capsules 10 min. (0.66 Cc.).

Sanmetra (*san-met'-rah*) [*sanus*, sound; *utero*, womb]. A combination of zinc sulfate, 1 gr.; antipyrin, 2 gr.; ichthyol, 5 gr.; fluidextract of hydrastis, 5 gr.; creasote, 1-2 gr.; extract of hyoscyamus, 1-2 gr.; menthol and thymol, each, 1-25 gr.; oil of eucalyptus, 2 gr. It is indicated in vaginal, uterine, and pelvic diseases, and is used in suppositories.

Sanmetto (*san-met'-o*). A proprietary preparation recommended in genitourinary diseases and said to consist of sandalwood and saw-palmetto. Dose 1 teaspoonful (5 Cc.) 4 times daily.

Sano (*san'-o*). A dietetic said to consist of dextrinated barley flour with a high percentage

of proteids; according to analysis, it consists of water, 13.7%; proteins, 12.5%; fat, 1.0%; mineral matter, 1.85%; soluble carbohydrates, 4.1%; cellulose, 1.4%; and starch, 64.9%.

Sanoderma (*san-oder'-mah*). A sterilized muslin bandage saturated with bismuth subnitrate.

Sanoform (*san'-o-form*). $C_6H_5I_3OHCOOCH_3$. The methyl ether of diiodosalicylic acid. It is a white, tasteless, odorless, permanent powder, containing 62.7% iodine, melts at $110^\circ C$; soluble in alcohol, ether, or vaselin. It is used as a surgical dressing in powder or 10% ointment.

Sanose (*san'-se*). A proprietary dietetic said to contain 80% of casein and 20% of albumose, a white, odorless, tasteless powder forming an emulsion when stirred with water or milk. Dose 5 dr.-1½ oz. (20-50 Gm.) in a pint of milk.

Sanosin (*san'-o-sin*). A mixture of sulfur, charcoal, and eucalyptus leaves. The fumes of this when ignited are used by inhalation in the treatment of pulmonary tuberculosis.

Sanson's Sign. 1. Considerable extension of dulness in the second and third intercostal spaces in pericardial effusion. 2. A rhythmic murmur transmitted through the air in the mouth when the lips of the patient are applied to the chestpiece of the stethoscope; it is heard in cases of aortic aneurysm.

Sanson's Images. See *Purkinje's Images*.

Santal (*san'-tal*). Santalum, white sandalwood. See *Sandalwood* (2).

Santalal (*san'-tal-al*). $C_{15}H_{14}O$. A constituent of sandal oil found by Chapoteaut; boils at $300^\circ C$.

Santalol (*san'-tal-ol*). $C_{15}H_{16}O$. A constituent of oil of sandal found by Chapoteaut; boils at $110^\circ C$.

Santa Lucia Bark. The bark of *Eugenia dorbudum*, a rubiacious tree of the Antilles.

Santol (*san'-tol*). $C_8H_8O_2$. A crystalline substance found by H. Weidel (1870) in white sandalwood.

Santolina (*san-to-lin')* [*santalum*, because of the similarity of odor]. A genus of composite plants. The herb and fruit of *S. chamaecyparissus* of Europe are anthelmintic, antispasmodic, and stomachic. As anthelmintic, dose for adults—of decoction, 5 oz. for 1 successive mornings, then followed by cathartic.

Santonica (*san-ton'-ik-ah*) [*santonide*, worm-wood]. Levant wormseed, the unexpanded flower heads of *Atemisia prucida* (U. S. P.) or *A. maritima*, var. *Stechmanniana* (B. P.), of the order *Compositae*, the essential constituent of which is *santonin*, $C_{10}H_{16}O_2$ (*santonium*, U. S. P., B. P.). Santonin is a neutral crystalline principle, producing, in overdoes, vertigo, giddiness, stupor, at times convulsions, and death from failure of respiration. The urine is colored yellow. *Santonica* and *santonin* are used as vermifuges against the lumbricoid worm. Dose of *santonica* 10-30 gr. (0.65-2.0 Gm.); of

santonin 1-2 gr. (0.065-0.13 Gm.). *Santonin* was formerly used as a vermifuge for santonin, but has produced poisoning.

Santonin (*san'-to-nin*). See *under Santonica*. **S.**, *Troches of Stochilos santonin* (U. S. P., B. P.), those of the U. S. P. contain not about ½ gr. (0.033 Gm.) of *santonin*; those of the B. P. contain 1 gr. (0.065 Gm.) of the drug.

Santonoxim (*san-ton-in-oks'-im*). $C_6H_5NO_2$ (NOH). A derivative of *santonin* by means of an alcoholic solution of hydrogen peroxide hydrochlorate with soda, a white crystalline powder, less toxic than *santonin*, and used as a vermifuge. Dose for adults 1 gr. (0.065 Gm.) divided into two doses and taken at intervals of one to two hours, followed by a cathartic. Repeat for 2 or 3 days.

Santonism (*san'-ton-izm*). Poisoning from overdosage of *santonin*.

Santorini's Canal. See *Reverend's Canal*.

S.'s Cartilages, cornicula laryngis, the cartilaginous nodules on the tips of the arytenoid cartilages. **S.'s Circular Muscle**, involuntary muscular fibres encircling the pharynx beneath the constrictor cricopharyngeus.

S.'s Concha, a small, superotympanic space bone sometimes found above the superior turbinate bone of the ethmoid.

S.'s Fissures, two fissures separating the superior portions of the external auditory meatus into three incomplete rings. **S.'s Foramina santonini**, **S.'s Muscle**. See *under Pterygoid*.

S.'s Plexus. 1. The venous plexus of the male, the venous plexus of the female. 2. An anastomotic plexus of veins at the foramen ovale by the filaments of the two roots of the inferior maxillary nerve.

S.'s Veins, the emissary veins forming a communication between the cerebral sinuses and the veins of the scalp, especially the emissary veins passing through the parietal foramen and connecting the parietal with the superior longitudinal sinus.

Sapan-wood (*sap-an'-wud*). The wood of *Caesalpinia sappan*, used as a dye as a substitute for hematoxylin.

Saphenous (*saf'-e-nus*) [*saphene*, marrow]. Apparent; superficial; manifest; evident. Two veins of the lower limb, the femoral or long saphenous vein and external or short saphenous vein, situated just beneath the skin, also applied to the veins anastomosing these veins. **S. Opening**, an opening in the fascia lata at the upper part of the thigh through which the long saphenous vein and nerve pass.

Sapid (*sap'-id*) [*sapere*, to taste]. Capable of being tasted.

Sapidity (*sap-id'-i-tee*) [*sapid*]. The amount or quality of a substance which gives it taste.

Sapo (*sap'-po*) [*sapo*]. See *Sapo*.

Sapodermin (*sap-od-er'-min*). An alkaloid sap containing albuminate of iron, used in the treatment of parasitic and fungous diseases.

Sapogenin (*sap-aj'-en-in*), $C_{44}H_{84}O_8$ (Hesse).

A derivative of saponin by action of dilute acids with heat. It occurs in needles grouped in stars, soluble in alcohol or ether. Syn., *Saporetin*.

Sapolan (*sap'-ol-an*). A compound said to consist of a naphtha product, 2.5 parts; soap, 3 to 4%; lanolin, 1.5 parts; it is used in skin diseases.

Saponaceous (*sap-o-na'-se-us*) [*sapo*, soap]. Having the nature of soap.

Saponal (*sap'-o-nal*). A cleansing compound said to consist of soap, 20%; sodium carbonate, 60%; sodium chlorid, 2.2%; and water, 11%.

Saponaria (*sap-o-na'-re-ah*) [*sapo*, soap]. A genus of plants of the order *Caryophyllæ*. *S. officinalis*, or soapwort, bouncing-bet, is a species growing wild abundantly in the United States and Europe in the vicinity of houses. The root, rhizome, and stolons are used in gout, syphilis, and as an expectorant. It contains saponin, sapotoxin, sapogenin, etc.

Saponarius (*sap-o-na'-re-us*). Of a soapy character.

Saponetin (*sap-on-et'-in*). A microcrystalline body, $C_{44}H_{84}O_{10}$, obtained by heating saponin with dilute acids.

Saponification (*sa-pon-i-fik-a'-shun*) [*sapo*, *facere*, to make]. The act of converting into soap; the process of treating a neutral fat with an alkali, which combines with the fatty acid, forming a soap.

Saponiform (*sap-on'-e-form*). Soap-like in appearance and consistence.

Saponify (*sa-pon'-e-fi*) [see *Saponification*]. To convert into soap; to convert a neutral fat by the action of an alkali into free glycerol and a salt of the alkali, the latter forming a soap.

Saponin (*sap'-o-nin*) [*sapo*], $C_{42}H_{84}O_{10}$. A glucosid contained in the roots of soapwort and other plants, and in aqueous solution forming a strong lather. S., Coal-tar. See *Liquor carbonis detergens*.

Saponule, Saponulus (*sap'-on-ül, sap-on'-u-lus*). Imperfect soaps formed by combination of essential oils with bases.

Saporosity (*sap-or-os'-it-e*) [*sapid*]. Sapidity.

Sapotin (*sap'-o-tin*). A glucosid, $C_{24}H_{42}O_{20}$, extracted from the seed of the sapodilla-plum, the fruit of *Achras sapota*, occurring in minute crystals which melt at 210° C. It is readily soluble in water, less so in alcohol, and insoluble in ether, benzoin, or chloroform.

Sapotiretin (*sap-o-tir-et'-in*), $C_{47}H_{82}O_{10}$. A product obtained from sapotin by boiling it with dilute sulfuric acid; insoluble in water, readily soluble in alcohol.

Sapotoxin (*sap-o-toks'-in*) [*sapo*; *τοξικόν*, poison], $C_{47}H_{82}O_{10}$. A poisonous glucosid obtained from saponin.

Sappanin (*sap'-an-in*). A substance obtained by the fusion of an extract of the wood of *Cesalpinia sappan* with caustic soda.

Sappey's Accessory Portal Veins. A system of venules uniting to form small trunks, which

redive in the liver and empty into the sublobular veins. It consists of the minute nutrient veins of the portal vein, hepatic artery, and bile-ducts; of venules lying in the gastro-hepatic omentum, the suspensory ligament of the liver, and about the fundus of the gall bladder; and of the group of small veins in the umbilical region. Through the branches lying in the suspensory ligament of the liver and through the parumbilical group the portal vein communicates with the venæ cavae. S.'s **Fibers**, smooth muscular fibers found in the check ligaments of the eyeball close to their orbital attachment.

Sapphism (*sap'-izm*) [from *Σαφώ*, Sappho, a Greek poetess]. Tribadism.

Sapremia, Sapræmia (*sap-rem'-e-ah'*) [*σαπρός*, putrid; *αἷμα*, blood]. The intoxication produced by absorption of the results of putrefaction of a contained material within a more or less shut containing cavity whose walls are capable of absorption of noxious products as they form; so long as the putrefaction is limited to the contained mass it is sapremia; when the process spreads from the containing tissue it becomes septicæmia.

Saprin (*sap'-rin*) [*σαπρός*, putrid]. A non-poisonous ptomain formed in the putrefaction of animal tissues.

Sapro- (*sap-ro-*) [*σαπρός*, putrid]. A prefix signifying decay, putridity, etc.

Saprogenic, Saprogenous (*sap-ro-jen'-ik, sap-roj'-en-us*) [*sapro-*; *γενᾶν*, to beget]. 1. Causing putrefaction. 2. Produced by putrefaction.

Saprolegnia (*sap-ro-leg'-ne-ah*) [*sapro-*; *λέγων*, an edge]. Fly-fungus. A genus of oomycetous fungi of the order *Saprolegniaceæ*. Four species are known: *S. monoica*, *S. dioeca*, *S. asterophora*, and *S. jeraux*. They are all saprophytes on dead plants and animals, especially flies, in water, with the exception of the last-named species, which is both saprophyte and facultative parasite. It is the cause of fish or salmon disease.

Saprophagous (*sap-roj'-a-gus*) [*sapro-*; *φαγεῖν*, to eat]. Subsisting on decaying matter.

Saprophyte (*sap'-ro-fit*) [*sapro-*; *φυτόν*, a plant]. A vegetable organism living on dead organic matter.

Saprophytic (*sap-ro-fit'-ik*) [*saprophyte*]. Growing in dead organic matter, as *saprophytic* bacteria.

Saprostomous (*sap-ros'-to-mus*) [*sapro-*; *στόμα*, mouth]. Having offensive breath.

Sar, Sara [E. Ind., "rotten"]. Vernacular for trypanosomiasis (*surra*) (*q. v.*).

Sarbo's Sign. Analgesia of the peroneal nerve, occasionally observed in tabes dorsalis.

Sarc (*sark*) [*σάρξ*, flesh]. The belly, body, or fleshy portions of a muscle.

Sarcin, Sarkin (*sar'-sin, sar'-kin*). See *Hyphoxanthin*.

Sarcina (*sar-si'-nah*) [L., "a bundle"; pl. *sarcinae*]. A genus of schizomycetes consisting of cocci dividing in three directions, thus producing cubic masses. See *Bacteria*.

Sarcinic (sar-si'-nik) [sarcina]. Pertaining to or caused by sarcine.

Sarcinuria (sar-sin-u'-re-ah) [sarcin; *αἶμα*, urine]. The discharge of sarcin with the urine.

Sarco- (sar-ko-) [*σαρξ*, flesh]. A prefix denoting composed of or pertaining to flesh.

Sarcoblast (sar'-ko-blast) [sarco-; *βλαστῆς*, a germ]. 1. In biology, a protoplasmic germinal mass. 2. Marchesini's term for *Sarcoplasm*.

Sarcocarcinoma (sar-ko-kar-sin-o'-mah). A tumor composed of malignant growth of both carcinomatous and sarcomatous types.

Sarcocele (sar'-ko-sel) [sarco-; *κύστης*, a tumor]. Any fleshy swelling of the testicle. **S. malleosa**, that due to *Bacillus mallei*. **S.**, Syphilitic, syphilitic orchitis.

Sarcocephalus (sar-ko-sep'-al-us) [sarco-; *κεφαλή*, head]. A genus of the Rubiaceae. *S. exulenta*, a shrub of western Africa, the Guinea or Sierra Leone peach, yields an astringent antipyretic bark, doundaki or doundaké (q. v.); it is the quinquina africana or kina du Rio Nuñez of the French. The wood, called nijmo, is tonic and astringent. It contains the alkaloid doundakin.

Sarcocystis (sar-ko-sis'-tis) [sarco-; *κύστης*, a cyst]. A group of the sporozoa. **S. miescheri**, a parasite found in pork and beef.

Sarcocyte (sar'-ko-sit). See *Ectoplasm*.

Sarcode (sar'-kod) [*σαρξ*, flesh]. Protoplasm.

Sarcoenchondroma (sar-ku-en-kon-dro'-mah). A combined sarcoma and enchondroma.

Sarcoepioplomphalus (sar-ko-epi-plant'-jal-us) [sarco-; *ἐπιπλομή*, caul, *ὀμφαλή*, navel]. An umbilical hernia forming a fleshy mass, from great thickening of the omentum.

Sarcolactic Acid (sar-ko-lak'-tik). See *Acid*, *Sarcolactic*.

Sarcolemma (sar-ko-lem'-ah) [sarco-; *lemma*, husk]. The delicate membrane enveloping a muscle-fiber.

Sarcoma (sar-ko'-mah) [sarco-; *ἄνωμα*, tumor].

A tumor made up of embryonal connective tissue. It is characterized by a great preponderance of cells and very little homogeneous or fibrillar intercellular substance. **S.** of Abernethy. See *S.*, *Adipose*. **S.**, *Adipose*, one containing fatty elements. **S.**, *Alveolar*, one in which groups of sarcomata cells are contained in alveolar spaces. **S.**, *Angiolithic*. Synonym of *Psammoma*. **S.**, *Angioplasmic*, a tumor of the testicle first described by Malacarne and Moust as composed of a protoplasmic network with irregular spaces and trabeculae; the latter made up of anastomosing giant cells. The name *Epithelioma non-tumescens testiculi* is proposed for it. **S.**, *carcinomatodes*, a scirrhous cancer. **S.**, *deciduocellulare*. See *Deciduoma malignum*. **S.**, *encephaloid*, a soft, rapidly growing sarcoma, usually of the round-celled variety. **S.**, *epulis*. See *Epulis*, *Malignant*. **S.**, *Giant-celled*, one containing giant cells as a prominent feature. **S.**, *Glandular*, Hodgkin's disease. **S.**, *Granulation*.

See *S.*, *Round-celled*. **S.**, *lipomatodes*. **S.**, *Lipomatous*, one characterized by infiltration of fat. **S.**, *lymphadenodes*. **S.**, *Lymphosarcoma*. **S.**, *Mastoid*, a sarcoma of the mammary gland. **S.**, *Melanotic*, a sarcoma, usually spindle-celled, in which the cells contain melanin. **S.**, *mollis*. See *Lymphosarcoma*. **S.**, *molluscum*, one containing connective-tissue tumors of the skin containing few spindle-cells. **S.**, *Mucous*. See *Sarcoma*. **S.**, *Müller's*, a sarcoma, probably an adenofibroma of the breast. **S.**, *Mixed*. See *S.*, *Giant-celled*. **S.**, *myxomatodes*, a myxosarcoma (q. v.). **S.**, *phyllodes*. See *S.*, *Müller's*. **S.**, *Round-celled*, one made up of round-cells. These are two kinds, the small round-celled and the large round-celled. **S.**, *scroti*, a sarcoma. **S.**, *Spindle-celled*, one made up of spindle-cells. **S.**, *Recurrent fibroid*.

Sarcomatosis (sar-ko-mat'-o-sis) [sarcoma]. The formation of multiple sarcomata, growths in various parts of the body.

Sarcomatous (sar-ko-mat'-us) [sarcoma]. Of the nature of or resembling sarcoma.

Sarcomere (sar'-ko-mere) [sarco-; *μέρος*, a part]. One of the segments into which a muscle fibril appears to be divided by transverse septamina.

Sarcoplasm (sar'-ko-plasm) [sarco-; *πλάσμα*, to mold]. The basine or fluid ground interfibrillar material of muscle tissue.

Sarcoplasmic (sar-ko-plas'-mik) [sarcoma; sarcoplasm].

Sarcoplast (sar'-ko-plast) [sarco-; *πλαστής*, to mold]. A cell lying between muscular fibrils and capable of developing into a muscular fiber.

Sarcoplastic (sar-ko-plas'-tik) [sarcoma; sarcoplastic]. Forming flesh.

Sarcoptes (sar-ko-pet'-es) [sarco-; *σκοπέω*, to cut]. A genus of mites. **S.**, *homina*, the itch-mite.

Sarcosepsis (sar-ko-sep'-is) [sarco-; *σῆσις*, to decay].

The presence of bacteria in the tissue. **Sarcosin** (sar'-ko-sin) [sarco-; *σιν*, to decay]. A thelyglycoside, a crystalline substance produced when creatin and calcium are heated with bacteria.

Sarcosporidia (sar-ko-spor'-id-ia) [sarco-; *σπορίδιον*, a sporidium]. A genus of protozoa found in the muscles of cattle, sheep, swine, and man.

Sarcosporidiasis (sar-ko-spor'-id-ia-sis) [sarco-; *σπορίδιον*, a sporidium]. A disease produced by sporidia of the genus *Sarcosporidia*.

Sarcostosis (sar-ko-sto'-sis) [sarco-; *στόσις*, to eat].

Sarcostyle (sar-ko-stil) [sarco-; *στόλος*, a pillar]. One of the four longitudinal bones of which a distal muscle fiber is composed and into which it is incorporated.

Sarcotripsy (sar-ko-trip'-sis) [sarco-; *τρίψω*, to crush].

Sarcous (sar'-ko-us) [sarco-; *αἶμα*, blood]. Pertaining to muscle. **S.**, *Element*, one of the elements of the ultimate blocks of sarcomerous fibers.

Sardonic Grin (*sar-don'-ik*). See *Risus sardonius*.

Sarsaparilla (*sar-sap-ar-il'-ah*) [Sp.]. The *Smilax officinalis* and other species of *Smilax*, of the order *Liliaceæ*. The dried root (*sarsaparilla*, U. S. P., *sarsæ radix*, B. P.) contains a crystalline glucosid, *parillin*, $C_{40}H_{70}O_{14}$. Sarsaparilla has been employed as an alterative in syphilis, rheumatism, and scrofulous affections. **S.**, Decoction of (*decoctum sarsæ*, B. P.). Dose 4-6 oz. (128-192 Cc.). **S.**, Decoction of, Compound (*decoctum sarsæ compositum*, B. P.). Dose 4-6 oz. (128-192 Cc.). **S.**, Fluidextract of (*fluidextractum sarsaparillæ*, U. S. P.). Dose 30-60 min. (2-4 Cc.). **S.**, Fluidextract, Compound (*fluidextractum sarsaparillæ compositum*, U. S. P.). Dose 30-60 min. (2-4 Cc.). **S.**, Liquid Extract of (*extractum sarsæ liquidum*, B. P.). Dose 2-4 dr. (8-16 Cc.). **S.**, Syrup of, Compound (*syrupus sarsaparillæ compositus*, U. S. P.). Dose 1-4 dr. (4-16 Cc.).

Sarsasaponin (*sar-sah-sap'-on-in*), $12(C_{27}H_{48}O_{10}) + 2H_2O$. A glucosid found by Kobert (1892) in sarsaparilla. It is the most poisonous of its constituents.

Sartian Disease (*sar'-shun*). An endemic affection of the tropics, characterized by red indurated spots that finally ulcerate.

Sartorius (*sar-to'-re-us*) [*sartor*, tailor]. The tailor's muscle, so called from being concerned in crossing the one leg over the other. See under *Muscle*.

Sassafras (*sas'-a'-fras*) [Sp., from *saxifraga*, from *saxum*, rock; *frangere*, to break]. The *S. variifolium*, a tree of the order *Laurineæ*. The root-bark (*sassafras*, U. S. P.; *sassafras radix*, B. P.) is employed as an aromatic stimulant. The pith (*sassafras medulla*, U. S. P.) yields a mucilage (*mucilago sassafras medullæ*, U. S. P.) that is used as an application to inflamed eyes, and as a demulcent drink in inflammation of the mucous membranes and kidneys. **S. Nuts**, pichurim beans; the seeds of *Nectandra pichury-major* and *N. pichury-minor*.

Sassafrid (*sas'-ah-frid*). A peculiar principle of *Sassafras officinale*, isolated by Reinach.

Sassafröl (*sas'-aj-rol*). See *Safröl*.

Sassolin [It.]. Boric acid extracted from the deposits in lagoons of Tuscany.

Satamuli. The native name in India for *Asparagus racemosus*. It is used as a diuretic and as a sedative in nervous pain.

Satellitism (*sat'-el-it-izm*). Mutualism; symbiosis.

Satbe, **Sathon** (*sa'-the*, *sa'-thon*) [*sâth*]. The penis.

Sattler's Vascular Layer. The layer of blood-vessels of the choroid lying internally to Haller's tunica vasculosa.

Saturated (*sat'-u-ra-ted*) [*saturare*, to fill]. 1. Of a liquid, containing in solution all of a substance that it can dissolve. 2. Of a chemie compound, having all the affinities of its component atoms satisfied,

a term especially applied to the hydrocarbons.

Saturation (*sat'-u-ra'-shun*) [*saturare*, to fill].

1. A state in which a liquid holds in solution all of a substance that it can dissolve; the state of being or becoming saturated. 2. Of a chemie compound, a state in which the affinities of all its atoms are satisfied.

Satureia (*sa-tur-e'-ya*). A plant of the order *Labiata*. *S. hortensis* resembles thyme and is used as a culinary herb.

Saturnine (*sat'-ur-nin*) [*Saturnus*, a Roman deity; the alchemists' name for lead]. Pertaining to or produced by lead. **S. Breath**, the peculiar sweet breath characteristic of lead-poisoning. **S. Encephalopathy**. See *Lead Encephalopathy*.

Saturnism (*sat'-ur-nism*). Lead-poisoning; plumbism.

Satyria (*sat'-i'-re-ah*). A genitourinary tonic said to consist of saw palmetto (*Serenoa serrulata*), false bittersweet (*Celastrus scandens*), muira-puama (*Liriosoma ovata*), couch-grass (*Agropyron repens*), and phosphorus, administered in an aromatic vehicle. Dose 1 teaspoonful (5 Cc.) 4 times daily after meals.

Satyriasis (*sat'-i'-ri-as-is*) [*σάτυρος*, a satyr]. Excessive venereal desire in the man. Erotic insanity. See *Priapism*.

Saunders (*sawn'-ders*). See *Sandalwood*.

Sauriderma (*saw-re-der'-mah*) [*σαῦρα*, lizard; *δέρμα*, skin]. Ichthyosis.

Sauriosis (*saw-re-d'-sis*) [*σαῦρα*, lizard]. Ichthyosis.

Sausage-poisoning. A state of gastroenteritis produced by the ingestion of decomposed sausage. Syn., *Allantiasis*; *Botulism*.

Sausarism (*saw'-sar-izm*) [*σάσαρσις*]. 1. Paralysis of the tongue. 2. Dryness of the tongue.

Sauvigneau's Ophthalmoplegia. Paralysis of the internal rectus muscle of one side and spasm of the external rectus of the opposite side. This affection is the reverse of Parinaud's ophthalmoplegia.

Savill's Disease. An epidemic skin disease characterized by the appearance of a papular rash, followed by a branny desquamation and by marked constitutional symptoms. A fatal result may follow. Syn., *Dermatitis exfoliativa epidemica*; *Epidemic eczema*.

Savin (*sav'-in*). A shrub, *Juniperus sabina*, of the order *Coniferae*. The tops (*sabina*, U. S. P., *sabine cacumina*, B. P.) contain a volatile oil (*oleum sabinae*, U. S. P.) and possess marked irritant properties. Savin is employed in amenorrhea, chronic rheumatism, gout, and as a local application to warts, ulcers, and parasitic affections of the skin. **S.**, Fluidextract of (*fluidextractum sabinae*, U. S. P.). Dose 3-8 min. (0.2-0.5 Cc.). **S.**, Oil of (*oleum sabinae*, U. S. P.). Dose 2-5 min. (0.13-0.32 Cc.). **S.**, Ointment of (*unguentum sabinae*, B. P.). **S.**, Tincture of (*tinctura sabinae*, B. P.). Dose 20 min.-1 dr. (13-4.0 Cc.).

Saviotti's Canals. See *Canals*, *Saviotti's*.

Saw [AS., *saga*]. An instrument having a thin blade with sharp teeth on one edge, and used for dividing bones and other hard substances. **S., Butcher's**, one in which the blade can be fixed at any angle. **S., Chain-**, one in which the teeth are set in links movable upon each other, the saw being moved by pulling alternately upon one and the other handle. **S., Crown-**. See *Tree-phine*. **S., Hey's**, a serrated disc affixed to a handle, and used for enlarging an opening in a bone.

Saxoline (*saks'-ol-ēn*). A proprietary soft petrolatum.

Sayre's Apparatus, S.'s Jacket. A jacket of plaster-of-paris molded to support the spine in diseases of the vertebral column.

Scab [*scabere*, to scratch]. 1. The crust formed by the desiccation of the secretion of an ulcer. 2. Scabies.

Scabbard (*skab'-ard*) [ME., *scabberd*, a sheath]. A veterinary term for the prepucis of the horse.

Scabies (*sku'-beez*) [*scabere*, to scratch]. Itch; a disease of the skin caused by an animal parasite, *Sarcoptes scabiei*, or itch-mite. The insect forms burrows or cuniculi beneath the skin, and causes irritation, with vesicles, papules or pustules, which are frequently modified by scratching. **S. agria**, lichen. **S., Boeck's**, scabies crustosa, Norwegian itch. **S. capitis**, a disease of the hairy scalp marked by exudation and formation of crusts. Syn., *Achoris capitis*. **S. capitis favosa**, favus. **S. crustosa**, an extreme form of general scabies of the body resulting in fish-scale-like desquamation. Syn., *Norway itch*. Cf. *Rodriguez*. **S. fera**. See *Ecthyma*. **S. ferina**, mange. **S. humida**, **S. miliaris**, eczema. **S. lymphatica**, that accompanied by vesicular eruption. Syn., *Wettery itch*. **S. papuliformis**, **S. papulosa**, a form marked by papular efflorescence. Syn., *Rank itch*. **S. pecorina**, a form affecting sheep. Syn., *Sheep itch*. **S. purulenta**, **S. pustulosa**, that in which there is formation of large pustules resembling those of smallpox, occurring on the wrists of children. Syn., *Rocky itch*.

Scabrities (*shabrit'-te-ēz*) [*scaber*, rough]. Roughness, scabiness.

Scala (*sku'-lā*) [L.]. A staircase or ladder. **S. anterior cochleæ**, **S. externa cochleæ**. See *S. vestibuli*. **S. clausa**, **S. inferior cochleæ**, **S. interna cochleæ**. See *S. tympani*. **S. media**, the space between the membrane of Reissner and the basilar membrane, containing the essential peripheral organs of hearing. **S. rhythmica**. See *Nucleus*. **Hypodottal**. **S. tympani**, the canal lying below the osseous lamina and the basilar membrane of the internal ear. **S. vestibuli**, the canal bounded by the osseous lamina and the membrane of Reissner. See under *Ear*.

Scald (*skald*) [*excoquere*, to wash in hot water]. 1. The burn caused by hot liquids or vapors. 2. [Tel., *skalli*, a bare head]. A disease of the skin accompanied by the formation of scales.

Scale (*skal*) [AS., *scalan*, a husk, a scale]. 1. The dry, semitransparent lamina of horny epidermis, shed from the skin in beauty and various diseases. 2. [*scala*, a ladder]. Anything bearing marks placed at regular intervals and used as a standard in measuring, a *barometer scale*.

Scalene (*skā'-len*) [*scalē*, or, uneven]. Having unequal sides. **S. Muscle**. See *Scaleni*, under *Muscle*.

Scaling (*skā'-ling*) [*scale*]. 1. Desquamation producing scales. 2. A pharmacological process consisting of drying concentrated solutions of drugs on glass plates. **S. the Teeth**, a name for the operation, in dentistry, which consists in the removal of tartar from the teeth commonly called tartar from the teeth.

Scallard (*skā'-lard*) [*scallard*]. Postage.

Scalp [ME., *scalp*, the top of the head]. The hairy integument covering the cranium.

Scalpel (*skā'-pel*) [*scalpel*, to cut]. A small knife having a convex edge.

Scalprum (*skā'-prum*) [*scalprum*, to remove]. A toothed raspatory used in trepanning and in removing carious bone.

Scaly (*sku'-le*) [*scal*]. 1. Resembling scales, characterized by scales as in *scaly skin*, *scaly tongue*. 2. Covered with or having scales. **S. skin**, a contagious disease common in the Islands of Marshall, and Gilbert groups of South Sea Islands. It is an eruption caused by scales, giving the sufferers a scaly appearance. It is probably indigenous in origin.

Scamnia (*shum'-ah*) [*scamnia*, a trench]. Same as *Fossa*.

Scammonium (*skam'-on-um*). See *Scammony*.

Scammony (*skam'-on-ē*) [*scammonium*, scammon]. The dried juice of the root of *Colchidum scammonium*. It is a drastic cathartic, and is generally given in combination with other drugs. **S., Resin of**, *Colchidum scammonium*, U. S. P.). Dose as an active purgative for adults 5 to 15 gr. (0.3 to 0.6 gm.).

Scanning, S. Speech (*skan'-ing*, to scan). A peculiar slow and measured form of speech, occurring in various nervous affections, especially in multiple sclerosis.

Scapha (*sku'-fah*) [*scapha*, trough]. 1. A trough. 2. The scaphoid bone.

Scaphocephalic, Scaphocephalous (*sku'-fah-shef-ah*, *sku'-fah-shef-ah*). Having a boat-shaped head, from the ossification of the sagittal suture, which projects like the keel of a boat.

Scaphocephaly (*sku'-fah-shef-ah*). The condition of the skull characterized by a prominent sagittal suture, due to its premature ossification.

Scaphohydrocephaly (*sku'-fah-shef-ah*). [*scapha*, boat, *hydrocephalus*]. Scaphocephaly due to hydrocephalus.

Scaphoid (*skā'-oid*) [*scapha*, boat, *oid*, like]. Boat-shaped. **S. Abdomen**, the abdomen seen in meningitis and a few

emacipation. **S. Bone**, a name given to a boat-shaped bone of the tarsus and of the carpus.
S. Fossa. See *Fossa, Scaphoid*.

Scaphoidoastragalan (*skaf-oid-o-as-trag'-al-an*). Relating to the scaphoid bone and the astragalus.

Scaphoidocuboid (*skaf-oid-o-ku'-boid*). Relating to the scaphoid and cuboid bones.

Scapula (*skap'-u-luh*) [L.]. The shoulder-blade, the large, flat, triangular bone forming the back of the shoulder. **Scapulæ alatæ**, of Galen and Aristotle, a wing-like appearance of the shoulder-blade in thin persons of weak musculature, especially in paralysis of the serratus magnus.

Scapular (*skap'-u-lar*) [*scapula*]. Pertaining to the shoulder-blade. **S. Line**, a vertical line drawn on the back through the inferior angle of the scapula. **S. Point**, a tender point developed in neuralgia of the brachial plexus and situated at the inferior angle of the scapula. **S. Reflex**. See under *Reflex*. **S. Region**, the region of the back corresponding to the position of the scapula, the spine of which divides it into a supraspinous and an infraspinous region.

Scapulary (*skap'-u-lar-e*). A bifurcated bandage, the two ends of which pass over the shoulders, while the single end passes down the back, all three being fastened to a body-bandage.

Scapulectomy (*skap-u-lek'-to-me*) [*scapula*; *ektomē*, excision]. Surgical removal of the scapula.

Scapuloclavicular (*skap-u-lo-kla-vik'-u-lar*) [*scapula*; *clavicle*]. Pertaining to the scapula and the clavicle.

Scapulohumeral (*skap-u-lo-hu'-mer-al*) [*scapula*; *humerus*]. Pertaining to the scapula and the humerus.

Scar (*skar*). See *Cicatrix*.

Scarfskin, **Scurfskin** (*skar'-skin*, *sker'-skin*) [AS., *searfe*, a fragment; *skin*]. The epidermis or cuticle.

Scarification (*skar-i-ik-a'-shun*) [*scarify*]. The operation of making numerous small, superficial incisions.

Scarificator (*skar'-i-ik-a-tor*) [*scarify*]. An instrument used in scarification, consisting of a number of small lancets operated by a spring.

Scarify (*skar'-i-i*) [*scarificare*, to scarify]. To make a number of small, superficial incisions.

Scarlatina (*skar'-lat-e-nah*) [*scarlatinus*, scarlet]. Scarlet fever. An acute, contagious, febrile disease, having a period of incubation varying from several hours to a week, setting in with vomiting or a chill, which is followed by high fever, rapid pulse, sore throat, and the appearance, at the end of the first or the second day of the disease, of a punctiform, scarlet-red eruption. The tongue, at first heavily coated and red at the tip and edges, soon shows prominence of the papillæ, which are red and swollen (strawberry tongue). The eruption, at the appearance of which all the symptoms become

intensified, gradually fades after five or six days, and is followed by a scaly desquamation. A peculiarity of scarlatina is the tendency it has to involve the kidneys. **S. anginosa**, scarlatina with marked inflammation of the throat. **S. maligna**, **S. Malignant**, a form characterized by an abrupt onset, high fever, convulsions, coma, and death, usually before the appearance of the eruption. **S. Puerperal**, Littre's name for a rash resembling scarlatina sometimes followed by vesication and pustulation of the affected parts, but without fever; observed in puerperants. Syn., *Erythema diffusum* (Braun); *Porphyra* (Retzius).

Scarlatinal, **Scarlatinoid**, **Scarlatinous** (*skar-lat-i'-nal*, *skar-lat'-in-oid*, *skar-lat'-in-us*) [*scarlatina*]. 1. Pertaining to or caused by scarlatina. 2. A disease simulating scarlatina. **S. Nephritis**, the acute catarrhal nephritis arising in the course of or during the convalescence from scarlatina.

Scarlatinosis (*skar-lat-in-o'-sis*). The toxic state due to the specific toxin of scarlatina.

Scarlet Fever. See *Scarlatina*.

Scarpa's Fascia [*Scarpa*, an Italian anatomist].

The deep layer of the superficial abdominal fascia. **S.'s Foramens**, the nasopalatine foramens. See *Foramens of Scarpa*. **S.'s Ganglion**. See under *Ganglion*. **S.'s Habenula**. See *Haller's Habenula*. **S.'s Hiatus**. 1. See *Breschet's Helicotrema*. 2. See *Foramen of Winslow*. **S.'s Liquor**, the endolymph of the labyrinth. **S.'s Membrane**, the membrane which closes the fenestra rotunda of the tympanic cavity. **S.'s Nerve**, the nasopalatine nerve. **S.'s Staphyloma**, posterior staphyloma; staphyloma of the posterior segment of the sclera. **S.'s Triangle**, a triangular space having for its base Poupart's ligament, and for its apex the point of intersection of the sartorius and adductor longus muscles.

Scat (*skat*). A hermaphrodite.

Scatemia, **Scatæmia** (*skat-e'-me-ah*) [*σκατός*, dung; *aima*, blood]. Autointoxication from retained fecal matter.

Scatiatria (*skat-i-at'-re-ah*) [*σκατός*, dung; *iatra*, a healing]. Medical treatment directed to the condition of the feces.

Scatocolica (*skat-o-kol'-ik-ah*) [*σκατός*, dung; *κόλιος*, having the colic]. Stercoraceous colic.

Scatocyanin (*skat-o-si'-an-in*) [*σκατός*, dung; *κυανός*, dark-blue]. A derivative of chlorophyll, resembling but not identical with phyllocyanin, discovered by E. Schunck (1901). It crystallizes in rhombic plates, pale brown by transmitted light, purplish-blue with brilliant metallic luster by reflected light, decomposed by heat, insoluble in ether, alcohol, or benzol; soluble in chloroform.

Scatodiarrhea (*skat-o-di-ar-e'-ah*). Stercoraceous diarrhea.

Scatophagous (*skat-o'-ag-us*) [*σκατός*, dung; *φαγῆναι*, to eat]. Coprophagous; excrement-eating.

movements, accompanied by baths containing Nauheim salts, for the treatment of heart disease, anemia, and chronic rheumatism.

Schreger's Lines. Curved lines in the enamel of the teeth, parallel to the surface; they are due to the optic effect produced by the simultaneous curvature of the dentinal fibers.

Schreiber's Maneuver. Friction of the skin of the thigh and leg to reinforce the patellar and achilles tendon-reflexes.

Schreiner's Base (*shri'-ner*). See *Spermin*.

Schroeder's Contraction Ring. See *Bandl's Ring*. **S.'s Test for Urea**, add to the urea crystal a solution of bromin in chloroform. The urea will decompose, with the formation of gas.

Schuele's Sign. Vertical folds between the eyebrows, forming the Greek letter omega (*omega melancholicum*), frequently seen in subjects of melancholia.

Schueler's Ducts. The ducts of Skene's glands.

Schultze's Cells. The olfactory cells. **S.'s**

Comma-shaped Tract, a small tract of descending fibers in the posteroexternal column of the spinal cord near the gray commissure.

S.'s Fold, a fold formed by the amnion near the insertion of the umbilical cord when the cephalic end of the fetus encroaches upon the latter.

S.'s Granules, finely granular masses in the blood formed by the breaking-up of the blood-plaques. **S.'s Position of the Placenta**, the position assumed by the placenta when its central portion bulges downward and is expelled in advance of the periphery.

S.'s Reagent for Cellulose, iodine dissolved to saturation in a zinc chloride solution of specific gravity 1.8, and the addition of 6 parts of potassium iodide. This reagent turns cellulose blue.

S.'s Test for Cholesterolin, evaporate to dryness with nitric acid, using a porcelain dish on the water-bath. In the presence of cholesterolin a yellow residue is obtained, which changes to yellowish-red on the addition of ammonia.

S.'s Test for Proteids, to a solution of the proteid add a few drops of a dilute cane-sugar solution and then concentrated sulfuric acid. On warming and keeping the temperature at 60° C. a bluish-red color is produced.

Schultze-Chvostek's Sign. See *Chvostek's Symptom*.

Schwabach's Test. The duration of the perception of a vibrating tuning-fork placed upon the cranium is prolonged beyond the normal in cases of middle-ear disease, but shortened when the deafness is due to a central cause.

Schwalbe's Convolution. The first occipital convolution. **S.'s Fissure**, one between the lower portion of the temporosphenoid and the occipital lobes. **S.'s Sheath**, the delicate sheath which covers elastic fibers. **S.'s Space**, the subvaginal space of the optic nerve.

Schwann, Primitive Bundle of. A muscular fiber. **S., Sheath of,** the neurilemma of a nerve-fiber. **S., White Substance of,** the myelin of a medullated nerve fiber.

Schwann's Reaction for Sulfonal. Upon

heating sulfonal with charcoal the mercaptan is evolved.

Schweinerothlauf (*shwi-na-rôt'-loaf*). Hog-erysipelas, an infectious disease characterized by fever and an eruption of reddish or brownish spots and due to special bacillus. See *Bacillus erysipelas* under *Bacteria*. Syn. *Rouget du porc*.

Schweinfurth Green (*shwi-n'-foort*). Syn. of *Paris-green*.

Schweitzer's Reagent for Cellulose. Sulfate, 10 parts; water, 100 parts; potassium hydroxid 5 parts. in water 5. Wash the precipitate and dissolve in ammonia solution. This reagent dissolves cellulose.

Sciatic (*si-at'-ik*) [*ischiol*, ischium] pertaining to the ischium, as the *sciatic nerve*. 2. Pertaining to the sciatic nerve, as *neuralgia*.

Sciatica (*si-at'-ik-ah*) [*ischiatismus*, ischium]. A disease characterized by pain along the course of the sciatic nerve usually follows exposure to cold and is dependent upon inflammation of the nerve. In addition to pain there are numbness, tingling, tenderness along the course of the nerve, and eventually wasting of the muscles. See *Felt Treatment of Sciatica*.

Scilla (*sil'-ah*). See *Squill*.

Scillipicrin (*sil-ip-ik'-rin*) [*scilla*, euphorbia]. A yellowish white, amorphous powdery substance obtained from squill, used as a diuretic in doses of 8-45 gr. (Gm.) daily.

Scillium (*sil'-izm*) [*scilla*]. Poisoning from extracts or tinctures of squill due to the contained glucosid, scillitoxin. It is manifested by vomiting, retarded pulse, and stupor.

Scillitic (*sil-it'-ik*). Pertaining to or of squill.

Scillitoxin (*sil-it-oks'-in*) [*scilla*, euphorbia]. An amorphous, light-beige active principle of squill. It is soluble in alcohol, insoluble in ether and water. It is a cardiac poison somewhat resembling digitalis. It is used as a diuretic in doses of 0.001-0.002 Gm. several times daily. The usual daily dose is 1 gr. (0.06 Gm.).

Scirrroid (*skir'-oid*) [*scirrhus*, cancer]. Resembling a scirrhus.

Scirrhoma (*skir-o'-mah*). See *Scirrhus*.

Scirrhus (*skir'-us*) [*scirrhus*, cancer]. Hardening of the flesh, especially in new-born infants. *scirrhus mammae*.

Scirrhus (*skir'-us*) [*scirrhus*]. Hard.

Scirrhus (*skir'-us*) [*scirrhus*, hard]. carcinoma.

Scissile (*sis'-il*) [*scindere*, to divide]. Capable of being divided.

Scissors (*sis'-ers*) [*scindere*, to cut]. An instrument consisting of two blades joined together by a rivet, and crossing each other so that in closing they cut the object between them.

Scissura (*sis-u'-rah*) [*scindere*, to cut]. A

Sclera (*skl'-er-ah*) [*sclera*, white]. The white part of the eye.

the firm, fibrous, outer membrane, continuous with the optic nerve behind and with the sclera in front.

Sclerone (*σκληρός*, hard; *acne*).

[sclera]. Pertaining to the sclera.

an-je-ah [*sclera*; *σκληρόν*, a state of hardness yielded by a pressure].

ti-tis. Same as *Scleritis*.

sk-le-ta'-ze-ah [*sclera*; *σκληρότης*, bulging of the sclera].

rek'-to-me [*sclera*; *εκτομή*, excision of a portion of the sclera].

re-de'-mah. See *Sclerema*.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

ma [*sclera*]. A hardening.

Sclerodactylia, Sclerodactyly (*skle-ro-dak-til'-e-ah*, *skle-ro-dak-til'-e*) [*sclero*; *δακτύλος*, finger]. A disease of the fingers (or toes) allied to scleroderma. It is usually symmetric, occurs chiefly in women, and leads to marked deformity.

Scleroderma (*skle-ro-der'-mah*) [*sclero*; *δέρμα*, skin]. A disease characterized by a progressive induration of the skin, occurring either in circumscribed patches (see *Morphea*) or diffusely. The skin becomes hard, pigmented, and firmly attached to the underlying tissues; destructive changes may also occur, and joints may become immobile from adhesions of the skin. The cause of scleroderma is not known. **S. neonatorum**, See *Sclerema neonatorum*. **S. oedematosa**, See *Sclerema oedematosa*.

Sclerogenous (*skle-roj'-en-us*) [*sclero*; *γεννᾶν*, to beget]. Producing a hard substance.

Sclerogeny (*skle-roj'-en-e*) [see *Sclerogenous*]. The formation of sclerous tissue.

Sclerokeratoiritis (*skle-ro-ker-at-o-i-ri'-tis*). Combined inflammation of the sclera, cornea, and iris.

Scleroma (*skle-ro'-mah*) [*sclero*; *μα*, tumor]. Abnormal hardness or induration of a part. **S. adultorum**. Synonym of *Scleroderma*.

Scleromatocystis (*skle-rom'-at-o-sist-is*) [*sclero*; *κύστις*, a bladder]. Induration of a cyst, but especially of the gall-bladder or urinary bladder.

Sclerometer (*skle-rom'-et-er*) [*sclero*; *μέτρον*, a measure]. An apparatus for determining the hardness of substances.

Scleromucin (*skle-ro-mu'-sin*) [*sclero*; *μύκος*]. A gummy substance obtained from ergot, and considered one of its active principles.

Scleronyxis (*skle-ron-ik'-sis*) [*sclero*; *ὄξύς*, a pricking]. Puncture of the sclera.

Sclerosarcoma (*skle-ro-sar-ko'-mah*) [*sclero*; *σάρcoma*]. A hard, fleshy tumor of the gums.

Sclerosed (*skle'-rōd*) [*sclerosis*]. Affected with sclerosis; hardened.

Sclérose en plaques (*skla-ros' on(g) plakh*). Synonym of *Sclerosis, Multiple*.

Sclerosis (*skle-ro'-sis*) [*σκληρός*, hard]. Hardening, especially a hardening of a part from an overgrowth of fibrous tissue; applied particularly to hardening of the nervous system from atrophy or degeneration of the nerve-elements and hyperplasia of the interstitial tissue; also to a chronic inflammation of the arteries characterized by thickening of their coats. **S., Diffuse**, one extending through a large part of the brain and cord. **S., Disseminated**, a form in which numerous sclerotic patches are scattered through the brain and cord. **S., Insular**. See *S., Multiple*. **S., Lateral**. See *Lateral Sclerosis*. **S. of Middle Ear**, v. Troltsch's name for otitis media hypertrophica. **S., Multiple**, chronic induration occurring in patches in different parts of the nervous system. The principal symptoms are muscular weakness and tremor upon essaying voluntary action. **S., Multiple Cerebral**, multiple sclerosis affecting only the brain. **S., Multiple Cerebro-**

spinal, multiple sclerosis affecting both the brain and the spinal cord. **S., Neural**, sclerosis attended by chronic neuritis. **S. telæ cellularis et adiposæ**, scleroderma. **S. testis**, sarcocoele. **S., Tuberos**, a form marked by hypertrophy and increased density of the involved areas. **S., Ulcerating** [Baumler], the primary lesion of syphilis; Hunterian or indurated chancre. **S., Vascular**, sclerosis of the walls of blood-vessels; arteriosclerosis.

Scleroskeleton (skle-ro-skel'-et-on) [sclero-, skeleton]. In biology, ossifications other than the bones of the main endoskeleton.

Sclerostenosis (skle-ro-sten-o'-sis) [sclero-, stenosis]. 1. Sclerosis with stenosis. 2. **Scleroderma**.

Sclerothrix (skle-ro-thrix) [sclero-, thrix, hair]. 1. Abnormal hardness of the hair. 2. (Of Metchnikoff, a genus of *Mycobacteriaceæ* included in *Mycobacterium*, Lehmann and Neumann.

Sclerotic (skle-rot'-ik) [sclero-]. Hard, indurated. **S. Coat**. See *Sclera*.

Sclerotica (skle-rot'-ik-ah). See *Sclera*.

Scleriticochoroiditis (skle-rot-ik-o-ko-roid-i'-tis). See *Scleriticochoroiditis*.

Scleriticonyx (skle-rot-ik-on-ik'-sis). See *Scleronyx*.

Sclerotidectomy (skle-rot-id-ek'-to-me). See *Sclerotomy*.

Sclerotitis (skle-ro-ti'-tis). See *Scleritis*.

Sclerotium (skle-rot'-the-um) [sclero-]. A thick mass of hyphae constituting a resting-stage in the development of some fungi, as the ergot.

Sclerotome (skle-rot'-om) [sclero-, to cut]. 1. A knife used in sclerotomy. 2. A hard tissue separating successive myotomes in certain of the lower vertebrates. 3. The skeletal tissue of an embryonic metamere.

Sclerotomy (skle-rot'-o-me) [see *Sclerotome*]. The operation of incising the sclera. **S., Anterior**, the making of an incision through the sclera anterior to the ciliary body, and entering the anterior chamber, as is done in glaucoma. **S., Posterior**, sclerotomy by an incision through the sclera behind the ciliary body, and entering the vitreous chamber.

Sclerozone (skle-rot'-zon) [sclero-, zone]. That portion of the surface of a bone giving attachment to the muscle derived from a given myotome.

Sclopetary (sklo-pet'-a-ree-us) [L.]. Relating to a gun. **Sclopetary vulnera**, gunshot wounds. Syn., *Sclopetary vulnera*.

Scobinate (skob'-in-at) [scobus, a tile]. Having a rough surface.

Scolecitis (sko-lek'-it-is) [scolex, a worm, inflammation]. Appendicitis.

Scolecoiditis (sko-lek'-oid-i'-tis) [scolex, a worm, inflammation, inflammation]. Appendicitis.

Scolectomy (sko-lek'-to-me) [see *Scolecitis*]. Appendicectomy.

Scolex (sko'-lek) [scolex, a worm]. The head of a tape worm, giving rise to the chain of proglottides.

Scolicoiditis (sko-le-koid-i'-tis) Gerster's name for appendicitis.

Scoliocolitis (sko-le-o-koid-i'-tis) Notbna-goff's term for appendicitis.

Scoliolordosis (sko-le-o-ldo'-sis) [C. scoliosis and lordosis].

Scoliorachitic (sko-le-o-ko-ldo'-tis) [C. scoliosis and rachitis].

Extreme Scoliosis.—(Muller.)

Scoliotome (sko-leo-tom) [scoliosis, a curve, a straightening apparatus for elongating the spine, and giving the rotation in lateral curvature].

Scombrin (skom'-brin) [Scomber, a fish]. A protein obtained from the spermatozoa of the cod.

Scombron (skom'-bron) [Scomber, a fish]. A protein obtained from immature sperm of the cod.

Scoop (AS, skop). An instrument resembling a spoon, for the extraction of material from cavities, as an ear-scoop.

Scoparin (sko-pa'-rin) [see *Scoparius*].

Scoparius (sko-pa'-ree-us) [see *Scoparin*]. The *Citrus scoparia*, a shrub of the Leguminosæ. The seeds of *scoparia* of the U. S. P. are *scoparia* B. P.; they contain the alkaloid $C_{12}H_{15}N_3$ and a neutral principle, $C_{12}H_{15}O_2$. Scoparin is derived from tharctic, these actions probably depend upon scoparin. Dose of the pure substance 30 min. (1/2 to 6 Gr.). Use of the seeds of *scoparia* see *Spartan*.

Scopola (sko-pa'-la) [see *Scoparin*]. The dried seeds of *Scoparia carnationa*. Dose 1/2 to 1 Gr. (1/2 to 1 Gm.). The chemistry of *Scopola* is carried out in the laboratory of scopolein, used as a standard.

Scopolamin, Scopolin (sko-pa'-la-min) [see *Scoparin*]. The active principle of *Scoparia carnationa*, $C_{17}H_{21}NO_4$, an alkaloid identical with hyoscyamine, but differing in producing anesthesia by blocking the Kuff's method (see *Scopolamin*). **S. Hydrobromid** (sko-pa'-la-min-hydro-brom-id) [see *Scoparin*]. Crystals, used as a standard. Vasoconstrictor in ophthalmology. Vasoconstrictor in the treatment of the

Scopophobia (*sko-po-fō-be-ah*) [*σκοπεῖν*, to examine; *φόβος*, fear]. A morbid dread of being seen.

Scorbutic (*skor-bu'-tik*) [*scorbutus*]. Pertaining to, affected with, or caused by scorbutus or scurvy.

Scorbutus (*skor-bu'-tus*). See *Scurvy*.

Scotodinia (*sko-to-din'-e-ah*) [*σκοτος*, darkness; *δῖνος*, a whirl]. Vertigo associated with the appearance of black spots before the eyes.

Scotograph (*sko-to-graf*) [*σκοτος*, darkness; *γράφειν*, to write]. 1. An instrument for aiding the blind to write. 2. A name given to the picture produced by means of the so-called roentgen-rays. See *Rays*, *Roentgen*.

Scotoma (*sko-to'-mah*) [*σκοτωμα*, darkness]. An area in the visual field rays of light from which are not at all (*absolute scotoma*) or imperfectly (*relative scotoma*) perceived. **S.**, **Central**, one limited to the region of the visual field corresponding to the macula lutea. **S.**, **Color-**, color-blindness limited to a part of the visual field, and which may exist without interruption of the field for white light. **S.**, **Flittering**. See *S. scintillans*. **S.**, **Negative**, a defect due to the destruction of the retinal center, and which is not noticeable to the patient. **S.**, **Positive**, a scotoma perceptible to the patient as a dark spot before his eyes. **S.**, **Relative**, a scotoma within which perception of light is only partially impaired. **S.**, **Ring-**, **S.**, **Annular**, a zone of scotoma surrounding the center of the visual field. **S.**, **scintillans**, **S.**, **Scintillating**, a scotoma with serrated margins extending peripherally and producing a large defect in the visual field. **Syn.**, *Fortification-spectrum*.

Scotometer, **Scotometer**, **Scotomometer** (*sko-to-m'-et-ur*, *sko-to-mom'-et-ur*) [*σκοτος*, darkness; *μέτρον*, a measure]. 1. An instrument for detecting, locating, and measuring scotomas. 2. An instrument used in the detection of central scotomas.

Scotosis (*sko-to'-sis*). See *Scotoma*.

Scototherapy (*sku-to-ther'-op-e*) [*σκοτος*, darkness; *θεραπεία*, therapy]. The treatment of malaria and other diseases by keeping the patient in a dark room and in the intervals between the attacks of the disease clothing him in garments impenetrable by light.

Scrattage (*skrat-ah-jih*) [Fr.]. Ophthalmoxysis, the oldest method of mechanic treatment of trachoma, the scratching out of the granules; revived in 1890. **Syn.**, *Brassage*.

Screatus (*skre-a'-tus*) [L.]. 1. A hawking. 2. A neurosis characterized by paroxysms of hawking.

Scrivener's Palsy. See *Writer's Cramp*.

Scrobiculus (*skro-bik'-u-lus*) [L.]. A small pit. **S.**, **cordis**, the depression at the epigastrium; the pit of the stomach.

Scrofula (*skrof'-u-lah*) [*scrofa*, a sow]. A term formerly applied to a peculiar condition characterized by enlargement of the lymphatic glands and necrosis of the bones; it is at present considered a form of tuberculosis. **Scrofulid** (*skrof'-u-lid*). See *Scrofuloderm*.

Scrofuloderm (*skrof'-u-lo-derm*) [*scrofula*; *δέρμα*, the skin]. A disease of the skin due to scrofula, and generally characterized by superficial irregular ulcers with undermined edges. The cause is the tubercle bacillus.

Scrofulosis (*skrof'-u-lo'-sis*) [*scrofula*]. The state characterized by the presence of scrofula; a scrofulous diathesis.

Scrofulotuberculosis (*skrof'-u-lo-tu-ber-ku-lo'-sis*). Attenuated tuberculosis.

Scrofulous (*skrof'-u-lus*) [*scrofula*]. Having the nature of, affected with, or produced by scrofula.

Scroll (*skrōf*) [ME., *scrolle*]. A roll of paper, or anything folded so as to resemble a roll. **S.-bone**, a turbinate bone. **S.s.**, **Olfactory**, the turbinate bones.

Scrophularin (*skrof'-u-la'-rin*). A principle obtained by Walz from *Scrophularia nodosa*.

Scrotal (*skro'-tal*) [*scrotum*]. Pertaining to or contained in the scrotum, as *scrotal hernia*.

Scrotopexy (*skro'-to-peks-e*) [*scrotum*; *πῆξις*, a fixing in]. Langue's term for the preservation of the scrotum which results from the extrascrotal transplantation of the testicle in cases of varicocele. Cf. *Orchidopexy*, *Vaginopexy*.

Scrotum (*skro'-tum*) [L.]. The pouch containing the testicles, consisting of skin, dartos, spermatic fascia, cremasteric fascia, infundibuliform fascia, and parietal tunica vaginalis.

Scrumptox (*skrum'-poks*). A name used in England among school-children for impetigo contagiosa.

Scruple (*skru'-pl*) [*scrupulus*, dim. of *scrupus*, a sharp stone]. In apothecaries' weight, 20 grains; represented by the sign ∩.

Sculcopin (*skul'-ko-pin*). The proprietary name for a preparation of hydrastis and skullcap, used as a local astringent.

Scultetus' Bandage. A bandage used in compound fractures, so arranged that the short pieces of which it is composed may be removed without motion of the limb.

Scurf (*skerf*) [AS.]. A bran-like desquamation of the epidermis, especially from the scalp; dandruff.

Scurvy (*sker'-ve*) [*scurf*]. A disease observed among persons who have been deprived of proper food for a length of time; it is characterized by spongy gums, extravasations of blood beneath the skin, hemorrhages from the mucous membranes, fetor of the breath, and painful contractions of the muscles. It is most common among sailors living on salt meats. **S.-grass**, *Cochlearia officinalis*, a plant of the order *Cruifera*, the properties of which reside in a volatile oil resembling oil of mustard. It is used in scurvy and in chronic rheumatism. **S.**, **Land-**. See *Purpura hemorrhagica*.

Scutellaria (*sku-tel-a'-re-ah*) [*scutellum*, a little shield]. A genus of the *Labiata*. The dried plant of *S. lateriflora*, skullcap, is the *scutellaria* of the U. S. P., and is employed in neuralgia, chorea, delirium tremens, and other nervous affections. **S.**, **Fluidextract** of

(*fluidextractum scutellariae*, U. S. P.). Dose 1-2 dr. (4-8 Gm.).

Scutellarin (*sku-tel-ar'-in*) 1. An impure precipitate from an alcoholic tincture of *Scutellaria*. Dose 3-4 gr. (0.2-0.26 Gm.). 2. $C_{16}H_{12}O_8$. A nontoxic principle derived from the root of *Scutellaria lateriflora*, forming flat yellow needles, soluble in alcohol, ether, or alkalis, melting at 199° C. It is used as a tonic and sedative in nervous diseases. Dose $\frac{1}{4}$ 4 gr. (0.05-0.26 Gm.).

Scutulate (*sku'-tu-lat*) [*scutulum*]. Shaped like a lozenge.

Scutulum (*sku'-tu-lum*) [dim. of *scutum*, a shield]. Any one of the thin plates of the eruption of favus.

Scutum (*sku'-tum*) [L., "a shield"]. A shield-like plate of bone. **S. tympanicum**, the annular plate of bone separating the attic of the tympanum from the outer mastoid cells.

Scybala (*sib'-al-ah*). Plural of *scybalum* (q. v.).

Scybalous (*sib'-al-us*) [*scybalum*]. Of the nature of a scybala.

Scybalum (*sib'-al-um*) [*σκυβανον*, fecal matter]. A mass of abnormally hard fecal matter.

Scymnol (*sim'-nol*) [*Scymnus*, a genus of sharks], $C_{17}H_{32}O_2$ or $C_{17}H_{34}O_2$. An organic base obtained by Hammarsten from the bile of sharks.

Scyphoid (*ski'-foid* or *ski'-foid*) [*σκυφος*, a drink-
ing cup]. Cup-shaped.

Scythian Lamb. See under *Cebotrium*.

Scytoblasta (*si-to-blast-ah*). See *Scytoblastema*.

Scytoblastema (*si-to-blast-ah*) [*σκυτος*, skin, *γεννημα*, germ]. The primitive or embryonic stage of the development of the skin.

Scytodephic, **Scytodeptic** (*si-to-dep'-fik*, *si-to-dep'-tik*) [*σκυτος*, a hind; *δύψω*, to soften]. Relating to tannin, tannic.

Seamstress's Cramp. A painful cramp affecting the fingers of seamstresses, an occupational neuritis analogous to writer's cramp.

Searcher (*serch'-er*). A sound used for the detection of stone in the bladder.

Sea-sickness. A condition occurring in persons aboard ship, produced by the rolling of the ship and characterized by vertigo, nausea, retching, and prostration. A similar state may be induced by riding in cars, elevators, etc.

Sea-tangle. See *Laminaria*.

Seat-worm. See *Oxyuris*.

Sebaceofollicular (*se-ba-se-o-fol-ik'u-lar*). Relating to a sebaceous follicle.

Sebaceous (*se-ba'-chee* [*sebum*, fat]). Pertaining to sebum, secreting sebum. **S. Cyst**, a cystic tumor formed by occlusion of the duct of a sebaceous gland, with retention of the secretion, dilation, and thickening of the wall of the gland. It contains a granular white cheesy material. **S. Glands**, **S. Follicles**, compound sacular glands associated with the hair follicles, and secreting a semifluid substance, the sebum, composed of oil-droplets and broken-down epithelial cells.

Sebadilla (*seh-ad-il'-ah*). See *Sebadilla*.

Sebileau's Sublingual Hollow. A space area with its base upward, extending deep beneath the tongue, and formed by the sublingual mucosa and the sublingual gland, the one below at the point where the mucosa and gland covers the geniohyoid.

Sebiparous (*seh-ihp'-ar-us*) [*sebum*, grease, + *parere*, to produce]. Secreting sebum.

Sebolith (*seh'-o-lith*) [*sebum*, fat, + *λίθος*, a stone]. A concretion in a sebaceous gland.

Seborrhea, **Seborrhoea** (*seh-or'-ree-ah*, *seh-or'-ree-ah*) [*sebum*, a flow]. A functional disease of the sebaceous glands, characterized by an excessive secretion of sebum, which collects upon the skin in the form of an oily coating or in scales. **Seborrhea congestiva**, **Seborrhea dermatitis**. **Seborrhea capillaris**, **S. capitis**, seborrhea of the scalp. **Seborrhea corporis**, seborrhea of the trunk. **Seborrhea faciei**, seborrhea of the face. **Seborrhea flavescens**. See *S. rosei*. **Seborrhea ichthyosa**, a variety characterized by the formation of large, plate-like crusts. **Seborrhea nas**, seborrhea of the sebaceous glands of the nose. **Seborrhea nigra**, **S. nigricans**, associated with the formation of dark-colored crusts, coloration being usually brown dirt. **Seborrhea oleosa**, a form characterized by an excessive oiliness of the skin, especially about the forehead and nose. **Seborrhea sicc**, the commonest form of seborrhea, characterized by greasy, brownish granules.

Seborrheic, **Seborrhoeic** (*seh-or'-ree-ik*, *seh-or'-ree-ik*). Affected with seborrhea, or the suffering with seborrhea.

Sebum (*se'-bum*) [L.]. The secretion of the sebaceous glands. See *Seborrhea* (q. v.).

Secale (*seh'-al-eh*) [L.]. Root. **S. cornutum**. See *Ergot*.

Secalose (*seh'-al-oh*). A carbohydrate but green rice, soluble in water.

Second Intention. See under *Healing*; **S. Nerve**, the optic nerve.

Secondary (*seh'-und-ee-er*) [*secundarius*, the secondary, second]. 1. Second in the order of time or development, as the secondary lesions of syphilis. 2. Second in rank, subordinate, produced by a cause secondary to the primary. **S. Amputation**, or amputation done after the subsidence of inflammation, symptoms. **S. Cataract**. See *Cataract* (q. v.). **S. Coil**, the coil of the intestine in which the induced current is generated. **S. Degeneration**, of nerve fibers, a degeneration following injury or disease of the nerve centers. **S. Hemorrhage**. See *Hemorrhage* (q. v.). **S. Secondary**.

Secrete (*seh-ket'-ee*) [*secreare*, to separate, to separate, specifically, to separate from blood or from out of materials forming part of blood a certain substance formed within].

Secretin (*seh-ket'-in*) [*secretum*, a secretion]. A substance produced in the epithelial cells of the duodenum by the contact of acid. It is secreted from the cells by the blood and exerts its paracrine action.

Secretion (*se-kre'-shun*) [*secrete*]. 1. The act of secreting or forming from materials furnished by the blood a certain substance which is either eliminated from the body or used in carrying on special functions. 2. The substance secreted. **S., External**, a secretion thrown out upon the external or internal surface of the body. **S., Internal**, a secretion that is not thrown out upon a surface, but is absorbed into the blood.

Secretogog (*se-kre'-to-gog*) [*secretion; dryōgōs*, leading]. 1. Stimulating the secretory function. 2. An agent which stimulates secretion.

Secretory (*se'-kre-to-re*) [*secretion*]. Pertaining to secretion; performing secretion. **S. Capillaries**, minute canaliculi into which gland-cells discharge their secretion, they are simple or branched, sometimes anastomose, forming a network enveloping the gland-cell, and open individually or united in a single trunk into the lumen of the gland. They occur in the fundus glands of the stomach, where the capillary networks envelop the parietal cells, in the liver, and in other glands.

Secile (*sek'-til*) [*secare*, to cut]. Capable of being cut.

Sectio (*sek'-she-o*) [L.]. See **Section**. **S. abdominalis**. See **Celiotomy**. **S. agrippina**, cesarean section. **S. alta**, suprapubic cystotomy. **S. cadaveris**, an autopsy. **S. cesarea**, cesarean section. **S. francioniana**, suprapubic cystotomy. **S. lateralis**, lateral lithotomy. **S. mariana**, **S. mediana**, median lithotomy. **S. nymphaeum**, nymphotomy.

Section (*sek'-shun*) [*secare*, to cut]. 1. The act of cutting or dividing. 2. A cut; a cut surface. **S., Abdominal**. See **Celiotomy**. **S., Cesarean**. See **Cesarean Section**. **S.-cutter**, a microtome. **S., Frontal**, a section dividing the body into dorsal and ventral parts. **S., Occipital**, a transverse section through the middle of the occipital lobe. **S., Parietal**, a transverse vertical section through the ascending parietal convolution. **S., Perineal**, external urethrotomy without a guide. **S., Pitres'**, a series of sections through the brain for postmortem examination. **S., Sagittal**, a section parallel with the sagittal suture, and hence with the median plane of the body, and serving to divide the body into equal parts.

Secundagravida (*se-kun-dah-grav'-id-ah*) [*secundus*, second; *gravidus*, pregnant]. A woman pregnant the second time.

Secundines (*sek'-un-denz*) [*secundus*, second]. The placenta, part of the umbilicus, and the membranes discharged from the uterus after the birth of the child.

Secundipara (*se-kun-dip'-ar-ah*) [*secundus*, second; *parere*, to bring forth]. A woman who has borne two children.

Secundiparity (*se-kun-dip'-ar'-it-e*). The state of being a secundipara.

Secundiparous (*se-kun-dip'-ar-us*). Having borne two children.

Sedatin (*sed'-at-in*). 1. Antipyrin. 2. See **Valeryl-phenetidin**.

Sedation (*se-da'-shun*) [*sedare*, to soothe]. 1. A state of lessened functional activity. 2. The production of a state of lessened functional activity.

Sedative (*sed'-at-iv*) [see **Sedation**]. 1. Quiet-ing or lessening functional activity. 2. An agent lessening functional activity.

Sediment (*sed'-im-ent*) [*sedimentum*, from *sedere*, to sit]. The material settling to the bottom of a liquid.

Sedimentation (*sed-im-en-ta'-shun*) [*sediment*]. The process of producing the deposition of a sediment, especially the rapid deposition by means of a centrifugal machine.

Sedimentator (*sed-i-ment'-at-or*). A centrifugal apparatus for producing a rapid deposit of the sediment of urine.

Seebeck-Holmgren's Test. See **Holmgren's Test**.

Seehear (*se'-hēr*). Of W. Rollins, a stethoscope fitted with a sound chamber and fluorescent screen by means of which the heart and lungs are rendered both visible and audible.

Seeligmüller's Sign. Mydriasis on the affected side in cases of neuralgia.

Seessel's Pocket. A slight depression in the epithelial lining of the pharyngeal membrane of the embryo, behind Rathke's hypophyseal pouch.

Ségla's Type of Paranoia. Psychomotor type of paranoia.

Segment (*seg'-ment*) [*segmentum*, from *secare*, to cut]. A small piece cut from the periphery of anything; a part bounded by a natural or imaginary line. **S., Vertebral**. 1. See **Somatome**. 2. The cusps of the heart-valves.

Segmental (*seg-men'-tal*) [*segment*]. 1. Pertaining to a segment; made up of segments. 2. Undergoing or resulting from segmentation. **S. Duct**, the duct of the pronephron. **S. Organs**, a tubular structure found in the embryos of amniotic animals, and comprising the pronephron, the mesonephron, and the metanephron.

Segmentation (*seg-men-ta'-shun*) [*segment*]. The process of dividing into two equal parts, as the segmentation of the ovum. **S.-cavity**, the central space in the ovum produced by segmentation. **S.-cells**. See **S.-sphere**. **S.-nucleus**. See **Nucleus**. **Segmentation-**. **S.-sphere**, one of the cells of an ovum formed by segmentation.

Segregator (*seg'-re-ga-tor*) [*segregare*, to separate]. An instrument by means of which urine from each kidney may be secured without danger of admixture.

Sequin's Signal Symptom. The initial convulsion of an attack of jacksonian epilepsy, which indicates the seat of the cortical lesion.

Seidel's Reaction for Inosit. Evaporate to dryness a little of the substance in a platinum crucible with nitric acid of specific gravity 1.1-1.2, and treat the residue with ammonia and a few drops of a solution of strontium acetate. If inosit is present, a green color and a violet precipitate are obtained.

S., Correlative, stimulation of the cerebrum by a sensation carried by a single sensory nerve. **S., Cutaneous**, a sensation produced through the medium of the skin. **S., Eccentric**, the conception of locality. **S., External**, a sensation transmitted from a peripheral sense organ. **S., General**. See *Subjective Sensation*. **S., Girdle**, girdle-pain. **S., Internal**. See *Subjective Sensation*. **S., Objective**, an external sensation due to some objective agency. **S.s., Psycho-visual**, sensations of sight without the stimulation of the retina, visions. **S., Radiating**. See *S., Secondary*. **S., Secondary**. 1. Müller's name for the excitement of one sensation by another or the extension of morbid sensations in disease to unaffected parts. 2. A sensation of one type attending a sensation of another type. Cf. *Audition colorée*. **S., Special**, any sensation produced by the special senses. **S., Subjective**. See *Subjective Sensation*. **S., Tactile**, one produced through the sense of touch. **S., Transference of**, clairvoyance.

Sense (*sens*) [*sensat*, from *sentire*, to feel]. 1. Any one of the faculties by which stimuli from the external world or from within the body are received and transformed into sensations. The faculties receiving impulses from the external world are the senses of sight, hearing, touch, smell, and taste, which are the special senses, and the muscular and temperature sense. Those receiving impulses from the internal organs (visceral senses) are the hunger sense, thirst sense, and others. 2. A sensation.

Sensibility (*sens-i-bil-i-ti-ty*) [see *Sense*]. 1. The ability to receive and feel impressions. 2. The ability of a nerve or end organ to receive and transmit impulses. **S., Recurrent**, Longlet's and Magnoli's term for the sensibility observed in the anterior roots of the spinal nerves, which appeared to be dependent on the posterior root, and not inherent, like the sensibility of the posterior root itself. The existence of recurrent sensibility was denied by Longlet.

Sensibilizer (*sens-i-bil-i-zer*) [see *Sense*]. A substance which, acting as a chemical screen, conduces to synthesis or other chemic processes.

Sensible (*sens-i-bil*) [*sensat*, to feel]. Perceptible by the senses, as *sensible* paraesthesia; capable of receiving an impression through the senses.

Sensitive (*sens-i-tiv*) [*sensitivus*]. 1. Capable of feeling, capable of transmitting sensation. 2. Reacting to a stimulus. **S. Soul** (cf. Stahl), the immaterial principle.

Sensitized (*sens-i-tiv-izd*). Rendered sensitive.

Sensitizer. Brandt's name (1895) for the intermediary body of Ehrlich. See, *Substance sensibilizatrice*.

Sensomobile (*sens-i-mo-bil*) [*sensus*, feeling, *mobiles*, movable]. Moving in response to stimulation.

Sensomobility (*sens-i-mo-bil-i-ti*) The ca-

capacity for movement in response to a sensory stimulus.

Sensorial (*sen-so-ri-ee-ee-ee*) [*sensorium*]. Pertaining to the sensorium.

Sensoriglandular (*sen-so-ri-glan-du-lar*). Causing glandular action by stimulation of the sensory nerves.

Sensorimetabolism (*sen-so-ri-me-tab-ol-izm*). Metabolism resulting from stimulation of the sensory nerves.

Sensorimotor (*sen-so-ri-mo-tor*) [*sensor*, feeling, *motor*]. Both sensory and motor. Pertaining to the perception of stimuli by pulses and with motor impulses. **S. Centers**, centers that are concerned both with the perception of sensation and with motor impulses.

Sensorimuscular (*sen-so-ri-mus-cu-lar*). Producing muscular action in response to stimulation of the sensory nerves.

Sensorium (*sen-so-ri-ee-um*) [*L.*]. A center of sensations, especially the part of the brain concerned in receiving and conveying impressions conveyed to the numerous sensory centers.

Sensory (*sen-so-ri*) [*sensor*, feeling]. Pertaining to or conveying sensation. **S. Aphasia**, or under aphasia. **S. Aura**, an aura affecting the special senses. **S. Crossway**, the posterior third of the posterior horn of the sensory capsule, where the afferent fibers of the sensory impulses cross to the opposite side. **S. Epilepsy**, various disturbances of sensation occurring in epilepsies that resemble epileptic convulsion. **S. Nerve**, the nerve conveying sensations from the periphery to the centers.

Sentient (*sen-she-ent*) [*sentire*, to feel]. Capable of feeling.

Sentina (*sen-ti-nah*) [*L.*]. The hold of a ship. The epiphysis cerebri.

Sentinal-pile. The thickened wall of the epipocket at the lower end of an anastomosis.

Separator (*sep-a-ree-er*) [*separare*, to separate]. 1. Anything that separates, especially an instrument for separating the teeth. 2. An instrument for detaching the peritoneum at peritoneum.

Sepedogenesis (*se-ped-ee-ni-ee-ee*) [*separare*, to produce]. Putrefaction.

Sepedon (*se-ped-on*) [*separare*, to be separated]. Putrefaction.

Sepsin (*sep-sin*) [*sepsis*]. A principle of main obtained from decomposed blood and blood.

Sepsis (*sep-sis*) [*sepsis*, putrefaction]. A state of poisoning produced by the action of putrefactive substances. **S., Gas**, a condition due to the gas formed from *acetone* capsules. **S., Putrefaction**, occurring after death, the process of putrefactive products from the peritoneal canal.

Septan (*sep-tan*) [*septem*, seven]. Pertaining to seven, as *septan* bone.

Septemia, **Septemia** (*sep-ti-mi-ee*) [*sepsis*, putrefaction]. Putrefaction.

Septentrionalis (*sep-ten-tri-on-ee-ee*) [*sepsis*, putrefaction].

kaloid obtained from *Aconitum lycoctonum*. It is a sensory paralyzant, resembling curara; it has been suggested as a local and general anesthetic, and is used as an antidote to strychnin and in treatment of tetanus and hydrophobia.

Septic (*sep'-tik*) [*sepsis*]. Pertaining to or produced by putrefaction. **S. Intoxication**, a form of poisoning resulting from the absorption of products of putrefaction. **S. Tank**, in sewage treatment a large closed chamber through which the sewage is allowed to pass slowly. Cf. *Contact bed*.

Septicemia (*sep-te-se'-me-ah*) [*sepsis; alba, blood*]. An infection characterized by the presence in the blood of bacteria; clinically the term is also used to include toxemia, whether or not there is invasion of the blood by bacteria. **S., Bacillar, of Chickens**, a disease of chickens described by Fuhrmann as due to a specific bacillus belonging to the colon group. **S., Goose**, a rapidly fatal disease of geese due to a specific microbe. The infection takes place by way of the mucosa of the head. **S., Mouse**, a form of septicemia occurring in mice and produced by *Bacillus murisepticus*. It is usually fatal in from 40 to 60 hours, the animal early becoming apathetic. **S., Rabbit**, a form of septicemia occurring in rabbits and due to *Bacillus septicaemiae haemorrhagicae* or bacillus of chicken cholera. **S., Sputum**, a form of septicemia produced by inoculation with microorganisms found in sputum, especially the pneumococcus.

Septicemic (*sep-te-sem'-ik* or *sep-te-se'-mik*) [*septicemia*]. Pertaining to or affected with septicemia.

Septicin (*sep'-tis-in*) [*septic*]. A ptomain obtained from decaying flesh.

Septicogenic (*sep-tik-o-jeu'-ik*) [*septic; γεννάω, to produce*]. Applied to a group of microorganisms established by Cohn producing ordinary putrefaction as distinguished from that which produces disease. Cf. *Pathogenic*.

Septicophlebitis (*sep-tik-o-pleb-i'-tis*). Phlebitis due to toxemia.

Septicopyemia (*sep-tik-o-pi-e'-me-ah*) [*septicemia; pyemia*]. Combined septicemia and pyemia. **S., Primary**, that in which the general infection is produced by the same bacteria as those causing the primary lesion. **S., Secondary**, that in which the general infection is due to other bacteria than those causing the primary lesion.

Septimetritis (*sep-ti-met-ri'-tis*). Metritis due to septic poisoning.

Septimipara, Septipara (*sep-tim-ip'-ar-ah, sep-tip'-ar-ah*) [*septimus, seventh, parere, to bear*]. A woman who has been in labor for the seventh time.

Septivalent (*sep-tiv'-al-ent*) [*septem, seven; valere, to be worth*]. Having an atomicity of seven.

Septiform (*sep-to-form'-ah*). A condensation-product of formaldehyd dissolved in

an alcoholic solution of linseed-oil potassium soap. It is used as an antiseptic and antiparasitic in veterinary practice.

Septomarginal (*sep-to-mar'-jin-al*). Relating to the margin of a septum.

Septometer (*sep-tom'-et-er*) [*septum; μέτρον, a measure*]. 1. An instrument for determining the thickness of the nasal septum. 2. [*sepsis*]. An apparatus for determining organic impurities in the air.

Septopyemia, Septopyæmia (*sep-to-pi-e'-me-ah*). See *Septicopyemia*.

Septulum (*sep'-tu-lum*). Diminutive of *septum* (q. v.). **Septula fibrosa**, fibrous trabeculas extending from the deep fascia of the penis into the corpus cavernosus. **Septula interalveolaria**, the septa dividing the alveoli of the lungs. **Septula medullaria**, processes radiating from the periphery of the gray substance of the spinal cord into the white substance. **Septula renum**. See *Columna bertini*.

Septum (*sep'-tum*) [*sepire, to hem in*]. A partition; a division-wall. **Sæptum atriorum, S. atrium, S. auricularum**, the septum

SEPTOMETER.

between the right and left auricles of the heart. **S., Bigelow's**, the calcareo femoral, an early vertical spur of compact tissue in the neck of the femur, a little in front of the lesser trochanter. **Septum crurale**, the layer of areolar tissue closing the femoral ring. **S., Douglas's**, in the fetus the septum formed by the union of Rathke's folds transforming the rectum into a complete canal. **Septum lucidum**, a thin, translucent septum forming the internal boundary of the lateral ventricles of the brain and inclosing between its two laminae the fifth ventricle. **S., Nasal**, the septum between the two nasal cavities. **S., Pectiniform**, that between the corpora cavernosa of the penis. **Sæptum pellucidum**. See *S. lucidum*. **S. of the Pons**, the median raphe of the pons formed by the decussation of nerve-fibers. **S., Rectovaginal**, the tissue forming the partition between the rectum and the vagina. **Septum scalæ**, lamina spiralis. **Septum thoracis**. See *Mediastinum*. **Sæptum transversum**. 1. The diaphragm. 2. The tentorium cerebelli. **S., Triangular Medullary**. See *S. lucidum*. **S., Ventricular**. 1. Same as *S. lucidum*. 2. Same as *S. ventriculorum*. **Sæptum ventriculorum**, the septum between the two ventricles of the heart.

Septuplet (*sep'-tu-plet*) [*septem*, seven]. One of seven offspring born from a single gestation.

Séquardin (*sa-kwar'-din*). A sterilized testicular extract (Brown-Sequard).

Sequel, Sequela (*sel'-kwel, sek-wel'-lah*) [*sequi*, to follow]. A diseased or abnormal condition following an attack of a disease, and directly or indirectly dependent upon it.

Sequestration (*se-kwes-tri'-shun*) [*sequestrum*]. 1 The formation of a sequestrum. 2 The isolation of persons suffering from disease for purposes of treatment or of protecting others.

Sequestrectomy (*se-kwes-tek'-to-me*). See *Sequestrotomy*.

Sequestrotomy (*se-kwes-tri'-to-me*) [*sequestrum*; *tomé*, a cutting]. The operation of removing a sequestrum.

Sequestrum (*se-kwes'-trum*) [*sequestro*, to separate]. A dead piece of bone that has become separated from the living bone.

Seralbumin (*se'-al-bu-min*) [*serum*; *albumin*]. Serum albumin, the albumin found in the blood.

Seroh Disease. A disease of sugar-cane of West Indies and South America due to *Mycoplasma sacchari*.

Serenoa (*ser-eno'-ah*) [*Sereno* Watson, American botanist]. A genus of palms of one species, *S. serrulata*, the saw-palmetto of North and South America. The fruit is diuretic and sedative and used in diseases of the genitourinary tract. Dose of *extract* 8-20 gr (0.52-1.3 Gm.); of the *fluidextract* 57-114 min (3.7-7.4 Cc.).

Serial (*se'-ri-al*) [*series*, a succession]. Following in regular order; occurring in rows. **S. Sections**, microscopic sections made in consecutive order and arranged in the same manner.

Séribile (*sa-re-bil*). A teniafuge said to consist of the seeds and root bark of *Commersonia eumensis*. Dose 2 oz. (60 Gm.) in decoction.

Sericeps (*ser'-is ept*) [*agrippa*, silk; *forceps*]. A device made of loops of ribbon, used in place of the forceps in making traction upon the fetal head.

Sero- (*se-ro*) [*serum*]. A prefix meaning relating to serum or serous.

Serochrome (*se'-ro-krom*) [*sero-*, *χρῶμα*, color]. Ciba's name for the pigments (chromochrome, Latin) which serve to give color to normal serum.

Serocolitis (*se-ro-kol-i-tis*). Inflammation of the serous covering of the colon.

Serocyst (*se-ro-sist*). A tumor containing cysts filled with serum.

Serocystic (*se-ro-sist-ik*) [*sero-*, *κύστις*, a bladder]. Composed of cysts filled with a serous fluid.

Serodermatitis (*se-ro-der-mi'-tis*) [*sero-*, *dermis*]. An inflammatory skin affection attended with serous effusion.

Serodiagnosis (*se-ro-di-ag-nō'-sis*). Diagnosis based upon the reaction of blood-serum of

typhoid-fever patients upon certain *Bacillus typhi abdominalis*, which is modified, agglutinated, and split in *Widal's Reaction*.

Seroenteritis (*se-ro-en-ter-i'-tis*). Inflammation of the serous covering of the small intestine.

Serofibrinous (*se-ro-fib'-ri-nus*). 1 Composed of serum and fibrin. 2 Characterized by the production of a serofibrinous exudate. 3 Characterized by the production of a serofibrinous inflammation.

Seroformalin (*se-ro-form'-a-lin*). A solution of dried coagulated blood-serum formalin, used as an antiseptic and preservative powder.

Seroglobulin (*se-ro-glob'-u-lin*). See *Serum globulin*.

Serohepatitis (*se-ro-he-pat-i'-tis*) [*sero-*, *hepar*, liver]. Inflammation of the hepatic serous membrane.

Seroid (*se'-roid*) [*sero-*, *ειδός*, likeness]. Resembling a serous membrane.

Serolemma (*se-ro-lem'-ah*) [*sero-*, *λίμα*, husk, a peel]. The serous membrane of the layer of the amnion.

Serolin (*se'-ro-lin*) [*sero-*, *λίπιν*, oil]. A neutral fatty constituent of blood-serum in small amount; its nature is unknown.

Serolipase (*se-ro-lip'-as*). Lipase acting on blood-serum.

Seromembranous (*se-ro-mem'-brā-nus*). Serous and membranous.

Seromucous (*se-ro-mu'-kus*). Having the nature of or containing both serum and mucin.

Seropurulent (*se-ro-pu'-rū-lent*) [*sero-*, *πυρρῆ*, purulent]. Composed of serum and pus.

Seropus (*se'-ro-pus*) [*sero-*, *πύς*, pus]. A disease consisting of serum and pus.

Serosa (*se'-ro-sah*) [*sero-*, *σῆμα*, membrane, proof]. A serous membrane.

Seroserous (*se-ro-ser'-us*) [*serous*]. Pertaining to two serous surfaces.

Serosine (*se'-ro-sin*). A purpuric and antiseptic.

Serositis (*se-ro-sit-i-tis*). Inflammation of a serous membrane.

Serosynovitis (*se-ro-sin-ov-i'-tis*) [*sero-*, *σύν*, with; *synovitis*]. A synovitis accompanied by inflammation of the synovial fluid.

Serotaxis (*se-ro-tak'-is*) [*sero-*, *τάξις*, arrangement]. In diagnosis the drawing of the blood to the skin by application of solution of caustic potash.

Serotherapy (*se-ro-the'-ra-pi*) [*sero-*, *θεραπεία*, treatment]. 1 The treatment of disease by means of blood-serum of animal or human origin.

2 The treatment of disease by means of serum immune to or containing a specific infectious disease. 3 When used.

Serotina (*se-ro-tin'-ah*). See *Serum albumin*.

Serous (*se'-rus*) [*serum*]. 1 Pertaining to or characterized by, or resembling, serum.

2 Producing serum, as a serous gland. 3 Containing serum, as a serous sac. **S. Cavity**, large lymph space. **S. Effusion**, exudation of serum. **S. Exudate**, an exudation consisting largely of serum. **S. Inflammation**,

an inflammation characterized by the formation of a serous exudate. **S. Membrane.** See *Membrane*.

Serpedo (*ser-pe'do*) [*serpere*, to creep]. Same as *Psoriasis*.

Serpens (*ser'-pens*) [L.]. Creeping.

Serpentaria (*ser-pen-ta'-re-ah*) [L.]. Virginia snake-root, the root of several species of *Aristolochia*, of the order *Aristolochiaceae*. The rhizome and rootlets of *Aristolochia serpentaria* and *Aristolochia reticulata* constitute the *serpentaria* of the U. S. P. (*serpentaria rhizoma*, B. P.). *Serpentaria* contains a volatile oil, a bitter principle, and a nitrogenous principle called *aristolochin*. It is a stimulant, tonic, diaphoretic, and diuretic, and is used in the eruptive fevers to bring out the eruption, in intermittent fever, and in dyspepsia. **S., Fluidextract of** (*fluidextractum serpentariae*, U. S. P.). Dose 20-30 min (13-20 Cc.). **S., Infusion of** (*infusum serpentariae*, B. P.). Dose 1 oz. (32 Cc.). **S., Tincture of** (*tinctura serpentariae*, U. S. P., B. P.). Dose 1 dr. (4 Cc.).

Serpentine (*ser'-pen-tin*) [*serpens*, serpent]. Sinuous; snake-like.

Serpes (*ser'-pes*) [*serpere*, to creep]. Herpes.

Serpiginous (*ser-pi'-in-us*) [*serpiginosus*, from *serpere*, to creep]. Creeping. **S. Ulcer**, one that extends in one direction while healing in another.

Serpigo (*ser-pi'-go*) [L.]. Ringworm.

Serrate, Serrated (*ser'-at*, *ser'-a-ted*) [*serra*, a saw]. Provided with sharp projections like the teeth of a saw.

Serration (*ser-a'-shun*) [see *Serrate*]. The state or condition of being serrate.

Serratus (*ser'-a-tus*) [L.]. Serrated; applied to muscles arising or inserted by a series of processes resembling the teeth of a saw. See under *Muscle*.

Serre-fine (*sär-fän*) [Fr.]. A small spring-forceps for seizing and compressing bleeding vessels.

Serre-nœud [Fr.]. An instrument used for drawing tight a ligature thrown around a part, as around the pedicle of a tumor.

Serres' Glands. Pearl-like masses frequently seen in the infant near the gum and resulting from the fragmentation of the dental epithelium. They may give rise to cysts or other abnormal growths.

Serrulate (*ser'-u-lät*) [*serrula*, dim. of *serra*, a saw]. Minutely notched or serrated.

Sertoli's Cells, S.'s Columns. The supporting cells of the seminiferous tubules, arranged radially on the membrana propria, and forming long columns between the spermatoblasts.

Serum (*ser'-rum*) [L.]. 1. The clear, yellowish fluid separating from the blood after the coagulation of the fibrin. 2. Any clear fluid resembling the serum of the blood. **S., Adamkiewicz's.** See *Canceroin*. **S.-albumin**, the albumin found in the blood-serum and other animal fluids. **S., Anticancerous**, a serum provided by the inoculation of

an ass previously infected with the filtered juice of a neoplastic tumor. **S., Antidiphtheric** (*serum antidiphthericum*, U. S. P.), one prepared by (1) the production of diphtheric toxin by means of bouillon cultures; (2) the immunization of horses, and (3) the collection and separation of the blood-serum from the immunized animals. If 1 Cc. of this serum suffices to protect perfectly a guineapig against a fatal dose of the toxin, and without even the occurrence of a localized reaction at the site of the injection, the serum is said to contain one immunizing unit in the cubic centimeter, if 0.1 Cc. suffices, it has 10 units; if 0.01 Cc., it has 100 units per cubic centimeter. In Germany the least allowed by law is 100 units. **S., Antiepileptomatous**, one obtained from animals by inoculation with cultures of pathogenic yeasts isolated from cancerous tumors. **Syn., Serum of Hoffmann and of Villiers and Wlaeff.** **S., Antimorphin**, a resistance substance conferring immunity to the action of morphin poison, obtained by L. Hirschlaß from animals treated with increasing doses of morphin. **S., Antiscarlatalinal.** See *S., v. Leyden's*, and *S., Moser's*. **S., Antistaphylococcic**, **S., Antistaphylococcus**, a serum produced in the goat by Pröschner that will immunize rabbits against from 5 to 7 times the lethal dose of culture of staphylococcus when used in doses of 1-5 Cc. **S., Antistreptococcic**, **S., Antistreptococcus**. 1. A specific serum obtained by Piorkowski against the streptococcus, which causes the disease called *Pferdedruse*, a contagious, catarrhal affection of the nasal and pharyngeal membranes of horses. The serum has protective and curative properties. It agglutinates the specific streptococcus in dilutions of 1:100, the streptococcus of angina but slightly or not at all, and other pathogenic species in dilutions of less than 1:25. Piorkowski concludes that there are specific races of streptococci, and that success in the use of an antistreptococcus serum will be obtained only when an antiserum for the specific organism found in the particular group of cases is used. 2. See *S., Moser's*. **S., Antitoxic**, that which acts upon the bacterial toxins and is not bactericidal. **S., Antityphoid**, a sterilized culture of typhoid bacilli used by vaccination as a prophylaxis against typhoid. Cf. *Jee's antityphoid extract*. **S., Antivenomous.** See *Antivenin*. **S., Bactericidal**, that which destroys bacteria but has no effect upon toxins. **S., Bardel's**, sodium chlorid, 1 Gm.; phenol, 0.5 Gm.; sodium phosphate, 3 Gm.; sodium sulfate, 2 Gm.; water, to 100 Cc. **S., Behring's**, **S. of Behring-Roux.** See *S., Antidiphtheric*. **S., Bichlorureted**, of Chéron, mercury bichlorid, 0.5 gr.; sodium chlorid, 2 Gm.; distilled water, 200 Cc., crystallized phenol added when the serum is quite cold. 2 Gm. Dose 300 gr. (20 Gm.) injected into the gluteal region every eight days for syphilis. **S., Calmette's.** See *Antivenin*. **S.,**

Cancer. 1. Cancer-juice. 2. See *Cancerin*.
S., **Cantani's**, sodium chlorid, 4 Gm.; sodium carbonate, 3 Gm.; water, 1000 Cc.
S., **casein**, Panum's name for paraglobulin.
S., **Cerebrospinal**, cerebrospinal fluid. **S.**, **Chéron's**, phenol, 1 Gm.; sodium chlorid, 2 Gm.; sodium phosphate, 4 Gm.; sodium sulfate, 8 Gm.; boiled distilled water, 100 Cc. **S.**, **Clumping**, a serum capable of producing agglutination of bacteria. **S.**, **Crocq's**, sodium phosphate, 2 Gm.; distilled water, 100 Cc. **S.**, **diagnosis**. See *Scrodiagnosis*. **S.**, **Globulicidal**, a hemolytic serum. **S.**, **globulin**. See *Paraglobulin*. **S.**, **Haffkine's**, a sterilized culture of cholera bacilli for conferring immunity against cholera. See *Haffkine's Method* under *Immunization*. **S.**, **Haffkine's Prophylactic**, a serum obtained by heating a virulent culture of plague bacilli to 70° C. It is used as a prophylactic against cholera. **S.**, **Hayem's**. 1. Sodium chlorid, 5 Gm.; sodium sulfate, 10 Gm.; sterilized water, 1 liter. 2. Sodium chlorid, 7.5 Gm.; sterilized water, 1000 Cc. **Syn.**, *Physiologic serum*. **S.**, **of Hoffmann**. See *S.*, *Antiepileptomatous*. **S.**, **Huchard's**, sodium phosphate, 10 Gm.; sodium chlorid, 5 Gm.; sodium sulfate, 2.5 Gm.; distilled water, 100 Cc. **S.**, **Huchard's Concentrated**, sodium chlorid, 5 Gm.; sodium phosphate, 10 Gm.; sodium sulfate, 2.5 Gm.; phenol, 1.5 Gm.; water, 100 Cc. **S.**, **Jequiritol**, an antitoxin prepared on the principle of Behring's method, which has the power of rapidly and surely paralyzing the effects of jequiritol in the human system when applied locally in the conjunctival sac and when injected subcutaneously. **S.**, **Kronecker and Lichtenstein's**, sodium chlorid, from 6 to 7.5 Gm.; sodium carbonate, 0.1 Gm.; water, 1000 Cc. **S.**, **lactis**, whey. **S.**, **Latta's**, sodium chlorid, from 1 to 5 Gm.; sodium carbonate, 1.7 Gm.; water, 1400 Cc. **S.**, **Leclerc's** (very strong), sodium chlorid, 4 Gm.; sodium phosphate, sodium sulfate, of each, 0.5 Gm.; boiled distilled water, 100 Cc. **S.**, **Leukotoxic**, one which destroys the leukocytes. **S.**, **v. Leyden's**, blood serum taken from convalescent scarlatina patients. Cf. *S.*, *Moser's*. **S.**, **Luton's**, crystallized sodium phosphate, 5 Gm.; sodium sulfate, 10 Gm.; boiled distilled water, 100 Cc. **S.**, **Maragliano's**, an antituberculous serum obtained from an ass or horse treated with repeated injections of tuberculous toxin. **S.**, **Marmorek's**, a polyvalent serum obtained by the inoculation of animals with streptococci of various origin. **S.**, **Mathieu's**, sodium sulfate, 6 Gm.; sodium phosphate, 4 Gm.; sodium chlorid, 1 Gm.; glycerol, 20 Gm.; distilled water, to 100 Cc. **S.**, **Moser's** (Paul), an antistreptococcus serum obtained by simultaneous inoculation of horses with several varieties of streptococci taken from the blood of scarlatina patients. **S.**, **Neurotoxic**, one which acts directly upon the nervous. **S.**, **Normal**, that of which 0.1 Cc.

neutralizes 10 times the minimal lethal dose of a specific bacterial poison. **S.**, **Paquez's**, an antitoxin serum of tuberculous origin by successive inoculation of horses 1-6 injected in daily doses of from 10 to 100 drops. **S.**, **Parascandolo's**, an immunizing serum produced by inoculation of animals with mixed cultures of streptococci and staphylococci. **S.**, **Physiologic**. See *S.*, *Hayem's* (2). **S.**, **Polyvalent**, serum derived from animals infected by a number of different streptococci. **S.**, **Protective**, an immunizing serum. Cf. *S.*, *Hoffmann's*. **S.**, **Renzi's**, iodine, 1 Gm.; potassium iodid, 1 Gm.; sodium chlorid, 6 Gm.; water, 1000 Cc. **S.**, **Richet and Héricourt's**. See *S.*, *Anticancerous*. **S.**, **Roussel's**, sodium phosphate, 50 Gm.; water, 1000 Cc. **S.**, **Roux's**. See *S.*, *Antidiphtheric*. **S.**, **Sapellier's**, sodium chlorid, 60 Gm.; potassium chlorid, 5 Gm.; sodium carbonate, 10 Gm.; sodium phosphate, 4.5 Gm.; potassium sulfate, 1.5 Gm.; boiled water, 100 Cc. **S.**, **Schiess's**, sodium chlorid, 72 Gm.; sodium bicarbonate, 50 Gm.; water, 1000 Cc. **S.**, **Schwartz's**, sodium chlorid, 6 Gm.; solution of caustic soda, 2 drops; water, 1000 Cc. **S.**, **Sclavo's**, cultures of streptococci in egg albumen. **S.**, **Seraphthim**, a prophylactic against foot and mouth disease. **S.**, **sublimatum**, one part of a serum is dilute to from 50 to 100 parts of serum. It is used subcutaneously as an antitoxin for impregnating bandages. **S.**, **Sedmann's**, sodium chlorid, 6 Gm.; sodium carbonate, 1 Gm.; water, 1000 Cc. **S.**, **of Tizzoni and Cattani**, obtained by evaporating in a vacuum the serum of an immunized horse and then gram of the powdered residue is added to 10 Cc. of the serum. **S.**, **Trunck's** for the treatment of symptomatic cases of arteriosclerosis, sodium chlorid, 100 Gm.; sodium sulfate, 0.44 Gm.; sodium carbonate, 0.21 Gm.; potassium sulfate, 0.4 Gm.; sodium phosphate, 0.15 Gm. This is put in hypodermatic injections of 1 to 2 cc. 1 or 4 days, increasing to 5 to 7 Cc. or 4 rectal injections of 10 Cc. **S.**, **unit**. See *Unit*. **S.**, **Vandervelde's**, 1. Sodium phosphate, sodium chlorid, of each, 10 Gm.; water, 1000 Cc. 2. Sodium chlorid, sodium phosphate, of each, 3 Gm.; sodium carbonate, 2.5 Gm.; sodium phosphate, 1 Gm.; potassium sulfate, 2 Gm.; water, to 100 Cc. **S.**, **of Villiers and Wlaess**. See *S.*, *Antiepileptomatous*. **S.**, **Wasson's**, serum of a horse immunized by intravenous injection of a virulent culture of the plague bacillus.

Serumal (ser'-u-mal) Resembling a serum. **S.**, **Calculus**, a calculus formed about the teeth by exudation from diseased gums.

Sesame (ses'-am) See *Sesamum*. **S.**, **Oil**. See *Sesamum Oil*.

Sesamoid (ses'-am-oid) Resembling a sesame seed. **S.**, **Boon's**

small bone developed in a tendon subjected to much pressure.

Sesamum (*ses'-am-um*) [*σάμνον*, sesame]. A genus of plants of the order *Pedaliaceae*. *S. indicum* and *S. orientale* yield a bland, sweetish oil. *S.*, Oil of (*oleum sesami*), sesame oil, employed like olive-oil. Syn., *Benne oil*; *Teel oil*.

Sesqui- (*ses'-kwe-*) [L.]. A prefix denoting one and one-half.

Sesquih. Abbreviation of *sesquihora*, an hour and a half.

Sesquioxid (*ses'-kwe-oks'-id*) [*sesqui-*; *δξύς*, acid]. A compound of oxygen and another element, containing three parts of oxygen to two of the other element.

Sesquisalt (*ses'-kwe-sawlt*) [*sesqui-*; *salt*]. A salt containing one and one-half times as much of the acid as of the radicle or base.

Sessile (*ses'-il*) [*sessilis*, from *sedere*, to sit]. Attached by a broad base; not pedunculated, as a *sessile* tumor.

Sesunc. Abbreviation of *sesuncia*, an ounce and a half.

Set [ME., *setten*]. 1. To reduce the displacement in a fracture and apply suitable bandages. 2. To harden; to solidify—as a cement or amalgam.

Setaria (*se'-ta'-re-ah*) [*seta*, a bristle]. A genus of grasses including millet, *S. italica*.

Setarin (*se'-tu'-rin*). A toxic glucosid isolated by E. F. Ladd, 1899, from millet, *Seturia italica*.

Seton (*se'-ton*) [*seta*, a bristle]. 1. A thread or skein of threads drawn through a fold of the skin, so as to produce a fistulous tract; it is used as a counterirritant. 2. The tract thus produced.

Setose (*se'-tōs*). Beset with bristle-like appendages.

Setschenow's Inhibitory Center (*setch'-en-ōf*). A cerebral center for the inhibition of reflex movements, situated in the corpora quadrigemina and the medulla oblongata.

Seven-day Fever. Relapsing fever.

Seviparous (*se'-vup'-ar-us*) [*sevi-*; *parere*, to produce]. Sebiferous; fat-producing.

Suam (*se'-vum*) [L.]. Suet. *S. præparatum*, the prepared suet of the U. S. P.

Sewer-gas. The mixture of gases emanating from sewers.

Sewing Spasm. See *Seamstress's Cramp*.

Sextan (*seks'-tan*) [*sex*, six]. Occurring every sixth day, as a *sextan* fever.

Sextipara (*seks'-tip'-ar-ah*) [*sextus*, sixth; *parere*, to produce]. A woman in labor for the sixth time.

Sexuplet (*seks'-tu'-plet*) [*sex*, six]. One of six offspring of a single gestation.

Sexual (*seks'-u-al*) [*sexus*, sex]. Pertaining to or characteristic of sex, as the *sexual* organs.

Sexual Involution, the menopause.

Six-valent (*seks'-val-ent*) [*sex*, six; *valere*, to be worth]. Having an atomicity of six as compared with that of hydrogen.

Six-raygram. See *Rays, Roentgen*.

Six-test. See *Skiascopy*.

Sixes (*shōks*). See *Ague*.

Shaking Palsy. See *Paralysis agitans*.

Share-bone. The os pubis.

Sharpey's Intercrossing Fibers. The collagenous fibers forming the lamellae which constitute the walls of the haversian canals in bone; same as osteogenic fibers. *S.*'s **Perforating Fibers**, calcified white or elastic fibers which connect the lamellae in the walls of the haversian canals.

Shaven-beard Appearance. A peculiar appearance of the agminated glands of the intestine in typhoid fever, resembling that of a recently shaven beard.

Sheath (*shēth*) [ME., *schethe*]. A covering. *S.*, **Crural**, the femoral sheath. See *Femoral Sheath*. *S.*, **Dural**, a strong fibrous membrane forming the external investment of the optic nerve. See *Dura*. *S.* of **Henle**. 1. An attenuated extension of the perineum investing the fibers composing funiculi of a nerve-trunk; it consists of a delicate fibrous envelop lined with endothelial plates, which in some cases alone represent the entire sheath. 2. The cellular layer forming the outer portion of the inner root-sheath of the hair. *S.*, **Medullary**, the myelin-sheath surrounding the axis-cylinder. *S.*, **Neural**. See *S.*, **Medullary**. *S.* of the **Optic Nerve**. See *S.*, **Dural**. *S.*, **Pial**, the investment of the optic nerve derived from the pia. *S.*, **Primitive**, *S.* of **Schwann**. See *Neurilemma*. *S.* of **Rectus**, that formed by the aponeuroses of the external and internal oblique muscles and the transversalis. *S.*, **Schwalbe's**, the delicate sheath which covers elastic fibers.

Sheep-pox. A contagious pustular disease of sheep similar to cow-pox.

Sheldon's Method of Hemostasis in Disarticulation of the Hip-joint. Consists in a preliminary disarticulation of the head of the femur, followed by the introduction of the artery forceps into the wound behind the femur and clamping of the femoral vessels.

Shepherd's Fracture. A fracture of the outer portion of the astragalus.

Sherrington's Law. The peripheral branches of the spinal nerve-roots— anterior and posterior—form anastomoses in such a manner as to supply any given region of the integument with the branches of three roots—a middle one and the ones next above and below.

Shield (*shēld*) [ME., *sheeld*]. 1. A protective structure or apparatus. 2. In biology, a protective plate, scute, lorica, or carapace. *S.*, **Antithermic**, a protective covering of the cauterium to prevent destruction of the tissues about the field of operation. *S.* **Bone**, the scapula. *S.*, **Nipple**, a protective covering for sore nipples. *S.*-**shaped**, shaped like a buckler or shield. *S.*, **Sims'**, an instrument used in the application of wire sutures.

Shin [AS., *scina*]. The sharp anterior margin of the tibia. *S.*-**bone**, the tibia.

Shingles (*shing'-gles*). Herpes zoster.

Ship-fever. Typhus fever.

Shiver (*shîv'-er*) [ME., *chiveren*, to shiver]. A slight tremor or shaking of the body due to cold, etc.

Shock [Fr., *shoc*]. 1. A sudden grave depression of the system produced by operations, accidents, or strong emotion. It is due to a profound influence on the nervous system. If not fatal, it is followed by a stage of reaction. 2. The agent causing a general or local depression, as an *electric shock*.

Shoddy Fever. A diseased condition caused by the inhalation of the dust in shoddy factories; it is characterized by feverishness, headache, nausea, dryness of the mouth, dyspnea, cough, and expectoration.

Shoemaker's Spasm. An occupation-neurosis, analogous to writer's cramp, occurring in shoemakers.

Short Circuit. One in which an electric current encounters an abnormally small resistance. **S.-circuiting**, a modification of Nélaton's operation for intestinal obstruction consisting either in lateral approximation and union or lateral implantation. **S.-sight**, **S.-sightedness**, myopia. **S.-windedness**, dyspnea.

Shoulder (*shôl'-der*) [AS., *sculder*]. The region where the arm joins the trunk, formed by the meeting of the clavicle and the scapula and the overlying soft parts. **S.-blade**, the scapula. **S.-girdle**. See *Girdle, Shoulder-*.

DIAGRAMMATIC SECTION OF SHOULDER THROUGH BICIPITAL GROOVE. (W. A.)

1. Deltoid. 2. Acromion. 3. Subacromial bursa. 4. Glenoid ligament. 5. Capsule of shoulder-joint. 6. Glenoid cavity. 7. Long tendon of biceps. 8. Glenoid ligament. 9. Synovial membrane lining capsule and ensheathing biceps tendon. 10. Inner fold of capsule and synovial membrane. 11. Extraarticular portion of biceps tendon. 12. Humerus.

S., Noisy, of R. H. Sayre, a grating of the muscles over the scapula on moving the shoulder up and down, believed to be due to a snapping tendon between or a bursa beneath the scapula. **S., Slipped**, **S., Splayed**, a

dislocated shoulder. **S.-wrench**, or dislocation of the shoulder.

LIGAMENTS OF THE SCAPULA AND SHOULDER (Wilson.)

1. Superior acromioclavicular ligament. 2. Coracoclavicular ligament (trapezoid). 3. Coracoclavicular ligament (conoid). 4. Coracoclavicular ligament (transverse). 5. Coracoclavicular ligament. 6. Capsular ligament. 7. Coracoclavicular ligament. 8. The long tendon of biceps issuing from the capsular ligament, filling the bicipital groove. 9. Extra-articular shoulder-socket formed by under surface of scapula and coracoclavicular ligament.

Show (*shô*) [AS., *scetan*, to look; *shô*, bloody discharge from the birth canal to labor. 2. The first appearance of menstrual flow.

Shrapnell's Membrane. See *Shrapnell's*.

Shucks. A strong tea of corn-shucks, a remedy for chronic malaria in the United States.

Shuttle-bone. The scaphoid bone.

Si. A symbol for *silicon*.

Sialagog (*si-al'-o-gog*). See *Sialogog*.

Sialemesia (*si-al-em-e'-sia*) [*si-al-em-e'-sia*, *emesis*]. The hysterical vomiting of saliva.

Sialic, Sialine (*si-al'-ik*, *si-al'-en*). Having the nature of saliva.

Sialoductilitis, Sialoductitis (*si-al-ô-duk-ti'-tis*, *si-al-o-duk-ti'-tis*). Inflammation of Stenson's duct.

Sialogenous (*si-al-ôj'-en-us*). Tending to produce. Generating saliva.

Sialogog (*si-al'-o-gog*) [*si-al-ô*, *gog*, to produce]. Producing a flow of saliva.

Sialon (*si'-al-on*). Saliva.

Sialorrhœa (*si-al-or-rh'-e-a*) [*si-al-on*, *rh'-e-a*, *salivatio*]. Salivation. **S., Pancreatic**, a flow of pancreatic juice.

Sialosemeiology (*si-al-o-se-mi-ol'-o-je*) [*sialon; semeiology*] Diagnosis based upon examination of the saliva.

Sibbens (*sib'-enz*) [*Gael., subhan, raspberries*]. A disease formerly endemic in the Scotch highlands, and by some identified with syphilis, by others with warts.

Sibilant (*sib'-il-ant*) [*sibilare, to hiss*]. Hissing or whistling, as a *sibilant* rale.

Sibilus (*sib'-il-us*) [*sibilare, to hiss*]. A sibilant rale.

Sibson's Aortic Vestibule. The chamber formed by the left ventricle just below the aortic orifice for the reception of the semilunar valves during diastole. **S.'s Groove**, a furrow formed in some individuals by a prominence of the lower border of the pectoralis major. **S.'s Notch**, the inward curve of the upper left border of precordial dulness in acute pericardial effusion.

Siccant, Siccative (*sik'-ant, sik'-at-iv*) [*sicare, to dry*]. 1. Drying; tending to make dry. 2. A drying agent or medicine.

Sicco (*sik'-o*). Dried hematogen (q. v.); a black-brown, tasteless powder, soluble in water, indicated in anemia, chlorosis, etc. Dose 75-105 gr. (5-7 Gm.) daily, children 4 gr. (0.25 Gm.).

Sick [*AS., sēd*]. Ill; not well. **S. Headache**, migraine.

Sickingia (*sik-in'-je-ah*) [Count v. *Sickingen*, of Vienna]. A genus of rubiaceous plants. *S. rubra*, *casca de arariba*, is a species found in Brazil and Japan; furnishes arariba bark, used in intermittent fever. It contains the alkaloid *oribain* and a red coloring-matter. *S. viridiflora*, *casca de arariba branca*, of Brazil, furnishes a bark used in malaria.

Sickness (*sik'-nes*) [*sick*]. 1. The state of being unwell. 2. Nausea. **S., African Horse-**. See *Edematomycesis*. **S., African Sleeping-**. See *African Lethargy*. **S., Ceylon**, beriberi. **S., Country**, nostalgia. **S., Creeping**, chronic ergotism. **S., Falling**, epilepsy. **S., Green**, chlorosis. **S., Jumping**, a form of choromania. See *Jumpers*. **S., Leaguer**, typhus. **S., Milk**, a form of poisoning due to the ingestion of diseased milk or meat. **S., Monthly**, the menstrual epoch. **S., Mountain-**, a sensation of nausea, with impeded respiration and irregular heart's action, due to the rarefied air of high altitudes. **S., Painted**. See *Pinta Disease*. **S., Railway**. See *Car-sickness*. **S., Salt**, a condition of starvation due to animals being confined on poor pastures consisting of dry wire grass and other inferior vegetation. **S., Sea-**. See *Sea-sickness*. **S., Spotted**. See *Pinta Disease*. **S., Sweating**. See *Sweating-sickness*. **S., Theater**, Paul's name for malaise with dyspnea and oppression followed by weak pulse and syncope, usually observed in women who have dined hurriedly and reached a crowded theater in a heated condition, formerly a result of eye-strain. See *Vertigo, Stomachal*.

Sicopirin, Sicopyrin (*sik'-o pi'-rin*), $C_{10}H_{13}O_7$.

A glucosidal body found by Peckolt in the root-bark of *Banisteria virgiloides*.

Sida (*si'-dah*) [*sidā*, a malvaceous plant]. A genus of plants of the order *Malvaceae*. *S. paniculata*, a species of Peru, is an active vermifuge. Its action is believed to be due to the very minute but resisting bristles which cover its leaves. *S. rhombifolia*, Queensland hemp, containing a great amount of mucilage, is used in Australia for snake-bite, pulmonary complaints, and in making poultices.

Side (*sid*) [*ME*]. A lateral half of the body or of any bilateral organ. **S.-bone**. 1. The hip-bone. 2. The diseased or disordered condition in horses which causes the lateral cartilages above the heels to ossify. 3. An abnormal ossification of the lateral elastic cartilage in a horse's foot. **S.-chain**. See *Receptor*. **S.-chain Theory**. See under *Lateral* and under *Immunity*.

Siderant, Siderante (*sid'-er-ant, sid'-er-an'-te*) [*siderari, to be blasted or planet struck*]. Characterized by sudden and abrupt onset as though the result of malign astral influences.

Siderism (*sid'-er-izm*) [*siderites, the lodestone*]. The curative influences long supposed to be exerted over the body by the lodestone; the priests of Samothrace drove a thriving trade in magnetized iron rings worn as amulets and cure-alls; they were worn by the worshippers of the Cabiri, afterward by the Roman priests of Jupiter, and in recent times so-called "rheumatism rings" and magnetic belts and insoles give evidence of the persistence of a belief in siderism.

Siderophone (*sid'-er'-o-fōn*) [*sidēphos, iron; phōnē, a sound*]. An electric appliance devised by Martin Jannson (1902) as an improvement upon Amus' sideroscope for detecting the presence of small splinters of iron.

Sideroscope (*sid'-er'-o-skōp*) [*sidēros, iron; skōzōn, to examine*]. An instrument for the detection of particles of iron or steel in the eyes.

Siderosis (*sid'-er'-o-sis*) [*sidēros, iron*]. 1. A pigmentation by a deposit of particles of iron; specifically, a chronic interstitial pneumonia caused by the inhalation of particles of iron. 2. A recognized type of lung disease (pneumokoniosis) due to the inhalation of metallic dust. Cf. *Anthraxis; Chalcosis; Silicosis*.

Sidonal (*si'-don-al*). See *Piperazin Quinate*. **S., New**, quinic acid anhydride, a white, tasteless powder, soluble in water, used as a uric-acid solvent. Dose 75-120 gr. (5-8 Gm.) daily, given in 4 or more doses.

Siegle's Otoscope, S.'s Speculum. An instrument consisting of a glass-covered box with a conic projection and a rubber tube attached laterally. When the conic projection is inserted firmly into the external auditory canal, and the air is compressed or rarefied, the movements of the drum-membrane may be observed. It is also used for the purpose of rendering the articulations of the ossicles mobile.

Siemerling's Nucleus. The anterior

nucleus of the anterior group of oculomotor nuclei in the gray matter below the sylvian aqueduct.

Sieur's Sign. "Signe du sou." A clear, metallic sound sometimes heard in cases of pleural effusion on percussing the chest in front with two coins and auscultating behind.

Sieve (*siv*) [AS., *sife*]. An apparatus with a reticulated bottom, used for the separation of fine from coarse particles. The gage of the sieve is usually expressed in the number of meshes in a square inch.

Sigaultian Operation, Sigault's Operation [J. R. Sigault, a French obstetrician]. Symphysiotomy.

Sigh (*si*) [AS., *mean*, to sigh]. A prolonged and deep inspiration followed by a shorter expiration. Syn., *Suspirium*.

Sight (*sit*) [AS., *sht*]. The act of seeing; the special sense concerned in seeing. *S.*, Day-, hemeralopia. *S.*, Far-, *S.*, Long-, hyperopia. *S.*, Night-, nyctalopia. *S.*, Old-, presbyopia. *S.*, Short-, myopia.

Sigillation (*sig-il-a'-shun*) [*sigillum*, a seal]. The mark of a matrix.

Sigmatism (*sig'-mat-izm*) [see *Sigmoid*]. 1. Defective utterance of the sound of *s*. 2. The too frequent use of the *s* sound in speech.

Sigmoid (*sig'-moid*) [*sigma*, the Greek σ , *chlog*, likeness]. 1. Shaped like the letter *S*. 2. Pertaining to the sigmoid flexure of the colon, as the *sigmoid* artery, the *sigmoid* mesocolon. *S. Cavities*, two depressions on the head of the ulna, the greater is for articulation with the humerus, the lesser, on the outer side of the coronoid process, is for articulation with the radius. *S. Flexure*, an *S*-shaped bend in the colon between the descending portion and the rectum, usually occupying the left iliac fossa.

Sigmoido- (*sig-moi-do-*) [*sigmoid*]. A prefix denoting relation to the sigmoid flexure.

Sigmoidopexy (*sig-moid'-o-pek-see*) [*sigmoido-*, *pexis*, a fixing]. An operation for prolapse of the rectum by fixation of the sigmoid flexure.

Sigmoidoproctostomy (*sig-moid'-o-prok-tos'-to-mee*, *sig-moido-*, *proctostomy*). Anastomosis of the sigmoid flexure of the colon with the rectum.

Sigmoidoscope (*sig-moid'-o-skop*) [*sigmoido-*, *scopia*, to view]. An apparatus for the inspection of the sigmoid flexure; it differs from the proctoscope in its greater length and character.

Sigmoidoscopy (*sig-moid'-o-skop-ee*) [see *Sigmoidoscope*]. A visual inspection of the sigmoid flexure with the aid of special instruments.

Sigmoidostomy (*sig-moid'-o-stom-ee*) [*sigmoido-*, *stoma*, mouth]. The formation of an artificial anus in the sigmoid flexure of the colon.

Sign (*sin*) [*signum*, a mark]. A mark or evidence, in a restricted sense, a physical sign. *S.*, Abadie's, a spasm of the levator palpebre superius muscle present in exophthalmic goiter. *S.*, Achilles, the achilles tendon reflex. *S.s* of Adherent Pericardium. See

S., Broadbent's. *S.*, Kewenow's. *S.*, Kuro's. *S.*, N. Sanders'. *S.*, Wilmann's. *S.*, Ahlfeld's, irregular tetanic contractions affecting localized areas of the uterus, observed after the third month of pregnancy. *S. of Alcoholism*. See *S.*, Quinquaud's. *S.*, Allen's, relaxation of the fascia between the costal arch and the thoracic wall in the case of fracture of the neck of the femur. *Adhesive Decubitus*, the position usually assumed by the early stage of pressure sores in the person who seeks to alleviate the pain by lying on the sound side. *S.s* of Anesthesia. See *S.*, Lehman's. *S.s* of Aneurysm. See *S.*, Brodsky's. *S.*, Cardanelli's. *S.*, Cardanelli's. *S.*, Glasgow's. *S.*, Hager's. *S.*, Hager's. *S.*, Johnson's. *S. of Angina pectoris*. See *S.*, Beaumont's. *S.s* of Aortic Insufficiency. See *S.*, Muller's. *S.*, Musset's. *S.*, Musset's. *S.*, Agyll Robertson Pupil, a pupil that does not accommodate but not to light, due to the usual tests for accommodation, and present in locomotor ataxia. *Ataxia, Intestinal*. See *S.*, Boer's. *S.*, Auscultation, bulging of the chest wall, a sign of cases of extensive pneumonia. *S.*, Aufrecht's, short and rapid breathing just above the jugular fossa on placing a stethoscope over the trachea in the case of tracheal stenosis. *S.*, Babinski's, contraction or absence of the plantar reflex when in true spasm as distinguished from spastic relaxation. *S.*, Baccelli's, a sound heard after aqueous, reverberation of the sound heard through the chest wall, a sign of pleural effusion. *S.*, Baillarger's, inequality in paralytic tremor. *S.*, Ballet's, ophthalmoplegia externa, due to the loss of all voluntary movements of the eyeball, with preservation of the involuntary movements and integrity of the innervation of the pupil. It is seen in basilar ganglionic goiter. *S.*, Bamberger's, a clinical perception of a stroke of the limb of one extremity at the same time as it takes place on the other extremity. *S.*, Barro to differentiate between organic and functional strabismus. In the former the rotations of the eyeball increase when the patient follows the physician's finger motion with his eye alternately from right to left and left to right. In the latter the rotations develop under these conditions. *S.*, Barro's. See *Baccelli's*. *S.*, Barro's. *S.*, Barro's, the restriction of the respiratory movements obtained by immersion in a bath of 75° F. in the presence of tracheal stenosis. *S.*, Beaumont's, retrosternal pain in angina pectoris. *S.*, Beccaria's, painful pressure sensation in the occipital region during convulsions. *S.*, Bechterew's. 1. A sign of Reaction. 2. Anesthesia of the lower extremities in tabes dorsalis. *S.*, Becker's, a lancinating pain of the lower extremities.

exophthalmic goiter. **S., Béhier-Hardy's**, aphonia, an early symptom in pulmonary gangrene. **S., Bell's, Bell's Phenomenon**, **Bell-Bernhardt's Phenomenon**, upward and outward rolling of the eyeball upon an attempt to close the eye of the affected side in peripheral facial paralysis. **S., Berger's**, an elliptic or irregular shape of the pupil sometimes seen in the early stage of tabes and paralytic dementia and in paralysis of the third cranial nerve. **Bernhardt's Symptom**, a subjective condition consisting of paresthetic and painful sensations on the outer and anterior aspect of the thigh, in the distribution of the external cutaneous nerve; it is in some cases dependent on displacement of the external cutaneous nerve. **S., Bezold's**, the appearance of an inflammatory swelling a short distance below the apex of the mastoid process is evidence of mastoid suppuration. **S., Bieg's Entotic**, when words are audible only on being spoken into an ear-trumpet connected with a catheter placed in the eustachian tube, but not through the ear-trumpet as ordinarily applied, there is a probable lesion of the malleus or incus, which interferes with conduction. **Biermer's Change of Sound**. See *Gerhardt's Change of Sound* in this table. **S., Biernacki's**, analgesia of the ulnar nerve at the elbow; it is observed in tabes dorsalis and parietic dementia. **S., Bing's**, let a vibrating tuning-fork be held on the vertex until it has ceased to be audible; then close either ear, and the fork will be heard again for a certain period. If this period of secondary perception is shortened, there exists a lesion of the sound-conducting apparatus; if normal and yet deafness is present, the perceptive apparatus is involved. **S., Bird's**, a well-defined zone of dulness with absence of the respiratory sound in hydatid cyst of the lung. **S., Boas's**. 1. The presence of lactic acid in the gastric contents in cases of cancer of the stomach. 2. In cases of intestinal atony a splashing sound can be obtained on pressure upon the abdominal wall after the injection of a small quantity (200 to 300 Cc) of water into the bowel. **S., Bolognini's**, on pressing with the tips of the fingers of both hands alternately upon the right and left of the abdomen of a patient who is lying on his back and whose abdominal muscles are relaxed by flexion of the thighs, a sensation of friction within the abdomen is perceived, it is noted in the early stages of measles. **S., Bordier-Frenkel's**. See *S., Bell's*. **Borsieri's Line**, in the early stages of scarlatina, a line drawn on the skin with the finger-nail leaves a white mark which quickly turns red and becomes smaller in size. **Bouillaud's Metallic Tinkling**, a peculiar clink sometimes heard to the right of the apex-beat in cardiac hypertrophy. **S., Bouveret's**, in intestinal obstruction; this is applicable only to the larger gut. Great distention of the cecum and a large elevation in the right iliac fossa. **S., Boz-**

zolo's, visible pulsation of the arteries of the naves, said to occur in some cases of aneurysm of the thoracic aorta. **Brach-Romberg Symptom**. See *S., Romberg's* (1). **S., Braun-Fernwald's**, an early sign of pregnancy consisting in an increased thickness of one-half of the body of the uterus and in the presence of a longitudinal median groove, these changes being dependent upon an unequal consistence of that organ. **Bright-Beatty's Friction-sound**, **Bright's Friction-sound**, the friction-sound produced by inflammation of the pleura. **S., Broadbent's**, a visible retraction, synchronous with the cardiac systole, of the left side and back in the region of the eleventh and twelfth ribs in adherent pericardium. **Brown-Séquard's Paralysis**, hemiparaplegia with hemianesthesia of opposite side, existing in lesion of lateral half of spinal cord. **S., Browne's (Crichton)**, tremor of the labial commissures and outer angles of the eyes in the early stage of paralytic dementia. **S., Bryson's**, diminished power of expansion of the thorax during inspiration; occasionally observed in exophthalmic goiter and neurasthenia. **S., Burton's**, the blue line at junction of teeth and gums in chronic lead-poisoning. **S., Callaway's**, in dislocation of the humerus the circumference of the affected shoulder, measured over the acromion and through the axilla, is greater than that of the sound side. **S.s of Cancer**. See *S., Boas's* (1); (*de*) *Morgan's Spots*, in this table, *S., Rommeleere's*, *S., Rusch's*, *S., Semon's*, *S., Spiegelberg's*. **S., Cardarelli's**, the lateral movement of the trachea as an indication of aneurysm of the aorta. **S. of Cardiac Hypertrophy**. See *S., Bouillaud's*. **S., Castellino's**. See *S., Cardarelli's*. **S., Cathelineau's**. See *S., Tournelle's* (Gilles de la). **S. of Cerebral Hemorrhage**. See *S., Pricost's*. **S., Charcot's**, signe du sourcil. In facial paralysis the eyebrow is raised; in facial contracture it is lowered. **S., Charcot-Marie's**. See *S., Marie's*. **S., Charcot-Vigouroux's**. See *S., Vigouroux's*. **Cheyne-Stokes' Respiration**, a succession of respirations becoming progressively shorter and more shallow, then an intermission of varying duration, followed by progressive increase in depth and length of respirations; noticed in various affections in which the brain is implicated, such as cerebral edema and uremia. **S. of Chlorosis**. See *S., Goulonbuff's*. **S., Chvostek's**, sudden spasm of one side of the face, elicited by a slight tap upon the side of the face in postoperative tetany. **S., Clark's (Alonzo)**, obliteration of the hepatic dulness due to tympanitic distention of the abdomen; noticed on percussion in appendicitis and other peritoneal inflammations, and denoting the presence of the inflated bowel or of gas in front of the liver. **S., Cleemann's**, in fracture of the femur with shortening there is a wrinkle above the ligamentum patellæ which disappears when the shortening is corrected by extension.

S., Cling [Ger. *Klebe*]. See **S., Gersuny's**.
S., Comby's, a form of stomatitis involving the buccal mucosa, diagnostic of incipient measles. There is slight swelling, and the mucous membrane becomes reddish, the superficial epithelial cells become whitish as if brushed over by a paint-brush. It may occur evenly or in patches. Cf. **Koplik's Spots** in this table.
Corrigan's Line, a purple line at the junction of the teeth with the gums, seen in chronic copper-poisoning.
Corrigan's Pulse, a forcible pulse-wave, which quickly recedes, elicited by finger or sphygmograph in aortic insufficiency. **S. of Coxalgia**. See **S., Erichsen's**. **S., Crichton Browne's**. See **S., Browne's**. **S., Dalrymple's**, abnormal widening of the palpebral aperture, in exophthalmic goiter. **S., Dance's**, a depression about the right flank or iliac fossa, regarded by Dance as indicating invagination of the cecum. **S., Davidsohn's**, reflection of light through the pupil in transillumination by electric light in the mouth; indicative of health. **S., Demarquay's**, immobility or lowering of the larynx during deglutition and phonation; it is characteristic of tracheal syphilis. **S.s of Dementia**. See **S., Brillinger's**, **S., Berger's**, **S., Bieracki's**, **S., Browne's**. **S. of Diabetes**. See **S., Unschuld's**. **Diaphragmatic Phenomenon**. See **Diaphragmatic Phenomenon**. **Dietl's Crises**, sharp paroxysmal pains occurring in case of movable kidney, probably depending on acute hydronephrosis from twisting of ureter. **S. of Dislocation**. See **S., Dugas', N., Hamilton's**. **S., Doane's** (Wm. C.), deafness in one ear in typhoid fever presages death; deafness in both ears is a good prognosis. **Drummond's Whiff**, a whiff heard at the open mouth, in auscultation during respiration, proceeding from the glottis, in aortic aneurysm. **S., Duchenne's**, sinking in of the epigastrium during inspiration in cases of marked hydropericardium or impaired movement of the diaphragm from pressure or paralysis. **Duchenne's Attitude**, in paralysis of the trapezium the shoulder droops, the shoulder-blade seesaws so that its internal edge instead of being parallel to the vertebral column becomes oblique from top to bottom and from without in. **S. Dugas'**, in dislocation of the shoulder-joint the elbow cannot be made to touch the side of the chest when the hand of the affected side is placed on the opposite shoulder. **S., Duncan Bird's**. See **S., Bird's**. **S., Dupuytren's Eggshell**, the sensation of a delicate crepitant shell (eggshell crackling) imparted on slight pressure in certain cases of sarcoma of long bones. **Duroziez's Murmur**, a double murmur occasionally heard by auscultation in the femoral artery, indicative of aortic incompetence. **S. of Echinococcus Cyst**. See **S., Lennhoff's**. **Eitelberg's Test**, if a large tuning-fork is held at intervals before the ear during 15 or 20 minutes, the duration of the percep-

tion of the vibration, during these increases in case the ear is normal, decreases when a lesion of the sound-conducting apparatus exists. **S., Ellis'**. See **Ellis'**. **S. of Enteroptosis**. See **S., S., Erb's**. 1. Increase of the excitability of the motor nerves in tetany; 2. temporary slowing of the pulse on forward or attempting to sit down; 3. observed in neurasthenia. **S., Erichsen's**. See **S., Westphal's**. **S., Erichsen's**, differentiate coxalgia from coxitis by compression of the two iliac bones; pain in the latter but not in the former. **S., Ewart's**, in marked pericarditis the left clavicle is so raised that the upper border of the first rib can be felt by the finger as far as the sternum. **Tubercles**, superficial masses felt by palpation on the surface of the liver in carcinoma. **S., Filipovitch's**, a salmon-colored coloration of the prominent parts of the hands and soles of feet, seen in typhoid fever. **S., First Rib**. See **S., Fisher's Brain-murmur**, a systolic murmur over the anterior fontanel or in the region of infants, heard in aneurysm, rickets and other conditions. **S., Fishson's**. See **S., Bryson's**. **S., Flintlik's**. See **Koplik's Spots** in this table. **Flint's Murmur**, a second murmur frequently heard in auscultation at the apex of the heart, it has a rumbling quality, and is presystolic, and is probably produced by the mitral orifice. It is indicative of incompetence. **Foerster's Shifting**, variations in the field of vision, the metric limits differing according to the position of the disc, determined by moving the disc from the center outward or from without to the center exists in anesthesia of the retina, neuritis, etc. **Fracture**. See **S., Mann's**, **S., Hunter's**, **Morris' Test** in fracture. **S., Frederici's**, perception of the sounds over the whole abdomen in perforative peritonitis, with escape of the peritoneal cavity. **S., Frenkel's**, a lowered tone (hypotonia) of the muscles of the lower extremities in tabes dorsalis. **Friedreich's Respiratory Change**, on percussion, the pitch of the sound becomes increased at the height of inspiration in pulmonary tubercle and other conditions. **S., Friedreich's**, collapse of the cervical veins, noted on palpation or inspection, in adherent peritonitis. **S., Fuerbringer's**, a subjective sensation may be distinguished from a sensation above the diaphragm by the presence of the former, of the respiratory movements to a needle inserted into the chest. **S., Gangolphe's**, in intracranial hemorrhage, after strangulation has taken place. **Gangrene**. See **S., Rickard's**.

diner-Brown's Test, in labyrinthine disease the patient ceases to hear the sound of a tuning-fork placed upon the vertex from half a second to several seconds before the examiner ceases to feel its vibrations. **S., Garel's**, absence of luminous perception on the affected side of the walls and sinuses about the mouth—antrum of Highmore; elicited by electric transillumination in disease of the antrum. **Garland's S-curve**. See *Line, Ellis'*. **Gastrosuccorhea**. See *S., Reichmann's*. **Gellé's Test**, the vibrations of a tuning-fork placed in contact with a rubber tube, the nozzle of which is inserted into the meatus, are distinctly perceived when the air is compressed by pressure upon the bulb attached to the tube. This does not occur when the chain of ossicles is diseased. **Gerhardt's Change of Sound**, a change of percussion-note according to the patient's position, whether upright, lying on the back, or on the side; due to changes in the form of the air-space and fluid contents of the thoracic cavity; it is found in pneumothorax and pulmonary tuberculosis. **S., Gerhardt's**.

1. A systolic bruit heard between the mastoid process and spinal column in cases of aneurysm of the vertebral artery. 2. Incomplete filling of the external jugular vein on the affected side, occasionally seen in thrombosis of the transverse sinus. 3. A band of dullness on percussion, superimposed upon the normal precordial dullness, about 3 cm. in width and extending toward the left clavicle; it is observed in cases of the persistence of the ductus arteriosus. 4. The absence of the movement of the larynx in dyspnea due to aneurysm of the aorta. In dyspnea from other causes the excursions of the larynx are extensive. **S., Gersuny's**, a peculiar sensation of adhesion of the mucosa of the bowel to the fecal mass while pressure is made with the tips of the fingers in cases of coprostasis. *Syn., Cling sign.* **Giraldès' "Bonnet à poil,"** widening of the cranium in the frontal region in chronic hydrocephalus. **S., Glasgow's**, a systolic sound in the bronchial artery, heard in latent aneurysm of the aorta. **S. of Goiter, Exophthalmic**. See *S., Ballet's, S., Becker's, S., Bryson's, S., Joffroy's (1), S., Mann's (Dixon), S., Möbius', S., Vigouroux's, S., Weiss'*. **S., Golonboff's**, of chlorosis, an acute pain located directly over the spleen, and pain on percussion over the ends of the long bones, especially the tibiae. **Goodell's Law**, "when the cervix is as hard as one's nose, pregnancy does not exist, when it is as soft as one's lips, pregnancy is probable." **S., Gould's Bowed-head**, in retinitis pigmentosa or other disease destroying the peripheral portion of the retina, the patient often bows the head low to see the pavement, in order to bring the image upon the functional portion of the retina. **S., Gousset's**, of phrenic neuralgia, a painful point always present and well defined to the right of the fourth or fifth

chondrosternal articulation; it must not be confounded with the retrosternal pain of chronic aortitis. **S., Gowers'**, intermittent and abrupt oscillations of the iris under the influence of light, previous probably to the total loss of the reflex; it is occasionally seen in *tabes dorsalis*. **S., v. Graefe's**, failure of the upper lid to follow the eyeball in glancing downward, elicited in exophthalmic goiter by having the patient alternately rotate the eyes up and down. **v. Graefe's Spots**, certain spots near the supraorbital foramen, or over the vertebrae, which, when pressed upon, cause a sudden relaxation of the spasm of the eyelids in cases of blepharofacial spasm. **S., Grancher's**, on auscultation in pulmonary condensation the expiratory murmur equals in pitch that of the inspiratory, evidencing obstruction to expired air. **Grancher's Triad**, the three symptoms characteristic of incipient pulmonary tuberculosis: weakened vesicular murmur, increased vocal fremitus, and skodaic resonance. **S., Graves'**, an increase of the systolic impulse often noted in the beginning of pericarditis. **S., Greene's (C. L.) Percussion**, in percussion of the free cardiac border during full inspiration and again during forced inspiration, the patient either standing or sitting, it will be noticed that the border is displaced outward by the expiratory movement in cases of pleuritic effusion. **S., Griesinger's**. 1. An edematous swelling behind the mastoid process in thrombosis of the transverse sinus. 2. In thrombosis of the basilar artery, compression of the carotids produces symptoms of cerebral anemia (pallor, syncope, convulsions). This is a sign of doubtful value, since it may also be caused by disturbances of the cerebral circulation resulting from cardiac and vascular lesions (especially arteriosclerosis). **S., Grisolle's**, the early eruption of smallpox is distinguished from that of measles by the fact that the papules remain distinct to the touch even when the skin is tightly stretched. **Gubler's Tumor**, a prominence seen on the dorsum of the carpus by flexing the carpus in wrist-drop of chronic lead-poisoning, denoting probably some effusion into the synovial sacs. **S., Guye's**, aprosexia occurring in childhood with adenoid vegetations of the nasopharynx. **S., Guyon's**, renal ballotement by palpation in floating kidney. **S., Haab's**. See *Haab's Pupil Reflex*. **Hall's Marshall Facies**, the prominent forehead and small features peculiar to hydrocephalus. **Hamilton's Test**, in dislocation of the shoulder-joint a ruler applied to the dislocated humerus may be made to touch the acromion and external condyle at the same time. **S., Hardy-Béhier's**. See *S., Béhier-Hardy's*. **Heberden's Nodosities**, hard nodules, usually on the distal joints of the fingers, discernible by palpation in rheumatoid arthritis, usually in advanced life. **S., Hegar's**, a softening of the lower uterine segment

elicited by the forefinger in the rectum and the thumb in the vagina, with pressure from above, and valuable as a sign of pregnancy. **S., Heim-Kreyssig's.** See **S., Kreyssig's.** **S., Heim-Sanders'.** See **S., Sanders'.** **S. of Hemiplegia.** See **S., Bubinski's** and **Schaeffer's Reflex** in this table. **S., Heryng's,** an infraorbital shadow observed on introducing an electric light into the mouth in empyema of the antrum of Highmore. **S., Hick's (Braxton),** intermittent uterine contraction noticed on palpation. Begins to be apparent at end of third month of pregnancy. May also be produced by any tumor that distends uterus. **Hippocratic Facies,** an anxious face, with pinched features and sunken eyes, produced by involuntary contraction of the facial muscles occurring in peritonitis and fatal diseases. **Hippocratic Fingers,** clubbing of the finger-tips, with incurvation of the nails, occurring in pulmonary tuberculosis and other wasting diseases. **Hippocratic Succussion,** a splashing sound obtained by shaking the body of the patient in pyopneumothorax and hydropneumothorax, and denoting the presence of air and fluid in the pleural cavity. **S., Hochsinger's,** the existence of indicanuria in tuberculosis of childhood. **S., Hoffmann's,** increase of the mechanic irritability of the sensory nerves in tetany. **S., Hope's,** double cardiac beat noted in aneurysm of the aorta. **S., Howship-Romberg's.** See **S., Romberg's (1).** **S., Huchard's,** the difference in the pulse between the standing and recumbent posture is less in persons with arterial hypertension, and may even be the reverse of that of the normal condition. **S., Huebl's,** an early sign of pregnancy consisting in an abnormal thinness and compressibility of the lower segment of the uterus as compared with that part above the insertion of the sacro-uterine ligaments, the bimanual examination being carried out with one finger in the rectum. **S., Hueter's,** absence of transmission of osseous vibration in cases of fracture with fibrous interposition between the fragments. **Hutchinson's Patch,** a dull red discoloration of the cornea, due to ciliary injection in interstitial keratitis occurring in syphilis. **Hutchinson's Teeth,** the upper central permanent incisor teeth are peg-shaped and notched on the cutting-edge in inherited syphilis. **Hutchinson's Trio of Symptoms,** notched teeth, interstitial keratitis, and otitis, denoting inherited syphilis. **S. of Hydatid Cyst.** See **S., Rovicht's.** **S. of Hysteria.** See **S., Ballet's,** **S., Putnam's,** **S., Tourette's,** **S., Weier's.** **S. of Intestinal Obstruction.** See **S., Bouveret's,** **S., Gangolphe's,** **S., Germain's,** **S., Schlange's,** **S., v. Wahl's.** **S., Jacoud's,** prominence of the aorta in the supra-sternal notch in leukemia and pseudoleukemia. **S., Jacquemier's,** blue coloration of the vaginal mucosa appearing about the twelfth week of pregnancy. **S., Jacquemin's,** violet color of the mucous membrane of

vagina; appears about the fourth gestation, and due to venous congestion. **Jadelot's Lines,** various lines on the infants occurring in various conditions. See **Jadelot's Lines.** **S.,** the flow of pus from a tube inserted subdiaphragmatic abscess is more during inspiration than during expiration if the collection is thoracic, the inverse true. Paralysis of the diaphragm the manifestation of this sign. **S., J.** **r.** Absence of facial contraction when patient suddenly turns his eyes upward in exophthalmic goiter. **2.** Phrenic la hanche. Rhythmic twitching of the on pressure upon the gluteal region of spastic paraplegia and sciatica. **3.** **senne's,** the pulse does not become rated on changing from the horizontal erect position; an indication of pericarditis. **4.** **S., Josseraud's,** a peculiar loud, sound, heard over the pulmonary area preceding the friction-sound in acute carditis. **Justus' Test,** transient of hemoglobin following the administration of mercury by inunction or hypodermic injection in syphilis. **S., Keen's,** creased diameter through the leg malleoli, shown by measurement of the fracture of the fibula. **S., Kelley's,** aural effusion in children. a preference upon the back or propped up high in avoidance of bending toward or from the affected side. **S., Kellock's,** vibration of the ribs on sharp percussion with the right hand, the patient placed flatly and firmly on the lower thoracic wall, just below the nipple, elicited in pleural effusion. **S., Keil's** of pregnancy, the umbilical or navel. **S., Kernig's,** contracture of flexion knee and hip-joint, at times also of the when the patient is made to assume the posture; it is noticed in meningitis. **Klebe (Ger).** See **S., Germain's.** **Symptom-complex.** **1.** Alternating long period, of constipation and early irregular attacks of colic which are of short duration and terminate in During these attacks the abdomen distended, there exists frequently a peristalsis, and a loud gurgling is heard in the epigastric region. These symptoms are characteristic of tuberculous stenosis of the small intestine. **2.** Blue-blindness in granular kidney. **3.** **lik's Spots,** minute bluish-white spots surrounded by a reddish areola, observed on the mucous membrane of the cheeks during the prodromal stage of measles. **4.** **Kreyssig's,** retraction of the epigastric the contiguous portions of the ribs in each systole, in adherent pericarditis. **5.** **Krisowski's,** of congenital syphilis, lines about the mouth and the hard palate with the posterior pharynx by fibrous tissue. **S., Kussmaul's,** of the cervical veins during inspiration.

adherent pericardium and mediastinal tumor. **S., Küster's**, the presence of a cystic tumor in the median line anterior to the uterus, disclosed by palpation and inspection; usually indicates ovarian dermoids. **S. of Labyrinthine Disease.** See *Gardner-Brown's Test* in this table. **Laennec's Perles**, rounded gelatinous masses, the mucous molds of the smaller bronchial tubes, in the sputum in bronchial asthma. **Laennec's Rale**, a modified subcrepitant rale, perceptible on auscultation in pulmonary emphysema caused by mucus in the bronchioles. **S., Lancisi's**, very feeble heart-beats, amounting to a trembling of the heart, perceived by palpation in grave myocarditis. **S., Landou's**, in diagnosis of malignant disease inability to grasp the uterus bimanually in the presence of slight ascites. **S., Lasègue's**. 1. Incapacity of the anesthetic hysteric individual to move the extremity which he is prevented from seeing. 2. To differentiate sciatica from hip-joint disease: in the case of the former, flexion of the thigh upon the hip is painless or easily accomplished when the knee is bent. **S., Lehman's**, in the administration of chloroform, to prognosticate as to a ready or difficult anesthesia, if the eyelids closed by the anesthetic reopen at once, wholly or in part, the anesthesia will be difficult. The eyes will remain closed from the beginning in those who take chloroform well. **S., Lennhoff's**, in cases of echinococcus-cyst on deep inspiration a furrow forms above the tumor between it and the edge of the ribs. **S., Leyden's**, in cases of subphrenic pyopneumothorax manometric observation shows that the pressure in the abscess cavity rises during expiration. The reverse was held by Leyden to occur in true pneumothorax. **S., Litten's**. See *Diaphragmatic Phenomenon*. **S., Lucas'**, distention of the abdomen, an early sign of rickets. **S., Macewen's**, increased resonance on combined percussion and auscultation of the skull in certain gross lesions of the intracranial contents—e. g., in cerebral abscess or over-distended lateral ventricles. **S., Magnan's**, in chronic cocaineism, hallucination of cutaneous sensibility, characterized by a sensation of foreign bodies under the skin, which are described as inert and spheric, varying in size from a grain to a nut, or as living things—worms, bugs, etc. **S., Mann's**, diminished resistance of the scalp to the galvanic current in traumatic neuroses. **S., Mann's (Dixon)**, a disturbance of the normal balance of the muscles in the two orbits, so that one eye appears to be on a lower level than the other; it is seen in exophthalmic goiter and other affections characterized by exophthalmia. **S., Mannkopf's**, an increase in the frequency of the pulse, obtained by pressure on peripheral points in the presence of pain, it is not present in simulated pain. **S., Marie's**, **S., Marie-Kahler's**, tremor of the extremities or the whole body in exoph-

thalmic goiter. **S., Mayor's**, of pregnancy the fetal heart-sounds. **S.s of Measles.** See **S., Bolognini's**, **S., Comby's**, **Koplik's Spots**, in this table, **S., Meunier's**. **S., Meltzer's**, normally, on auscultation of the heart (at the side of the xiphoid appendix) there is heard, after swallowing, a first sound produced by the flowing of fine drops, and six or seven seconds after, a glou-glou. According to Meltzer, the second sound fails in the case of occlusion or pronounced contraction of the lower part of the esophagus. **S.s of Meningitis.** See **S., Kernig's**, **S., Roger's**, **S., Simon's**, **S., Squire's**. **S., Meunier's**, of measles, a daily loss of weight noticed four or five days after contagion. This may amount to 50 Gm. daily, commencing five or six days before the appearance of catarrhal or febrile symptoms. **S., Meyer's**, numbness of the hands or feet associated with formation. It is observed in the eruptive stage of scarlatina. **S.s of Middle-ear Disease.** See *Poltzer's Test* and *Schwabach's Test* in this table. **S., Möbius'**, inability to retain the eyeballs in convergence in exophthalmic goiter. **Morgan's (de) Spots**, bright red nevoid spots frequently seen in the skin in cases of cancer. **Morris' Test**, a rod, graduated from the center and provided with sliding pointers, is placed across the abdomen, so that its center corresponds to the median line of the body, and the pointers are moved along it until they reach the outer surface of the greater trochanter. In cases of fracture of the neck of the femur a discrepancy will be found on comparing the measurements on the two sides of the body. **S., Müller's**, pulsation of the tonsils and soft palate in cases of aortic insufficiency. **S., Murat's**, pulmonary tuberculosis, vibration of the affected part of the chest with a sense of discomfort while talking aloud. **S., Musset's** (named from the poet de Musset, who presented the phenomenon), rhythmic movements of the head synchronous with the radial pulse, observed in persons with an aortic affection; it is considered a pathognomonic sign of an affection of the circulatory system. **Mussey's (de) Point**, **M.'s Symptom**, "bouton diaphragmatique," a point intensely painful on pressure at the intersection of a line continuous with the left border of the sternum and of another forming a prolongation of the tenth rib. It is noted in diaphragmatic pleurisy. **S. of Myocarditis.** See **S., Lancisi's**. **S. of Myopia.** See **S., Weiss'**. **S. of Nephrolithiasis.** See **S., Thornton's**. **S.s of Neuralgia.** See **S., Goussel's**, **S., Seeligmüller's**, **S., Trousseau's**. **S.s of Neurasthenia.** See **S., Bryson's**, **Erben's Phenomenon**, in this table, **S., Rosenbach's** (2), **S., Stiller's**, **S., Weiss'**. **S. of Neuroses, Traumatic.** See **S., Rumpf's**. **S., Nothnagel's**, paralysis of the facial muscles, which is less marked on voluntary movements than on movements connected

S. of Palsy, S. of Paralysis. See *S. of Palsy*.
See S., Bell's, S., Berger's, Duchenne's At-
titude, in this table. *S., Joffroy's (2), S.*
Reverdi's. **Parkinson's Facies**, in paraly-
 sis agitata the face is expressionless
 "wooden"; movements of the lips slow
 eyebrows elevated. The whole expression
 is immobile and mask-like. **Parkinson's**
Mask. See *Parkinson's Facies* in this table.
Parrot's Nodes, osteophytes of the skull, of
 syphilitic origin, noticeable on palpation if
 inherited syphilis. *S., Parrot's*, dilation
 of the pupil produced by pinching the skin of
 the neck in meningitis. *S., Paul's*, a feeble
 apex-beat with a forcible impulse over the
 body of the heart, obtained by palpation in
 pericarditis, significant of pericardial adhe-
 sions. *S., Perez's*, a loud friction murmur
 heard over the sternum when the patient raises
 his arms, especially the left, over his head
 and lets them fall again. It is noted in cases of
 aneurysm of the arch of the aorta and con-
 dylar tumors. **S.s of Pericardial Effu-**
sion. See *S., Auenbrugger's, S., Ewart's, S.,*
Rotch's, S., Sanson's (1), Sibson's Notch, in
 this table. **S.s of Pericarditis.** See *S.,*
Graves', S., Jasseraud's, S., Oppolzer's, S. War-
thin's. **S. of Perigastritis.** See *S., Rosen-*
heim's. **S. of Peritonitis.** See *S., Frederic's,*
S., Pfuhl's, S., P.-Jaffé's, in subphrenic pyo-
 pneumothorax the liquid issues from the
 exploratory puncture or incision with con-
 siderable force during inspiration, while the
 contrary occurs in true pneumothorax. **S.s,**
Physical, the symptoms derived from auscul-
 tation, percussion, etc. *S., Pinard's*, after
 the sixth month of pregnancy a sharp pain
 upon pressure over the fundus uteri is fre-
 quently a sign of breech presentation. *S.,*
Pitres', or "Signe du couteau." The angle
 formed by the axis of the sternum and the

affected side only; it is observed in paralysis of the superior facial nerve. **S. of Rickets.** See **S., Lucas'.** **S., Rinmann's,** of early pregnancy: slender cords radiating from the nipple; they are considered to be hypertrophic acini of the glands. **Rinné's Test,** if a vibrating tuning-fork is placed on the vertex, and then, before it has ceased to vibrate, is held before a normal ear, the vibration is still distinctly perceived. The test is negative when a lesion exists. **S., Ripault's,** a change in the shape of the pupil on pressure upon the eye, transitory during life, but permanent after death. **Ritter's Tetanus,** tetanus of a muscle produced in a healthy subject by suddenly breaking the circuit while a strong constant current is passing through a nerve. **Ritter-Rollet Phenomenon,** flexion of the foot by gentle electric stimulation. Extension of the foot by energetic stimulation, voltaic or faradic stimulation may be used. **S., Roger's,** subnormal temperature during the third stage of tuberculous meningitis, regarded by Roger as pathognomonic of the disease. **S., Romberg's.** 1. Swaying of the body and inability to stand when the eyes are closed and the feet placed together; it is seen in locomotor ataxia, exophthalmic goiter, tabes dorsalis, hereditary cerebellar ataxia, etc. 2. Neuralgic pain in the course and distribution of the obturator nerve, pathognomonic of obturator hernia. **S., Rommelaere's,** diminution of the normal phosphates and chlorides of sodium in the urine is pathognomonic of cancerous cachexia. **S., Rosenbach's.** 1. Loss of the abdominal reflex in inflammatory intestinal diseases. 2. Tremor of the eyelids when the patient is asked to close them, often with insufficient closure of the lids. It is seen in neurasthenia. **S., Rosenheim's,** a friction-sound heard on auscultation over the left hypochondrium in fibrous perigastritis. **Rosenthal's Hyperacid Vomiting,** the vomiting of very acid material, indicative of exaggerated secretion of HCl in the gastric juice—Rosbach's disease. **S., Rosenthal's,** the application of a strong faradic current to the sides of the vertebral column causes burning and stabbing pains in cases of spondylitis. **S., Roser-Braun's,** absence of pulsations of the dura in cases of cerebral abscess, tumor, etc. **S., Rotch's,** dullness on percussion in the right fifth intercostal space in pericardial effusion. **Rotth's Spots,** white spots, resembling those of albuminuric retinitis, seen in the region of the optic disc and the macula in cases of septic meningitis. **S., Roussel's,** a sharp pain caused by light percussion, in the subclavicular region between the clavicle and the third or fourth rib, originating 3 to 4 cm. from the median line and extending to and beyond the shoulder and the supraspinal fossa; it is observed inipient tuberculosis. **S., Roux's,** of suppurative appendicitis: on palpation the cecum presents a special soft resistance comparable to that of a wet pasteboard tube.

S., Rovighi's, hydatid fremitus: a thrill observed on combined palpation and percussion in cases of superficial hydatid cyst of the liver. **S., Rumpf's,** fibrillar twitching of muscles in traumatic neuroses. **S., Rust's,** at every change of position of the body a patient suffering from caries or carcinoma of the upper cervical vertebrae supports his head with the hand. **S., Sanders',** undulatory character of the cardiac impulse, most marked in the epigastric region, in adherent pericardium. **Sänger's Macula,** macula gonorrhoeica, a bright red spot marking the orifice of the duct of Bartholin's gland in cases of gonorrheal vulvitis. **Sänger's Pupil-reaction,** for the differential diagnosis of cerebral syphilis and tabes: in amaurosis and optic atrophy of cerebral syphilis the pupil-reflex to light may be preserved and even increased after a protracted stay in the dark, which is never the case in tabes dorsalis. **S., Sansom's.** 1. Considerable extension of dullness in the second and third intercostal spaces in pericardial effusion. 2. A rhythmic murmur transmitted through the air in the mouth when the lips of the patient are applied to the chestpiece of the stethoscope; it is heard in cases of aortic aneurysm. **S., Sarbo's,** analgesia of the peroneal nerve, occasionally observed in tabes dorsalis. **S.s. of Scarlatina.** See **Bursieri's Line,** in this table. **S., Meyer's.** **S., Schaefer's.** 1. Of pregnancy, a characteristic discoloration in stripes, reddish on a livid background, which appears in the neighborhood of the urethra or on the vestibule of the vagina. The stripes run for the most part crosswise or oblique. The condition is regarded as due to a vasomotor reaction dependent upon the life of the child, as the stripes disappear as soon as the child within the womb is dead. 2. Of hemiplegia: See **Schaefer's Reflex.** **S., Schlange's,** in cases of intestinal obstruction the intestine is dilated above the seat of obstruction and peristaltic movements are absent below that point. **Schönlein's Triad,** purpuric exanthem, rheumatic phenomena, and gastrointestinal disorders in purpura rheumatica. **S., Schuele's,** vertical folds between the eyebrows, forming the Greek letter omega (ω , *omega melancholicum*), frequently seen in subjects of melancholia. **S., Schultze-Chvostek's.** See **S., Chvostek's.** **Schwabach's Test,** the duration of the perception of a vibrating tuning-fork placed upon the cranium is prolonged beyond the normal in cases of middle-ear disease, but shortened when the deafness is due to a central cause. **S.s of Sciatica.** See **S., Babinski's.** **S., Joffroy's (2).** **S., Laségue's.** **S., Seeligmüller,** mydriasis on the affected side in cases of neuralgia. **Seguin's Signal Symptom,** the involuntary contraction of one muscle or group of muscles preceding the epileptic attack. **S., Semon's,** impaired mobility of the vocal cord in carcinoma of the larynx. **Sibson's Notch,** the inward curve of the upper left border of pre-

confial dulness in acute pericardial effusion. **S., Sieur's**, "signe du sou," a clear, metallic sound sometimes heard in cases of pleural effusion on percussing the chest in front with two coins and auscultating behind. **S., Silex's**, radial furrows about the mouth, and coincidentally in other parts of the face; a pathognomonic sign of congenital syphilis. **S., Simon's**, immobility or retraction of the umbilicus during inspiration, sometimes seen in tuberculous meningitis. **Skeer's Symptom**, a small circle that forms in the iris near the pupil in both eyes simultaneously in tuberculous meningitis. **Skoda's Consonating Rales**, bronchial rales heard through consolidated pulmonary tissue on auscultation in pneumonia, caused by mucus in the bronchial tubes surrounded by consolidated structure. **S., Skoda's S., Resonance, S., Tympany**, a tympanitic note on percussing the chest above a large pleural effusion or above the line of consolidation in pneumonia, heard when a pleural effusion extends up to the fourth rib or above, and indicating vicarious action of the portion of lung not involved (apex or upper lobe). **S. of Smallpox**. See **S., Grisolle's**. **S., Smith's** (Hastax), of bronchitis: a murmur audible over the sternum when the chin is drawn up. **S. of the Sou**. See **S., Sieur's**. **Spence's Test**, a tumor of the mammary gland can be distinguished from an inflammatory enlargement by the absence, in the latter case, of any tumefaction, there being only the lumpy and wormy sensation of the swollen acini and ducts. **S., Spiegelberg's**, a sensation like that of passing over wet india rubber, imparted to the finger which presses on, and moves along, the affected part. It is noted in cancer of the cervix uteri. **Spondylitis**. See **S., Rosenthal's**. **S., Squires' (G. W.)**, a rhythmic dilation and contraction of the pupil in basilar meningitis. **S., Stairs**, difficulty in descending stairs, one of the early symptoms of locomotor ataxia. **S., Steele's**, exaggerated pulsation over the whole area of the cardiac region, it is noted in intra-thoracic tumor. **S., Stellwag's**, an apparent widening of the palpebral aperture, seen on retraction of upper eyelid, and occurring in exophthalmic goiter. **S.s of Stenosis**. See **S., Lapresch's**, **S., Reinhold's**, **Traube's Phenomenon**, in this table. **S., Stiller's**, marked probability or fluctuation of the touch rib in neurasthenia and enteritis. See, *Costa fluctuans decubitus*. **S., Stokes'**, 1. Violent throbbing in the abdomen to the right of the umbilicus on palpation occurring in acute enteritis. 2. Marked feebleness of the first heart sound, which calls for alcohol stimulation if it occurs during fever. **S., Straus'**, in facial paralysis from a central cause the hypodermic injection of pilocarpin causes no appreciable difference in the perspiration of the two sides, either as to time or quantity, whereas there is a marked retardation of the

secretion on the affected side in peripheral paralysis. **S., Strauss'**, striation of fatty food by the tongue, an increase in the amount of fatty in the effusion of chylous ascites, subjective, one recognized only by **S.s of Syphilis**. See **S., Duret's**, **Justus', S., Accumbis', S., Bamberger's**. **S.s of Tabes**. See **S., S., Berger's**, **S., Rosenbach's**, **S., Gowers', S., Pitres', S., Romberg's (1), Singer's**. **P. of this table**, **S., Simeon's**. **Tache**, the appearance of a red line at the finger-nail over the call in tuberculous meningitis, and other conditions. **S., Tachycardia**, effacement of the angle between the lower uterine segments, found on examination, occurring in pregnancy indicating inevitable abortion. **Tanovsky's**, in cases of peritonitis with intestinal perforation a note heard on abdominal auscultation, respiratory movement, and in maximum intensity is situated at the site of the perforation. **S.s of T. Beckers', Reaction**, **S., Tachycardia**, **S., Weiss'**. **S., Tachycardia**, violent pain in the back, lithiasis. **S., Tourette's**, red invasion of the ratio between the earthy phosphates of the urine, if paroxysms of hysteria. **Traube-enon**, a double sound, or note, heard over peripheral arteries, femoral, in aortic aneurysm, also in mitral stenosis, etc. **S., Tresilian's**, of mumps, and Stenson's duct on the inner cheek, outside the second upper incisor, comes a bright red papule. **S., enlargement of the left lymph glands**, an indication of disease of the intercalary gland. **Trousseau's, T.'s Phenomenon**, a spasm, which continues as long as is applied on the large artery of the trunk in tetany, showing a muscular irritability. **Trousseau's apophyses**, points, seen over the dorsal and lumbar vertebrae, and the base of the skull. **Trousseau's Spots**, see **S., Trousseau's**, in this table. **S.s of Typhoid**. **Warrington's Reaction**, **S., Weiss'**, **S., Mural's**, **S., Turner's**. See **S., Nuchal**, **Braun's**, **Spence's Test**, in this table. **S.s of Typhoid**. **Reaction**, **S., Duret's**, **S., Ulnar Phenomenon**, a redness of the trunk of the arm, and a redness of the

patients. **S.**, **Unschuld's**, a tendency to cramps in the calf of the leg; it is an early sign in diabetes. **Valleix's Points**, tender spots along the course of a nerve, noticeable on pressure in neuralgia. **S.**, **Vigouroux's**, diminished resistance of the skin to electric stimulation in exophthalmic goiter. **S.**, **Vincet's**. See **Argyll Robertson Pupil** in this table. **S.**, **Vohsen-Davidsohn's**. See **S.**, **Davidsohn's**. **S.**, **Voltolini-Heryng's**. See **S.**, **Heryng's**. **S.**, (von) **Wahl's**. 1. Distention of the bowel (local meteorism) above the point at which there exists an obstruction. 2. A scraping or blowing sound, synchronous with the cardiac impulse, heard over an arterial trunk immediately after the partial division, through injury, of the vessel. **S.**, **Warthin's**, accentuation of the pulmonary sound in acute pericarditis. **S.**, **Weber's**, paralysis of the oculomotor nerve of one side and hemiplegia of the opposite side. **S.**, **Wegner's**, in fetal syphilis the dividing line between the epiphysis and diaphysis of long bones, which under normal conditions is delicate and rectilinear, appears as a broad, irregular, yellowish line. **S.**, **Weiss**, "facialis phenomenon," contraction of the facial muscles upon light percussion; it is noticed in tetany, neurasthenia, hysteria, and exophthalmic goiter. **S.**, **Wernicke's**. See **Reaction, Hemianopic Pupillary**. **Westphal's Foot-phenomenon**, ankleclonus, obtained by suddenly flexing the foot on the leg in lateral sclerosis and various other conditions. **Westphal's Paradoxical Contraction**, the tonic contraction of the anterior tibial muscle caused by the passive approximation of its extremities by rapid dorsal flexion of the foot, occurring in paralysis agitans (Westphal) and sclerosis of the posterolateral columns of the cord. **S.**, **Westphal's**, abolition of the knee jerk in locomotor ataxia, destructive lesions of the lower part of the cord, peripheral neuritis, etc. **Westphal-Erb symptom**. Same as **S.**, **Westphal's**. **S.**, **Williams'**, diminished inspiratory expansion on the left side in adherent pericardium. **Williams' Tracheal Tone**, a dull tympanitic resonance, becoming higher pitched on opening the mouth, heard on percussion in pleural effusion, and arising from the vibration of air in a large bronchus surrounded by compressed lung. **S.**, **Winckel's**, change in the pitch on percussion when the mouth is opened and closed in tuberculosis of lung, and indicating a pulmonary cavity. **S.** (*sig'-nah*) [*sign*]. Mark. In prescription-writing, a term placed before the physician's directions to the patient concerning the medicine prescribed; abbreviated to **S.** or **Sig.** **pletic** (*sig-nal-el'-ik*). Relating to signalization. **Signalment** (*sig-nal-i-za'-shun*, *se-nal-ment*). See **Bertillonage and Identification, Bertillon System of**. **Structure** (*sig'-nat-ur*) [*sign*]. 1. The part of

the prescription that is to be placed on the label. 2. A distinguishing character. **S.**, **Doctrine of**, a theory that the medicinal uses of plants or other objects can be determined from the signatures or peculiar characters. **Siguatera** (*si'-wah-te'-rah*) [*Sp.*, "fish-poisoning"). 1. The name given by Spanish colonists to a complex of symptoms that resulted from eating poisonous fishes indigenous to certain hot countries. 2. Poisoning from the ingestion of fresh food uninfected by bacteria, but in which the toxin is a leukomain formed by the physiologic activity of the tissues.

Sikimin (*sik'-im-in*) [*sikhim*, a region of the Himalaya]. A poisonous principle derived from *Illicium religiosum*.

Silberol (*sil'-ber-ol*). See **Silver Paraphenol-sulfonate**.

Silent Region of the Spinal Cord. The gray matter of the cord.

Silica (*sil'-ik-oh*) [*silica*, flint]. Silicon dioxide, SiO_2 , occurring in nature in the form of quartz, flint, and other minerals.

Silicate (*sil'-ik-at*) [*silica*]. A salt of silicic acid.

Silicic Acid (*sil'-is'-ik*) [*silica*], H_2SiO_4 . A tetrabasic acid forming the silicates. See **Sodium Silicate**.

Silicon (*sil'-ik-on*) [*silica*]. A nonmetallic element occurring widely distributed in nature as silica, SiO_2 , and in the form of silicates. Atomic weight 28.2; symbol **Si**; valence IV. It resembles carbon in its chemie behavior. **S. Carbid**, a compound prepared by heating in an electric furnace silica and carbon in the presence of salt. Next to the diamond it is the hardest substance known. The pure salt forms colorless, transparent laminae of diamond-like luster. Its specific gravity is 3.22 and its index of hardness 9.5. **S. Tetracetate**, $\text{Si}(\text{O} \cdot \text{C}_2\text{H}_3\text{O}_2)_4$, acetoorthosilicic anhydride, a substance occurring in prismatic crystals.

Silicosis (*sil'-ik-o'-sis*) [*silica*]. A deposit of particles of silica in the tissues; specifically, a chronic fibroid condition of the lung or the bronchial lymphatic glands, produced by the inhalation of particles of silica.

Siliqua (*sil'-ik'-wah*) [*siliqua*, a husk or pod; pl., *siliquae*]. Same as **Siliqua**. **S. olivæ**, **S. olivæ externa**, the nerve-fibers encircling the olive. **S. olivæ interna**, dentoliva.

Siliqua (*sil'-ik'*) [*siliqua*, a husk or pod]. In biology, the slender, two-valved capsule of some *Cruciferae*.

Silk [**ME.**]. The simplest and most perfect of the textile fibers. It differs from all other fibers in that it is found in nature as a continuous fine thread. Silk is the product of the silkworm (*Bombyx mori*), and is simply the fiber that the worm spins around itself for protection when entering the pupa or chrysalis state. The silk-fiber consists, to the extent of rather more than half its weight, of fibroin, $\text{C}_{16}\text{H}_{22}\text{N}_4\text{O}_6$, a nitrogenous principle. Covering this is the silk-glue, or sericin, $\text{C}_{10}\text{H}_{12}\text{O}_6$.

$H_2N_2O_5$. The most important physical properties of the silk-fiber are its luster, strength, and avidity for moisture. Besides the true silk, we have several so-called "wild silks," the most important of which is the *tussar silk*, the product of the larva of the moth, *Antheraea mylitta*, found in India. The cocoons are much larger than those of the true silkworm, are egg-shaped, and of a silvery drab color. The cocoon is very firm and hard, and the silk is of a drab color. It is used for the buff-colored Indian silks, and latterly largely in the manufacture of silk plush. Other wild silks are the *eria silk* of India, the *muga silk* of Assam, the *allas* or *jagora silk* of China, and the *wama-mai silk* of Japan. Silk has been used as a hemostatic. S., **Epispastic**, silk containing some vesicant. S. **Floss**, **Dentists'**, untwisted filaments of fine silk prepared expressly for the purpose of cleaning the surfaces of the teeth, and used by some dentists for finishing the surfaces of fillings in the sides of teeth. S. **Gelatin**, a glutinous mass formed by boiling certain kinds of raw silk in water. It is used in bacteriology as a culture-medium for the majority of bacilli of water and air. S.-**grass**, pineapple fiber. S., **Saddler's**, a heavy silk used by saddlers and to some extent in surgery. S., **Tait's**, cable twist; it differs from ordinary silk in containing the gums or animal matter imparted by the worm in the spinning process.

Silkworm-gut. The thread drawn from the silkworm killed when ready to spin the cocoon.

Silphologic (sil'-ol-og'i-ke) [*silph*, an insect; *logos*, science] Larval

Silver. See **Argentum**. **S. Arsenite**, Ag_2AsO_3 , an alterative and antiseptic, used in skin diseases. Dose $\frac{1}{10}$ to $\frac{1}{2}$ gr. to 1000-6000 (Gm.). **S. casein**, a fine white powder, soluble in hot water obtained from sodium casein by action of silver nitrate and alcohol. It is used in gonorrhea in 2 to 10% solutions. **S. Chlorid**, AgCl , a white powder, soluble in ammonium, potassium thiosulfate, or potassium cyanide. It is used as an antiseptic and a nerve sedative. Dose $\frac{1}{10}$ to $\frac{1}{4}$ gr. (0.02-0.05 Gm.). **S. Citrate**, $\text{Ag}_2\text{C}_6\text{H}_5\text{O}_7$, a fine dry powder soluble in 3800 parts of water, used as a surgical antiseptic and disinfectant. Application 1 to 2% ointment or 1:200 solution. **S. Iod.** **S., Colloidal**, a form of metallic silver consisting of heavy greenish-black particles of metallic luster which, when triturated with water, form a greenish-black fluid. It is used in the treatment of venetic diseases, applied in the form of an ointment. **S., Argentum album.** **Argentum Comb.** **Collargol.** **S. Cyanid.** See **Iron cyanidum** under **Arsenicum**. **S. Fluorid**, AgF , a brown, glassy, brittle solid, very soluble in water discovered by Paterno in 1901. It is used as an antiseptic. **S., Tachyd.** **S.-fork Deformity**, a peculiar deformity of the

wrist and hand in Colles' fracture, a tork S. Gelatose, anisoyl thiolate. See *Leukargan*. S. *Argentis Iodidum* under *Argentum*, *Iodate*, AgClH_2O , + H_2O , a white powder, recommended as a cathartic. Injection in strychnine S. $\frac{1}{2}$ to 1 oz. 100 to 1 of water as a teaspoonful of solution in 100 to 1 of water. Syn. *Latol*. S. *Nitrate*. S. *Nitras* under *Argentum*. S. *Nucleate* *leid*. See *Nagol*. S. *Oxid*. *Sesquioxidum* under *Argentum*. S. *Pan sulfonate*, an antiseptic anesthetic. *Suberol*. S. and *Potassium Cyanide* (CN), very poisonous white crystals in a parts of water at 70° C. in 10% alcohol. It is antiseptic and caustic. One part in 1000 destroys bacilli. S. *protalbin*. See *Leukargan*. S. *Sulfocarbonate*, S. *Sulfophenate* crystalline powder containing 2% of metallic silver; it is a non-septic, used in eye diseases and in Test for Glucose in Urine, and in excess to a strong solution of H_2O_2 add the urine and boil. In the presence of glucose a metallic silver mirror is at the bottom of the tube. S. *Tartaric* and give the same result. S. *Thiohydrocarbosulfonate*. See *Leukargan*. S. *Trinitrophenolate*, a white crystalline powder containing 30% of silver, used as a topical on inflamed mucous surfaces. S. *Vitellin*. See *Argemone*.

Simaba *Simaba* 'ah' 'ah'. A genus of simarubaceous trees. The seeds of *S. cedron* are eaten. Dose of the tincture is 10 to 20 Cc. It contains, according to the alkaloid *cedronin* and also bark also has tonic and febrifuge.

Simaruba *Simaba* 'ah' 'ah'. A genus of the order Simarubaceae. The fruit of *S. officinalis* has been used as a bitter.

Similia similibus curentur. Do-
A sophism formulated by Hahnemann
by Paracelsus ("Similia similibus
contrariantur"), and later, as one of
of the reaction against the abuses of
venesection and drastic medicine, by
Juel Christian Friesenhelm. Hahnemann
apostle of homeopathy, whose motto
like it to be cured by like, has made the
practice of naturopathy of the 19th century.
smallpox is to be treated by cowpox
taintworm by ingestion of the same.

Simon's Posture. The legs and thighs flexed, the arms and the thighs abducted. S's immobility or restriction of the ingeneration within the meninges. S's Triangles, 12 regular areas covering the abdomen, the inner surface of the thighs and the arms to a point 10 to 12 centimeters

pubes, and the inguinal region as far outward as the trochanter (abdominoaural or femoral triangle), and (2) the axillary and pectoral regions and the inner surface of the arm (brachial triangle). They are frequently the seat of petechial or petechioerythematous rashes during the first three days of smallpox.

Simonart's Bands, S.'s Threads. Amniotic bands formed by drawn-out adhesions between the fetus and the amnion where the cavity has become distended through the accumulation of fluid.

Simple (*sim'-pl*) [*simplex*, *simple*]. Not complex; consisting of but one substance, or containing only one active substance; not compound.

Simples (*sim'-ples*) [*simple*]. A term for herbs having a medicinal value.

Sims' Depressor [J. Marion Sims, an American gynecologist]. An instrument for depressing the anterior vaginal wall. **S.'s Posture**, the semiprone position for vaginal operations. **S.'s Speculum**, the duckbill vaginal speculum for the perineum.

Simulation (*sim-u-lat'-shun*) [*simulare*, to feign]. A feigning or counterfeiting.

Sinal (*si'-nal*). Relating to or situated within a sinus.

Sinalbin (*sin-al' bin*). See under **Mustard**.

Sinamin (*sin'-am-in*), C_7H_5CN . Allyl cyanamid, a substance obtained from crude oil of mustard.

Sinapin (*sin'-ap-in*) [*otvaxi*, mustard], $C_{16}H_{21}NO_2$. A substance occurring as a sulfo-cyanate in white mustard.

Sinapis (*sin'-a'-pis*). Mustard. See **Mustard**.

Sinapism (*sin'-ap-izm*) [*sinapis*]. A mustard-plaster.

Sinapized (*sin'-ap-ird*) [*sinapis*]. Containing mustard.

Sinapol (*sin'-ap-ol*). A mixture recommended as an application for neuralgia, rheumatism, etc., said to consist of spirit of rosemary (2:15), 780 Gm.; castor-oil, 120 Gm.; menthol, 30 Gm.; essence of mustard, 30 Gm.; aconitin, 0.4 Gm.

Sinapolin (*sin-ap'-ol-in*). Diallylurea, a substance obtained from mustard oil by heating with water and lead oxid.

Sincalin (*sin'-ka-lin*). A base found in mustard and identified with cholin.

Sincipital (*sin-sip'-it-al*) [*sinciput*]. Pertaining to the sinciput.

Siciput (*sin'-sip-ul*) [*semi*, half; *caput*, head]. The superior and anterior part of the head.

Sicov (*sin'-u*). A tendon (q. v.)

Sigult (*sin'-gult*) [*singultus*, a sobbing]. A sob.

Sigultient (*sin-gult'-she-ent*). Sobbing; sighing.

Sigultous (*sin-gult'-us*). Relating to or affected with hiccup.

Sigultus (*sin-vult'-tus*). See **Hiccup**.

Sigrin (*sin'-ig-rin*). A glucosid found in black mustard.

Sinistral (*sin'-is-tral*) [*sinister*, left; *ad*, toward]. Toward the left.

Sinistral (*sin'-is-tral*) [*sinister*]. 1. On the left side. 2. Showing preference for the left hand, eye, foot, etc., for certain acts or functions.

Sinistrality (*sin-is-tral'-it-e*) [*sinister*]. The preference generally for the left hand, eye, foot, etc., in performing certain acts.

Sinistraction (*sin-is-tral'-shun*). 1. A turning to the left. 2. Sinistrality.

Sinistral (*sin-is-tral'-ral*) [*sinister*; *auris*, ear]. Left-eared; the reverse is *dextral*.

Sinistrin (*sin'-is-trin*) [*sinister*]. A substance resembling dextrin, found in squill. **S.**, **Animal**. See under *Helicoproteid*.

Sinistro- (*sin-is tro-*) [*sinister*, left]. A prefix meaning left or toward the left side.

Sinistocardial (*sin-is-tro-kar'-de-al*) [*sinistro-*; *cardia*, heart]. Having the heart to the left of the median line; the reverse is *dextrocardial*.

Sinistrocerebral (*sin-is-tro-ser'-e-bral*). 1. Located in the left cerebral hemisphere. 2. Functionating preferentially with the left side of the brain; the reverse is *dextrocerebral*.

Sinistrocular (*sin-is-trok'-u-lar*). Left-eyed; the reverse is *dextrocular*.

Sinistrogryic (*sin-is-tro-ji'-rik*). See *Sinistorse*.

Sinistrophepatal (*sin-is-tro-hep'-at-al*) [*sinistro-*; *hepatis*, liver]. Having the liver to the left of the median line; the reverse is *dextrophepatal*.

Sinistromanual (*sin-is-tro-man'-u-al*) [*sinistro-*; *manus*, hand]. Left-handed; the reverse is *dextramanual*.

Sinistropedal (*sin-is-trop'-ed-al*) [*sinistro-*; *pes*, foot]. Left-footed; the reverse is *dextropedal*.

Sinistrophoria (*sin-is-tro-fo'-re-ah*). See *Levophoria*.

Sinistrotoræ (*sin'-is-trots*) [*sinistro-*, *vertere*, to turn]. In biology, turning from right to left.

Sinistrosplenic (*sin-is-tro splen'-ik*). Having the spleen to the left of the median line; the reverse is *dextrosplenic*.

Sinistrotorsion (*sin-is-tro-tor'-shun*) [*sinistro-*; *torquere*, to turn]. A twisting or turning toward the left; the reverse is *dextrotorsion*.

Sinistrous (*sin'-is-trus*). Awkward; unskilled; the reverse is *dextrous*, skilled, expert.

Sinkalin, Sinkolin (*sink'-al-in, -ol-in*). See *Cholin*.

Sinus (*si'-nus*) [L., "a gulf or hollow"]. 1. A hollow or cavity; a recess or pocket. 2. A large channel containing blood, especially one containing venous blood. 3. A suppurating tract. **Sinuses, Accessory, of the Nose**, the maxillary, frontal, ethmoid, and sphenoid sinuses. **S.**, **Air-**, a cavity within bores containing air, especially one communicating with the nasal passages. **S.**, **Aortic**. See *S. of Valsalva*. **S.**, **Arlt's**, a small depression, directed forward and outward, in the lower portion of the lacrimal sac; it is not constant. **S.**, **Cavernous**, a large venous sinus extending from the sphenoid fissure to the apex of the petrous portion of the temporal bone, communicating behind with the inferior and superior petrosal sinuses and receiving the ophthalmic vein in front. **S.**, **Circular**, a venous

sinus surrounding the pituitary body, and communicating on each side with the cavernous sinus. **S., Common, of the Vestibule.** See *Utricle* (1). **S., Coronary** (of the heart), a large venous sinus in the transverse groove between the left auricle and left ventricle of the heart. **S., Duncan's**, the fifth ventricle. **S., Ethmoid**, the ethmoid cells. **S., Frontal**, one of the two irregular cavities in the frontal bone containing air and communicating with the nose by the infundibulum. **S., Guérin's**, the lacuna magna, situated in the mesial line of the upper wall of the urethra, near the external meatus. **S. of the Heart**, the chief cavity of either of the auricles. **S., Inferior Longitudinal**, a venous sinus which extends along the posterior half of the lower border of the falx cerebri and terminates in the straight sinus. **S., Inferior Petrosal**, a large venous sinus arising from the cavernous sinus running along the lower margin of the petrous portion of the temporal bone, and joining the lateral sinus to form the internal jugular vein. **S. of Kidney**, the prolongation inward of the hilum of the kidney. **S. of the Larynx**, the ventricle of the larynx. **S., Lateral**, a venous sinus which begins at the torcular herophili and runs horizontally on the inner surface of the occipital bone to the base of the petrous portion of the temporal bone, where it unites with the inferior petrosal sinus to form the internal jugular vein. **S., Lieutaud's**, the straight sinus. **S., Littre's**, the transverse sinus. **Sinuses**, **Mastoid**, the mastoid cells. **S. of Morgagni**, the interval between the upper border of the superior constrictor muscle and the basilar process of the occipital bone. **S., Occipital**, a small venous sinus in the attached margin of the falx cerebelli opening into the torcular herophili. **S., Petrosquamosal**. See *Petrosquamosal Sinus*. **S., phlebitis**, inflammation of one of the sinuses of the cranial cavity. **S. pocularis**. See *Uterus maculatus*. **Sinuses, Precaval**. See *Ducts of Cuvier*. **S., Prostatic**. See *Uterus masculinus*. **S., Rhomboid**, **S. rhomboideus**, the fourth ventricle of the brain. **S., Sagittal, Inferior**. See *S., Inferior Longitudinal*. **S., Sphenoid**, the air space in the body of the sphenoid bone, communicating with the nasal cavity. **S., Squamosopetrosal**. See *Petrosquamosal Sinus*. **S., Straight**, a venous sinus running from the inferior longitudinal sinus along the junction of the falx cerebri and tentorium to the lateral sinus. **S., Superior Longitudinal**, a venous sinus which runs along the upper edge of the falx cerebri, beginning in front at the crista galli and terminating at the torcular herophili. **S., Superior Petrosal**, a venous sinus running in a groove in the petrous portion of the temporal bone, extending from the posterior part of the cavernous sinus to the lateral sinus. **S., Terminal**, **S. terminalis**, a vein that encircles the vascular area of the blastoderm, and empties either by one

trunk, the anterior vitelline vein, into the vitelline vein, or by two trunks into two vitelline veins. **S.-thrombosis**, the disease of the sinuses of the dura mater of the brain. It is usually septic in character, and is likely to lead to pyemia. The most frequent site is disease of the middle ear. **S., Transverse**, a sinus uniting the inferior petrosal sinus. **S., Urogenital**, the canal of ducts which, in the embryo, the Wolffian ducts and the bladder empty and which opens into the cloaca. **S. of Valsalva**, one of the aneurysm-like dilations of the aorta or pulmonary artery opposite the segments of the aortic valves.

Sinusitis (*tri-nai-si-tis*) Inflammation of a sinus. **S., Serous**, **S., Chronic Catarrhal**. See *Mucosae*.

Sinusoidal (*si-nu-soi-dal*) Pertaining to or derived from a sinusoid.

Sinusoids (*si-nu-soi-ds*) [*sinus*, *sinus*, *sinus*] A system of relatively large blood tubes constituting the embryonic circulatory system in the supranatal glands, also in the liver and the pneumonion and mesonephros; the endothelial walls are in direct contact with the cells of the parenchyma, without the intervention of connective tissue.

Sionagra (*si-on-a-gra*) [*si-on*, the name of a city, *agra*, a suffix] Gout of the eye bone.

Siphon (*sif-on*) [*siphon*, a tube] A tube bent at an angle, one arm of which is longer than the other, for the purpose of removing liquid from a cavity or vessel.

Siphonoma (*si-fon-o-ma*) [*siphon*, a tube, *oma*, a tumor] A tumor composed of two tubes. **S., Heide's tubular tumor**.

Sirenornelus (*si-ren-or-nel-us*) [*siren*, a mermaid, *ornelus*, a limb] A form of fungus in which the lower extremities are indurated, the feet being absent.

Sirolin (*si-ro-lin*) Thapsus, 105, in a sort of orange bark. It is used in infantile bronchitis and intestinal catarrh. Dose, 1 or 2 teaspoonfuls 3 or 4 times daily.

Sirup (*si-rup*) See *Syrup*.

Sisymbrium (*si-sim-bri-um*) [*si-sim*, a root, *brium*, a suffix] A genus of cruciferous plants. **S.** is a common mustard, singer's herb is a European variety, laxative, diuretic, and expectorant. It is employed in laryngeal catarrh and bronchitis. Dose, 3 cupfuls a day of a decoction of 1/2 Gm. of the leaves sweetened with sugar. A syrup of the drug made in the same way.

Sittelgria (*si-tel-gra*) [*sittel*, a verb, to shoot out] Sollier's term for *Exostoma*.

Sitogen (*si-to-jen*) A vegetable foodstuff intended to replace meat in diet.

Sitomania (*si-to-ma-ni-a*) [*si-to*, a verb, to eat, *mania*, a disease] 1. A periodical craving for the periodical biluria. 2. Hungering.

Sitophobia (*si-to-fo-bi-a*) [*si-to*, a verb, to eat, *phobia*, a fear] A morbid aversion to food.

Sitotoxicon (*si-to-tox-i-con*) [*si-to*, a verb, to eat, *toxicon*, a poison]

σιτοτοξιν, poison]. The active poisonous agent in sitotoxism, all sitotoxicons are not of bacterial origin.

Sitotoxin (*si-to-toks'-in*) [see *Sitotoxicon*]. Any basic poison generated in vegetable food by growth of bacteria or fungi.

Sitotoxism (*si-to-toks'-izm*) [see *Sitotoxicon*]. Poisoning with vegetable food infected with molds and bacteria.

Situs (*si'-tus*) [L., "site"]. A position. **S. viscerum inversus**, an anomaly in which the viscera of the body are changed from the normal to the opposite side of the body.

Sitzbath (*sits'-bath*) [Ger., *Sitz*, a seat; *bath*]. A hip-bath; a bath taken in a sitting posture.

Sjoeqvist's Test for the Quantitative Estimation of Free HCl in the Gastric Juice. It depends upon the action of barium carbonate on the acid of the secretion, the hydrochloric acid being estimated as barium chlorid by means of titration with a solution of potassium dichromate.

Skatol (*skat'-ol*) [*σκατόλ*, gen. of *σκαπ*, dung], $C_9H_7N_3$. A nitrogenous compound produced by the decomposition of proteids in the intestinal canal.

Skeer's Sign. A yellowish-brown ring near the pupillary margin of the iris, observed in the early stage of some cases of tuberculous meningitis.

Skeletal (*skel'-et-al*) [*skeleton*]. Pertaining to or connected with the skeleton or supporting structure of a body.

Skeletins (*skel'-et-inz*) [*skeleton*]. A name given to a number of insoluble epithelial products found chiefly in invertebrates.

Skeletization (*skel-et-i-zā'-shun*) [*skeleton*]. The process of converting into a skeleton; gradual wasting of the soft parts, leaving only the skeleton.

Skeleto- (*skel-et-o-*) [*skeleton*]. A prefix meaning relating to the skeleton.

Skeletogenous (*skel-et-oj'-en-us*) [*skeleton*; *γεννᾶν*, to produce]. Producing a skeleton or skeletal tissues.

Skeletography (*skel-et-og'-ra-je*) [*skeleton*; *γράφειν*, to write]. A description of the skeleton.

Skeletology (*skel-et-ol'-o-je*) [*skeleton*; *λογία*, science]. The branch of anatomy treating of the skeleton.

Skeleton (*skel'-et-on*) [*σκελετόν*, a dried body, from *σκήνω*, to dry up]. A supporting structure, especially the bony framework (*osseous skeleton*) supporting and protecting the soft parts of an organism. **S.**

Cartilaginous, the cartilaginous structure from which the bony skeleton is formed through ossification.

Skeletonize (*skel'-e-ton-iz*). To reduce to a skeleton.

Skeletopeia, (*skel-et-o-pe'-e-ah*) [*skeleto-*; *ποιεῖν*, to do]. The branch of anatomy dealing with the construction of skeletons and the preliminary preparation of the bones.

Skeletopy (*skel-et-op-e*). See *Skeletotopy*.

Skeletotopic (*skel-et-o-top'ik*). Applied by Waldeyer to such topographic description as refers a part or organ to its relation to the skeleton.

BONY SKELETON.—(Brubaker.)

Skeletotopy (*skelet-ot'-o-pe*) [*skeleto-*; *τόπος*, a place]. Waldeyer's term for the relation of an organ or part to the osseous skeleton of the whole organism. Cf. *Holotopy*, *Idiotopy*; *Nyntopy*.

Skene's Glands. Two complex tubular glands in the mucosa of the female urethra opening by small ducts just within the meatus urinarius.

Skérliivo. See *Scherlievo*.

Skiagram (*ski'-ag-ram*) [*skia*, shadow, *γράφω*, a writing]. The finished printed roentgen-ray picture. Syn., *Inductogram*; *Shadowgram*.

Skiagraph (*ski'-ag-raf*). See *Skiagram*.

Skiagrapher (*ski'-ag-raf-er*). An adept in skiagraphy.

Skiagraphy (*ski'-ag-ra-se*) [*skia*, shadow, *γράφω*, to write]. Photography by the roentgen rays; skotography, skiography, radiography, elctrography, electroskiography, roentgenography, and the new photography are names that have been used to designate the method.

Skiameter (*ski-am'-et-er*) [*skia*, shadow, *μέτρον*, a measure]. An apparatus devised by Biesalski for measuring the intensity of the roentgen-rays and for the recognition of fine differences in the density of roentgen-ray shadows.

Skiametry (*ski-am'-et-er*). Shadow mensuration applied to a method of determining the density of roentgen-ray shadows.

Skiaporescopy (*ski-ap-or-es'-ko-pe*). See *Retinoscopy*.

Skiascope (*ski'-as-kop*) [*skia*, shadow, *σκοπεῖν*, to view]. An instrument employed in retinoscopy. S., *optometer*, an optometer designed for the determination of the refraction of the eye by retinoscopy.

Skiascopia, **Skiascopy** (*ski-as-ko'-pe-ah*, *ski-as'-ko-pe*). See *Retinoscopy*.

Skiatherapy (*ski-ah-ther'-ap-ee*) [*skia*, shadow; *θεράπειν*, therapy]. The therapeutic application of roentgen rays.

Skimmetin (*skim'-et-in*), $C_{15}H_{16}O_2$. A distillation product of skimmmin by action of dilute mineral acid with heat, it is perhaps identical with umbelliferone.

Skimmia (*skim'-ee-ah*) [*mijima-skimmi*, Japanese name]. A genus of the *Rutaceæ*. *S. japonica* is a species of Japan, the flowers are used to flavor tea, the leaves contain an etherial oil, the bark contains the glucosid *skimmmin*.

Skimmin (*skim'-in*), $C_{15}H_{16}O_2$. A glucosid similar to scopocin and esculin isolated from the bark of *Skimmia japonica*, occurring in long, colorless needles, soluble in hot water, alcohol, or alkalis, insoluble in chloroform or ether; melts at $210^{\circ}C$.

Skin (*ML*). The protective covering of the body, composed of the epidermis, *warf-skin*, or cuticle, and the corium, or *true skin*. The epidermis consists of a deep layer, the *stratum malpighii*, and three superficial layers—the *stratum granulosum*, the *stratum lucidum*, and the *stratum corneum*. The corium, derma, or *true skin* consists of a papillary and reticular layer, *stratum papillare* and *stratum reticulare*, the former projecting upward in the form of

papillae. The true skin is made up of the tissue, white fibrous tissue, and muscular tissue (the arrectores pilorum), subcutaneous tissue consists of fibrous and adipose tissue. The appendages of the skin are the nails, hairs, and sweat and sebaceous glands, which are derivatives of the epidermis. In the skin are also the terminal nerve-organs subserving the sense of touch. S., *Atrophy of the*, a wasting or retrogressive change in the skin. See *Ematrophism*. S., *bound Disease*. See *Prurigo*. S., *Congestion of the*, engorgement of the blood vessels of the skin. See *Prurigo*. S., *Edema of the*, effusion of fluid into the areolar tissue of the skin. See *Ematrophism*. S., *Glossy*, a peculiar glazed skin seen in conditions in which the trophic nerve supply to the skin is cut off after injury to a nerve. S., *Goose-Goose-flesh*. S., *grafting*, the application of pieces of the outer layers of healthy skin to a granulating surface for the purpose of hastening its contraction. (1) *Autografting*. When the epithelial cells are taken from a patient, it includes—(a) wrapping in a healthy skin; (b) corn shavings; (c) pieces of blisters; (d) the Older Thiersch method, which one-half the skin thickness is removed, and part of the cutis proper is removed; and (e) the Krause method, in which one-half the thickness of the skin is used in grafting. *Heterografting*. When the epithelial cells are furnished by another person. See *Autografting*. When the skin is removed from lower animals as the use of—(a) small pieces of skin; (b) frog skin; (c) inner membrane of the eye; (d) inner surface of piglets' wings; (e) cat's pupa; (f) skin of guinea-pigs; (g) skin of rabbits. S., *Hypertrophy of the*, excessive growth of the skin. Syn., *Dermatohypertrophy*.

Neuralgia of the. See *Dermatoneuralgia*.

Pigmentation of the. See *Pigmentation*.

S.-shedding. See *Keratoderma*.

Skoda's Sign, **S.'s Resonance**, **S.'s Tympany**. See *Sign*, *Skoda's*.

Skodaic Resonance. See *Sign*, *Skoda's*.

Skookum Chuck (American, 'good luck'). A homeopathic remedy for skin diseases consisting of a trituration of the scales of the eel of this name. Dose 2 gr. or 15 grains in a half glass of water, teaspoonful every 2 hours.

Skotography (*sko-to'-gra-f*). See *Skiagraphy*.

Skotography (*sko-to'-gra-f*). See *Skiagraphy*.

Skull (*skul*, [*l*], *skdl*, a bowl). The bony framework of the head, consisting of the cranium and the face. The cranium is composed of the occipital, frontal, sphenoid, and parietal bones, and the two parietal and two frontal bones. The face is composed of two maxillae, two superior maxillary, two inferior maxillary, two palate, and two inferior palatine bones, and the vomer and inferior maxillary bone.

Modes of measuring the capacity of the skull: Broca's method. 1. The skull is

impermeable, is filled with water, which can be weighed or measured. 2. The skull is packed with shot, which is then measured; but both the filling and measuring are aided by certain implements, and especially by a funnel of certain dimensions, which controls the flow of the shot, and every step of the procedure follows definite rules. *Method of Busk, Flower, or Turdeman*: the skull is filled with small, rounded seeds, beads, shot, or other substance, and the contents are then measured. The filling or the measuring (or both) is aided by certain manipulations (tilting, tapping, etc.). *Method of Schmidt or Matthews*. See *Broca's method* above. *Welcker's method*: the mode of filling the skull, so long as efficient and uniform, is immaterial; all that is required is that each worker should, with the aid of a standard skull, find the exact size of the funnel necessary to give him, in measuring, the correct result with his particular method and substance used for the filling of the skull. **S-cap**. 1. The top of the skull. 2. See *Scutellarium*.

Skunk-cabbage. *Dracontium fastidum*, the rhizome of which is stimulant, antispasmodic, and narcotic, and has been used in asthma, rheumatism, hysteria, and dropsy.

Slabber (*slab'-ur*). See *Slaver*.

Slag-wool. Mineral wool.

Slake (*slak*) [AS., *sleacan*, to quench; extinguish]. 1. To quench or appease. 2. To disintegrate by the action of water.

Slaver (*slav'-er*) [ME., *Drivel*; saliva, especially such as is discharged involuntarily.

Sleep. The periodic state of rest in which voluntary consciousness and activity cease. **S-epilepsy**. See *Narcolepsy*. **S., Hypnotic**, **S., Magnetic**, **S., Mesmeric**. See *Hypnotism*. **S.-walking**. See *Somnambulance*.

Sleeping-sickness. See *African Lethargy*.

Slender Column. See *Funiculus gracilis*. **S. Lobe of Cerebellum**, a small lobe in the inferior surface of the cerebellum.

Slide (*slid*) A small, rectangular plate of glass upon which objects intended for examination with the microscope are placed.

Sling. A swinging bandage for supporting an arm or other part.

Slough (*sluf*) [ME., *slough*, the skin of a snake]. A mass of soft tissues destroyed by gangrene.

Sloughing (*sluf'-ing*) [*slough*]. Pertaining to or characterized by sloughs.

Smallpox. See *Variola*.

Smegma (*smeg'-mah*) [*σμήγμα*, a cleansing substance]. Sebum. **S., Prepuce**, **S. præputii**, or simply smegma, the substance secreted by the sebaceous glands of the prepuce.

Smell. 1. The perception of odor. 2. Odor.

Smelling-salts. A name applied to various preparations of ammonium carbonate scented with aromatic substances.

Smesches (*smet'-chee*). Puffs of arsenic trioxid gas which occasionally escape from the doors of the calcining furnaces in Cornish arsenic works, and which give rise to pulmonary irritation among the workmen.

Smilacin (*smi'-lus-in*) [*smilax*]. 1. The

precipitate from a tincture of the root of sarsaparilla, *Smilax officinalis*, alterant, detergent, diaphoretic, and stimulant. Dose 2-5 gr. (0.13-0.32 Gm.). 2. $C_{16}H_{18}O_8$ (Flückiger) or $C_{16}H_{18}O_9$ (Poggiale) or $C_{16}H_{20}O_9$ (Peterson). Folchi's name for a saponin-like glucosid found by Palotta, in 1824, in sarsaparilla-root (various species of *Smilax*), and named by him *pariglin*. It forms a yellowish-white powder, soluble in water and alcohol; alterative, expectorant, and emetic, and used in syphilis and colds. Dose 1-3 gr. (0.065-0.2 Gm.). Syn., *Parillin* (Batha); *Salseparin* (Thubœuf).

Smilax (*smi'-laks*). See *Sarsaparilla*.

Smile (*smil*) [ME., *smil*]. A joyful expression. **S., Levator**, **S., Nasal**, W. R. Gowers' name for a peculiarity of expression in some patients affected with myasthenia, consisting in absence of normal movement at the corners of the mouth.

Smith's Cramp. An occupation-neurosis occurring in smiths, and characterized by painful cramps in the arm or hand.

Smith's Dislocation of the Foot. See under *Dislocation*. **S.'s Fracture**, transverse fracture about 5 cm. above the lower extremity of the radius. **S.'s Reaction for Bile-pigments**, pour tincture of iodine carefully over the liquid to be tested. A green ring appears between the two liquids.

Smith's (Eustace) Disease. Mucous colitis.

Sn. Symbol for tin [L., *stannum*].

Snaggle-teeth (*snag'-t*). Irregular and oblique dentition.

Snakeroot. See *Cimicifuga*, *Senega*, and *Serpentaria*.

Snares [AS., *snear*, a cord]. A loop of wire or other material used in removing projecting growths.

Sneeze (*snēz*) [AS., *fnēsan*, to sneeze]. A sudden, noisy, spasmodic expiration through the nose.

Sneezing. The act of expelling air violently through the nose. **S., Pregnancy**, spasmodic fits of sneezing from hyperemia of the nasal mucosa, following a circulatory disturbance due to pregnancy.

Snell's Laws. The two laws which govern single refraction: (1) The sine of the incident angle bears a fixed ratio to the sine of the angle of refraction for the same two mediums, the ratio varying with different mediums. (2) The incident and the refracted ray are in the same plane, which is perpendicular to the surface separating the two mediums.

Snellen's Types. See *Test types*.

Snore, Snoring [ME., *snoren*, to snore]. 1. To breathe through the nose in such manner as to cause a vibration of the soft palate, thereby producing a rough, audible sound. 2. The sound so produced.

Snow-blindness. See *Blindness*, *Snow*.

Snuffles. Coryza, especially of infants, which is frequently due to inherited syphilis.

Soap (*sapo*, soap). A chemie compound made by the union of certain fatty acids with an alkali or other metal. According to the alkali used,

Br, is used like the other bromids. Dose $\frac{1}{2}$ -2 dr. (2-8 Gm.). **S. Cacodylate**, **S. Methylarsenate**. See *Arrhenal* and *Neocacodyl*. **S. Caffeine Sulfate**, **S. Caffeine Sulfonate**, **S. and Caffeine Sulfonate**, $C_8H_6N_4O_6SO_3Na$, soluble in 50 parts of water, in 7 parts of boiling water, used as a diuretic in obesity and dropsy. Syn., *Symphoral-sodium*; *Symphoral N.* **S. Cantharidinate**, a compound of cantharidin, 0.2 Gm., and sodium hydroxid, 0.3 Gm., dissolved in 20 Cc. of water with heat; the solution is made up to 1000 Cc. It is used subcutaneously in tuberculosis of the throat. Dose 8 gr. (0.5 Gm.). **S. Carbolate**. See *S. Phenate*. **S. Carbonate**, $Na_2CO_3 \cdot 10H_2O$, is used as an antacid, and locally in diseases of the skin and in superficial burns. Dose 10 gr.- $\frac{1}{4}$ dr. (0.65-2.0 Gm.). *Dried sodium carbonate* is used like the carbonate. Dose 5-15 gr. (0.32-1.0 Gm.). Unof. **S. Carbonate, Monohydrated** (*sodii carbonas monohydratus*, U. S. P.), $Na_2CO_3 \cdot H_2O$. Dose 4 gr. (0.25 Gm.). **S. Cetrarate**, $Na_2C_{18}H_{14}O_4$, a microacicular powder, soluble in water and used as a tonic. Dose 2-15 gr. (0.13-1.0 Gm.). **S. Chlorate** (*sodii chloras*, U. S. P.), $NaClO_3$, has medicinal properties similar to those of potassium chlorate, but is more soluble. Dose 5-15 gr. (0.32-1.0 Gm.). **S. Chlorid** (*sodii chloridum*, U. S. P., B. P.), $NaCl$, common salt, is a constituent of animal fluids and tissues and of food. In medicine it is used as a stomachic; in hemoptysis; as an application to sprains and bruises; as a tonic and stimulant in the form of salt-water baths; as a cathartic; and in the form of a 0.6-0.75 % solution to replace the loss of fluids from hemorrhage or profuse diarrhea, being used as an intravenous, subcutaneous, or rectal injection. **S. Chloroborate**, a combination of boric acid, borax, sodium chlorid, and sodium sulfate used as an antiseptic in typhoid, etc. **S. Choleate**, dried purified oxgall, a yellow powder, soluble in water, and used as a tonic and laxative in chronic constipation. Dose 5-10 gr. (0.32-0.65 Gm.). **S. Cinnamate**, $NaC_9H_7O_2$, a white powder, soluble in water, used intravenously in tuberculosis. Dose $\frac{1}{2}$ - $\frac{1}{4}$ gr. (0.005-0.000 Gm.) thrice weekly. Syn., *Hetol*. **S. Citrate** (*sodii citras*, U. S. P.), $2Na_2C_6H_5O_7 + 11H_2O$. Dose 15 gr. (1 Gm.). **S. Citrate, Neutral**, $2Na_2C_6H_5O_7 + 11H_2O$, white crystals, soluble in water, used as a purgative in diseases of genitourinary origin, fever, etc. Dose 10-60 gr. (0.65-4.0 Gm.). **S. Citrobenzoate**, a white, bulky powder, soluble in water; diuretic, antiseptic, and antilithic. **S. Citrophosphate**. See *Melachol*. **S. Citrotartrate** (*sodii citrotartras effervescent*, B. P.), is refrigerant and laxative. Dose 1-2 dr. (4-8 Gm.). **S. Coparivate**, $NaC_{20}H_{19}O_2$, a yellow, powdery mass, soluble in water, used as antiseptic and diuretic. Dose 10-30 gr. (0.65-2.0 Gm.). **S. Corallinate**. See *S. Rosalate*. **S. Cresylate**, used as in cresol. **S. diiodoparaphenol Sulfonate**. See *S. Szozodolate*. **S. Diiodosalicylate** $2NaC_7H_4O_2 + 5I_2O$,

white needles or leaflets, soluble in 50 parts of water at 20° C. It is analgesic and antiseptic and used externally on parasitic and syphilitic sores. **S. Dioxid**, Na_2O_2 , a white powder, soluble in water, used as a bleaching agent and disinfectant in dentistry. Syn., *Sodium peroxid*. **S. Dithionate**. See *S. Thiosulfate*. **S. α -Dithiosalicylate**, $Na_2C_{14}H_9O_6S_2$, a yellowish powder, soluble in water, used in foot-and-mouth disease. **S. β -Dithiosalicylate**, $Na_2C_{14}H_9O_6S_2$, a grayish powder, more soluble in water than the alpha salt. It is used internally in rheumatism, gonorrhea, etc. Dose 1-10 gr. (0.065-0.65 Gm.). Wash in foot-and-mouth disease 2.5 to 5 % solution. **S. α -ethoxyphenyl Succinamid**. See *S. Phenosuccinate*. **S. Ethylate**, $NaOC_2H_5$, is used as a caustic. **S. Ethylsulfate**, $NaC_2H_5SO_4 + H_2O$, flat, aromatic crystals, soluble in water or alcohol; used in constipation. Dose 60-300 gr. (4-20 Gm.). **S. Fluorid**, NaF , shining crystals, soluble in water, used internally in malaria, epilepsy, etc. Dose $\frac{1}{2}$ - $\frac{1}{4}$ gr. (0.005-0.01 Gm.) in solution with sodium bicarbonate; externally as an antiseptic dressing for wounds. Syn., *Fluorol*. **S. Fluosilicate**. See *S. Silicofluorid*. **S. Glycerinoborate**, **S. Glyceroborate**, glycerite of borax obtained by heating 30 parts of borax with 60 parts of glycerol and forming a translucent, brittle mass, soluble in water or alcohol; antiseptic. **S. Glycerinophosphate**, **S. Glycerophosphate**, $Na_2PO_4C_3H_5(OH)_2 + H_2O$, soluble in water, used in neurasthenia, Addison's disease, phosphaturia, etc. Injections, 3-4 gr. (0.2-0.20 Gm.) daily in solution of sodium chlorid. **S. Glycholate**, $NaC_{20}H_{12}NO_8$, a white powder, soluble in water or alcohol; used in chronic constipation and tuberculosis, and as a remedy for gall-stones. Dose 5 gr. (0.32 Gm.) thrice daily. **S. guaiaicol Carbonate**, a white powder, soluble in water, similar to but milder than sodium salicylate in action. **S. Gynocardate**, $NaC_{14}H_{23}O_2$, a yellow-white powder, soluble in water and alcohol; an antiseptic and alterative, used in leprosy. Dose 5-15 gr. (0.32-1.0 Gm.) twice daily in capsules containing 1 grain each. **S. Hippurate**, $NaC_6H_8NO_3$, a white powder, soluble in boiling water, a solvent for uric acid. **S. Hydrate**. See *S. Hydroxid*. **S. Hydroxid** (*sodii hydroxidum*, U. S. P.; *soda caustica*, B. P.), $NaOH$, is an extremely corrosive substance, occurring in the form of white pencils, it is used as a caustic and as an antacid, like the bicarbonate. From it is prepared *liquor sodii hydroxidi* (U. S. P.). Dose 5-30 min. (0.32-2.0 Cc.). **S. Hypochlorite**, $NaOCl$, is a constituent of *liquor sodii chlorinate* (U. S. P., B. P.), Labarraque's solution. **S. Hypophosphite** (*sodii hypophosphis*, U. S. P., B. P.), $NaPH_2O_2H_2O$, is used like the other hypophosphites in pulmonary tuberculosis, scrofula, rickets, etc. Dose 10-30 gr. (0.65-2.0 Gm.). **S. Hyposulfite**. See *S. Thiosulfate*. **S. Ichthylol**, **S. Ichthylol-sulfonate**, a dark brown mass prepared by neutralizing ichthylol-sulfonic acid with an

aqueous solution of sodium hydroxid. **S. Indigosulfate**, indigo carmin. **S. Iodid** (*sodium iodidum*, U. S. P., B. P.), NaI, is used like potassium iodid. **S. Kussinate**, $\text{NaC}_{10}\text{H}_7\text{O}_6$, an intensely bitter, yellowish, amorphous mass, soluble in hot water and alcohol, used as a vermifuge. **S. Lactate**, $\text{NaC}_2\text{H}_3\text{O}_2$, a thick syrup used as a hypnotic. Dose 2-4 dr. (8-16 Gm.) in sweetened water. **S. and Magnesium Borocitrate**, a white antiseptic powder used in lithiasis. Dose 5-30 gr. (32-200 Gm.). **S. Mercurophenyl Disulfonate**. See *Mercurphenol*. **S. Metavanadate**, an alternative and succedaneum for arsenic. Dose $\frac{1}{2}$ -1 gr. (0.001-0.008 Gm.). **S. methoxysalicylate**. See *S. gignacel*. **S. Carbonate**. **S. Methylarsenite**. See *Neourysolol*. **S. Chlorphenol**. **S. 3-Naphtholate**, **S. betanaphthol**, **S. naphthol**, *micradulin*, **S. Nitrate** (*sodii nitras*, U. S. P., B. P.), NaNO_3 , has been used in dysentery. Dose $\frac{1}{2}$ -1 oz. (16-32 Gm.). **S. Nitrite** (*sodii nitras*, U. S. P., B. P.), NaNO_2 , colorless crystals, soluble in water, used as a diuretic and antispasmodic like the other nitrites, but its effects are more slowly produced and more permanent. Dose $\frac{1}{2}$ -2 gr. (0.032-0.13 Gm.). Recommended for lowering blood pressure in doses of 2-3 gr. (0.13-0.2 Gm.) every 2 to 4 hours. See *Nitrite*. **S. Nitroprussid**, $\text{Na}_2\text{Fe}(\text{CN})_5\text{N}_2$, is used as a reagent. **S. Nucleinate**, a white powder, soluble in water, used in puerperal affections and pneumonia and in diagnosing tuberculosis. Dose 30-16 gr. (2-3 Gm.). **S. Oleate**, a compound of $\text{NaC}_{18}\text{H}_{33}\text{O}_2$ with excess of oleic acid, a yellowish mass, soluble in water. Syn. *Eunastol*. **S. Orthodinitrocresylate**. See *Antinocum*. **S. Orthophosphate**. See *S. Phosphate*. **S. Ossalinate**, a substitute for cod-liver oil, the sodium compound of the acid of oxynarow. **S. 2-Oxynaphtholate**, $\text{C}_{10}\text{H}_7(\text{OH})\text{COONa}$, a white, odorless powder, antiseptic and antithermic in action. **S. Paracresolate**, $\text{NaC}_6\text{H}_4\text{O}_3\text{Na}$, a free, monocresylline, bitter powder, soluble in 24 parts of warm water, used as an antiperistaltic and antispasmodic. Dose 1-20 gr. (0.065-1.3 Gm.). **S. Parafluorobenzoate**, is used in tuberculous processes. Dose 8 gr. (0.5 Gm.) 3 times daily. **S. Peroxid**. See *S. Peroxid*. **S. Persulfate**, $\text{Na}_2\text{S}_2\text{O}_8$, a barbiturate and vulnerary, used in 3 to 10% solution. It is also used as an aperient, 30 gr. to 1 Gm. in 16 oz. (295 Gm.) of water, 1 tablespoonful daily before the principal meals. Syn. *Persulfine*. **S. phenacetinsulfonate**, a soluble succedaneum for aspirin. **S. Phenate**, $\text{NaC}_6\text{H}_5\text{O}$, white crystals, soluble in water, used as an antispasmodic. Dose 2-10 gr. (0.13-0.65 Gm.). **S. phenolphthaleinate**. See *S. Phenolphthaleinate*. **S. Phenolsulfonate** (*sodii phenolsulfonatus*, U. S. P.), $\text{NaC}_6\text{H}_4\text{SO}_3\text{Na}$, is used locally as an antiseptic and internally as an antispasmodic in intestinal fermentation. Dose 1-15 gr. (0.065-1 Gm.). **S. phenolsulfonate**, synthetic phenol,

20%, and sodium sulfonate, 4-10%, and in 20% aqueous solution in skin diseases, as in painting these depilation. **S. Phenosuccinate**, the sodium salt of phenosuccin, a white powder, soluble in water. It is antiperistaltic and antispasmodic. Dose 7 $\frac{1}{2}$ -16 gr. (0.5-1 Gm.). **S. Phosphate** (*sodii phosphas*, U. S. P., B. P.), disodium orthophosphate Na_2HPO_4 , occurs in colorless, transparent, rhombic prisms, of a saline taste. It is soluble in boiling water and melts at 100°C. It is a mild cathartic and antispasmodic. Dose 5-10 gr. (0.32-0.6 Gm.). **S. Phosphate, Effervescent** (*sodii phosphas effervescentis*, U. S. P., B. P.) is used like the previous. Dose 2-4 dr. (8-16 Gm.). **S. Phosphate, Exsiccated** (*sodii phosphas exsiccatus*, U. S. P.), Dose 10 gr. (0.6 Gm.). **S. Poliborate**. See *S. Tetraborate*. **S. and Potassium Tartrate**, Rochelle salt. See *Potassium and Sodium Tartrate*. **S. Pyrophosphate** (*sodii pyrophosphas*, U. S. P.), $\text{Na}_2\text{P}_2\text{O}_7$, is used for preparing ferric pyrophosphate, soluble in boiling water; used in lithiasis. Dose 2-20 gr. (0.13-1.3 Gm.). **S. rosaniline sulfonate**, $\text{Na}_2\text{C}_{18}\text{H}_{11}\text{NO}_2\text{S}_2$, crystals with green luster obtained from fuchsin by action of fuming sulfuric acid. **S. Rosaniline**, *Fuchsin*, *Fuchsin sodium*, *Magenta*, *Rubm*, **S. Rosolate**, $\text{NaC}_{18}\text{H}_{11}\text{NO}_2\text{S}$, crystals with green luster used as a dye. See *Rosaniline*. **S. Saccharinate**, the sodium salt of soluble saccharic acid, a white crystalline powder containing 50% of anhydrous sodium in water and having a sweet taste, 100 times greater than cane sugar. It is recommended as a valuable intestinal antiseptic. Dose 1 gr. (0.065 Gm.) 3 times or 4 times daily. Syn. *Crystalline*. **S. Salicylate** (*sodii salicylas*, U. S. P., B. P.), $\text{NaC}_7\text{H}_5\text{O}_2$, has the properties and uses of salicylic acid. It is a white, shining white scales, soluble in 20 parts of water or 6 parts of alcohol. It is a febrifuge, antirheumatic, and antipyretic. Dose 2 gr. (0.13-0.2 Gm.) 3 times or 4 times daily. Syn. *Salicyl*. **S. Santoninate**, *santonin*, $\text{C}_{15}\text{H}_{11}\text{O}_6$, bitter acrid powder, crystalline groups, soluble in 3 parts of water or 10 parts of alcohol, 0.5 of boiling water, 1 part of boiling alcohol. It is given for treating ascariasis. For adults 4-1 gr. (0.26-0.65 Gm.) 3 times daily. **S. Silicate**, Na_2SiO_3 , which is used in the form of its powder, used in preparing bone and villous which is employed as a cathartic. See *Silicic acid*. Syn. *Silicic acid*. **S. Silicofluorid**, Na_2SiF_6 , white crystals, crystalline powder, soluble in 20 parts of water, is used as a styptic, antiperistaltic, and general anesthetic solution of a weak. The solution is known as *silicofluorid*. **S. Sorosulfate**, $\text{Na}_2\text{H}_2\text{SO}_4$, $\text{Na}_2\text{H}_2\text{SO}_4$, long crystals, soluble in 10 parts of water, soluble in 100 parts of water. It is alterative and antiperistaltic. Dose 10-20 gr. (0.65-1.3 Gm.) daily. In enteritis, 10 gr. (0.65 Gm.) 3 times daily. In skin diseases, syphilis, etc., 10-20 gr. (0.65-1.3 Gm.) daily.

or 1% aqueous solution. **S. Stearate**, **S. Stearate**, $\text{NaC}_{18}\text{H}_{35}\text{O}_2$, soapy, acicular crystals or scales, soluble in water; it is used in treatment of parasitic skin diseases. **S. Succinate**, $\text{Na}_2\text{C}_4\text{H}_4\text{O}_6 + 6\text{H}_2\text{O}$, white crystals, freely soluble in water, recommended in catarrhal icterus. Dose 45 gr. (3 Gm.) daily. **S. Sulfanilate**, $\text{C}_6\text{H}_5\text{NH}_2\text{SO}_2\text{Na} + \text{H}_2\text{O}$, white plates, soluble in water, recommended in coryza. **S. Sulfantimonate**, $\text{Na}_3\text{SbS}_4 + 9\text{H}_2\text{O}$, large yellow or colorless crystals with alkaline reaction, soluble in water. Syn., *Schlippe's salt*. **S. Sulfate** (*sodii sulphas*, U. S. P., B. P.), $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ (Glauber's salt, is a hydragog cathartic and diuretic. Dose $\frac{1}{2}$ -1 oz. (16-32 Gm.). **S. Sulfate, Effervescing** (*sodii sulphas effervescens*, B. P.), is used for the same purposes as the sulfate. Dose 2-4 dr. (8-16 Gm.). **S. Sulfite** (*sodii sulphis*, U. S. P., B. P.), $\text{Na}_2\text{SO}_3 + 7\text{H}_2\text{O}$, is used as sodium thiosulfate. **S. Sulfite Benzoate**, a white powder, soluble in water; it is used as a wound antiseptic in the form of a dusting-powder. **S. Sulfocaffeate**, bitter crystals, slightly soluble in water; a nontoxic, nonirritating, powerful diuretic. Dose 15 gr. (1 Gm.) in capsules. Syn., *Nasrol*; *Symphorol*. **S. Sulfocarbonate**. See *S. Phenolsulfonate*. **S. Sulfuricinate**, a compound of sulfuric acid and sodium hydroxide. A brown, syrupy liquid, soluble in alcohol and water; used as a solvent for iodine, iodoform, etc. Syn., *Poly-solve*; *Solvon*. **S. Sulfuricinate, Phenolized**. See *S. phenolsulfonate*. **S. Sulfosalicylate, Acid**, $\text{NaC}_7\text{H}_5\text{O}_3\text{SO}_3$, white, crystalline powder, soluble in water, used as an antiseptic and antipyretic. Dose 10-30 gr. (0.65-2.0 Gm.). **S. Sulfovinate**. See *S. Ethylsulfate*. **S. Sulfurobenzoate**, a clear, colorless liquid, said to be a harmless antiseptic for wounds. **S. Tartrate**, $\text{Na}_2\text{C}_4\text{H}_4\text{O}_6 + 2\text{H}_2\text{O}$, white needles or prisms, soluble in water. Cathartic and diuretic. Used as an antacid and refrigerant in fevers. Dose 4-8 dr. (15-30 Gm.) once a day. **S. Taurocholate**, $\text{NaC}_{20}\text{H}_{35}\text{NSO}_4$, a white powder, obtained from bile of herbivora, soluble in water or alcohol. It is used in deficient biliary secretion. Dose 2-6 gr. (0.13-0.4 Gm.). **S. Tellurate**, $\text{NaTeO}_4 + 5\text{H}_2\text{O}$, a white powder, soluble in water. Used as an antipyretic, antiseptic, and antihidrotic. Dose $\frac{1}{2}$ -1 gr. (0.016-0.05 Gm.) in elixirs. **S. Tetraborate**, a compound of equal parts of boric acid and sodium baborate, forming an unctuous, insipid powder, neither toxic nor caustic. It is used in conjunctivitis and keratitis. Syn., *Antipyonin*. **S. Thioantimonate**. See *S. Sulfantimonate*. **S. Thiophenate**, $\text{C}_6\text{H}_5\text{SSO}_2\text{Na}$, a white powder, slightly soluble in water; used on prurigo in 0.5 to 1% ointment. **S. Thiophenesulfonate**, $\text{NaC}_6\text{H}_4\text{SO}_3 + \text{H}_2\text{O}$, a white, scaly powder, containing 33% of sulfur; used as an antiseptic on prurigo and skin diseases in 5 to 10% ointment. **S. Thiosulfate** (*sodii thiosulphas*, U. S. P., $\text{Na}_2\text{S}_2\text{O}_3 + 5\text{H}_2\text{O}$), is used to check fermentation, and locally in parasitic diseases

of the skin and mouth. Dose 10-20 gr. (0.65-1.3 Gm.). **S. Trichlorocarbols'ate**, **S. Trichlorophenol**, $\text{C}_6\text{H}_2\text{Cl}_3\text{ONa}$, white needles or crystalline powder, soluble in hot water; antiseptic. **S.-tumenol Sulfonate**, a compound of sodium and sulfotumenolic acid. A dark-colored, dry powder, soluble in water. Syn., *Tumenol*. **S. Tungstate**, $\text{Na}_2\text{WO}_4 + 2\text{H}_2\text{O}$, colorless, rhombic, bitter crystals, soluble in 4 parts of water and 2 parts of boiling water. Syn., *Sodium wolframate*. **S. Valerate**, **S. Valerianate** (*sodii valerianas*, B. P.), is used as a nervous stimulant. Dose 1-5 gr. (0.065-0.32 Gm.). **S. Xanthogenate**, $\text{NaC}_2\text{H}_3\text{OS}_2$, a compound obtained by adding a saturated alcoholic solution of soda to carbon disulfide. It is antiseptic and germicide.

Sodomy (*sod'-om-e*) [*Sodom*, a city of ancient Palestine]. Sexual connection by the anus.

Sodor (*so'-dor*). The proprietary name for capsules of liquid carbonic acid for preparation of carbonated beverages.

Soemmering's Bone. The marginal process of the malar bone. **S.'s Crystalline Swelling**, an annular swelling formed in the lower part of the capsule, behind the iris, after extraction of the crystalline lens. **S.'s Foramen**. See *S.'s Yellow Spot*. **S.'s Ganglion**, **S.'s Gray Substance**, the substantia nigra (locus niger) of the cerebral peduncles. **S.'s Ligament**, the suspensory ligament of the lacrimal gland. **S.'s Nerve**, the long pudendal nerve. **S.'s Yellow Spot**, the macula lutea of the retina.

Soft. Yielding readily to pressure; not hard. **S. Palate**. See *Palate*. **S. Soap**. See *Soap*, *Green*. **S. Water**, one containing but little mineral matter and forming free lather with soap.

Softening (*sof'-en-ing*). The act of becoming soft. **S., Gray**, an inflammatory softening of the brain or cord with a gray discoloration. **S., Green**, a purulent softening of nervous matter.

Soja-beans, **Soy-beans**. The edible seeds of *Glycine soja*, a leguminous plant of the East Indies. The meal of the soja-beans is used in diabetes. They contain a diastatic ferment, casein, cholesterol, lecithin, asparagin, leucin, cholin, hypoxanthin bases, phenylamidopropionic acid, oil (18%), sugar (12%).

Sokra [E. Ind., "without flesh or blood; skeleton"]. Vernacular for trypanosomiasis (*q. v.*).

Solanin (*so'-lan-in*) [*solanum*, the nightshade]. An alkaloid found in various species of solanum.

Solanism (*so'-lan-izm*). Nightshade poisoning from ingestion of berries of *Solanum dulcamara* or *S. nigrum*, or rarely through eating unripe potatoes, due partly to the contained glucosid causing vomiting, pain, and diarrhea, partly to tropein, marked by symptoms of belladonna poisoning.

Solanum (*so'-la'-num*) [L.]. A genus of the *Solanaceae*, including the tomato, potato, bitter-sweet, and black nightshade. *S. carolinense*, horse-nettle, is indigenous to the United States; a fluid extract from the fresh berries is recom-

mended in epilepsy, tetanus, and convulsions of pregnancy. Dose 10-30 min. (0.6-1.8 Cc.). It is also used as an abortifacient. *S. crispum*, *S. gavanum*, and *S. tomatillo* are indigenous to Chili and Peru, and are used under the name of matrix in inflammatory fevers, in typhus, etc. *S. dulcamara*, bitter-sweet, is indigenous to Europe and Asia, and contains dulcamarin and solamin. An extract from the young branches is employed as an alterant and diuretic in dropsy, cutaneous diseases, and rheumatism. Dose 5-20 gr. (0.32-1.3 Gm.). *S. insidiosum* and *S. paniculatum*, jurebeba, are species of Brazil, and are alterative and anti-blennorrhic. Dose of fluid extract in gonorrhea and syphilis 15-30 min. (0.9-1.8 Cc.). *S. nigrum*, nightshade, is found in Europe, Asia, and America, is used as a diuretic and emetic, and externally as a cataplasm. *S. tuberosum* is the potato, indigenous to Chili; it contains solanin, solanidin, solanin, and a small amount of tropin. The tubers contain the proteid tuberin.

Solar Ganglions (*sol' lar*) [*solaris*, from *sol*, the sun, so called because of the radiating nerves]. See under *S. Plexus*. **S. Plexus**, a plexus consisting of a network of nerves and ganglions (*solar ganglions*), and situated behind the stomach and in front of the aorta and crura of the diaphragm. It receives the great splanchnic nerves and filaments from the right pneumogastric nerve, and supplies branches to all the abdominal viscera.

Solarization (*sol' ar-iz-ay-shun*) [*sol*, the sun]. The application of solar or electric light for therapeutic purposes.

Solayres' Obliquity. Lateral obliquity. Deviation of the child's head by its occipital diameter into the oblique diameter of the pelvis.

Soldani's Solution for Glucose. Fifteen Gm. of copper carbonate dissolved in 1,000 Cc. of water, to which is added 4.6 Gm. of potassium bicarbonate. A reduction of copper suboxide is obtained by heating the foregoing solution with a glucose solution.

Sole (*sol*) [*AS*]. The plantar surface of the foot. **S.-reflex**. See *Reflex*, *Plantar*.

Solenoid (*sol' en-oid*, *sol-en-oid*; a pipe, coil, like-ness). A spiral of conducting wire wound into a cylindric shape so that it is almost equivalent to a number of equal and parallel circuits arranged upon a common axis. In therapeutics the name is applied to a large cage used for holding the patients in treatment in such manner that they are not in direct communication with the current.

Soleus (*sol' e-us*). A flat muscle of the calf. See under *Muscle*.

Solferino (*sol' er-ee-no*) [an Italian city, the scene of a battle]. A synonym of *Fuchsin*.

Solieticus (*sol' iet-ee-tus*). Synonym of *Heat-stroke*.

Solid (*sol' id* or [*solidus*, solid]) 1. Firm, dense, not fluid or gaseous. 2. Not hollow. 3. A firm body, a body the molecules of which are in a condition of strong mutual attraction.

Solidism (*sol' id-izm*) [*solid*]. The theory that diseases depend upon alterations in the solid of the body.

Solitary (*sol' -d-ee*) [*solitarius*, solitary]. Existing separately, not connected together. **S. Bundle**, a strand of nerve fibers in the medulla. **S. Follicles**, **S. Glands**, small lymphatic nodules in the mucous membrane of the intestine.

Sollunar (*sol' lu'-nar*) [*sol*, sun; *lunar*, moon]. Influenced by or relating to the sun and the moon.

Solly's Arciform Band. See *Reinhardt's Arciform Fibers*.

Solphinol (*sol' -fe-nol*). A mixture of benzoic acid, and sulfurous acid, a white crystalline, odorless powder soluble in 1 part of water or in 20 parts of glycerol. It is used as an antiseptic.

Solpugidæ (*sol' pu'-jide*) [*solpuga*, a scorpion spider]. A group of spider-like arachnids having closer relationship to the scorpions than to the true spiders. Their bite is poisonous.

Solubility (*sol'-ub-il-ee-ti*) [*solubilis*, dissolvable, to dissolve]. The state of being soluble.

Soluble (*sol'-u-bil*) [*solubilis*]. Capable of being dissolved.

Solutio (*sol'-u-ti-oe*). See *Solution*.

Solution (*sol'-u-shun*) [*solutio*, to loosen, to loosen]. 1. A separation or breaking of a solution of continuity. 2. The process of dissolving a solid or of being dissolved. 3. A liquid in which a substance has been dissolved. **S., Burrow's**, one containing 100 grains of alum, 5 parts, lead acetate 25 grains in 500 parts of water, used to stain tubercles. **S., Colloidal**, one obtained by dropping bars of metal into pure water and passing a heavy electric current from one bar to the other through the water. The same under these conditions is torn off in a state of such fine division that it remains suspended in the water in the form of a colloid.

Pseudosolution. **S. of Cresol**, Compound (*liquor cresoli compertus*, U. S. P.) 100 Gm.; dissolved 350 Gm. potassium hydroxid 80 Gm.; water to make 1,000 Cc. **S., Dobell's**, one containing 1 dr. of water, 1 of sodium bicarbonate, 15 gr. of opium, 1 of glycerol, and water to make one ounce. **S., Donovan's**. See *Donovan's Fluid*. **S. of Fowler's**. See *Fowler's Solution*. **S., Gowen's**, for use with hemoglobinometer sodium acetate 100 gr. acetic acid 1 dr., distilled water 9 Cc. **S. Grammolecular**, one in which each molecule contains the weight of one atom or molecule of the active chemical expressed in grains. **S., Harris' (Thos.)**, for the precipitation of organic urinary sediments, potassium acetate, 10 Gm.; chloroform, 10 Cc.; distilled water, 1000 Cc. **S., Havem's**. See *Havem's Solution*. **S., Hérard's**, sodium chloride 10 Gm.; potassium chloride 200 Gm.; water phosphoric 1.25 Gm.; sulphuric acid 1.25 Gm.; distilled water, 1000 Cc. **S., Isotonic**, each 20 are equal in osmotic pressure.

S., Keyes', for use with the hemoglobinometer: "Take urine slightly phosphatic, easily obtainable after a meal, about 1020 sp. gr., and make of it a saturated solution with borax. Clouds of earthy phosphates are thrown down. Filtration yields a clear alkaline fluid of sp. gr. about 1030. One-half of water added will reduce the specific gravity to 1020 and the fluid is ready for use." **S., Labarraque's**. See *Labarraque's Solution*. **Solutio lithantracis acetonica**, a solution of coal-tar 10 parts, in benzol 20 parts, and acetone 77 parts. It is employed in skin diseases. **S., Löffler's**, menthol, 10 Gm.; toluene, sufficient to make 36 Cc.; creolin, 2 Cc.; ferric chlorid solution, 4 Cc.; alcohol, sufficient to make 100 Cc. **S., Mandl's**, a gargle consisting of iodine, 6 gr.; potassium iodid, 20 gr.; glycerol, 6 dr.; water, 2 dr. **S., Monsel's**. See *Monsel's Solution*. **S., Normal**. See *Normal Solution*. **S., Normal Saline**. See *Saline Solution*. **S., Potain's**, for use with the hemoglobinometer: a mixture of a solution of gum acacia, sp. gr. 1020, 1 volume; equal parts of sodium sulfate and sodium chlorid in solution of sp. gr. 1020, 3 volumes. **S., Potassium Silicate**, a colorless, slightly turbid, syrupy liquid with alkaline reaction, consisting of 10% of potassium silicate in water, $K_2SiO_3 \cdot H_2O$. **Solutio retinæ**, detachment of the retina. **S., Saturated**. See *Saturated* (1). **S., Sherrington's**, for use with the hemocytometer, methylene-blue, 0.1 Gm.; sodium chlorid, 1.2 Gm.; neutral potassium oxalate, 1.2 Gm.; distilled water, 300 Cc. **S., Test-**, a standard solution. **S., Thiersch's**, a valuable antiseptic wash for the nose, throat, or stomach, consisting of salicylic acid, 2 parts; boric acid, 12 parts; water, 1000 parts. **S., Toisson's**, for use with the hemocytometer: methyl-violet, 5 B, 0.025 Gm.; sodium chlorid, 1 Gm.; sodium sulfate, 8 Gm.; neutral glycerol, 30 Cc.; distilled water, 160 Cc. **S., Löpfer's**, a solution of dimethylamidoazobenzol. **S., Trunccek's**. See *Serum, Trunccek's*. **S., Van't Hoff's Theory of**, "The osmotic pressure of a substance in solution is the same as the gas pressure which would be observed if the substance alone, in gaseous state, occupied the volume of the solution at the same temperature." **S., Water-glass**. See *S., Potassium Silicate*. (For solutions not defined here see the qualifying word.)

Solutol (sol-u'tol) [solution]. An alkaline solution of cresol in sodium cresylate, used as a disinfectant.

Solvent (sol'vent) [solvere, to dissolve]. 1. Capable of dissolving. 2. A liquid capable of dissolving.

Sveol (sol've-al). A neutral solution of cresol in sodium cresylate, used as a disinfectant.

Svine (sol've-in). One of a series of liquids obtained from certain oils by the action of concentrated sulfuric acid; it is a powerful solvent, and also possesses the property of dissolving the red corpuscles.

Somacule (so'-mak-ul) [dim. of *sōma*, the body]. A physiologic unit corresponding to, but greatly more complex than, the chemic molecule.

Somatic (so-mat'-ik) [σωματικός, from *sōma*, body]. 1. Pertaining to the body. 2. Pertaining to the framework of the body and not to the viscera.

Somaticovisceral (so-mat-ik-o-vis'-er-al) [sōma, body; viscera]. Relating to the body and the viscera.

Somatochrome (so-mat'-o-krōm) [sōma, body; χρώμα, color]. Applied by Nissl to a group of nerve-cells possessing a well-defined cell-body completely surrounding the nucleus on all sides, the protoplasm having a distinct contour. This group is divided into arkyochrome, stichochrome, arkyostichochrome, and gyrochrome nerve-cells.

Somatodymia (so-mat-o-dim'-e-ah) [sōma, body; δύναι, to enter]. A twin monstrosity in which the trunks are united. There are several varieties: *ischiodymia*, union by the hips; *infraomphalodymia*, union in the inferior umbilical region; *omphalodymia*, union in the umbilical region; *supraomphalodymia*, union in the superior umbilical region; *sternodymia*, by the sternum; *sternomphalodymia*, union by the sternal and the umbilical regions; *vertebrodymia*, union by the vertebrae.

Somatology (so-mat-ol'-o-jē) [sōma, body; λόγος, science]. The study of anatomy and physiology of organized bodies; biology apart from psychology.

Somatome (so'-mat-ōm) [sōma, body; τομή, a cutting]. A transverse segment of an organized body; a somite.

Somatopleure (so-mat'-o-plūr) [sōma, body; πλευρά, the side]. The body-wall.

Somatose (so'-mat-ōz) [sōma, body]. A proprietary albumose food-product. **S., Ferro-**, **S., Iron**, a preparation of somatose containing 2% of iron. Dose 75-150 gr. (5-10 Gm.) daily. **S., Milk**, a tasteless, inodorous food in the form of a powder prepared from milk with 5% of tannic acid; used in chronic diseases of the digestive tract. Dose for adults 2 or 3 tablespoonfuls (30-45 Cc.) daily.

Somatoplachnopleuric (so-mat-o-splank-na-plū'-rik). Relating to the somatopleure and the splachnopleure.

Somesthetic, Somæsthetic (so-mes-thet'-ik) [sōma, body; αἰσθητικός, sensation]. Pertaining to general sensory structures. **S. Area**, Munk's *Körperhülsphäre*, the region of the cortex in which the axons of the general sensory conduction-path terminate. **S. Path**, the general sensory conduction-path leading to the cortex.

Somiology (so-mi-ol'-o-jē) [sōma, body; λόγος, science]. A term proposed by Rafinesque, 1814, as a common name under which to consider the phenomena of organic nature, now covered by the term biology. Syn., *Organology*; *Organomy*.

Somite (so'-mit) [sōma, body]. 1. A segment of the body of an embryo. 2. One of a series of

segments of the mesoblast on each side of the dorsal ridge of the embryo; a protovertebra, a protovertebral or mesoblastic somite.

Somnal (sōm'nal) [sōmnus, sleep]. A crystalline substance, a compound of chloral hydrate and urethane. It is diuretic and hypnotic. Dose 30 gr. (2 Gm.).

Somnambulance, Somnambulism (sōm-nam'-bu-lans, sōm-nam'-bu-lizm) [sōmnus, sleep; ambulare, to walk]. 1. The condition of half-sleep, in which the senses are but partially suspended; also sleep-walking, a condition in which the individual walks during sleep. 2. The type of hypnotic sleep in which the subject is possessed of all his senses, often having the appearance of one awake, but whose will and consciousness are under the control of the hypnotizer. **Somnambulism provoqué**, sleepwalking induced by mesmerism, hypnosis, or "electrobiology."

Somnambulator, Somnambulist (sōm-nam'-bu-la-tor, sōm-nam'-bu-list). One who walks in his sleep.

Somnial (sōm'-ne-āl) [sōmnus, dreaming]. Relating to dreams.

Somniative, Somniatory (sōm'-ne-ā-tiv, sōm'-ne-ā-tor) Relating to dreaming, producing dreams.

Somnolent (sōm'-nik'-u-lus) [sōmnus, sleep]. Drowsy, sleepy.

Somnolent (sōm'-ne-jā'-shent) [sōmnus, sleep; facere, to make]. 1. Producing sleep. 2. A medicine producing sleep.

Somniloquence, Somniloquism, Somniloquy (sōm-nil'-o-kuens, sōm-nil'-o-kuizm, sōm-nil'-o-kuē) [sōmnus, sleep, loqui, to talk]. The act of talking during sleep.

Somniloquist (sōm-nil'-o-kuist). One given to talking during sleep.

Somnoform (sōm'-no-form) An anesthetic consisting of ethyl chlorid, 60%; methyl chlorid, 35%; ethyl bromid, 5%.

Somnol (sōm'-nol) A synthetic product of chloralurethane with a polyatomic alcohol radical, used as a hypnotic and cerebral sedative. Dose 2-4 gr. (12.7-16.3 Gm.).

Somnolentia (sōm-no-lent'-she-ah) [L.]. Sleep-drunkennes; a condition of incomplete sleep in which a part of the faculties are abnormally excited, while the others are in repose.

Somnolescent (sōm-no-lent'-sent) [sōmnus, sleep]. 1. Drowsy. 2. Including drowsiness.

Somnone (sōm'-nūn). A proprietary hypnotic said to contain opium, lupulin, and lactucarium. Dose 16-32 min. (1-2 Gm.).

Somnopathist (sōm-nop'-ath-ist) [sōmnus, sleep; pathos, disease]. One subject to hypnotic trance.

Symnopathy (sōm-nop'-ath-e) Hypnotic somnambulism.

Somnos (sōm'-nos) [sōmnus, sleep]. A proprietary hypnotic formed by the chemical reaction between chloral hydrate and glycerol in certain proportions.

Sonometer (sō-nom'-et-er) (sonus, a sound, metron, a measure). 1. An instrument for determining the pitch of sounds and their re-

lation to the musical scale. 2. An instrument for testing hearing.

Sonorous (so-nu'-er-us) (sonus, sound). Capable of producing a musical sound, of tones pitched.

Soor (soor) [Ger.]. See *Thrush*.

Soot-cancer, Soot-wart. Epithelioma of the scrotum, so called from its frequency in chimney sweeps.

Sophistication (so-fis-ti-kā'-shun) (sōphos, wisdom, deus, god). The adulteration or imitation of a substance.

Sopor (so'-por) [L.]. Sleep, especially the profound sleep symptomatic of a morbid condition.

Soporate (so'-por-āt) (sopor). To stuporize, render drugged.

Soporiferous (so'-por-āf'-er-us) See *Sopor*.

Soporific (so'-por-āf'-ic) (sopor, facere, to make). 1. Producing sleep. 2. A sleep-producing.

Sorbefacient (sor-be-fā'-shent) (sorbere, to suck, facere, to make). Promoting absorption.

Sordes (sor'-des) (sordere, to be soiled). Filth, dirt, especially the crusts that accumulate on the teeth and lips in continued fever. **S. gastrica**, undigested gastric debris, or *Saburia gastrica*.

Sordid (sor'-did) (sordidus, dirty, filthy). In biology, of a dull or dirty color.

Sordidin (sor'-did-in), $C_{12}H_{14}O_4$, m. p. 151°. A substance isolated from the bacterium *S. sordida*.

Sore. 1. Painful, tender. 2. An open wound. **S., Delhi, S., Penjdeh, S., Bala.** See *Furunculosis orientalis*. **S. Feet of China, S., Water.** See *Ich. Causa*. **S. Mouth, Ceylon.** See *Aphtha tropica*. **S. Tropical of Fothergill**, ulcerative angina of scarlatina scarlatina anginosa. **S., Veil.** See under *Veil*.

Soret's Band. An absorption band in the extreme violet end of the spectrum of light, is characteristic of hemoglobin.

Sorocco (sor'-o) [Port.]. An affection resembling measles, common to the regions of South America.

Soron (so'-ron). Unaltered monochlorobenzene, 98.5%, in powder. It is colorless and volatile.

Sostrum (sōs'-trum) (sōstrum, a reward, for long life). A physician's fee.

Souffle (soo'-fl) [Fr.]. A blowing sound. **S. Fetal**, an incessant murmuring heard over the uterus during pregnancy, and due to the contraction of the arteries of the **S., Funic, S., Funicular**, a tumor synchronous with the fetus, and situated over the abdomen of a pregnant woman, supposed to be produced by the rupture of the **S., Placental, S., Uterine**, a tumor during the latter months of pregnancy, and due by the entrance of air into the cavities of the uterus. **S., Splenic**, a tumor to be audible over the spleen is seen in anæmia and leukemia.

Soul (sōl) (Mn. soul). The immaterial part of man's nature. **S., Unborn**

See *Blindness, Psychic, and Apraxia*. **S.-deafness**, deprivation of all sensation of sound or reminiscence of it. **S., Spinal**, a supposititious consciousness present in the spinal cord. **S., Stahl's**, according to the doctrine of George Ernst Stahl (1668-1734), the supreme, life-giving, life-preserving principle, distinct from the spirit, when hindered in its operation, disease resulted; it governed the organism chiefly by way of the circulation. His doctrine was called *animism*, and was a reaction against the chemie and mechanic theories of the seventeenth century.

Sound [sonus]. 1. The sensation produced by stimulation of the auditory nerve by aerial vibrations. 2. [Fr., *sonder*, to probe.] An instrument for introduction into a channel or cavity, for determining the presence of constriction, foreign bodies, or other morbid conditions, and for the purpose of treatment. **S., Pulmonary**. See *Respiratory Murmur*.

Southern Fever. Synonym of *Texas fever*.

Southernwood. See *Artemisia abrotanum*.

Southey's Drainage-tubes. Small tubes employed for draining away the fluid from limbs that are the seat of extensive anasarca.

Soymida (soi'-mid-ah) [Telugu name]. A genus of the *Melivceæ*. *S. febrifuga* is an East Indian tree that furnishes rotun bark, introduced as a medicine in 1807 and used as a tonic and antiperiodic.

Sozal (so'-al). See *Aluminium Sulfo-carbolate*.

Sozin (so'-zin) [soz'etv, to save; keep]. A defensive protoid occurring naturally in the animal body. One capable of destroying micro-organisms is termed a *mycosozin*, one antagonizing bacterial poisons, a *toxosozin*.

Sozoborol (so-zo-bo'-rol). A mixture used in coryza said to consist of aristol, soziodol, and borates.

Soziodol, Soziodolic Acid (so-zo-i'-o-dol, so-zo-i'-dol'-ik) [soz'etv, to save; indol], $C_6H_4(SO_2)OH$. A crystalline, odorless powder used as an antiseptic, disinfectant, and parasiticide, chiefly in the form of its salts, of which the following have been employed: sodium soziodol, potassium soziodol, zinc soziodol, and mercury soziodol. **S., Lead**, fine acicular crystals, sparingly soluble in water. **S., Sodium**. See *Sodium Soziodolate*.

Sozolic Acid (so-zo'-lik). See *Aseptol*.

Space (spās) [ME., from L., *spatium*, space]. A name given for purposes of description to sundry inclosed or semiinclosed places within or about the body. **S., Anterior Perforated**, a triangular space at the mesal side of the sylvian fissure. **S., Arachnoid**. See *S., Sub-arachnoid*, and *S., Subdural*. **S., Axillary**, the axilla. **S., Bogros'**, a space between the peritoneum above and the fascia transversalis below, in which the lower portion of the external iliac artery can be reached without wounding the peritoneum. **S., Böttcher-Cotugno's**, **S., Cotugno's**, the sacus endolymphaticus of the internal ear. **S., Bregmatic**, the anterior fontanel. **S., Circumlen-**

tal, the interspace between the ciliary body and the equator of the lens. **S.s, Circumvascular Lymph-**, channels surrounding the blood-vessels and communicating with lymphatic vessels. **S., Colles'**, the space beneath the perineal fascia containing the ischio-cavernosus, transversus perinei, and bulbocavernosus, the bulbous portion of the urethra, the posterior scrotal (labial) vessels and nerves, and loose areolar tissue. **S., Complemental** (of pleura), the portion of the pleural cavity just above the attachments of the diaphragm which is not filled with lung during inspiration. **S., Corneal**, that between the corneal layers. **S.s, Czermak's Interglobular**, irregular branched spaces in the crista petrosa and enamel of the teeth. **S., Douglas'**. See *Culdesac, Douglas'*.

S., Epidural (of the spinal canal), a lymph-space between the spinal dura and the periosteum lining the canal. **S.-feelings**, Her- ing's term for the perceptions or inferences of space-relations resulting from the retinal image. **S. of Fontana**, one of the inter-communicating cavities in the spongy tissue occupying the angle between the cornea and the iris. **S., Haversian**, **S., Medullary**. See *Havers' Spaces*. **S., Henke's Retro-**

visceral, the prevertebral space of the thorax which is continuous with the cervical space and is filled with areolar and fatty tissue. **S.s, His' Perivascular**, lymph-spaces sur- rounding the blood-vessels of the brain and spinal cord. **S., Hypoprostatic**, the space between the rectum and the prostate. **S.s, Intercellular**, cavities formed by the splitting or separation of the walls of adjoining cells. **S., Intercostal**, the space between two con- tiguous ribs. **S., Interocrural**. See *S., Inter-*

peduncular. **S.s, Interfascicular**, spaces between the bundles in fibrous tissue. **S., Interglobular**, an apparent, irregular space in the interglobular substance of the dentin. **S.s, Interlamellar**, the spaces between the lamellas of the cornea. **S., Intermesoblas-**

tic, the cavity between the visceral and parietal laminae of the mesoblastic plates of the embryo. **S.s., Intermetatarsal**, spaces between the metatarsal bones. **S.s, Inter-**

muscular, in the popliteal region, the spaces between the quadriceps extensor and the posterior muscles of the thigh. **S., Inter-**

osseous, the space between two parallel bones. **S., Interparietal**. See *S., Virchow-*

Robin's. **S., Interpeduncular**, a diamond- shaped depression at the base of the brain, lying between the optic tracts and the crura cerebri. **S., Interproximate**, in denti-

stry, the V-shaped space between the prox- imate surfaces of the teeth and the alveolar septum which is filled by the gum. **S., In-**

tertunical. See *S., Virchow-Robin's*. **S., Intervaginal** (of the optic nerve). See *S., Subcraginal*. **S.s, Investing**. See *S., Lymph.*

S., Ischiorectal. See *Fossa, Ischiorectal*. **S., Kiernan's**, an interlobular space of the liver. **S., Kretschmann's**, a small pocket in the attic of the middle ear situated below

the interspace between the ciliary body and the equator of the lens. **S.s, Circumvascular Lymph-**, channels surrounding the blood-

vessels and communicating with lymphatic vessels. **S., Colles'**, the space beneath the perineal fascia containing the ischio-cavernosus,

transversus perinei, and bulbocavernosus, the bulbous portion of the urethra, the posterior scrotal (labial) vessels and nerves, and loose areolar tissue. **S., Complemental** (of pleura), the portion of the pleural cavity just above the attachments of the diaphragm which is not filled with lung during inspiration. **S., Corneal**, that between the corneal layers. **S.s, Czermak's Interglobular**, irregular branched spaces in the crista petrosa and enamel of the teeth. **S., Douglas'**. See *Culdesac, Douglas'*.

S., Epidural (of the spinal canal), a lymph-space between the spinal dura and the periosteum lining the canal. **S.-feelings**, Her- ing's term for the perceptions or inferences of space-relations resulting from the retinal image. **S. of Fontana**, one of the inter-communicating cavities in the spongy tissue occupying the angle between the cornea and the iris. **S., Haversian**, **S., Medullary**. See *Havers' Spaces*. **S., Henke's Retro-**

visceral, the prevertebral space of the thorax which is continuous with the cervical space and is filled with areolar and fatty tissue. **S.s, His' Perivascular**, lymph-spaces sur- rounding the blood-vessels of the brain and spinal cord. **S., Hypoprostatic**, the space between the rectum and the prostate. **S.s, Intercellular**, cavities formed by the splitting or separation of the walls of adjoining cells. **S., Intercostal**, the space between two con- tiguous ribs. **S., Interocrural**. See *S., Inter-*

peduncular. **S.s, Interfascicular**, spaces between the bundles in fibrous tissue. **S., Interglobular**, an apparent, irregular space in the interglobular substance of the dentin. **S.s, Interlamellar**, the spaces between the lamellas of the cornea. **S., Intermesoblas-**

tic, the cavity between the visceral and parietal laminae of the mesoblastic plates of the embryo. **S.s., Intermetatarsal**, spaces between the metatarsal bones. **S.s, Inter-**

muscular, in the popliteal region, the spaces between the quadriceps extensor and the posterior muscles of the thigh. **S., Inter-**

osseous, the space between two parallel bones. **S., Interparietal**. See *S., Virchow-*

Robin's. **S., Interpeduncular**, a diamond- shaped depression at the base of the brain, lying between the optic tracts and the crura cerebri. **S., Interproximate**, in denti-

stry, the V-shaped space between the prox- imate surfaces of the teeth and the alveolar septum which is filled by the gum. **S., In-**

tertunical. See *S., Virchow-Robin's*. **S., Intervaginal** (of the optic nerve). See *S., Subcraginal*. **S.s, Investing**. See *S., Lymph.*

S., Ischiorectal. See *Fossa, Ischiorectal*. **S., Kiernan's**, an interlobular space of the liver. **S., Kretschmann's**, a small pocket in the attic of the middle ear situated below

Prussack's space S.s, Kuhnt's, the recesses of the posterior chamber, a series of radial spaces which communicate anteriorly with the posterior chamber of the eye and contain aqueous humor S., Lacunar. See *Lacuna*. S.s, Lange's, the rhomboidal meshes of the reticular layer of the skin. S.s, Larrey's, spaces between the parts of the diaphragm attached to the sternum and those that are attached to the ribs. S., Lesshaft's, Lesshafti rhombus, a locus minoris resistentie existing in the region of the twelfth rib in some individuals, which allows the pointing of an abscess or the protrusion of a hernia. It is bounded, in front, by the external oblique, behind, by the latissimus dorsi; above, by the serratus posterior inferior, and below, by the internal oblique. See *Gray's triangle*; *Lumbocostal abdominal triangle*; *Spatium latissimum humeri*. S., Lymph-, a sinus or space through which lymph passes. S., Macewen's. See *Macewen's Triangle*. S.s, Magenlie's, imperfectly closed lymph-spaces formed by the separation of the arachnoid from the pia and corresponding to the cerebral sulci. S., Malncarne's. See *Parietal Space*. S., Marrow-. See *Canal*, *Medullary*. S., Meckel's, a dual space in the gasserian ganglion. S., Nuel's. See *Nuel's Space*. S., Pelvirectal. See *Fossa*, *Ichiorectal*. S., Perforated. See *Perforated Space*. S.s, Pericellular, lymph spaces in the brain. S., Perichoroid, a lymph space between the sclera and the choroid. S., Perigastric, the cavity surrounding the stomach and other viscera. S., Perilenticular, the space surrounding the crystalline lens bounding the zonule of Zann. S.s, Perineural, lymph spaces between the lamellae of the perineurium. S., Perivascular. See *S. Circumvascular Lymph*. S., Perivitelline. See *S. Yolk*. S., Pituitary, the space between the two cranial trabeculae which in the hypophyseal apparatus. S.s, Placental Blood-, the intervillous lacunae of the placenta. S.s, Pleuroperitoneal. See *S. Internescoblastic*. S., Poiseuille's. See *S. Lymph*. S., Popliteal, a large shaped space at the back of the knee and thigh. S., Posterior Perforated, the depression just behind the alar foramina at the base of the brain. S., Posterior Triangular, the space lying above the clavicle and between the sternomastoid and the trapezius muscle and the occiput. S., Prevesical, a space lying immediately above the nubes and between the transversalis fascia and the posterior surface of the testis abdominalis. S., Prussack's (Alexander), the small space formed in the attic of the middle ear by the external ligament of the malleus above, the short process of the malleus below, the neck of the malleus internally, and the tympanic membrane externally. S., Quadrilateral, the anterior and posterior triangles of the neck taken together. S., Quincke's, the space between the third and fourth thoracic vertebrae. S., Rectovesical, the space between the blad-

der and the rectum. S., Retzine's. See *S. Precentral*. S., Schwalbe's, the anterior space of the optic nerve. S., Semimunar. See *Traubel*. See *Semimunar Space*. S., Sense. 1. The faculty by which the sense objects is recognized. 2. A sense by which we judge of the relation of objects in space; it is a part of the sense of sight. S., Subarachnoid, the space between the arachnoid and the pia proper. It contains the cerebrospinal fluid. S., Subdural, the space between the pia and the arachnoid. Normally it contains a capillary layer of blood. S., Subvagal, a lymph space within the sheath of the vagus nerve. S., Suprachoroid, the space between the velum interspersum and the choroid. S. of Tenon, a lymph space between the sclera and the fascia of Tenon. S., Traube's, a semilunar two-part space existing in the stomach. See *Nonchance*. S., v. Troelsch's, two small pockets formed in the posterior wall of the attic of the middle ear by means of a common membrane. S., Uterorectal, S., Uterovaginal. See *Culdeus*, *Fornix*. S., Visceral. Robin's, an adventitious lymph space between the coats of the cerebral arteries. S., Visual, the visual field. S., Yolk-, a space formed by the retraction of the vitellus from the zona pellucida. S., Zang's, the space between the two tendons of origin of the semimastoid in the superior nuchal line.

Spanemia (*span-e-mee-ah* [*span-ee-mee-ah*, *span-ee-ah*]) Anemia.

Spaniocardia (*span-ee-oh-kar-dee-ah* [*span-ee-oh-kar-dee-ah*]) Latent form of bradycardia.

Spanish Fever. Synonym of *Typhus*. See *S. Fly*. See *Caulthorpes*. S., Windlass. See *Windlass*.

Spanopnea (*span-oh-pe-ah* [*span-ee-oh-pe-ah*]) Inability to breathe. Interference of respiratory action.

Sparadrap (*spa-rad-rap* [*spa-rad-rap*]) A plaster spread upon cotton, linen, silk, paper or paper.

Spargosis (*spa-r-goh-sis* [*spa-r-goh-sis*]) 1. Enlargement of the mammary gland. 2. Accumulation of milk. 3. Phlogosis.

Sparteine (*spa-r'tee-ne*). An alkaloid found in *propariis*. S. Hydrochlorate, $C_{15}H_{21}N_2O_2 \cdot HCl$, colorless crystals soluble in water, alcohol, used as is the sulfate. S. Hydroxide, $C_{15}H_{21}N_2O_2 \cdot H_2O$, white crystals soluble in water or alcohol. Usage and dose the same as the sulfate. S. Sulfate, $C_{15}H_{21}N_2O_2 \cdot H_2SO_4$, white crystals soluble in water, alcohol, propariis, and the other bases. Boiling at $166^\circ C$. It is a heart stimulant during life. Dose 1-4 gr. in water. Maximum dose 1 gr. in water. Usage and dose the same as the sulfate. S. Triiodide, $C_{15}H_{21}N_2O_2 \cdot HI_3$, a black powder. Attention must be given in the use of water and alcohol in the use of the sulfate.

Spartium (*spa-r'tee-um*). Pallasine from *Spartium*. Characterized by its staining, soluble

paralytic-like weakness, and accelerated pulse.

Spasm (*spazm*) [*σπασμός*, spasm]. A sudden muscular contraction. **S. of Accommodation**, spasm of the ciliary muscles, producing accommodation for objects near by. **S., Carpopedal**, a contraction causing flexion of the fingers and wrist or ankles and toes. **S., Clonic**, a spasm broken by relaxations of the muscles. **S., Clonic, in the Area of the Nervus accessorius**. Synonym of *Torticollis*, *Spasmodic*. **S., Clonic, in the Area of the Portio dura**. Synonym of *Tic*, *Painless*. **S., Cynic**. See *Cynic Spasm*. **S., Deglutition**, a paroxysm of rapid swallowing, noted by Young (1901) as a symptom of whooping-cough. **S.s, Fatigue**, Poore's term for a group of affections characterized by spasmodic contractions, either clonic or tonic, brought about by voluntary movement, the exciting cause being limited to some particular action. Syn., *Business spasms*; *Coordinated business neuroses* (Benedict); *Functional spasms* (Weir Mitchell); *Handicraft spasms*; *Movement spasms*; *Occupation spasms*; *Professional spasms*; Ger., *Beschäftigungs Neurosen*. **S.s, Friedreich's**. Synonym of *Paramyoclonus multiplex*. **S.s, Function**, **S.s, Functional**, **S.s, Handicraft**. See *S.s, Fatigue*, and *Occupation neurosis*. **S., Habit**, a spasm acquired from habit. **S., Hammer**. See *Palsy*, *Hammer*. **S., Idiopathic Muscular**. See *Fenny*. **S., Laryngeal Congenital**, a peculiar stridor developing at birth and disappearing after one or two years. **S., Lock**, a form of writer's cramp in which the fingers become locked on the pen. **S., Masticatory** (of the face). See *Trismus*. **S., Mimic**, facial neuralgia. **S.s, Movement**. See *S.s, Fatigue*. **S., Muscular, Idiopathic**. See *Tetany*. **S., Myopathic**, one attending a disease of the muscles. **S., Nictitating**, **S., Nodding**. See *Eclampsia nutans*. **S., Occupation**, **S., Professional**. See *S.s, Fatigue*. **S., Pantomimic**. Synonym of *Tic*, *Painless*. **S., Penman's**. Synonym of *Writers' cramp*. **S., Retrocollic**, clonus of the deeper muscles of the back of the neck. **S., Romberg's**, masticatory spasm affecting the muscles supplied by the motor fibers of the fifth nerve. **S., Saltatoric**, **S., Saltatory**, **S., Static Reflex**. See under *Saltatory*. **S., Telegraphist's**, an affection described first by Onimus, 1873. See *S.s, Fatigue*. **S., Tetanic**. See *S., Tonic*. **S., Tonic**, a spasm that persists without relaxation for some time. **asmo-** (*spaz-mo-*) [*σπασμός*, spasm]. A prefix denoting pertaining to a spasm. **asmodermic** (*spaz-mo-der'-mik*). Relating to a spasmodic affection of the skin. **asmodic** (*spaz-mod'-ik*) [*spasm*]. Pertaining to or characterized by spasm. **S. Spinal Paralysis**. See *Lateral Sclerosis*. **asmodism** (*spaz'-mod-izm*) [*spasm*]. Fleury's term for those nervous states that originate in medullary excitation.

Spasmoneme (*spaz'-mo-nēm*) [*spasmo-*; *νήμα*, a thread]. The central reticulum or undulating bundle of fibrils eccentrically located in the peduncle of a stalked infusorian (*Vorticella*) and derived from the myonemes of the body.

Spasmophilia (*spaz-mo-fil'-e-ah*) [*spasmo-*; *φιλία*, to love]. A morbid tendency to convulsions.

Spasmotin (*spaz-mo'-tin*). See *Sphaerelotoxin*.

Spasмотoxin (*spaz-mo-toks'-in*) [*spasmo-*; *τοξίνη*, poison]. 1. A ptomain-base of composition yet undetermined, obtained by Brieger from cultures of the tetanus germ, together with other unnamed toxins, one of which induced complete tetanus, with salivation and laceration. Spasmotoxin induces in animals violent clonic and tonic convulsions. See under *Ptomain*. 2. See *Sphaerelotoxin*.

Spastic (*spas'-tik*) [*σπαστικός*, spastic]. Pertaining to or characterized by spasm; produced by spasm. **S., Diplegia**. See *Paraplegia*, *Infantile Spasmodic*. **S., Paralysis**. See *Paralysis*, *Spastic*.

Spasticity (*spas-tis'-it-e*) [*spastic*]. The state of being spastic.

Spathologic (*spath-o-laj'-ik*) [*σπάθιον*, to go fast. *λογία*, science]. Relating to rapid proliferation of leukocytes.

Spatial (*spa'-shal*) [*spatium*, space]. Relating to space.

Spatula (*spa'-u-lah*) [L.; dim. of *spatha*, a ladle]. A flexible blunt blade used for spreading ointments.

Spay [Gerl., *spath*]. To remove the ovaries.

Spearmint (*spir'-mint*). See *Mentha viridis*.

Specialism (*spesh'-al-izm*). See *Specialty*.

Specialty (*spesh'-al-tee*) [*species*]. The particular branch pursued by a specialist.

Species (*spe'-shee*) [L.]. 1. A subdivision of a genus of animals or plants the individuals of which are either identical in character or differ only in unimportant and inconstant details. 2. A powder made from the leaves or other parts of various plants, and used to prepare a medicinal infusion.

Specific (*spe-sif'-ik*) [*species*; *facere*, to make]. 1. Of or pertaining to a species, or to that which distinguishes a thing or makes it of the species of which it is. 2. A medicine which has a distinct curative influence on an individual disease. 3. Produced by a single micro-organism, as a specific disease, in a restricted sense, syphilitic. **S. Gravity**. See *Gravity*, *Specific*. **S. Heat**. See *Heat*, *Specific*.

Specificity (*spe-sif-ih'-it-e*) [*specific*]. The quality of being specific.

Specillum (*spe-sil'-um*) [L.]. A probe.

Specimen (*spe-sim-en*) [L.]. An example; a sample. **S.-cooler**, a small water-cell immediately under the specimen in microprojection, to prevent injury from the heat of the radiant

Spectacles (*spek'-tak-le*) [*spectaculum*, a show, from *specare*, to view]. A pair of lenses set in a frame, and used for the correction of optic defects of the eye.

Spermatoblast, Spermbblast (*sper'-mat-o-blast*, *sper'-mo-blast*) [*spermato-*; *βλαστός*, a germ]. A cell resulting from the division of the spermatogenic cell and developing into a spermatozoon.

Spermatocoele (*sper'-mat-o-sēl*) [*spermato-*; *κύστη*, tumor]. A spermatic cyst or encysted hydrocele containing spermatozoa.

Spermatocystectomy (*sper'-mat-o-sist-ek'-to-me*) [*spermato-*; *cystectomy*]. Excision of a spermatic cyst.

Spermatocystitis (*sper'-mat-o-sis-ti'-tis*). Inflammation of the seminal vesicles.

Spermatocystotomy (*sper'-mat-o-sis-tot'-o-me*) [*spermato-*; *cystotomy*]. Surgical incision of a seminal vesicle.

Spermatocyte (*sper'-mat-o-sit*) [*spermato-*; *κύτταρο*, cell]. The germinal cell from which the spermatozoon develops.

Spermatogenesis, Spermatogeny (*sper'-mat-o-jen'-e-sis*, *sper'-mat-oj'-en-e*) [*spermato-*; *γένεσις*, origin]. The formation of spermatozoa.

Spermatogenic (*sper'-mat-o-jen'-ik*) [see *Spermatogenesis*]. Producing spermatozoa, as the spermatogenic cells of the testicle.

Spermatogonium (*sper'-mat-o-go'-ne-um*) [*spermato-*; *γενή*, generation]. A formative seminal cell or mass of spermatoblasts.

Spermatomere (*sper'-mat-o-mēr*) [*spermato-*; *μέρος*, share]. Any one of the portions into which a pronucleus of the fertilized ovum may divide.

Spermatophore (*sper'-mat-o-fōr*) [*spermato-*; *φέρω*, to bear]. 1. The part of the spermatozoon that is not converted into a spermatozoon. 2. A semitransparent capsule surrounding a group of spermatozoa.

Spermatorrhea (*sper'-mat-or-e'-ah*) [*spermato-*; *ῥοή*, a flow]. Involuntary discharge of semen without sexual excitement.

Spermatospore (*sper'-mat-o-spōr*) [*spermato-*; *σπορίσ*, a sowing]. A primitive cell giving rise by division to spermatozoa.

Spermatotoxin, Spermatoxin (*sper'-mat-o-toks'-in*, *sper'-ma-toks'-in*). See *Spermolysin*.

Spermatozoon, Spermatozoic (*sper'-mat-o-zō'-on*, *sper'-mat-o-zō'-ik*). Relating to a spermatozoon.

Spermatozoicide (*sper'-mat-o-zō'-is-id*) [*spermatozoon*; *κτερέω*, to kill]. 1. Destructive to spermatozoa. 2. An agent destructive to spermatozoa.

Spermatozoon (*sper'-mat-o-zō'-on*) [*spermato-*; *ζῶον*, animal]. The male element capable of fecundating the ovum. It consists of an oval head and a long, mobile cilium or tail. It is the essential element of the semen.

Spermaturia (*sper'-mat-u'-re-ah*) [*spermato-*; *οὐρ*, urine]. The presence of semen in the urine.

Spermin (*sper'-min*) [*sperm*], C_2H_5N . A non-poisonous base obtained from sputum, human semen, the organs of leukemic patients, etc. It has been used in neurasthenia, senile debility, diabetes mellitus, and pulmonary tuber-

culosis. S. Phosphate, constitutes the Charcot-Leyden crystals.

Spermbblast (*sper'-mo-blast*). See *Spermatoblast*.

Spermocenter (*sper'-mo-sen'-ter*). The sperm-centrosomes during fertilization of the egg.

Spermolysin (*sper'-mol'-is-in*) [*sperm*; *λύω*, to loose]. Metchnikoff's name for a cytolyisin produced by inoculation with spermatozoa. Syn., *Spermatoxin*.

Spermolysis (*sper'-mol'-is-is*). Dissolution of spermatozoa.

Spermoplasm (*sper'-mo-plazm*) [*sperm*; *πλάσσω*, to mold]. The protoplasm of the spermatozoon.

Spermosphere (*sper'-mo-sfēr*) [*sperm*; *σφαῖρα*, sphere]. A mass of spermatozoa.

Spermospore (*sper'-mo-spōr*). See *Spermatozoon*.

Spermotoxin (*sper'-mo-toks'-in*). See *Spermolysin*.

Sphacelate, Sphacelated (*sfas'-el-āt*, *sfas'-el-a-ted*) [*sphacelus*]. Necrosed; gangrenous; mortified.

Sphacelation (*sfas'-el-a'-shun*). The formation of a sphacelus; moist gangrene.

Sphaceloderma (*sfas'-el-o-der'-mah*) [*sphacelus*; *δέρμα*, skin]. Gangrene of the skin, especially symmetric gangrene, or Raynaud's disease.

Sphacelotoxin (*sfas'-el-o-toks'-in*) [*sphacelus*, a stage in the growth of ergot; *toxicon*, a poison], $C_{20}H_{22}O_8$. A yellowish, pulverulent body obtained from ergot, insoluble in water, soluble in ether, chloroform, alcohol, and alkaline solutions. It is used as a tonic, astringent, and emmenagog. Dose $\frac{1}{4}$ - $\frac{1}{2}$ gr. (0.032-0.1 Gm.). Syn., *Sphacelatin*; *Sphacelotoxin*.

Sphacelus (*sfas'-el-us*) [*σφάκελος*, gangrene]. A slough.

Sphaerobacteria (*sfe-ro-bak-te'-re-ah*). See *Spherobacteria*.

Sphaerococcus (*sfe-ro-kok'-us*) [*σφαῖρα*, a ball; *κόκκος*, a berry]. A genus of marine algae of the order *Sphaerococcoideae*. *S. compressus*, said to furnish in part the Japanese isinglass or agar of commerce.

Spheno- (*sfe-no-*) [*σφήν*, a wedge]. A prefix denoting pertaining to the sphenoid bone.

Sphenobasilar (*sfe-no-bas'-il-ar*) [*spheno-*; *βάσις*, base]. Pertaining conjointly to the sphenoid bone and the basilar portion of the occipital bone.

Sphenoccipital (*sfe-nok-sip'-it-āl*) [*spheno-*, *occiput*]. Pertaining to the sphenoid and the occipital bones.

Sphenocephalus (*sfe-no-sel'-ul-us*) [*spheno-*; *κεφαλή*, head]. A variety of monster in which the two eyes are well separated, the ears united under the head, the jaws and mouth distinct, and the sphenoid bone altered in shape, so that it is analogous in form to what is found normally in birds.

Sphenoethmoid (*sfe-no-eth'-moid*) [*spheno-*; *εθμοΐδ*]. Relating to both the sphenoid and the ethmoid bones.

Sphenoid (*sfe'-noid*) [*σφήν*, wedge; *οἶκος*, like]. 1. Wedge-shaped, as the sphenoid bone. 2.

- The sphenoid bone. **S. Bone.** See *Sphenoidale* under *Bones*, *Table of*. **S. Sinus.** See *Sinus*, *Sphenoid*.
- Sphenoidale** (*sfe-noi-dal'-le*) [neuter of *sphenoidalis*, sphenoid]. The sphenoid bone. **S. basilare anterius**, the anterior portion of the body of the sphenoid. **S. basioposticum**, the lower portion of the body of the sphenoid. **S. laterale posterius**, the lateral portion of the sphenoid. **Sphenoidalia lateralia**, the greater wings of the sphenoid.
- Sphenoiditis** (*sfe-noi-d-i-tis*). Inflammation of the sphenoid sinus.
- Sphenoido-** (*sfe-noi-do-*). The same as *Sphenoido-*.
- Sphenoidofrontal** (*sfe-noi-do-fron'-tal*) [*sphenoido-*; *frontal*]. Pertaining to the sphenoid and frontal bones.
- Sphenoidoparietal** (*sfe-noi-do-par-i'-et-al*) [*sphenoido-*; *parietal*]. Pertaining to the sphenoid and parietal bones.
- Sphenomaxillary** (*sfe-no-maks'-il-l-ary*) [*sphenoido-*; *maxilla*]. Pertaining to the sphenoid and maxillary bones, as the *sphenomaxillary fossa*. **S. Fissure.** See *Fissure*, *Sphenomaxillary*. **S. Fossa**, a triangular space at the angle of the sphenomaxillary and pterygomaxillary fissure. **S. Ligament**, a ligament extending from the inferior maxilla, near the inferior dental foramen, to the spinous process of the sphenoid bone.
- Sphenooccipital** (*sfe-no-ok-sip'-it-al*). See *Sphenoccipital*.
- Sphenoorbital** (*sfe-no-or'-bit-al*) [*spheno-*; *orbit*]. Pertaining to the sphenoid bone and the orbit.
- Sphenopalatine** (*sfe-no-pal'-a-tin*) [*spheno-*; *palatum*, palate]. Pertaining to the sphenoid bone and the palate, as the *sphenopalatine foramen*.
- Sphenoparietal** (*sfe-no-par-i'-et-al*) [*spheno-*; *parietal*]. Pertaining to the sphenoid and parietal bones.
- Sphenopetrosal** (*sfe-no-pe-tro'-sal*) [*spheno-*; *petra*, rock]. Pertaining to the sphenoid bone and the petrous portion of the temporal bone.
- Sphenotic** (*sfe-no-tik*) [*spheno-*; *ot*, ear]. A part of the sphenoid bone, existing as a distinct bone in the fetus, and forming the parts adjacent to the carotid groove.
- Sphenotribe** (*sfe-no-trib*) [*spheno-*; *tribe*, to rub]. An instrument for crushing the basal portion of the fetal skull.
- Sphenotripsy** (*sfe'-no-trib'-se*) [see *Sphenotribe*]. Crushing of the fetal skull.
- Sphere** (*sfe'*) [*sphaîra*, a sphere]. 1. A ball or globe. 2. A space. **S. of Attraction**, a clear spot in the cell plasma, outside and close to the nucleus of an ovum undergoing mitosis. It contains the centrosome of Boveri, and is the center of the formation of the amphias-ters in karyokinesis (q. v.). **S., Embryonic.** See *S.*, *Segmentation*. **S., granule**, a large granular corpuscle found in serous exudations. **S., Hearing**, the area in the brain which is supposed to be the seat of hearing. It is in the temporal lobe. **S., Motor**, a region in the central nervous system which, when stimulated, gives rise to motion. **S., Protoplasmic Primordial.** See *S.*, *Segmentation*. **S., Segmentation**, a process derived from division of the vitellus in the process of segmentation. **S., Sensory**, a sensory area of the central nervous system. **S., Vitelline**, **S., Yolk-**, the mulberry-like mass of cells that results from the fusion of the substance of the ovum after fertilization. **S., Yeast-**, in biology, an aggregation of cells sprouting forms of the genus *Blasaria*.
- Spheric, Spherical** (*sfer'-ik*) [*sphaîra*, a sphere]. Having the shape of or pertaining to a sphere. **S. Aberration.** See *Aberration*, *Spherical*.
- Spherobacteria** (*sfe-rok'te'-ri-ya*) [*sphaîra*, sphere; *bacteria*]. The spherobacteria.
- Spherometer** (*sfe-ro-met'-er*) [*sphaîra*, sphere; *metron*, a measure]. An instrument for determining the degree of curvature of a convex or part of a sphere, especially of optical lenses or of the tools used for grinding them.
- Sphincter** (*sfink'ter*) [*spindz*, to twirl]. A muscle surrounding and closing an opening in the anal sphincter, the pyloric sphincter, etc. **S. antrypyloric.** See under *Muscle*. **S. gule**, the constrictor of the pharynx. **S. Henle's**, the striated muscular fibers which encircle the prostate and membranous portions of the urethra. **S., Hyrtl's.** See *S. Nélaton's*. **S. ilei**, the ileocecal valve. **S. intestinalis.** See *S. antrypyloric* under *Muscle*. **S. labiorum**, the orbicularis oris muscle. **S. laryngis**, the arytenoid, pharyngeal muscles of both sides surrounding the laryngeal opening. **S., Nélaton's**, a circular bundle of rectal muscular fibers situated from 2 to 3 cm. above the anus, on a level with the prostate. It is not constant, and when present it generally occupies only a part of the circumference of the bowel. **S., O'Heime's**, the knotted, circular bundle of muscle fibers situated in the rectum, just below its junction with the colon. **S. oculi**, **S. palpebrarum**, the orbicularis palpebrarum muscle. **S. oesophageus.** See *Foramen*, *Pharynx*. **S., Oral**, the orbicularis oris. **S. pharyngolaryngeus**, the inferior constrictor of the pharynx, the anterior cricothyroid and the thyroid muscles considered as one. **S. pyloricus.** See under *Muscle*.
- Sphincteroscope** (*sfink'ter-o-skop*) [*sphaîra*, sphere; *skopein*, to examine]. An instrument for making visual inspection of a sphincter.
- Sphincteroscopy** (*sfink'ter-o-skop-i*) [*sphaîra*, sphere; *skopein*, to examine]. Visual inspection of a sphincter by means of a sphincteroscope.
- Sphincterotomy** (*sfink'ter-o-tom-i*) [*sphaîra*, sphere; *tomé*, a cutting]. The operation of incising a sphincter.
- Sphinctrate** (*sfink'tat*) [*sphaîra*, sphere]. Contracted as if by a sphincter.
- Sphingoin** (*sfin'-gin*) [*sphaîra*, sphere; *oin*, an alkali]. A substance derived from sphingolipids.
- Sphygmia** (*sfig'-mi-a*) [*sphaîra*, sphere; *mi-a*, pertaining to the pulse].
- Sphygmo-** (*sfe-no*) [*sphaîra*, sphere]. A prefix signifying pertaining to the pulse.

Sphygmochronograph (*sfig-mo-kro'-no-graf*) [*sphygmo-*; *chronograph*]. A form of sphygmograph.

Sphygmochronography (*sfig-mo-kro-nog'-ra-e*) The registration of the extent and oscillations of the pulse-wave.

Sphygmogenin (*sfig-moj'-en-in*) [*sphygmo-*; *γεννέω*, to produce]. A substance isolated by Frankel from the suprarenal capsule, which causes increase of blood-pressure. It is used as an antidote in nicotine poisoning.

Sphygmogram (*sfig'-mo-gram*) [*sphygmo-*; *γραμμά*, a writing]. The tracing made by the sphygmograph.

Sphygmograph (*sfig'-mo-graf*) [*sphygmo-*; *γραφώ*, to write]. An instrument for recording graphically the features of the pulse and the variations in blood-pressure.

Sphygmographic (*sfig-mo-graf'-ik*). Pertaining to the sphygmograph.

Sphygmology (*sfig-mol'-o-je*) [*sphygmo-*; *λόγος*, treatise]. The branch of medicine dealing with the characters of the pulse.

Sphygmomanometer (*sfig-mo-man-om'-et-er*) [*sphygmo-*; *μανόμετρον*]. An instrument for measuring the tension of the blood-current.

Sphygmometer (*sfig-mom'-et-er*). See *Sphygmograph*.

Sphygmopalpation (*sfig-mo-pal'-pa'-shun*). The palpation of the pulse.

Sphygmophone (*sfig-mo-fon*) [*sphygmo-*; *φωνή*, sound]. A sphygmograph in which the vibrations of the pulse produce a sound.

Sphygmoscope (*sfig'-mo-skop*) [*sphygmo-*; *σκοπεῖν*, to examine]. An instrument for showing the movements of the heart or the pulsations of a blood-vessel.

Sphygm systole (*sfig-mo-sis'-to-le*) [*sphygmo-*; *συστολή*]. That part of the sphygmogram produced under the influence of the cardiac systole upon the pulse.

Sphyræ (*sfi'-rah*) [*σφίρα*, a hammer]. The malleus.

Sphinctomy (*sfi-rek'-to-me*) [*sphyræ*; *τέκνωσις*, excision]. Excision of the malleus.

Phyrotomy (*sfi-rot'-o-me*) [*sphyræ*; *τομή*, a cutting]. Surgical removal of part of the handle of the malleus, or of the malleus or its handle together with a portion of the membrana tympani.

Spica (*sfi'-kah*) [L.]. A spike. **S.-bandage**. See under *Bandage*.

Spicule (*sfi'-kal*) [dim. of *spica*, a spike]. A minute, sharp-pointed body, as a *spicule* of bone.

Spider (*sfi'-der*) [ME., *spither*]. An arthropod of the class *Arachnida*. **S. Cancer**. See *Acne rosacea*. **S.-cells**, in biology—(a) Bacteria the flagella of which are present in such numbers as to give the microbes the appearance of minute spiders. See *Bacillus typhi abdominalis* under *Bacteria*. (b) The characteristic cells of the neuroglia. They have numerous long and delicate prolongations.

Menarody, a poisonous species of *Latrodectus* found in Madagascar. **S. Nervus**. See *Acne rosacea*. **S.-web**, the web spun

by the spider, formerly much used as a hemostatic, and also in some systemic diseases; used also as a moxa with the blow-pipe.

Spiegelberg's Sign. A sensation like that of passing over wet rubber, imparted to the finger which presses on, and moves along, the affected part; it is noted in cancer of the cervix uteri.

Spiegler's Test for Albumin. Acidulate the solution by the addition of acetic acid to remove the mucin; filter, and overlay the filtrate with a solution prepared by dissolving 8 Gm. of mercuric chlorid and 4 Gm. of tartaric acid in 200 Cc. of water, and adding 20 Gm. of glycerol to it. In the presence of albumin a white ring will form between the two liquids.

Spigelia (*sfi-je'-le-ah*) [after Adrian van der Spiegel, a Belgian physician]. Pinkroot, a genus of plants of the order *Loganiaceæ*. The rhizome and rootlets of *S. marilandica* constitute the *spigelia* of the U. S. P.; they contain a volatile alkaloid, *spigelin*, and are used as an anthelmintic against the roundworm. Dose 10-20 gr. (0.65-1.3 Gm.) for a child; 1-2 dr. (4-8 Gm.) for an adult. **S., Fluid-extract of** (*fluidextractum spigelia*, U. S. P.). Dose 10-20 min. (0.65-1.3 Cc.) for a child; 1-2 dr. (4-8 Cc.) for an adult.

Spigelian Lobe (*sfi-je'-le-an*). See *Spigelius' Lobe*.

Spigelius' Line. The semilunar line marking the insertion of the muscular fibers of the transversalis abdominis into its tendon. **S.'s Lobe**, a small triangular lobe on the under surface of the right lobe of the liver.

Spikenard (*sfi'-kard*). A name given to the rhizome of various species of *Valeriana*.

Spiloma (*sfi-lo'-mah*). See *Nervus* (2).

Spiloplasia (*sfi-lo-plaks'-e-ah*) [*σπίλος*, spot; *πλάσις*, a broad surface]. A synonym of *Leprosy*.

Spina (*sfi'-nah*) [L.]. The spine. **S. accessoria ischii**, an inconstant projection into the great sciatic notch at the junction of the ischium and ilium. **S. angularis**, the spine of the sphenoid bone. **S. bifida**, a protrusion of the spinal membranes through a congenital cleft of the lower part of the vertebral column. **S. bifida occulta**, *spina bifida* in which there is no protrusion of the spinal membranes. **S. cervina**. See *Buckthorn*. **S. ischiadica**, *S. ischiaticus*, *S. ischii*. See *Spine of Ischium*. **S. nodosa**, *rachitis*.

Spinal (*sfi'-nal*). 1. Pertaining to the spine.

2. Pertaining to the spinal cord. **S. Accessory Nerve**. See under *Nerve*, *S. Canal*. See *Canal*, *Vertebral*. **S. Column**, the vertebral column, composed of vertebrae, intervertebral cartilages, and ligaments. **S. Cord**, the neural structure occupying the vertebral canal and extending from the atlas to the first lumbar vertebra, and terminating in the filum terminale. It is covered by the spinal membranes (the pia mater, arachnoid, and dura mater) and is divided into symmetric halves by the anterior

and posterior median fissures. These halves are joined together by the anterior white commissure and the gray commissure. In the middle of the latter is the central canal, a continuation of the ventricular cavity of the brain. Each half of the spinal cord consists of an internal mass of gray matter and an outer covering of white matter. The former is sub-

(Türk's column) and the anterior ground-bundle, or anterior radicular zone, which is continuous with the adjacent part of the lateral column. In the latter the following tracts are distinguished: the crossed posterior, direct cerebellar, anterolateral (crossed), and mixed lateral tract. The posterior column contains the posteromedian tract (Türk's

VERTEBRAL COLUMN, LATERAL ASPECT

A-A Spinous process. B-B Articular process. C-C Anterior articular process. D-D Transverse process. E-E Intervertebral foramen. F-F Intervertebral disc. G-G Intervertebral foramen. H-H Intervertebral disc. I-I Intervertebral foramen. J-J Intervertebral disc. K-K Intervertebral foramen. L-L Intervertebral disc. M-M Intervertebral foramen. N-N Intervertebral disc. O-O Intervertebral foramen. P-P Intervertebral disc. Q-Q Intervertebral foramen. R-R Intervertebral disc. S-S Intervertebral foramen. T-T Intervertebral disc. U-U Intervertebral foramen. V-V Intervertebral disc. W-W Intervertebral foramen. X-X Intervertebral disc. Y-Y Intervertebral foramen. Z-Z Intervertebral disc.

divided into the anterior and posterior horns, which are made up of ganglion-cells, nerve-fibers, and delicate fibers, and a modified neuroglia, the substantia gelatinosa. The white matter is divided by the two gray horns into three columns: the anterior, lateral, and posterior. These are again subdivided into distinct physiologic tracts. Thus the anterior column includes the direct pyramidal tract

TRANSVERSE SECTIONS OF SPINAL CORD, SHOWING THE DISTRIBUTION OF THE WHITE MATTER AT DIFFERENT LEVELS. The white matter has been stained black (according to Weigert's method), while the gray matter is unstained.

column) and the posterolateral or posteromedian tract. Burdach's column. The spinal cord is the conductor of the motor impulses from the brain, as well as a center for reflexes. S. Epilepsy. See Epilepsy. Irritation, a form of neurasthenia, characterized by pain in the back, vertigo, and spasms of the vertebrae, fatigue, and irritability, and occasionally tenderness and tenderness.

in the limbs. **S. Nerves**, the 31 pairs of nerves arising from the spinal cord, and grouped in-

nongangliated) root. On the dorsal root is the spinal ganglion. Beyond the ganglion the

voluntary muscles of the trunk and extremities, to the smooth muscular fibers of the bladder, uterus, etc., vasomotor, inhibitory, secretory, and trophic fibers. The posterior roots carry afferent impulses

Spinalgia (*spinal'-je-ah*) [*spine*; *ἀλγος*, pain]
Tenderness of a vertebral spine to pressure.

Spinalis (*spr-na' lis*) [*spin-*] 1. Spinal 2. A muscle attached to the spinous processes of the vertebrae. See under *Muscle*.

Spinant (*spi'-nant*) [*spine*] A drug or other agent increasing the reflex excitability of the spinal cord; strychnin is a spinant.

Spindle (*spin-dl*) [MI] 1. A tapering rod or pin. A body having a fusiform shape. **S.**, **Achromatic**, **S.**, **Cleavage**, **S.**, **Karyokinetic**, **S.**, **Nuclear**, **S.**, **Segmentation**, the double cone-like appearance of the nucleus during certain stages of karyokinesis. **S.**, **cataract**, a form of cataract characterized by a spindle-shaped opacity extending from the posterior surface of the anterior portion of the capsule to the anterior surface of the posterior portion of the capsule, with a central duration. **S.**, **cell**, a fusiform cell. **S.**, **celled**, having fusiform cells, a form of cell typical of certain morbid growths, especially sarcoma, foveo-cellular. **S.**, **Central**, the lining filaments spanning the interval between the centrosomes at the completion of the prophase. **S.**, **legged**, having long, thin legs. **S.**, **oils**, lubricating oils. **S.**, **shanked**. Same as **S.**, **legged**. **S.**, **shaped**, shaped like a spindle; fusiform. **S.**, **tree**. See **Elmoximus**.

Spine (*spin*) (*spina*, a thorn) 1. A sharp process of bone. 2. The backbone or spinal column. **S., Angular**, curvature of the spine. **S., Civinini's**, a small spine on the outer border of the external pterygoid plate giving attachment to the pterygospinous ligament. **S., Henle's**, *spina suprameatum*. An inconstant small spine at the junction of the posterior and superior walls of the external auditory meatus. It serves as a landmark in traphing of the mastoid process. **S. of Ischium**, a pointed prominence on the posterior border of the body of the ischium. It forms the lower border of the great sciatic notch. **S., Navicular**, a pointed projection on the inner edge of the navicular bone. **S. of the Scapula**, the plate of bone crossing the dorsum of the scapula and dividing it into two unequal parts. **S., Spix's**, the bony spine at the inner border of the inferior dental foramen giving attachment to the sphenomaxillary ligament. **S., Trochlear**, a small projection on the upper ventral part of the inner wall of the orbit for the trochlea. **S., Zygomatic**, a projection from the zygomatic process.

Spuricerebrate (spi-ni-ter'e-brēd). Furnished with a brain and spinal cord.

Spindeltord (*Spindel*) *torf*. The part of the dried musc arising from the spine of the

Spinifugal (spī-nī-fū-gal) [spine; fugere, w
flee] Moving from the spinal cord.

Spinipetal (*spin'ip'e-tal*) *flower*, *petal*
seek]. Moving toward the petal.

Spinitrapezium, spinous part of the trapezium as distinguished from the cranial part.

Spinobulbar (*spino bul' bar*) [from *spin-*, the medulla oblongata] Pertaining to the spinal cord and the medulla oblongata.

Spinogalvanization

Spinoglenoid (*spino-glenoid*) *adj.* Relating to the spine of the scapula and the Glenoid.

Spinol (*spinol*). An extract of the spores of the fungus *Trichoderma harzianum* (strain T-22) in a liquid and as a powder. It is used as a spore cure for children. Dose: 0.05 to 0.52 (mg) several times daily.

Spinomuscular *hypertonia* is due to the

Spinoneural refers to the part of the spinal cord and the peripheral nerves.

Spinous (*spī-nō-us*) [*spī-nō*]. Relating to or pertaining to a spine, as the spinous process of the tibia or of a vertebra.

Spectroscope—An instrument for analyzing light. It consists of a slit, a collimating lens, a dispersive element (prism or grating), and an eyepiece or camera. It is used to study the emission and absorption spectra of elements and compounds.

Spinterism (*spen'ther-izm*) [from *spinter*,
rusty sparks]. The sensation of sparks
ingratiating the eye.

Spintometer (spon-tōm'ē-ter) [*spōn*, a pump, a measure] — An instrument for measuring the length of a stroke in the human arm.

Spiradenitis (*Spiradenitis*) [from *Spira* (spiral) + *adenitis* (inflammation)] Term a name for pyogenic inflammation of the sebaceous gland.

Spiral *spī'ral* [except a coil] 1. Wound like the threads of a screw, as a spiral bandage. 2. A curve, as a spiral path.

Spirasoma tipsak et al. [?], p. 2, pl. 1, fig. 1 (1968). A genus of bacteria.

Spirem, Spirema, Spireme

Spirillosis (spiral disease) is a disease due to *Spirillum*. It is a disease of the

the Transvaal S. of Fowla, a
game, ducks, guinea-fowls, etc.

Spirit (*spir'-it*) [*spiritus*, breath, from *spirare*, to breathe]. 1. The soul. 2. An alcoholic solution of a volatile substance. See *Spiritus*. 3. Alcohol. **S.**, **Adiaphorous**, a liquid obtained by the distillation of cream of tartar. **S.**, **Ammonia**. See *Ammonia*, *Spiritus*, under *Ammonia*. **S.**, **Anise**. See *Anisi*, *Spiritus*, under *Inisum*. **S.**, **Corn-**, whisky obtained by the distillation of corn. **S.**, **Potato-**, whisky obtained by the distillation of potatoes. **S.**, **Proof-**, diluted alcohol (*alcohol dilutum*, U. S. P.; *spiritus tenuior*, B. P.), containing about 47% by weight of absolute ethyl-alcohol. **S.**, **Rectified** (*spiritus rectificatus*, B. P.), contains 16% of water.

Spirituous (*spir'-it-u-us*). Alcoholic; pertaining to alcoholic liquors.

Spiritus (*spir'-it-us*) [L.]. See *Spiritus*. **S.**, **ætheris nitrosi**. See *Niter*, *Sweet Spirit of*. **S.**, **chloroformi**, is used as a carminative. Dose 10-60 min. (0.65-4.0 Cc.). See also *Chloroform*, *Spirit of*. **S.**, **frumenti**, whisky, a spirit obtained by the distillation of fermented grain. **S.**, **juniperi**, gin or whisky with which juniper-berries and hops have been distilled. **S.**, **odoratus**, cologne-water. **S.**, **vini gallici** (U. S. P.), brandy; a liquor obtained by the distillation of wine. (For other spirits see the different drugs.)

Spiro- (*spi-ro-*) [*σπείρα*, a coil]. A prefix meaning spiral. 2. [*spirare*, to breathe.] A prefix meaning relating to respiration.

Spirobacteria (*spi-ro-bak-ter-ia*) [*spiro-*; *bac-terium*]. Spiral bacteria.

Spirochete, **Spirochæte** (*spi'-ro-ket*, *spi-ro-ke'-te*) [*spiro-*; *χῆλη*, a bristle]. A genus of bacteria characterized by flexible spiral filaments. See under *Bacteria*. **S.**, **pallida**. See *Treponema pallidum*. **S.**, **refringens** (*re-frin'-gens*). Found on healthy genital organs.

Spirofibrillas (*spi-ro-fi-bril'-at*) [*spiro-*; *fibrilla*, a small fiber]. The term applied by Fayod in his theory of the structure of protoplasm to supposed long, twisted, hollow fibrils constituting the protoplasm and nuclei of vegetal cells and uniting to form the spirospartas (*q. v.*). Fayod asserts also that the blood-plasma consists of spirofibrillas and that they penetrate here and there into the hematoblasts. In this case Butschli holds that Fayod mistakes coagulation of fibrin for spirofibrillas.

Spirograph (*spi'-ro-graf*) [*spiro-*; *γράφω*, to write]. An instrument for registering the movements of respiration.

Spirometer (*spi-rom'-et-er*) [*spiro-*; *μέτρον*, a measure]. An instrument for measuring the quantity of air taken in and given out in forcible respiration.

Spirometry (*spi-rom'-et-er*) [see *Spirometer*]. Pertains to the measurement of respiration.

Spiromonas (*spi-ro-mo-nas*) [*spiro-*; *μονή*, a unit]. A genus of bi-flagellate monads or free-swimming animalcules established by Perty (1852), now referred to *Bodo* (Ehrenberg), Stein.

Spirozoa (*spi'-ro-zo-a*) [*spiro-*, *ζῷον*, a

thread]. A helical thread of cytophanes wrapped about the axoneme of the peduncle of a stalked infusorian.

Spirophore (*spi'-ro-jör*) [*spiro-*; *φέρω*, to bear]. An instrument for performing artificial respiration.

Spirospartas (*spi-ro-spar'-tas*) [*spiro-*; *σπείρα*, a rope]. The term applied by Fayod in his theory to twisted hollow strings the walls of which are formed by the twisting together of the fibrils or spirofibrillas. The cavities of the spirospartas and spirofibrillas are said to be filled in the normal condition by "granular plasma"; spirospartas pass from the protoplasm into the nucleus and vice versa, and also may be traced frequently from one cell into a neighboring one, so that "the cell loses its value as a morphologic and physiologic unit." These results were obtained in vegetal cells, chiefly by injection with quicksilver, by which method Fayod believes he filled the cavities of the spirospartas and spirofibrillas with metal. Cf. *Spirofibrillas*.

Spirulina (*spi-ro-li'-nah*) [*spirula*, from *spira*, a coil]. A spiral microorganism of spindle shape.

Spissated (*spis'-a-ted*). Inspissated.

Spissitude (*spis'-it-ud*) [*spissare*, to thicken]. The state of being inspissated.

Spittle (*spit'-l*). See *Saliva*.

Spitzka's Bundle. A tract of nerve-fibers which passes from the cerebral cortex through the pyramidal region of the crus cerebri to the oculomotor nuclei of the opposite side. **S.**'s **Nucleus**. See *Nucleus*, *Spitzka's*.

Spitzka-Lissauer's Tract. See *Lissauer's Tract*.

Spix's Spine. The bony spine at the inner border of the inferior dental foramen, giving attachment to the sphenomaxillary ligament.

Splanchnic (*splangk'-nik*) [*σπλῆγνα*, viscera]. 1. Pertaining to or supplying the viscera. 2. A remedy efficient in diseases of the bowels. **S.** **Nerves**, three nerves, the great, lesser, and least, or renal splanchnic, derived from the sympathetic system.

Splanchno- (*splangk'-no-*) [*σπλῆγνα*, viscera]. A prefix denoting pertaining to the viscera.

Splanchnography (*splangk'-nog'-ra-jé*). See *Splanchnology*.

Splanchnology (*splangk'-nol'-o-jé*) [*splanchno-*; *λόγος*, science]. The branch of anatomy treating of the viscera.

Splanchnomegaly (*splangk'-no-meg'-al-e*) [*splanchno-*; *μέγας*, large]. Giant growth of the viscera.

Splanchnopleural (*splangk'-no-plu'-rat*, [*splanchnopleure*]). Relating to the splanchnopleure.

Splanchnopleure (*splangk'-no-plur*) [*splanchno-*; *πλευρά*, the side]. The visceral layer of mesoderm forming the covering of the digestive tube.

Splanchnoptosis, **Splanchnoptosis** (*splangk'-no-tó-she-ah-sis*) [*splanchno-*; *πτῶσις*, a falling]. A condition of relaxation of the abdominal viscera; it includes gastroptosis, enteroptosis, nephroptosis, less commonly hepatoptosis and splenoptosis.

Splanchnoscopy (*splan'ch-no-sko-pe*) [*splanchno-*; *skopein*, to examine]. Visual examination of the viscera.

Splanchnoskeleton (*splan'ch-no-skel'-et-on*) [*splanchno-*; *skeleton*]. That portion of the skeleton related to the viscera.

Splanchnotomy (*splan'ch-no-t-o-me*) [*splanchno-*; *tomos*, to cut]. Dissection of the viscera.

Splashing (*splash'-ing*) [origin obscure]. Making a splashing sound. **S. Fremitus**, a noise heard in succession in some cases of pleural effusion; it may be simulated by the presence of fluid in a distended stomach. **S. in the Stomach**, a sign of atony of that organ.

Splay-foot. See *Palipes*.

Spleen (*splēn*) [*splan-*; *spleen*]. One of the abdominal viscera, situated just below the diaphragm on the left side, and connected with the hematopoietic system. It is covered by a fibroelastic capsule from which trabeculae radiate into the organ. In the spaces formed by these are found collections of lymphoid tissue (the malpighian corpuscles) and the splenic pulp. The malpighian corpuscles surround the small branches of the splenic artery. The splenic pulp consists of a detriticulum containing large connective-tissue cells, lymphoid cells, and red corpuscles. The spleen receives a large amount of blood, which in passing from the termination of the splenic artery to the beginning of the splenic vein is probably not held within walls, but comes in direct contact with the lymphoid tissue. The spleen normally weighs about 230 Gm. **S. Accessory**, a detached portion of splenic tissue in the neighborhood of the spleen. **Syn.** *Splenodus*. **S. Floating**. See *S. Wandering*. **S. Sago**, one of which the malpighian follicles are the seat of a gradual change. **S. Wandering**, one that, owing to relaxation of its attachment, is movable.

Splen- (*splēn-*). See *Spleno-*.

Splenadenoma (*splen-a-den-o-mah*) [*splen-*; *adenoma*]. Hyperplasia of the lymphoid tissue of the spleen.

Splenalgia (*splen-al'-jeah*) [*splēn-*; *algos*, pain]. Neuralgic pain in the spleen.

Splenculus (*splen'-kulus*) [*splēn*]. An accessory spleen.

Splenectomy (*splen-ek'-t-o-mi*) [*splen-*; *ektomē*]. To excise the spleen.

Splenectomy (*splen-ek'-t-o-mi*) [*splēn-*; *ektomē*]. Excision of the spleen.

Splenemia (*splen-e'-mi-a*) [*splēn-*; *aima*, blood]. Splenic leukemia.

Splenic (*splēn'-ik*) [*splēn*]. 1. Pertaining to or affecting the spleen. 2. A remedy efficient in disorders of the spleen. 3. Affected with splenitis. **S. Apoplexy**, **S. Fever**. See *Leukemia*.

Spleniferrin (*splen-i-fer'-in*). An organ iron preparation said to be obtained from the spleen.

Splenification (*splen-i-fik'-a-shun*). See *Splenization*.

Splensified (*splēn'-i-fid*). Of a tissue, resembling the tissue of the spleen, as that of the

ling the tissue of the spleen, as that of the bone-marrow.

Splenin (*splēn'-in*). An organ iron preparation made from the spleen.

Splenic (*splēn'-ik*). See *Splenic*.

Splenitis (*splēn'-it-is*) [*splēn-*; *itis*, inflammation]. Inflammation of the spleen.

Spodogenous, that due to accumulation of waste matter.

Splenitive (*splēn'-it-iv*). Capable of acting upon the spleen.

Splenium (*splēn'-i-um*) [*splēn-*; *ium*, a suffix]. 1. A knollage. 2. The rounded posterior extremity of the corpus callosum.

Splenius (*splēn'-i-us*) [*splēn-*; *ius*, a suffix]. A splenidium, as the splenic muscle is simply splenicus. See *Splenius*.

Splenization (*splēn'-i-zā-shun*) [*splēn-*; *ization*]. The change in an organ, especially the one induced by congestion, whereby it acquires the character of the spleen.

Spleno- (*splēn-*) [*splēn-*; *ia*, a suffix]. A prefix denoting pertaining to the spleen.

Splenocoele (*splēn'-o-sēl*) [*splēn-*; *coele*, cavity]. Hernia of the spleen.

Splenocolic (*splēn'-o-kēl-ik*) [*splēn-*; *colic*, colon]. Pertaining to the spleen and colon.

Splenocyte (*splēn'-o-sīt*) [*splēn-*; *cyte*, a cell]. The cell present in splenic tissue.

Splenohepatomegaly (*splēn'-o-he-pat-o-meg-ah*) [*splēn-*; *hepat-*, liver; *meg-*, great]. Enlargement of the liver and spleen.

Splenolaparotomy (*splēn'-o-lap-a-rō-tō-mi*). See *Laparotomy*.

Splenolymph (*splēn'-o-lym-f*) [*splēn-*; *lym-f*, lymph]. A mixture of the lymph and splenic gland. See *Splenolymph*.

Splenolymphatic (*splēn'-o-lym-f-atic*) [*splēn-*; *lym-f-atic*, lymphatic]. Pertaining to the spleen and the lymphatic system.

Splenomalacia (*splēn'-o-mal-ā-si-a*) [*splēn-*; *mal-*, bad; *acia*, condition]. Splenic anemia.

Splenomedullary (*splēn'-o-med-ū-lar-ē*) [*splēn-*; *med-ū-lar-*, medulla]. Pertaining to the spleen and the medulla.

Splenomegaly, **Splenomegaly** (*splēn'-o-meg-ah*) [*splēn-*; *meg-*, great]. Enlargement of the spleen, usually associated with enlargement of the liver. See *Leukemia*. In some cases it is associated with Hodgkin's disease.

Splenoparectama, **Splenoparectasis** (*splēn'-o-parek-tā-mah*) [*splēn-*; *parek-tā-sis*, disturbance]. Disturbance of the spleen.

Splenopathy (*splēn'-o-path'-ē-ah*) [*splēn-*; *path-*, suffering]. S. *leukocytæmica*, *splēn-*; *leukemia*.

Splenopathy (*splēn'-o-path'-ē-ah*) [*splēn-*; *path-*, suffering]. Any disease of the spleen.

Splenopexia, **Splenopexis**, **Splenopexy** (*splēn'-o-pēx-i-ah*) [*splēn-*; *pēx-*, to bind]. Binding of the spleen, as by a splenic ligament. See *Splenopexy*.

Splenophrenic (*splēn'-o-fren'-ik*) [*splēn-*; *fren-*, diaphragm]. Pertaining to the spleen and diaphragm.

Splenopneumonia (*splen-o-nu-mo'-ne-ah*) [*spleno-*; *pneumonia*]. Pneumonia with splenization of the lung.

Splenoptosis (*splen-o-to'-sis*) [*spleno-*; *πτωσις*, a falling]. Downward displacement of the spleen.

Splenorrhaphy (*splen-or'-a/-e*) [*spleno-*; *ρᾶψη*, suture]. Suture of the spleen.

Splenoscirrhosis (*splen-o-skir'-us*) [*spleno-*; *σκίρσις*, hardness]. Cancer of the spleen.

Splenotomy (*splen-ot'-o-me*) [*spleno-*; *τομή*, to cut]. 1. The operation of incising the spleen. 2. Dissection of the spleen.

Splenule (*splen'-ul*). An accessory or rudimentary spleen.

Splint (Swedish, *splint*, a kind of spike). A piece of wood, metal, or other material for keeping the ends of a fractured bone or other movable parts in a state of rest. **S.-box**. See *Fracture-box*. **S.**, **Desault's**, one used in treating fracture of the thigh. **S.**, **Interdental**, an appliance used in the treatment of fractured jaws. **S.**, **Mason's**, one used in subsequent treatment of amputation at the elbow, allowing pronation and supination movements during healing. **S.**, **Poroplastic**, a splint which can be softened with hot water and molded upon the limb, to harden and retain the shape when dried. **S.**, **Stromeyer's**, one used to prevent stiffness of the joints in case of fracture. It consists of two hinged parts that can be fixed at any angle.

Splintage (*splint'-dj*). The application of splints.

Split-cloth. A bandage for the head with six or eight tails attached to a central part.

Spodogenous (*spo-doj'-en-us*) [*σποδός*, ashes; *γεννᾶν*, to produce]. Pertaining to or produced by waste-material, as *spodogenous* enlargement of the spleen, a swelling of the spleen produced by the accumulation of the detritus of red corpuscles.

Spodophagous (*spo-doj'-ag-us*) [*σποδός*, ashes; *φάγειν*, to eat]. Destroying the waste-material of the body.

Spodophorous (*spo-doj'-or-us*) [*σποδός*, ashes; *φέρειν*, to bear]. Carrying or conveying waste-material.

Sphenoid's Foramen. A small opening in the cartilaginous base of the skull between the ethmoid and the lesser wings of the sphenoid and the anterior ethmoid.

Stoke-shave (*spāk'-shūv*). A ring-knife, devised by Carmalt Jones, for use in rhinologic operations.

Spondyl-, Spondylo- (*spon-dil-, spon-dil-o-*) [*σπονδυλος*, vertebra]. A prefix denoting pertaining to a vertebra.

Spondylarthritis (*spon-dil-ar-thri'-tis*) [*spondyl-*; *ἄρθρον*, joint; *τις*, inflammation]. Inflammation of a vertebral articulation.

Spondyle (*spon'-dil*) [*σπονδυλος*, a vertebra]. A vertebra.

Spondylitis (*spon-dil-i'-tis*) [*spondyle*; *τις*, inflammation]. Inflammation of a vertebra.

Spondylous, Pott's disease.

Spondylizema (*spon-dil-i-ze'-mah*) [*spondyle*;

ἴσπεα, a subsiding]. The settling of a vertebra into the place of a subjacent one that has been destroyed.

Spondylodidymia (*spon-dil-o-did-im'-e-ah*) [*spondyle*; *ἰδύμων*, twin]. A form of somatodymia in which the union is in the vertebrae. Syn., *Vertebradymia*.

Spondylodymus (*spon-dil-od'-im-us*) [*spondyle*; *δύω*, to enter]. A twin monster united by the vertebrae.

Spondylolisthesis (*spon-dil-o-lis-the'-sis*) [*spondyle*; *ὀλισθησις*, a slipping]. Deformity of the spinal column produced by the gliding forward of the lumbar vertebrae in such a manner that they overhang the brim and obstruct the inlet of the pelvis; especially the separation of the last lumbar vertebra from, and its slipping forward on, the sacrum.

Spondylolisthetic (*spon-dil-o-lis-thet'-ik*). Pertaining to or caused by spondylolisthesis.

Spondylosis (*spon-dil-o'-sis*) [*spondyle*]. Vertebral ankylosis. **S.**, **Rhizomelic**, spondylose rhizomelique; Marie's term for a variety of arthritis deformans with ankylosis of the vertebrae and arthritis of the hips and shoulders.

Spondylotomy (*spon-dil-ot'-o-me*). See *Rachiotomy*.

Sponge (*spunf*) [*σπόγγος*, a sponge]. A marine animal of the class *Porifera*, having a porous, horny skeleton; also the skeleton itself, used as an absorbent. **S.-bath**, the application of water to the surface of the body by means of a sponge. **S.s.**, **Bernay's Aseptic**, small circular discs of prepared cotton fiber which has been subjected to great pressure; when placed in water, they increase in size 12 to 15 times. They are recommended as controlling agents in nasal hemorrhage. **S.-gatherer's Disease**, a disease of divers due to a secretion of a species of *Actinia* found in waters where sponges grow. This viscid excretion causes at the point of contact upon the body a swelling and intense itching, followed by a papule surrounded by a zone of redness which later becomes black and gangrenous and forms a deep ulcer. **S.-graft**. See *Graft*, *Sponge*. **S.-tent**. See *Tent*, *Sponge*.

Spongework (*spunj'-werk*). Synonym of *Spongioplasm*.

Spongiform (*spun'-je-form*) [*sponge*, *forma*, a form]. Resembling a sponge.

Spongin (*spun'-jin*) [*sponge*]. The horny substance forming the skeletal fibers of the sponge.

Spongioblast (*spun'-je-o-blast*) [*sponge*; *βλαστός*, a germ]. A variety of cell derived from the ectoderm of the embryonic neural tube, and forming later the neuroglia. **S.** of **Inner Molecular Layer of Retina**. See *Cells*, *Amacrine*.

Spongiocyte (*spun'-je-o-sit*) [*sponge*; *κύτος*, a cell]. Fish's term for the glia or neuroglia cell.

Spongiopilin (*spun'-je-o-pil'-lin*) [*sponge*; *πίλος*, felt]. Felted or woven cloth into which tufts of sponge are incorporated and one side of which is coated with rubber; it is used as a poultice.

Spongioplasm (*spun'-je-o-plazm*) [*sponge*; *plasma*, to mold]. The fine, elastic, protoplasmic threads forming the reticulum of cells.

Spongiosis (*spun-je-o-si'-tis*). Inflammation of the corpus spongiosum.

Spongy (*spun'-je*) [*sponge*]. Having the texture of sponge. **S. Portion of the Urethra**, that contained in the corpus spongiosum of the urethra.

Spontaneous (*spun-ta'-ne-us*) [*spont.*, will]. Voluntary, occurring without extraneous impulse; automatic.

Spoon. An instrument consisting of an oval or circular bowl fixed to a handle; it is used in surgery to scrape away dead tissue, granulations, etc.

Spoonful. A spoon is full when the contained liquid comes up to but does not show a curve above the upper edge or rim of the bowl. A teaspoonful equals 5 Cc.; a dessertspoonful, 10 Cc.; a tablespoonful, 15 Cc.

Sporadic (*spor-ud'-ik*) [*σποραδικός*, scattered]. Scattered; occurring in an isolated manner. **S. Cholera**, cholera morbus.

Sporadoneure (*spor-ud'-o-nūr*) [*σποράς*, scattered; *νεύρον*, a nerve]. An isolated nerve-cell.

Sporangium (*spor-an'-je-um*) [*spore*; *ἀγγεῖον*, a vessel, pl., *sporangia*]. In biology, a capsule producing or inclosing spores.

Spore (*spōr*) [*σπόρον*, seed]. A seed; a reproductive body of lower vegetable organisms, as of bacteria.

Sporidium (*spor-id'-e-um*) [*spore*; *ἰδιον*, a dim.; pl., *sporidia*]. 1. In biology, a spore borne upon a promycelium. 2. A provisional genus of *Sporozoa*. **S. vaccinale**, Funk, a species of sporozoa occurring as: (1) small, spheric, highly refractive bodies (2-10 μ), of green color and slow movement; (2) small refracting spheres inclosed in capsules, (3) morula masses or spore-casts. They can be cultivated and the culture produces typical vaccinia when inoculated in calves.

Sporiferous (*spor-īf'-er-us*) [*spore*; *ferre*, to bear]. Spore bearing.

Sporification (*spor-īf'-ik-a'-shun*). The formation of spores.

Sporo- (*spor-o*) [*spore*]. A prefix meaning relating to a spore or seed.

Sporoblast (*spor'-o-blast*) [*sporo-*; *βλαστός*, a germ]. One of the four round bodies produced by the process of endogenous cell-formation in a coccidium.

Sporocyst (*spor'-o-sist*) [*sporo-*; *κύστις*, a bag]. 1. The mother-cell of a spore. 2. That stage of a sporozoon resulting from the development of a sporoblast and in its turn giving rise to two sporozoites.

Sporogenesis (*spor-o-jen'-es-is*) [*sporo-*; *γενεσις*, generation]. The development of spores; reproduction by spores.

Sporogony (*spor-ag'-o-ne*). 1. See *Sporogenesis*. 2. A form of exogenous sporulation; an oocyst containing a sporont divides into four sporoblasts, which ripen into sporocysts and in turn divide into a crescentic nucleated body, the sporozoite. It occurs among coccidia. Cf. *Schizogony*.

Sporont (*spor'-ont*) [*sporo-*; *ὄν*, being]. In zoology a gregarine without an equant, distinguished from a cephalont. 2. Schizogony's term for the single-celled contents of the coccidian oocyst. Cf. *Schizogony*.

Sporophore (*spor'-o-for*) [*sporo-*; *φορέω*, to bear]. That portion of a fungus bearing the spores.

Sporoplasm (*spor'-o-plazm*) [*sporo-*; *πλάσσω*, to form]. The cytoplasm of the asexual reproductive cell.

Sporotheca (*spor-o-the'-kah*) [*sporo-*; *θήκη*, case]. 1. See *Sporangium*. 2. The cell of the sporulating cell.

Sporozoa (*spor-o-zo'-ah*) [*sporo-*; *ζῷον*, animal]. A class of parasitic Protozoa divided into the *Gregarinidea*, parasitic in insects; the *Coccididea*, parasitic in various worms and arthropods; the *Cryptosporidia*, ovoid forms parasitic in the intestinal epithelium of various animals, including man; the *Sarcosporidia*, which form sporosperms, parasitic in the muscles of various animals, the *Myxosporidia*, the sporosperms of fishes; the *Microsporidia*, the sporosperms of arthropods.

Sporozoite (*spor-o-zo'-it*) [see *Sporozoa*]. A sickle-shaped, nucleated organism which results from the division of a sporozoite into the sporozoite. Syn., *Germinal cell* (R. 1878); *Zygoblast* (Ross, 1899); *Zygoblast* (Lankster, 1900).

Sporozoon (*spor-o-zo'-on*) [see *Sporozoa*]. In biology, a member of the *Sporozoa*.

Sporulation (*spor-u-ha'-shun*) [*spore*]. The production of spores. **S.**, *Archie*, the change of bacteria into spores, which are capable of germinating again under favorable conditions.

Spot [ME.]. See *Macule*. **S.s.**, *Acute*. See *Macula acutica* under *Macula*. **Bitot's**, xerosis conjunctive, shiny, triangular spots on the cornea of the cornea, within the region of the palpebral aperture, consisting of epithelium, flaky masses, and keratinous. They are observed in severe cases of hemeralopia. **S.**, *Blind* and *Macula*, the entrance of the optic nerve which is blind and the cones are absent. **S.**, *Blue* (integument), a tegumentary spot on the sacral region characteristic of the *Mammalia*; due to aggregations of large, star-shaped, and stellate cells in the integumenting pigment. It appears in the beginning of fetal life and persists until the seventh year. **S.**, *Corneal*, leukoma. **S.s.**, *Cribiform*, perforations of the fovea centralis, the passage of the filaments of the optic nerve. Syn., *Macula cribiformis*. **S.**, *Ser Pibrine*. **S.**, *Embryonic*, the spot of the ovum. **S.s.**, *Genital*, the spots on the cheeks of a person suffering from hectic fever. **S.s.**, *Koplik's*, the spots under Sign. **S.s.**, *Lenticular*.

S.s., Rose. S., Light (on the membrana tympani), a cone of light on the anterior and inferior part of the tympanic membrane, with its apex directed inward. **S., Mariotte's**, the optic disc. **S., Milk-**, a spot found postmortem on the external surface of the visceral layer of the pericardium, usually over the right ventricle; it varies from one-half to one inch in diameter, and is of common occurrence in persons who have passed middle life. **S.s., de Morgan's**. See *Morgan's (de) Spots* under *Sign*. **S., Mother's**, nevus. **S.s., Rose**, a red papulous eruption forming spots the size of a small lentil, effaced by pressure of the finger and occurring mostly on the abdomen and loins during the first seven days of typhoid fever. They are due to inflammation of the papillary layer of the skin from invasion of typhoid bacilli. Syn., *Typhoid roseola*; *Typhoid spots*; Fr., *Tache rosées lenticulaires*. Cf. *Tache bleutée*. **S.s., Roth's**. See *Roth's Spots* under *Sign*. **S.s., Soldiers'**. Same as *Macula lutea*. **S., Sömmering's**. See *Macula lutea*. **S.s., Sun**. See *Lentigo*. **S.s., Typhoid**. See *S.s., Rose*. **S. of Wagner**, the embryonic spot. **S.s., White**, grayish or yellowish-white elevated spots from the size of a pin head to that of a one-cent piece, of varying shape and distinctness of outline, often occurring on the ventricular surface of the anterior leaflet of the mitral valve. **S., Wine-**, port-wine mark; strawberry mark. **S., Yellow**. See *Macula lutea*. **Spotted Fever**. 1. Cerebrospinal fever. 2. Typhus.

SpRAIN (*sprān*) [OF., *espreindre*, from L., *exprimere*, to press out]. A wrenching of a joint, producing a stretching or laceration of the ligaments. **S.-fracture**, an injury in which a tendon together with a shell of bone is torn from its attachment.

SPRAY (*sprai*). A liquid blown into minute particles by a strong current of air. **S.-cure**, a form of douche applied by means of a spraying apparatus.

Spengel's Deformity. See *Deformation*, *Spengel's*.

SPREW (*spru*). See *Sprue*.

SPRING [ME.]. The first of the four seasons of the year; also, a device having resiliency. **S. Conjunctivitis**. See *Vernal Conjunctivitis*. **S. Fever**, lassitude. **S.-finger**, a condition in which there is an obstruction to flexion and extension of one or more fingers at a certain stage of these movements. It is due to injuries or may result from inflammation of the tendinous sheaths. **S.-halt**, an involuntary convulsive movement of the muscles of either hind leg in a horse, by which the leg is suddenly and fully raised from the ground and lowered again with unnatural force. **S.-knee**, a condition of the knee similar in general features to the condition known as spring-finger. Just before full extension of the joint is reached there is a slight hitch, and then the limb tightens itself with a sharp, rather painful

jerk. **S.-ligament**, the inferior calcaneoscapoid ligament of the sole of the foot. **S.-nail**, a hangnail. **S. Ophthalmia**. See *Vernal Conjunctivitis*. **S.-worm**. See *Oxyuris venicularis*.

SPRUE. 1. Thrush. 2. The name given by the Dutch in Java to aphthæ tropicæ (*q. v.*); a chronic catarrhal inflammation of the entire alimentary tract, especially prevalent in Malaya. Syn., *Ceylon sore mouth*; *Diarrhæa alba*; *Sprout*; *Tropical sprue*.

SPUD [Dan., *spyd*, a spear]. 1. An instrument used in the detachment of the mucosa in flaps in operations necessitating the removal of bone. 2. A short flattened blade used to dislodge a foreign substance.

Spunk (*spungk*). See under *Agaric*.

SPUR (*sper*) [ME., *spure*]. 1. A sharp point or projection. 2. The angle made by any branch with the main blood-vessel. 3. In biology, a pointed, spine-like outgrowth, either of the integument or a projecting appendage. 4. Ergot. **S.-blind**, myopic. **S.-gall**, a callous and hairless place on the side of a horse, caused by the use of a spur. **S. of the Septum**, an outgrowth of the nasal septum.

Sputum (*sputum*) [*spuere*, to spit; pl., *sputa*]. The secretion ejected from the mouth in spitting. It consists of saliva and mucus from the nasal fossa and the fauces. In diseased conditions of the air-passages or lungs it may be purulent, mucopurulent, fibrinous, or bloody. **S., Æruginous**, sputum of a green color. **S., crudum**, the scanty, viscid expectoration of the early stages of acute bronchitis. **S., Hailstone**, spheric masses of sputum of the later stages of bronchitis. **Sputa margaritacea**. See *S., Pearly*. **S., Mucopurulent**, small lumps or pellets in a viscid, mucoserous fluid, seen in bronchitis. **S., Nummular**, a sputum characterized by round, coin-like masses; it is seen in pulmonary tuberculosis. **S., Pearly**, sputum consisting of small translucent pellets. **S., Rusty**, the dark-colored sputum of lobar pneumonia, the color of which is due to the admixture of blood. **S. Septicæmia**. See *Septicæmia*, *Sputum*.

SQUAMA (*skwa'-mah*) [L.]. A scale or scale-like mass, as the squama of the temporal bone. **S. frontalis**, the vertical portion of the frontal bone. **S. occipitalis**, the supra-occipital bone. **S. temporalis**, the squamosa.

Squamo- (*skwa-mo-*) [*squama*]. A prefix denoting relating to the squamous portion of the parietal or temporal bone.

Squamomandibular (*skwa-mo-man-dih'-u-lar*). Relating to the squamosa and maxillary bone.

Squamoparietal (*skwa-mo-par-i-ét-ál*) [*squamo-*; *paries*, wall]. Pertaining to the squamous portion of the parietal bone.

Squamosa, Squamosal (*skwa-mo'-tah*, *skwa-mo'-sal*). The squamous portion of the temporal bone.

Squamosphenoid (*skwa-mo-she'-noid*) [*squamo-*; *sphenoid*]. Pertaining to the squamous portion of the temporal bone and to the sphenoid bone.

Squamotemporal (*skwa-mo-tem'-po-ral*) [*squa-ma-*; *temporal*]. Pertaining to the squamous portion of the temporal bone.

Squamous (*skwa'-mus*) [*squamosus*, scaly]. 1. Of the shape of a scale, as the *squamous* portion of the temporal bone. 2. Scaly. **S. Suture**, the suture between the squamous portion of the temporal bone and the frontal and parietal bones.

Squamozygomatic (*skwa-mo-zi-go-mat'-ik*) [*squamo-*; *zygomatic*]. Pertaining to the squamous and zygomatic portions of the temporal bone.

Square Lobe. 1. The lobus quadratus of the liver. 2. A lobe on the upper surface of the cerebellar hemisphere.

Squarious, Squarrous (*skwa'-re-us*, *skwar'-us*) [*squariosus*, scurly]. Scurly.

Squill (*skwîl*). The bulb of *Urginea maritima* (U. S. P.) or *Urginea scilla* (B. P.), of the order Liliaceæ. Squill (*scilla*, U. S. P., B. P.) contains several bitter principles, *scillitin*, *scillipicrin*, *scillitoxin*, and *scillin*, a carbohydrate *sinistrin*, and other substances. It is expectorant, diuretic, and emetocathartic, and is used in dropsy and in croup. Dose 1-2 gr. (0.065-0.13 Gm.). **S., Fluidextract of** (*fluidextractum scilla*, U. S. P.). Dose 2-3 min. (0.13-0.2 Cc.). **S., Oxymel of** (*oxymel scilla*, B. P.). Dose 1-2 dr. (4-8 Gm.). **S., Pills of, Compound** (*pilule scilla composita*, B. P.). Dose 5-10 gr. (0.32-0.65 Gm.). **S., Syrup of** (*syrupus scilla*, U. S. P., B. P.). Dose ½-1 dr. (2-4 Cc.). **S., Syrup of, Compound** (*syrupus scilla compositus*, U. S. P.). Dose 20-30 min. (1.3-2.0 Cc.). **S., Tincture of** (*tinctura scilla*, U. S. P., B. P.). Dose 5-30 min. (0.32-2.0 Cc.). **S., Vinegar of** (*acetum scilla*, U. S. P., B. P.). Dose 10-30 min. (0.65-2.0 Cc.).

Squint (*skwint*). See *Strabismus*.

Squirting Cucumber. See *Elaterium*.

Sr. Symbol for *strontium*.

Ss. Abbreviation for *semis*, one-half.

Stabile (*sta'-bil*) [*stabilis*, from *stare*, to stand]. Not moving, fixed. **S. Current**, an electric current produced by holding the electrodes in a fixed position.

Staccato Speech. See *Scanning*.

Stachydrin (*sta-kid'-rin*), $C_7H_{11}NO_2$. An alkaloid from the bulb of *Stachys palustris*, forming colorless crystals which liquefy on exposure; soluble in water and alcohol; melt at 210° C.

Staderini's Nucleus. The nucleus intercalatus, an aggregation of ganglion-cells situated between the dorsal nucleus of the pneumogastric and the nucleus of the hypoglossal nerve.

Stadium (*sta'-de-um*) [L.]. Stage. **S. acmes**, the height of a disease. **S. amphiboles.** See *Stage*, *Amphibolic*. **S. annihilationis**, the convalescent stage. **S. augmenti**, the period in which there is increase in the intensity of the disease. **S. caloris**, the period during which there is fever; the hot stage. **S. decrementi**, deservescence of a febrile disease; the period in which there is a de-

crease in the severity of the disease. **S. tionis**, the stage of an eruptive disease in which the exanthem is at its height. **S. frigoris**, the cold stage of a fever. **S. Algid.** **S. incrementi**, the stage of a fever or disease. **S. staseos.** **S. acmes.**

Staff. An instrument for passing into the urethra and used as a guide in operations for stricture.

Staffa (*staf'-ah*). 1. The stapes. 2. A of-8 bandage.

Stage (*staj*) [*stare*, to stand]. 1. A period of a disease characterized by symptoms; a condition in the course of a disease. 2. The horizontal plate passing from the pillar of a microscope for supporting the slide or object. **S., Algid**, a stage characterized by subnormal temperature, feeble, flickering pulse, various nervous symptoms, etc. It occurs in cholera and diseases marked by exhausting intercurrent charges. **S., Amphibolic**, the stage of a disease intervening between its high and low phases. **S., Asphyxial**, the preliminary stage of Asiatic cholera, marked by extreme muscular cramps, etc., due to loss of fluid from the blood. **S., Cold**, the stage of an attack of a malarial paroxysm. **S., Expulsive** (of labor), the stage which begins when dilation of the cervix uteri is complete and during which the child is expelled from the uterus. See *Labor*, *Stages of Labor*. **S., Febrile** (of labor), that stage in which the molding of the fetal head and the contraction of the cervix are effected. **S., Febrile** stage of a malarial paroxysm. **S., Invasion**, the period in the course of a disease in which the system comes under the influence of the morbid agent. **S., Latency**, the incubation-period of a disease, or that period intervening between the entrance of the virus and the manifestation of the symptoms to which it gives rise. **S., Placental** (of labor), the period occupied by the expulsion of the placenta and fetal membranes. **S., Preeruptive**, the period of an eruptive fever following and prior to the appearance of the eruption. **S., Second** (of labor). See *S., Expulsive*. **S., Sweating**, the third or terminal stage of a malarial paroxysm, during which profuse sweating occurs. **S., Third** (of labor). See *Placental*.

Stagium (*sta'-je-um*). The sixth part of an ounce.

Stagnum chyli. Same as *Receptaculum chyli*.

Stahl's Ear. A congenital deformity of the ear which consists in a broadening of the ear at the fossa ovalis and upper part of the ear, the fossa being covered.

Stahlian (*stah'-le-an*). An annalist of the doctrine of George Ernst Stahl, a German chemist, 1660-1734.

Stain (*stan*) [from *distain*, from *de-*, to deprive, + *stain*, to color]. 1. A discolored spot or pigment employed in various arts and

tissues or to produce certain reactions. The common microscopic stains are hematoxylin, carmin, osmic acid, and the anilin dyes. **S.**, **Intra vitam**, one that will act upon living material. **S.**, **Inversion, of Rawitz**, a process in which, under the influence of a mordant, a basic anilin dye behaves as a plasma or acid dye. **TABLE OF STAINS, REAGENTS, REACTIONS, STAINING METHODS, etc.**: Appended are those most important to students of medicine. For a full definition of all the stains, etc., in use in special and general branches, see the *Illustrated Dictionary* and the *Dictionary of New Medical Terms*. **Acid Fuchsin**, a diffuse stain, having a special affinity for axis-cylinders. A solution of 2 Gm. in 40 Cc. of 95% alcohol and 160 Cc. of distilled water is employed. Wash out in 95% alcohol. Weigert stains sections of tissue hardened in Müller's fluid in a saturated aqueous solution of acid fuchsin for from 1 to 24 hours, then rinses them quickly in water, immerses for a few minutes in a saturated solution of potassium hydroxid, 1 part, alcohol, 10 parts. Wash thoroughly to remove the alkali, dehydrate, clear, and mount. This process differentiates the finer nerve-fibers in the spinal cord. **Alcohol**, an excellent fixing medium, suitable for all tissues except those of the central nervous system and those undergoing fatty infiltration or degeneration. It is also used to harden and preserve objects that have been fixed in other fluids. As a preservative it is not without defects, as it alters the structure of tissues by continuously dehydrating their albuminoids. Toluol, ether, and xylol are recommended as substitutes (Kultschitzky). As a fixing agent alcohol is usually employed in gradually increasing strengths, beginning with 50 or 70%. **Alcohol, Absolute**, one of the most penetrating fixing agents, which has the advantage of preserving the structure of glands and of nuclei. It should be employed in large quantities. Hydration may be prevented by suspending in the alcohol strips of gelatin (Lowie). After fixation, preserve the object in 95% alcohol. **Amyloid Reaction** (in tissues having undergone amyloid degeneration). 1. With iodine: Dilute Lugol's solution with distilled water until it has the color of port-wine, and add 25% of glycerol; in this stain the sections for 3 minutes, wash in water, and mount in glycerol. The amyloid substance (brown-red), the remaining tissues are light-yellow. (For permanent preparations see the method of Langhans for glycogen.) 2. With clin-green. Stain for 24 hours in iodine green (5 Gm. dissolved in 150 Cc. of distilled water) and wash in water. The amyloid masses are red-violet, the remaining tissues green. 3. With iodine and sulfuric acid: stain sections that have been treated with Lugol's solution (see *Iodine Reaction* in this list) in 1% sulfuric acid. The brown of amyloid substance becomes intensified or changes to a violet or blue to green color.

4. With methyl-green: Stain for from 3 to 5 minutes in 1% solution of the dye and wash in distilled water containing 1% of hydrochloric acid. Amyloid substance violet, nuclei, green.

5. With methyl-violet. The process of staining is the same as with methyl-green. The amyloid is purple-red, the remaining tissue blue. **Anilin Oil**, an important medium because of its ability to clear watery objects; it will even clear aqueous mediums without the intervention of alcohol, which sometimes renders it valuable as a penetrating medium prior to paraffin embedding. It is also used for clearing celloidin sections. **Anilin Water** (Ehrlich), shake up 3 Cc. of anilin oil with 97 Cc. of distilled water and filter. The filtrate should be clear. Used as a mordant for anilin dyes. It does not keep well, and should be freshly prepared. **Apathy Cement**, heat together, in a porcelain capsule, equal parts of hard paraffin (60° C. (140° F.) melting-point) and Canada balsam until the mixture assumes a golden tint and no longer emits vapors of turpentine. On cooling, this forms a firm mass, which for use is warmed and applied with a glass rod.

This cement is suitable for closing glycerol mounts. **Balsam-paraffin for Cells** (Julien), this substance consists of paraffin saturated with balsam-cement, and is prepared as follows: Reduce commercial Canada balsam to a wax-like consistence by slow evaporation in a shallow tin pan over a low flame. Test by cooling a few drops from time to time. Melt slowly one-fourth pound of paraffin, with a melting-point above 45° C. (113° F.); add a lump of balsam-cement about the size of a marble, and then digest at gentle heat, stirring frequently, for about an hour. The appearance of a slight yellow tinge indicates the saturation of the paraffin by the balsam. When it is desired to prepare a cell, the balsam-paraffin is cautiously heated to the melting-point in a shallow porcelain capsule. These paraffin cells are suitable for dry or liquid mounts, excepting for the latter when Canada balsam, dammar, or oils are used as preservatives. The great advantage of the balsam-paraffin is its chemic indifference to the reagents employed in the preservation mediums.

Boston's Mixture (for the preservation of casts in urine), liquor acidi arsenosi (U. S. P.), 1. oz.; salicylic acid, $\frac{1}{2}$ gr.; glycerol, 2 dr. Dissolve by warming gently and add "whole tears" of acacia to saturation. Let the mixture settle, decant the supernatant liquid, and add a drop of formalin. Place a drop of urine containing casts on a slide, evaporate nearly to dryness, add a drop of the preservative, mix the two with a delicate needle, apply a cover-glass, and when the mount has hardened, seal with cement. **Bremer's Method** (for diabetic blood), fix the films for 6 minutes in the oven at 135° C. (275° F.). Stain for 3 minutes with 1% solution of methyl-blue or with the Ehrlich-Biondi mixture. The yellow-green reaction of the erythrocytes

may also be obtained by using eosin, congo red, or biehrich scarlet in 1% solution.

Canada Balsam, evaporate the balsam in a water-bath to dryness, and dissolve in an equal volume of xylol, benzol, toluol, chloroform, or turpentine. Filter through paper and keep in a "capped" bottle. If it gets too thick, dilute by adding more of the solvent employed.

Carbolfuchsin, fuchsin, 1 Gm.; phenol, 5 Gm.; alcohol, 10 Gm.; distilled water, 100 Gm.

Celloidin, stated to be a preparation of pure pyroxylin. It is nonexplosive and is soluble in ether and alcohol. Celloidin should be used in thin (2%) and in thick (6%) solutions. The object is thoroughly dehydrated in absolute alcohol, placed in a mixture of equal parts of ether and alcohol for from 12 to 24 hours, or longer if the object is large. It is then placed for 24 hours in a thin solution of celloidin (8 Gm. in 100 Cc. each of alcohol and ether), and transferred from this to a thick solution of celloidin (8 Gm. in 50 Cc. each of alcohol and ether). Select a cork or a piece of soft, dry wood, and dip it in the thick celloidin solution; when dry, place the prepared tissue upon it and drop the thick celloidin solution upon this with a pipet until it is embedded in a jelly-like mass. Blocks or cylinders of glass or vulcanized fiber serve better than cork, as they sink in the liquids used. Harden in 90% alcohol, and preserve in 70% alcohol. When making sections, keep the knife and section wet with alcohol. Apathy advises previous smearing of the knife with vaselin, as it cuts better and is protected from the alcohol. Use bergamot oil to clear. Sections may be kept in from 60 to 80% alcohol.

Chenzinsky's Stain (for blood), concentrated aqueous solution of methylene-blue and distilled water equal parts. To this is added an equal quantity of 0.5% solution of eosin in 60% alcohol. Stain blood films 4 to 5 minutes. Red blood-corpuscles stain a rose-red, nuclei of leukocytes blue, and malarial parasites blue.

Claudius' Method (for bacteria), stain in gentian or methyl-violet, after Gram (see *Gram's Method* in this table), differentiate in a saturated aqueous solution of picric acid diluted with an equal volume of water, decolorize in chloroform.

Collodion, prepared by dissolving gun-cotton or soluble cotton in equal parts of 95% alcohol and sulfuric ether; it is in every way as good as celloidin, and considerably cheaper.

Conn's Method (for preserving cultures of bacteria as museum specimens). Inoculate 2% agar-slants and seal the tubes with paraffin and plaster-of-paris. In a few days the cultures cease growing and remain indefinitely unaltered.

Copper Acetate, a solution of 1 Gm. of copper acetate and 4 Gm. of mercuric chlorid in 250 Cc. of glycerol and 1 Cc. of glacial acetic acid is used in preserving and mounting green algae.

Corrosive Sublimate, a most excellent reagent, generally applicable, useful particularly for fixing glands and gland-

cohesive solutions are usually employed. Tissues turn white when fixed; corrosive sublimate must be washed off, or the sections will be sprinkled with crystals of the salt. The hardening is in alcohol, glass, wood, or paper, and may be used in manipulating objects with this reagent. Sections may be made with any of the usual reagents.

Preparations, such preparations made in examining blood, sputum, or fluid or semifluid substance. For blood, a tiny mass is placed on a glass, another is pressed gently upon this, and the two glasses are slid one over the other, then the cover-glass is secured a thin, even film on each slide. They may also be spread with a cover-glass or with a platinum wire. Preparations are then left to dry, or they may be dried by exposing to a temperature of 120° for twenty minutes, passing them quickly through the flame of a spirit-lamp or Bunsen burner. When dry, they are ready to be mounted on a cover-glass preparation. To remove the finger, prick the pad, where the blood has exuded, touch with a second drop with a cover-glass in the manner described, and dry.

Method for obtaining the flagellum, cleanse the ear of the slide and cover-glass, with a puncture with a sterile needle, pass the first drops of blood. Gently move the slide and take up on it the summit of the second drop and apply the cover-glass. The blood spreads and the moisture on the slide hastens flagellation.

Creasote, a mixture of creasote and phenol. Beechwood creasote is used as a medium for celloidin sections.

zynke's Double Stain, an aqueous solution of methylene-blue and 0.5% solution of eosin in 70% alcohol and distilled water, 30 Cc. This stains the blood, and colors the red of the leukocytes blue; also for malarial, the gonococcus, and bacillus of Pfeiffer and Campylobacter, a nuclear stain, used for demonstrating the granules of mastzellen. Tissues hardened and stained for several hours in a solution of violet 2 Gm., in 90% alcohol, 25 Cc. alcohol until nearly colorless.

Hematoxylin, an excellent stain. Dissolve 4 Gm. of hematoxylin in absolute alcohol, and add 100 Cc. of an aqueous solution of sodium carbonate. Expose to light and air for 3 or 4 days, add to the filtrate 100 Cc. of absolute alcohol and methyl alcohol. **Eau de Javel** (sodium hypochlorite), rub on chlorinated lime in 100 Cc. of alcohol.

glycerol until it dissolves); alum, 5 Gm.; glycerol, 30 Cc., distilled water, 70 Cc. (Mayer). **Gold Chlorid**, recommended for tracing nerve-endings in fresh tissues and for staining connective tissue and cartilage-cells. Place small pieces of tissue, $\frac{1}{4}$ inch square, in from 0.5 to 1% solution of commercial gold chlorid in distilled water. Keep in the dark, and when the tissue has become yellow, wash in distilled water. Then expose to the light in 50 Cc. of water containing 2 drops of acetic acid for 48 hours, or until the tissue acquires a purple tint. Mount in glycerol. **Gold-horn's Stain** (for blood), preparation of the solution of polychrome methylene-blue. Solution A (Merck's medicinal methylene-blue; Grubler's methylene-blue rectified, and methylene-blue—Koch): Dissolve 2 Gm. methylene-blue in 300 Cc. warm water. Add to this 4 Gm. lithium carbonate, shaking constantly. Heat in an evaporating dish on a water-bath, the water touching the dish. Stir the solution occasionally. Remove in 15 to 20 minutes. Do not filter. Set aside for several days. Then add dilute acetic acid (5%) until the solution is only faintly alkaline. Solution B: A 0.1% aqueous solution of eosin. Fix blood-films in methyl-alcohol for 15 seconds. Wash in running water. Stain in solution B for 7 to 30 seconds. Wash. Stain in solution A for 30 seconds to 2 minutes. Wash thoroughly in running water. Dry by agitating in air, not between filter-paper. The eosin may be added to the methyl-alcohol (enough to make a 0.1% solution); or solution B may be added to solution A (1:4), but this easily produces a precipitate (the neutral stain). These give good results. Mixtures of methyl-alcohol, eosin, and polychrome methylene-blue give poor results. The depth of the chromatin stain depends on the length of staining. To stain the chromatin of half-grown malarial parasites $\frac{1}{4}$ to 2 minutes is necessary, while the chromatin of the hyaline forms stains in 10 seconds. Repeated staining may improve the chromatin violet. To do this the blood-film may be stained with solution B for 5 seconds, with solution A for 10 seconds. **Golgi's Method** (for the restoration of over-hardened tissue), wash in a half-saturated solution of copper acetate until it yields no precipitate, and return for 5 or 6 days to Golgi's mixture (see below). The tissue will then take the silver and the sections can be mounted in thickened cedar oil under a cover-glass. **Golgi's Mixture**, potassium dichromate (3.5% solution), 54 Cc.; osmic acid (2%), 6 Cc. **Gonococcus**, the gonococci are seen in the pus-cells grouped around the nucleus. Watery solutions of anilin dyes, preferably methylene-blue, stain the cocci intensely. **Gram's Method**, heat for from 2 to 5 minutes, or stain cold for from 20 to 30 minutes (tubercle bacilli, 12 to 24 hours), in saturated solution of gentian-violet anilin water; rinse quickly in absolute alcohol; transfer to Gram's solution (1 to $1\frac{1}{2}$ minutes),

in which the specimen turns black; alcohol until the black color vanishes; pale-gray color appears, dry and Canada balsam. The decolorization may be hastened by adding 1% nitric acid to the alcohol and then washing in pure alcohol; the tissue cells are decolorized by this. The cells may be subsequently stained in watery or alcoholic solution. The brown color of the tissue may be removed by brown for from 2 to 5 minutes, then in absolute alcohol until the section is brown. This method is of danger as certain bacteria are stained, others decolorized, by it. The bacteria that are stained by Gram's method are: tubercle bacillus; Fraenkel-Weichselbaum pneumococcus; *Streptococcus pyogenes*; streptococcus; *Staphylococcus pyogenes*; *Staphylococcus albus*, *Staphylococcus aureus*, and *Staphylococcus bacillus* of hog erysipelas. The bacteria that are decolorized by Gram's method are: Typhoid bacillus; gonococcus; *Fraser's capsule bacillus*; Koch's *erysipelas* bacillus; and the spirillum causing fever. Botkin advises washing the preparation in plain anilin water before decolorizing in the iodine solution. **Gram's Method**: 1. *Gentian-violet* method: Transfer from the iodine-potassium solution to alcohol, then to a mixture of 1 volume, and nitric acid, 3 volumes; wash this again into alcohol. 2. *Nitric acid* method: Decolorize in a mixture of 1 volume, and acetone, 1 volume. 3. *Botkin's modification*: Decolorize in a mixture of 10% of acetic acid and 90% of alcohol. The sections, stained with gentian-violet or methyl-violet are not transferred to alcohol from the iodine solution, but upon slides and covered with anilin water; is removed with blotting-paper, and by xylol and xylol-balsam. The sections are dehydrated and differentiates. **Gram's Alcoholic Borax-carmin**, dissolve 1 Gm. of borax in 100 Cc. of distilled water. Add 1 Gm. of carmin, warm, and dilute with 100 Cc. of 70% alcohol. Filter before use. Transfer the tissue from the standard alcohol acidulated with from 1 to 2 Cc. hydrochloric acid, in which it should be stained until it acquires a bright, transparent appearance. This solution is used for decolorizing in bulk and gives a splendid color. **Gram's Durham's Method** for the agglutination of typhus and cholera bacilli, for the immunization serum on a cover-glass, add a drop of equal size of the bacteria, finely divided as possible. Mix and spread on a slide with a ground glass. For cases put the preparation in the water for 15 to 30 minutes. **Haffkine's Method** for the culture of the bacillus of cholera, chop 1 kilo of goat's flesh and boil for 1 hour under a pressure of 3 atmospheres for 1 hour. Add hydrochloric acid. Filter, neutralize with water to 3 liters, and sterilize by

Prophylactic, inoculate a flask containing 3 liters of Hafkine's bouillon with a pure culture of pest bacilli; when the stalactite growth develops, shake the flask until the colony sinks to the bottom, and when the growth reappears, shake again; when the stalactite culture forms the third time, heat to 60° C. (140° F.) for 3 hours. Decant the clear fluid and preserve in hermetically sealed tubes. Dose 16-32 min. (1-2 Cc.) injected beneath the skin. **Harris' Carboltoluidin**, dissolve 1 or 2 Gm. of toluidin-blue in a saturated solution of phenol. Before staining treat the sections with water; stain for from 5 minutes to 24 hours, wash, and differentiate in glycerol-ether (Grubler) diluted 15 times with water or in acidulated alcohol; after from 5 to 15 minutes wash in alcohol. Eosin in alcohol may be used as a counterstain. In this case omit the differentiation and stain for from $\frac{1}{2}$ to 2 minutes and wash in alcohol. **Harris' Hematoxylin**, dissolve 1 Gm. of hematoxylin in 10 Cc. of alcohol and add to 200 Cc. of a saturated aqueous solution of alum; heat to boiling and add 0.5 Gm. of mercuric oxid; when the solution turns a dark purple, remove from the flame and cool quickly. For use dilute to the color of port-wine with aqueous solution of alum. **Haug's Phloroglucin Fluid**. One of the most rapid decalcifying agents, and without injurious action on the tissue-elements, with the exception of blood. It is prepared as follows: Warm slowly and carefully 1 Gm. of phloroglucin in 10 Cc. of pure nitric acid, and to the resulting ruby-colored solution add 50 Cc. of distilled water. If a larger quantity is desired, add nitric acid and water to the foregoing proportion until the volume measures 300 Cc., the limit of the protective influence of the phloroglucin. Previously to being brought into this fluid the tissues should be well fixed. Fetal bones and those of lower vertebrates are decalcified in half an hour. Older and harder bones require several hours. When decalcification is completed, wash in running water for two days. The sections stain well. Another formula, useful for teeth when rapid action is necessary, consists of phloroglucin, 1 Gm.; nitric acid, 5 Cc.; 95% alcohol, 70 Cc.; distilled water, 30 Cc. The function of the phloroglucin is to protect the organic tissue-elements against the action of the acid. **Heidenhain's Fluid**, saturate hot 0.5% sodium chlorid solution with mercuric chlorid. **Heiler's Method**. 1. *For the osmication of medullated nerve-fibers*: Harden the tissue in Müller's fluid. Stain the sections in 1% osmic acid—in the oven for 10 minutes, at room-temperature for a half-hour, wash in water; reduce in 5% pyrogallic acid for a half-hour, oxidize in 2.5% potassium permanganate for from 3 to 5 minutes, decolorize in 2% oxalic acid for from 3 to 5 minutes. 2. *For mounting objects for sectioning*: Pin a piece of paper about the cork or block so that it

projects and forms a trough into which the celloidin can be poured around the object. Harden in the vapor of alcohol by suspension in a closed cylinder containing a few centimeters of alcohol. **Hemosiderin**, amorphous yellow to black-brown iron-containing fragments occurring in thrombi or hemorrhagic infarcts. In sections of material hardened in alcohol or formalin, treated for a few minutes with a 2% aqueous solution of potassium ferrocyanid and examined in glycerol containing 0.5% of hydrochloric acid, the pigment appears in the form of dark-blue granules. **Hermann's Fluid**, a modification of Flemming's fluid. Platinum chlorid is used instead of chromium trioxid; in other respects the formulas are alike. **His' Medium** (for the differential culture of the typhoid bacillus). 1. The tube culture-medium: triturate 5 Gm. of agar, 80 Gm. of gelatin, 5 Gm. of beef-extract, and 5 Gm. of salt; add a liter of water and enough hydrochloric acid or soda solution to produce a reaction of 1.5% of normal acid, using phenolphthalein as the indicator. Clear with 1 or 2 eggs beaten in 25 Cc. of water; add 10 Gm. of glucose, boil for 25 minutes, and filter through absorbent cotton. 2. For the plate-culture use 10 Gm. of agar, 25 Gm. of gelatin, 5 Gm. each of beef-extract and salt, and 10 Gm. of glucose. The medium must contain not less than 2% of normal acid. The typhoid bacillus alone has the power of clouding these mediums. **Hofbauer's Method** (for staining the iodophil granules of leukocytes), dry the film and stain 1 minute in a solution of iodine, 1 part, potassium iodid, 3 parts, and water, 100 parts, brought to a syrupy consistence by the addition of gum-arabic. Remove the excess of the stain with filter-paper to prevent diffuse coloring. Iodin-alcohol, alcohol, 90%, to which enough tincture of iodine is added to impart the color of port-wine. See also Zenker's fluid in this table. **Iron Hematoxylin**, sections are treated with a weak aqueous solution of ferric acetate, washed in water, and stained in 0.5% aqueous solution of hematoxylin. A blue-black or black-brown stain is obtained. This process is recommended by Butschli for staining sections of protozoa 1 μ thick. Another method is as follows: Treat sections for from $\frac{1}{2}$ hour to 2 or 3 hours with a 1.5 to 4% solution of ferric ammonium sulfate; wash in water, and stain for from 1 to 12 hours in an aqueous solution of hematoxylin, about 0.5%. Rinse with water and treat again with the iron solution. As soon as differentiation is complete, wash for 15 minutes in running water and mount. The results vary according to the duration of the treatment with the iron and hematoxylin solutions; short baths give a blue preparation, in which the nuclear structures are highly differentiated; prolonged baths give black preparations, showing connective-tissue fibers and red blood-corpuscles black, central and polar bodies intensely black, cytoplasm

sometimes colorless, sometimes gray, in which case cell-plates and achromatic spindle-fibers are stained. Microorganisms are sharply stained. **Jenner's Stain (for blood)**. Preparation of the neutral stain. In an open beaker mix equal parts of 1:2 or 1:25% aqueous solution of eosin (Grubler), 1% aqueous solution of methylene-blue med. (Grubler). Let stand for 24 hours. Filter. Dry the precipitate obtained. Wash the precipitate with distilled water and dry again. The staining solution. For use dissolve 0.5 Gm. of the precipitate in 100 Cc. pure methyl alcohol (Merck "for analysis"). Jenner gives no particular method of fixation. Staining. Stain in the solution for 1 to 3 minutes, covering with a watch-crystal. Pour off stain quickly and rinse in water until film is pink (5 to 10 seconds). Staining reaction: Leukocytes, nuclei, blue; granules, neutrophil, red; granules basophil, dark violet; granules, eosinophil, brilliant crimson; malarial parasites, bacteria, and filaria, blue. **Karyokinesis**. Place small pieces of tissue hardened in strong Flemming's solution in an alcoholic solution of safranin (2 Gm. to 60 Cc.) for from 24 to 48 hours. Wash for a few minutes in water, and carry to acidulated absolute alcohol (10 drops of acetic acid to 100 Cc.) for from 1/2 to 1 minute. When thick clouds of color are no longer given off, carry to absolute alcohol. After 1 or 2 minutes clear and mount. **Leishman's Stain (for blood)**. Preparation of the neutral stain. Solution A. The solution of polychrome methylene-blue. A 1% aqueous solution of methylene-blue med. (Grubler) is made alkaline with 0.5% Na_2CO_3 . This is heated for 12 hours at 65°C., and then allowed to stand for 10 days before use. Solution B. A 0.1% aqueous solution of eosin (extra BA Grubler). Equal parts of solutions A and B are mixed in an open vessel and allowed to stand for 5 or 6 hours, with occasional stirring. The precipitate formed is collected on a filter, washed with water, dried, and powdered. The staining solution. Dissolve 0.1 Gm. of the dry precipitate in 100 Cc. pure methyl alcohol (Merck "for analysis"). To stain. Four drops of the solution are poured on the blood-film, and allowed to stain for 1/2 minute. Without pouring off the stain, 6 to 8 drops of distilled water are added and the mixture is allowed to stain for 5 minutes. Wash gently. Put a few drops of water on the blood-film for 1 minute. Then dry and mount. Staining reactions. Red blood-corpuscles stain pale pink or greenish; lymphocytes nuclei, dark ruby red; protoplasm, pale blue; mononuclear nuclei, ruby red; protoplasm, pale blue; polymorphonuclear neutrophils nuclei, ruby red; granules, red; "coarse-grained eosinophils" nuclei, ruby red; granules, pale pink; basophils nuclei, red; granules, purplish black; blood platelets stain deep ruby red; malarial parasites nuclei, chromatin mass, ruby red, cytoplasm, blue. **Lithia-water**.

Saturated aqueous solution of lithium carbonate 1 Cc., and distilled water 9 Cc., as an intermediate agent in staining microorganisms. **Living Cells**. Young *Amphibia* are the best objects for the study of cells *intra vitam*. Place the larvae or *Bombina* in a watch glassful of water containing 5 to 10 drops of a solution of 1 part of 100 parts each of water and 1 Cc. of From 1/2 to 1 hour's immersion is required for curarization. It is not necessary to wait till the larvae are motionless, they may be moved as soon as their movements have become slow. The gills and the mouth may then be studied. The tail may be cut from the living animal and stained for a time in 1% salt solution in a watch glass medium. The adult animal may be cut the thin, transparent bladder. Larvae may be bred from adults, if well fed with apple worms, and supplied with a vessel of water. The larvae will be deposited in the water. The cytoplasm of living cells may be stained with methylene blue, fast blue, or gentian violet dissolved in water or in an anhydrous liquid. **Loeb's Method (for producing typical parthenogenesis)**. Place the fertilized eggs of sea-urchins in sea water containing magnesium chloride in the presence of 5000 ppm MgCl_2 to cause cleavage. After 2 hours restore them to normal water. The eggs form normal parthenogenetic plutei. **Loeffler's Methylene-blue**. 1:30 Cc. of a concentrated aqueous methylene-blue solution to 100 Cc. of a saturated solution of potassium (500:1000). Filter. **Loeffler's Stain (for fungi)**. Mix to 20% solution of tartaric acid, and 1 Cc. of a solution of ferrous sulfate, and 1 Cc. of an alcoholic solution of fast blue, methylene blue, or "Weilschwarz." For fungal stains, add 1 Cc. of 1% solution of sodium borate. For *Aspergillus* add 30 drops of 1% solution of potassium edema. 30 drops, for *Clavaria*, add 1 drop of sodium borate to the solution, for *Strombosium* add 10 drops. **McCrorie's Method (for fungi)**. In the cover glass preparation in warm water of equal parts of a saturated solution of night blue, a 10% solution of tartaric acid, and a 10% solution of sodium borate. **Madon's Method**. 1. For neurospora. Fix the 2 Cc. in 10% formalin, then for 2 days in a saturated solution of potassium borate for 4 days in a 2% solution of potassium borate at 12°C. Staining reactions for 2 minutes in 1% aqueous solution of acid fuchsin, rose, and methylene blue with 1% aqueous solution of potassium borate, wash in two changes of water and for 2 minutes in a mixture of water and anilin blue, 0.5 Gm., orange G, 2 Gm., in acid, 2 Gm., and water 100 Cc. Wash in water and dehydrate in alcohol. From a negative tissue, blue, containing the ganglion-cells and axons. **Madon's Method**. 2. For neurospora. Fix the tissue in 10%

method given in No. 1, and treat the sections for 15 minutes with a 0.5 aqueous solution of potassium permanganate, and after washing for the same time with 1% solution of oxalic acid, wash, and stain in hematoxylin prepared by dissolving 0.1 Gm. of the dye in a little hot water, and when cool adding water up to 80 Cc., 20 Cc. of 10% aqueous solution of phosphotungstic acid, and last 0.2% of hydrogen dioxide. Wash in water, dehydrate in alcohol, clear in oil of origanum, and mount in balsam. Nuclei, neuroglia, and fibrin blue; axis-cylinders and ganglion-cells pale pink; connective tissue deep pink. 3. *For connective tissue:* Fix in Zenker's fluid or sublimate and stain the sections for 2 minutes in 0.1% aqueous solution of acid fuchsin. For further treatment see No. 1. Result: fibrous tissue, mucus, amyloid and hyaline substances, blue; nuclei, cytoplasm, elastin, fibrin, neuroglia, and axis-cylinders, red; erythrocytes and myelin sheaths, yellow. 4. *For nuclei and fibrin:* Stain sections of tissue fixed in any medium except formaldehyd for 3 minutes in 10% aqueous solution of ferric chlorid; drain and dry and stain for 3 minutes in a 1% aqueous solution of hematoxylin; wash and differentiate in a 0.25% solution of ferric chlorid. Result: nuclei, dark blue; fibrin, gray to dark blue. In sublimate preparations the erythrocytes are greenish gray; connective tissue, pale yellow. 5. *For staining Anabaenae coli in tissues:* Use alcohol material and treat the sections for from 5 to 20 minutes with saturated aqueous solution of thionin; wash, and differentiate for from 30 to 60 seconds in 2% aqueous solution of oxalic acid; wash, dehydrate, clear, and mount in the usual way. **Mallory's Phosphomolybdic-acid Hematoxylin.** Mix 10% solution of phosphomolybdic acid, 1 part; hematoxylin, 1 part; water, 100 parts; chloral, from 6 to 10 parts. Expose to sunlight for a week. Filter before using and save the used portions. Stain sections for from 10 minutes to an hour; wash in 40 to 50% alcohol, changing it 2 or 3 times. Dehydrate and mount. If the solution does not stain readily, add a little hematoxylin. The stain is blue, and in its general effect similar to nigrosin. It is recommended for preparations of the central nervous system. **Mallory-Wright Method** (for staining tubercle bacilli). Stain lightly in alum-hematoxylin, then for 2 or 3 minutes in steaming hot carbol-fuchsin; decolorize for 30 seconds in acid alcohol. **Marchi's Method.** Used to demonstrate early degeneration of nerves, prior to sclerosis. After hardening in Muller's fluid place the tissue in a large quantity of a mixture of Müller's fluid, 2 parts; 1% osmic acid, 1 part. The degenerated fibers are stained black; the normal are yellow or uncolored. **Mayer's Carmalum.** Take 1 Gm. of carminic acid, 10 Gm. of alum, and 200 Cc. of distilled water; heat the mixture and filter, adding an antiseptic to keep it clear. The fluid is light red

in color, shading toward violet, and is said to have good penetrating powers, even in osmium preparations, and to be better than alum-carmin for staining *in toto*. **Mayer's Carmalum and Indigo-carmin.** Dissolve 0.1 Gm. of indigo-carmin in 50 Cc. of distilled water or of 5% alum solution; add 1 volume of indigo-carmin solution to 4 volumes of carmalum. **Mayer's Hemalum.** An excellent stain for large objects. It consists of two solutions—one of hematein, or ammonium hematein, 1 Gm., dissolved by the aid of heat in 50 Cc. of 90% alcohol; the other of alum 50 Gm. and distilled water 1 liter. The solutions are mixed, left to cool, and then filtered. A crystal of thymol may be added to prevent the formation of mold. For most purposes it is advisable to dilute this stain with water or alum solution. Hemalum plus 2% glacial acetic acid gives a more precise nuclear stain. **Mayer's Hemalum and Indigo-carmin.** Add 1 volume of a 0.05% aqueous solution of indigo-carmin to 4 volumes of hemalum. **Mayer's Paracarmin.** Dissolve carminic acid, 1 Gm., aluminium chlorid, 0.5 Gm., calcium chlorid, 4 Gm., in 100 Cc. of 70% alcohol, with or without heat. Filter, after precipitation, and the solution will have a clear red color. Suitable for staining bulky objects with large cavities, such as *Salpa*. **Methylene-blue.** An important reagent, which gives a specific stain for lymph-spaces and intercellular cement, closely resembling gold and silver impregnation, for medullated nerves, and for plasma-cells. It also stains *intra vitam*, and is a specific reagent for the axis-cylinders of sensory nerves in living animals (Ehrlich). Small and permeable aquatic organisms may be stained during life by adding to the water containing them enough of the dye to give it a very pale tint. Nerve-tissue may be stained by injecting the dye into the vascular system of a living, narcotized animal, or by removing the organ and immersing it in the solution. From 0.5 to 1% solutions in physiologic salt solution are employed for this purpose. The color is not permanent, but may be fixed by ammonium picrate. Parker fixes the color by dehydrating in a solution of mercury bichlorid, 1 Gm., in methylol 5 Cc.; washing in a mixture of 2 parts of the methylol and sublimate solution, 1 part pure methylol, 3 parts xylol. The object is then placed in xylol for 4 or 5 days, when it is ready to mount or embed. Mayer's albumin should not be used to fix sections to the slide, as it discharges the color. A solution of 0.25 Gm. in 90% alcohol, 20 Cc., and distilled water, 80 Cc., is used for tissue-staining. A 1% and a saturated alcoholic (15 Gm. to 100 Cc.) solution are used for staining microorganisms. **Methyl-green.** This is chiefly used as a nuclear stain for fresh or recently fixed tissues; it is also a reagent for amyloid degeneration (Heschl), giving a violet color. Use 0.5 Gm. of methyl-green in 20 Cc. of 90% alcohol, 80 Cc. of distilled water,

and 1 Cc. of acetic acid. Stain the tissue for 5 minutes, wash in acidulated water, differentiate in 90% alcohol, and dehydrate. The nuclear reaction depends on the presence of acetic acid. Arnold recommends a dilute solution of methyl-green containing 0.6% sodium chlorid for staining cells and nuclei. Bizzozero has observed that the elements of blood and pus, also dilated epithelium and spermatozoa, do not stain with methyl-green if the cells are highly alkaline. If the alkalinity is diminished, they are dyed violet; if the cells are acid, they are colored green. Carnoy regards methyl-green as the best stain for nucleoli. **Methyl-violet.** A good chromatin stain. Dissolve 0.5 Gm. in 200 Cc. of distilled water and 5 Cc. of glacial acetic acid. Stain sections for 20 minutes, wash in distilled water, and then in equal parts of glycerol and water. Mount in Farrant's medium. This is also a reagent for tissues undergoing amyloid degeneration. The amyloid substance stains pink. 1. (*Alcoholic*) Methyl-violet, 25 Gm.; absolute alcohol, 100 Cc. 2. (*Aqueous*) Methyl-violet, 1 Gm.; alcohol, 20 Cc.; distilled water, 80 Cc. **Muchematein.** A specific stain for mucin. 1. Pulverize 0.2 Gm. of hematin with a few drops of glycerol and then add 0.1 Gm. of aluminium chlorid, 40 Cc. of glycerol, and 60 Cc. of water. 2. Dissolve 0.2 Gm. of hematin and 0.1 Gm. of aluminium chlorid in 100 Cc. of 70% alcohol. Two drops of nitric acid may be added. **Mucicarmin.** A specific stain for mucin. Rub 1 Gm. of carmin in a mortar with 0.5 Gm. of aluminium chlorid and 2 Cc. of distilled water; heat for 2 minutes, until the light-red color changes to dark, stir and add a little 50% alcohol, when dissolved, make up to 100 Cc. with 50% alcohol, and after 24 hours filter. For use dilute tenfold with water or with 50% alcohol. **Müller's Berlin Blue.** Precipitate a strong solution of Berlin blue with 90% alcohol. The fluid is neutral and the precipitate finely divided. **Müller's Fluid.** This agent is very extensively used, as it penetrates well and hardens evenly. It has the following composition: potassium dichromate, 2 (parts); sodium sulfate, 1 part; water, 100 parts. The addition of a little camphor, chloral, thymol, or naphthalene will prevent the formation of mold. The time required for hardening depends on the size of the object. This fluid diluted to 0.2% is used as a macerating agent. **Nissl's Method (for ganglion-cells).** 1. Stain sections of tissue hardened in 10% formalin or in graded alcohols in hot concentrated aqueous fast blue solution. 2. Stain in hot 0.5% methylene-blue; when cool, transfer to a mixture of anilin (20 parts) and 90% alcohol (80 parts); then treat with cedar-oil, then with benzol, and mount in solution of cedar-oil in benzol. 3. Mount the hardened tissue on cork (without embedding), cut sections and stain them in hot Nissl's methylene-blue; treat with the anilin-alcohol mixture, then with cedar-oil, then as in 2. **Nissl's**

Methylene-blue. Methylene-blue (B. patent), 3.75 parts; Venice soap, 1.75 parts; distilled water, 1000 parts. **Nitric Acid.** An oxidizing agent, which causes the swelling and does not attack the tissue elements. It is used in 1 and in 10% solutions, the former for unhard bones, the former for young bones. The specimens should previously have been put in absolute alcohol, and the decalcifying be changed daily. They must be removed as soon as decalcification is complete, or they become discolored. They are then washed in running water for two hours and passed to alcohol, which should be renewed in a few days. **Nochi's Stain (for Nissl's method).** Unna's polychrome methylene-blue is neutralized with dilute acetic acid. Solution A: 1 Cc. of the neutralized polychrome methylene-blue is mixed in a watery mixture with a saturated aqueous solution of anilin. Solution B: methylene-blue until its red color disappears; the solution becomes blue. Solution B: 1 drop or 4 drops of a 1% aqueous solution of eosin with 1 or 2 Cc. water. Add solution A drop by drop to solution B until it is dark blue; a precipitate has then been formed. In the mixture blood-films are to be stained for several hours up to 24 hours. Fix tissue in alcohol or by heat. Subsequent mounting in Solution A. The polychrome methylene-blue solution. To a 1% aqueous solution of methylene-blue add 1 or 2 % Na_2CO_3 . Boil at 50° C. to 60° C. (112° to 140° F.) for several days. Solution B: Dilute 2 or 4 drops of a 1% aqueous solution of eosin with 1 or 2 Cc. water. To solution B add solution A drop by drop until the mixture is dark blue and loses its eosin tint. To stain, float blood-films face down on this mixture for from 5 to 10 minutes. **Normal Salt Solution.** Sodium chlorid, 6-7.5 Gm.; distilled water, 1000 Cc. Used in the study of living structures. **Paraffin Infiltration and Embedding.** The initial step in this process consists in the infiltration of the object with a clearing agent that is, by some substance which is a solvent of paraffin. It is then immersed in melted paraffin until it is thoroughly saturated. The paraffin should be kept just at the melting point and should be renewed if the object is large. The duration of the bath depends on the size of the object. When the saturation in the process is completed, embed the paraffin as in simple embedding. To prevent crystallization of the paraffin the embedded object should be quickly cooled, which may be done by floating it in the containing receptacle of cold water. **Phenol and Xylol.** A mixture of 1 part of phenol and 3 parts of xylol is used to clarify cellulosic sections, which may be taken from 70% alcohol, and do not require further dehydration. A layer of colored heated copper sulfate in the bottom of a bottle will keep the mixture free from algae. **Pianese Double Stain.** Prepare a saturated solution of nigrosin in a mixture of alcoholic solution of picric acid and

volumes of this with 1 volume of anilin water and evaporate in open air. The crystals deposited are dissolved in absolute alcohol, and from this solution green crystals are obtained soluble in alcohol, ether, and water. For tissues, make a 2% solution in alcohol; for microorganisms, in water. Stain sections first in lithium-carmin, treat with acid alcohol, wash, and immerse in an alcoholic solution of picronigrosin until they assume a brown hue. Decolorize in oxalic acid. Nuclei are stained red, plasma, dark-yellow; cartilage, yellow; connective tissue, pale green; elastic fibers, violet. **Picric Acid.** A fixing agent of great penetration, and, therefore, especially suitable for the preparation of chitinous structures. A saturated solution is employed. The time required for fixation varies from a minute to a day, and depends on the size of the object. Wash out in alcohol and stain in alcoholic solutions. **Picric Alcohol.** A saturated solution of picric acid in 50% alcohol. **Piconigrosin.** A solution of 1 Gm. of picric acid in 100 Cc. of distilled water with the addition of 1 Gm. of nigrosin. **Plehn's Method.** 1. *For the study of the living malarial parasites:* Place a drop of fluid paraffin on a slide and a drop on a cover-glass; take up the drop of blood on the latter and so place it on the slide that the blood is between the drops of paraffin. Examine on a warm stage. The addition of a drop of methylene-blue will stain the living organisms. 2. *For malarial films fixed in absolute alcohol:* Stain for 5 minutes in a mixture of concentrated aqueous solution of methylene-blue, 60 Cc., 0.5% solution of eosin in 75% alcohol, 20 Cc., distilled water, 20 Cc., and 20% potash lye, 12 drops. **Polychrome Methylene-blue.** A reddish-violet dye sometimes present as an impurity in commercial methylene-blue, or that develops in old, ripened, or alkaline solutions of methylene-blue. It is used for staining cell-granules. See *Unna's Method*. **Potassium Permanganate** (*Du Pleiss*). Useful for the study of isolated and very contractile cells, as spermatozoa. It is said to kill more rapidly than any other agent, 2% osmic acid not excepted. A saturated aqueous solution is used. It is also used for washing out overstaining with carmin, and in 1% solution as a mordant for anilin dyes (*Henneguy*) and for reducing silver impregnations. **Rosenberger's Method.** 1. *For staining blood:* Fix the films by heat or in absolute alcohol or alcohol and ether and stain in a mixture of 15 Cc. of a saturated aqueous solution of methylene-blue, 4 Cc. of a saturated aqueous solution of phloxin, 6 Cc. of 95% alcohol, and 12 Cc. of distilled water. 2. *For staining the tubercle bacillus:* The essential point in this process is the use of sweet spirit of niter for bleaching; it is also mixed with alcoholic solutions of methylene-blue, malachite green, Bismarck brown, and gentian-violet. **Safranin.** *Pfitzer's formula:* Safranin (*Grübner's*), 1 part; absolute alco-

hol, 100 parts; water, 200 parts. *Flemming* uses a concentrated alcoholic solution diluted one-half with water. *Babes' formula:* (a) Equal parts of a concentrated alcoholic and a concentrated aqueous solution; (b) water, 100 parts; anilin oil, 2 parts; safranin, in excess. The latter may be used according to the method of *Grün*, and is recommended for the demonstration of mitotic figures. **Scheele's Green Mass.** (a) Mix 80 Cc. of a saturated solution of potassium arseniate and 50 Cc. of glycerol. (b) Take 40 Cc. of a saturated solution of copper sulfate and 50 Cc. of glycerol. Combine the two solutions with three volumes of the vehicle. **Substantive Staining.** A histologic stain obtained by direct absorption of the pigment from the solution in which the tissue is immersed. Dyes that combine directly with the substance acted on are called substantive dyes. **Subtractive Staining.** A so-called theory of *Heidenhain's*, based on the hypothesis that a general stain satisfies the affinities of some cell-structures, that hold it in subsequent treatment with specific dyes, while the other structures give up the general stain and then take the specific stain. **Sudan III.** A selective stain for fat. Prepare a saturated solution in 95% alcohol, dilute two-thirds with 50% alcohol, and filter. Stain sections for from 5 to 10 minutes, wash for about the same time in 60 or 70% alcohol, and mount in glycerol. Small oil-drops yellow, large ones orange. **For staining the fat-granules in the elements of tissues undergoing fatty degeneration** use the undiluted stain. The tissue may be fixed in Muller's fluid or cut fresh on the freezing microtome. **Thionin.** The uses and technique are the same as for methylene-blue. A saturated solution in 50% alcohol diluted with 5 volumes of water is used for staining. **Thoma's Method** (*for the numeration of leukocytes*). Dilute the blood in the proportion of 1:10 with water containing 0.3% anhydrous acetic acid. This dissolves the colored blood-cells. **Unna's Hematoxylin.** A constant half-ripe stock solution. Hematoxylin, 1 Gm.; alum, 10 Gm.; alcohol, 100 Cc.; water, 200 Cc.; sublimed sulfur, 2 Cc. If the sulfur is added 2 or 3 days after preparing the hematoxylin solution, it will arrest oxidation and the stain will be ready for use at this stage. The oxidation of alum-hematoxylin solutions can be instantaneously accomplished by adding a little neutralized hydrogen dioxide. **Unna's Method.** *For collagen:* 1. Stain sections of alcohol material for 5 minutes in strong solution of polychrome methylene-blue, then for 15 minutes in neutral 1% solution of orcein in absolute alcohol; wash in alcohol, bergamot; balsam. Collagen, dark red; nuclei, blue; granules of mast-cells, carmin red; cytoplasm of plasma-cells, blue. 2. Stain sections for 20 seconds in 1% solution of water-blue (*Wasserblau*), wash and stain for 5 minutes in neutral aqueous 1% solution of safranin; wash in water and then treat with

absolute alcohol until the blue color reappears; collagen, sky-blue; nuclei, red; cytoplasm, violet. 3. *For collagen, elastin, and smooth muscle.* Stain with hot orcein for 10 minutes, wash in dilute alcohol, stain with hematein for 10 minutes, and treat for a few seconds with acid alcohol; wash, and place in a 2% solution of acid fuchsin for 5 minutes, in saturated aqueous solution of picric acid for 2 minutes, then in saturated alcoholic solution of picric acid for 2 minutes; absolute alcohol; oil; balsam. Elastin, brown-red; collagen, red; muscle-fibers, yellow with gray-violet nuclei.

4. *For elastin and smooth muscle:* Stain as in 3, substituting polychrome methylene-blue for hematein and a 4% potassium permanganate for the acid alcohol. Elastin, brown red; collagen, decolorized; muscle-fibers, violet. 5. *For smooth muscle:* Stain sections for 10 minutes in polychrome methylene-blue; wash, and fix in 1% red prussiate of potash, differentiate in acid alcohol for 10 minutes. Absolute alcohol, oil, balsam. The collagen is decolorized. 6. *For keratohyalin:* Overstain in hematoxylin, treat for 10 seconds with 0.5% solution of potassium permanganate, and wash in alcohol, or place the stained sections in 34% solution of iron sulfate for 10 seconds, or in 10% solution of iron chloride. 7. *For epithelia:* Stain sections for 10 minutes in neutral aqueous 1% solution of water blue; wash, and stain for 10 minutes in 1% solution of orcein. Or overstain sections of alcohol material in polychrome methylene-blue and differentiate in Unna's glycerol-ether mixture (Grubler), or in a mixture of alcohol, 10 parts; xylol, 15 parts; anilin, 25 parts, and transfer to xylol, or in a mixture of xylol, 30 parts; alcohol, 20 parts; then transfer to xylol and then to anilin containing alum to saturation (tagatized and filtered before using). 8. *For plasma cells and mast-cells:* Apply the methods for epithelia. (For the demonstration of bacteria in epithelia see the methods for staining microorganisms.) 9. *For ascertaining the decolorization of bacteria in the process of dehydrating in alcohol:* Transfer the section from the decolorizing fluid to the slide, remove as much as possible of the water by means of filter-paper, and then heat the slide over flame until the section is dry, when cold, mount in balsam.

Waldeyer's Method *For the fixing and decolorization of bone:* Fix the fresh object in chromium trioxid (1.600), decolorify in a mixture of chromium trioxid (1.200), 200 Cc. and nitric acid 2 Cc. Wash thoroughly and harden in alcohol. **Weigert's Differentiating Fluid.** Borax, 2 Gm.; potassium ferricyanid, 0.5 Gm.; distilled water, 200 Cc. Used after hematoxylin. **Weigert's Method.** 1. *For fibrin:* Make a fibrous section and stain one minute in Weigert's fibrin stain (5% solution of gentian-violet, 4.4 Cc., 96% alcohol, 6 Cc., anilin oil, 1 Cc.). Dry with unsized printing paper and add a drop of Gram's solution saturated with iodine. Most of the stained parts are decolorized. Re-

move the iodine with printing paper, stain equal parts of anilin oil and 96% alcohol until all the water is removed. The same gives the section a white appearance. Put with filter-paper, wash with xylol, and mount in xylol balsam. 2. *For fibrin:* Fix for 8 days in the following mixture: dissolve 2.5 Gm. chromic acid in 100 Cc. water by heat, and while hot add 6 parts each of acetic acid and pulverized copper filings; when cold, 10 parts of formalin. Filter on celluloid. Treat the sections for 10 minutes with 0.5% solution of potassium permanganate, wash in water, and reduce in the following (5 parts each of chromic acid and water) in 100 parts of water to which 10 parts of acetic acid and 10 parts of a 10% solution of potassium nitrate. After 3 hours transfer to 5% hematoxylin and after 24 hours stain in the following: saturate hot 75% alcohol with methylamine, decant when cold, and to each 100 Cc. add 5 Cc. of 5% aqueous solution of soda, and differentiate in a saturated solution of soda in 5% solution of potassium nitrate. Decant in a mixture of equal volumes of anilin and xylol, wash in xylol, and mount in balsam. 3. *Without decolorizing:* Transfer the section to Muller's fluid and alcohol are used instead of celluloid, and then put into a mixture of equal parts of a 10% solution of soda and tartaric acid and a cold saturated solution of sodium acetate, which is kept at from 45° to 55° F. (86° to 93° F.). These are next placed in a half-saturated solution of copper acetate at the same temperature for 48 hours. The blocks, rinsed in water, may be kept in 70% alcohol and out at any time. The staining fluid is composed of 1 part of anilin and 10 parts of alcohol solution (1:10) and 10 parts of a saturated solution of lithium chloride. The fluid is to be freshly made. Stain for 10 to 12 hours, wash decolorize in cold water, and clear in anilin xylol 2:1, then in 96% xylol, and mount in xylol balsam. The advantage of the method is the manner in which the fine nucleated fibers are distinguished from the cells and other parts. It is less tedious than the old method. **Weigert's Stain** *For blood:* Preparation of the stain stain. Solution A. Make a 1% aqueous solution of the Nallo G, being 100 Cc. of water, all the salt into solution by stirring with a glass rod. Then add 1 Cc. of formalin (Grubler's methylene blue, "Bla", "Blau", or "Ischold's neutral"). Transfer this to an Arnold sterilizer for 1 hour after steam has cooled. Solution B. 0.1% aqueous solution of eosin (Grubler, "yellowish-violet" is best). Add solution B to solution A until the mixture becomes purple; a mixture of 10 parts of surface, and a finely granular blue precipitate appears in suspension. Add 1 Cc. of solution B to 100 Cc. of solution A, stir off the precipitate. Do not wash. Preparation of the staining solution. Mix a saturated solution of the precipitate in 100 Cc. of 96% alcohol with 3 Gm. of 96% alcohol.

alcohol). Filter, and add an additional 25 % of the original volume of methyl-alcohol used. This prevents precipitation of the stain on the film. Cover the film with the stain for 1 minute. Without pouring off the stain add water drop by drop until the mixture is translucent at the edges and a yellowish metallic scum forms on the surface. Stain in this diluted stain for 2 to 3 minutes. Wash in distilled water until the film becomes pink. Dry between filter-papers. Staining reactions: Lymphocytes: nuclei, dark purplish-blue; cytoplasm, robin's-egg blue; large mononuclears, nuclei, blue, cytoplasm, pale blue; polymorphonuclear neutrophils: nuclei, blue; granules, reddish-lilac; eosinophils: nuclei, blue; granules, blue, mastzellen: nuclei, blue to purplish; granules, dark blue or purple; myelocytes: nuclei, dark blue or lilac; granules, dark or reddish-lilac; blood-platelets stain blue or purplish; malarial parasites: nuclei, chromatin portion, lilac-red to black; cytoplasm, blue. **Xylo.** Used for paraffin and celloidin sections. It causes shrinkage if the sections are not thoroughly dehydrated. **Zenker's Fluid.** Dissolve 25 Gm. potassium dichromate, 10 Gm. sodium sulfate, and 50 Gm. mercuric chlorid in 1000 Cc. warm distilled water. At the time of using add to each 20 Cc. 1 Cc. of glacial acetic acid. Fix the tissue for from 24 to 48 hours; wash for 24 hours in running water. Harden in the dark in the ascending series of alcohols. For the removal of the precipitate add to the 90 % alcohol enough tincture of iodine to impart the color of port-wine, and repeat the addition daily until the color does not fade. Preserve in 90 % alcohol. **Ziehl-Neelsen Method.** Float the cover-glass preparation upon Ziehl's carbolfuchsin; heat until vapor arises (about 3 to 5 minutes), wash in water, and decolorize in 15 % nitric or 5 % sulfuric acid, then in 60 to 80 % alcohol to remove the remnant of color. Wash well, dry, and mount in balsam. In the case of tissue-sections, stain cold for 15 minutes and decolorize as detailed; upon removal from the alcohol counterstain with methylene-blue; wash, dehydrate, clear, and mount.

Stalagmometer (*stal-ag-mom'-et-er*) [*σταλαγμόμετρον*, a dropping; *μέτρον*, a measure]. An instrument for measuring the number of drops in a given volume of liquid.

Stalagmometry (*stal-ag-mom'-et-er*) [*σταλαγμόμετρον*]. A method of diagnosis based upon the determination of the relative degree of surface tension or capillarity possessed by the body-fluids.

Stammer (*stam'-er*) [AS., *stamur*, stammering]. To speak interruptedly or with hesitation.

Stammering (*stam'-er-ing*). Interrupted or hesitating speech. **S. Bladder.** See *Bladder, Stammering*.

Stamper (*stamp'-er*). A name for one affected with locomotor ataxia, from the stamping gait incident to it.

Standard (*stan'-dard*) [*extendere*, to spread out].

Something used for comparison. **S. Solution**, a solution containing a definite quantity of a reagent.

Stannate (*stan'-at*). A salt of stannic acid.

Stannic (*stan'-ik*) [*stannum*]. Containing tin as a tetrad element. **S. Acid**, H_2SnO_4 . A gelatinous white precipitate which, on drying, forms a translucent vitreous mass. It is dibasic.

Stanniferous (*stan-if'-er-us*) [*stannum*; *ferre*, to bear]. Yielding or containing tin.

Stannite (*stan'-it*). Tin sulfid, bell-metal.

Stannius' Experiments. 1. Separation by a ligature of the sinus venosus from the remainder of the frog's heart causes the latter to remain distended in diastole, while the former continues its rhythmic pulsations. Mechanic excitation of the auricle or ventricle produces a single contraction, which is repeated only when a new stimulus is applied. 2. If a ligature is placed around the groove dividing the auricles from the ventricle, there occurs a rhythmic contraction of the ventricle, while the auricles remain quiescent.

Stannous (*stan'-us*). Containing tin as a bivalent element.

Stannum (*stan'-um*) [L.]. Tin. See *Tin*.

Stapedectomy (*sta-pe-dek'-to-me*) [*stapes*; *ἐκτομή*, excision]. Excision of the stapes.

Stapedial (*sta-pe-de-al*) [*stapes*]. 1. Shaped like a stirrup. 2. Relating to the stapes.

Stapediovestibular (*sta-pe-de-o-ves-tib'-u-lar*) [*stapes*; *vestibulum*, vestibule]. Relating to the stapes and the vestibule.

Stapedius (*sta-pe-de-us*) [*stapes*]. See under *Muscle*.

Stapes (*sta'-pēz*) [L., "a stirrup"]. The stirrup-shaped bone of the middle ear, articulating with the incus and the fenestra ovalis.

Staphisagria (*staf-is-ag'-re-ah*) [*staphylos*, a dried grape; *ἄσπις*, wild]. Stavesacre. The *staphisagria* of the U. S. P. is the ripe seed of *Delphinium staphisagria*, of the order *Ranunculaceae*. It contains the alkaloids *delphinin*, $\text{C}_{20}\text{H}_{27}\text{NO}_5$, *delphinidin*, $\text{C}_{20}\text{H}_{25}\text{N}_2\text{O}_5$, *delphisin*, $\text{C}_{20}\text{H}_{25}\text{N}_2\text{O}_4$, and *staphisagrin*, $\text{C}_{20}\text{H}_{25}\text{NO}_6$. It has been used locally as an application in rheumatism, and as an ointment to destroy lice and itch-mites. **S. Fluidextract of** (*fluidextractum staphisagria*, U. S. P.). Dose 1 min (0.06 Cc.).

Staphyle (*staf'-i-le*) [*σταφύλη*, a bunch of grapes]. The uvula.

Staphylinopharyngeus (*staf-il-i-no-for-in'-je-us*) [*staphyle*; *pharynx*]. The palatopharyngeus. See under *Muscle*.

Staphylinus (*staf-il-i'-nus*) [*staphyle*]. 1. Palatal. 2. See *S. medius*. **S. externus**, the tensor palati. **S. internus**, the levator palati. **S. medius**, the azygos uvula muscle. See under *Muscle*.

Staphylitis (*staf-il-i'-tis*) [*staphyle*; *εἶς*, inflammation]. Inflammation of the uvula.

Staphylo- (*staf-il-o-*) [*σταφύλη*, uvula]. A prefix denoting pertaining to the uvula.

Staphyloangina (*staf-il-o-an-ji'-nah*). Walsh's term for pseudomembranous inflammations

of the throat due to infection by staphylococci.

Staphylococcemia (*staf-il-o-kok-se'-me-ah*) [*staphylococcus*, *aliqua*, blood]. A morbid condition due to the presence of staphylococci in the blood.

Staphylococcia (*staf-il-o-kok'-se-ah*). General infection with staphylococci.

Staphylococcus (*staf-il-o-kok'-us*). See under *Bacteria*.

Staphylocosis (*staf-il-o-kok'-sis*). Infection by staphylococci.

Staphylohemia (*staf-il-o-he'-me-ah*). See *Staphylococcemia*.

Staphylolysin (*staf-il-ol'-is-in*) [*staphylococcus*, *lysis*, to loose]. Neisser and Wechsberg's name for a hemolysin produced by *Staphylococcus aureus* and *S. albus*.

Staphyloma (*staf-il-o'-mah*) [*staphylo*, a defect in the eye]. A bulging of the cornea or sclera of the eye. *S. æquatoriale*, *S. æquatoris*, *S. Equatorial*, staphyloma of the sclera in the equatorial region. *S.*, *Anterior*. See *Keratoglobus*. *S. corneæ*, a bulging of the cornea due to a thinning of the membrane with or without previous ulceration. *S.*, *Posterior*, *S. posticum*, a backward bulging of the sclerotic coat at the posterior pole of the eye. *S.*, *Scarpa's*, posterior staphyloma, staphyloma of the posterior segment of the sclera. *S. uveale*, thickening of the iris. Syn., *Iridococis*.

Staphylomycosis (*staf-il-o-mi-kok'-sis*) [*staphylococcus*, *mycosis*]. A morbid condition due to staphylococci.

Staphyloplasmia (*staf-il-o-plaz'-min*) [*staphylococcus*, *plasma*]. Staphylococcus toxin.

Staphyloplasty (*staf-il-o-plaz'-te*) [*staphylo*, *plasma*, to mold]. A plastic operation for the closure of cleft palate.

Staphylorrhaphy (*staf-il-ar'-te*) [*staphylo*, *rhaphy*, suture]. Suture of a cleft palate.

Staphylostreptococcus (*staf-il-o-strep-to-kok'-se-ah*). Infection by both staphylococci and streptococci.

Staphylotomy (*staf-il-ot-o-me*) [*staphylo*, *tomia*, a cutting]. 1. The operation of incising or removing the uvula. 2. The operation of incising a staphyloma.

Staphylotoxin (*staf-il-o-tok'-in*). See *Staphylohemia*.

Staphysina (*staf-is-i'-nah*) [*staphylo*, a dried grape]. A product obtained by Thompson from the seeds of *Desmodium staphysagria*.

Star (ME., *stare*). In biology applied to various radially symmetrical structures, granules, cells, groups of cells, or organisms. *S.-anise*. See *Thalamus*. *S.-cells*, endothelial cells of vessels, first described by Kupffer, and regarded as nervous elements on account of their shape and thin, elongated processes, but afterward shown to belong to the endothelial tissue; they have the power of ingesting various granules. Syn., *Kupffer's cells*. *S.*, *Daughter*. See *Daughter*. *S.-grass*. See *Statice*. *S.s. of Verheyen*, the star-shaped figures formed by the stellate veins of the kidney, beneath the capsule.

S.s., Winslow's, capillary whorls which form the beginning of the vortices of the Coarctoid. Syn., *Stella vorticaria verheyenii*.

Starblind (AS., *stareblind*). Half-blind; blinding.

Starch (AS., *steare*, *stiff*). A carbohydrate widely distributed in the vegetable kingdom, occurring in peculiar concentrically arranged granules or grains. When heated in water the granules swell up, burst, partake of gelatin, and form starch paste. The solid residue is called granulose, the insoluble residue. Iodine produces a characteristic blue color with starch. The most important natural starches are: potato starch, sago starch, wheat starch, *farina*, *maizena*, *L. S. P.*, *B. P.*, *corn starch*, *rice-starch*. *S.*, *Animal*. *S. animalis*, *cogen*. 2. See *Bodur*, *1st* ed. *S.*, *Care*. See *Corn starch*. *S.-enema*, an enema consisting of starch-water. *S.*, *Glycerine* of *See Amali Glycerine*. *S. iodide*, a compound of iodine and starch, used as a coloring agent in food, a disinfectant and external antiseptic. Dose, $\frac{1}{2}$ to 1 Gm. (0.06 Gm.). *S.*, *Soluble*, a white emulsion obtained by heating starch and glycerine, containing strong alcohol during the cooking, and used as an emulsifier. Syn., *Emulsion*. *S.-water*, a mixture of wheat starch and water, used chiefly as an emulsifier in enemas.

Starter (*staf'-er*) (ML., *stareto*, to start). A pure culture of bacteria employed to start some particular fermentation, as in the making of cream.

Starvation (*star-vo'-shun*) (AS., *starve*, to starve). Deprivation of food, the state produced by deprivation of food.

Stasimetry (*stas-im'-et-ee*) [*stasis*, *metron*, a measure]. Biot's term for the measurement of the constancy of soft organic tissues.

Stasimorphy (*stas'-e-mor'-ee*) [*stasis*, *morpha*, form]. Deviation from the normal form; arrest of development.

Stasis (*staf'-is*) [*stasis*, from *stasis*, to stand]. A standstill of the progress of any of the functions of the body, especially of the blood.

Stasophobia (*stas-fo-bia*) [*stasis*, *phobos*, fear]. Fear of standing upright.

Static (*staf'-ik*) [*stasis*, standing, standing]. At rest, pertaining to matter or force at rest in equilibrium. *S. Breese*, a method of administering static electricity consisting in withdrawal of a static charge from a body by means of a pointed electrode. *S. Electricity*. See *Electrostatics*.

Statice (*staf'-ice*) [*stasis*, an astringent]. A genus of plants of the order *Ericaceae*. *S. antarctica* and *S. borealis* are the most common. South American species are used to produce uterine contractions. *S. peruviana* is indigenous to southern Brazil; it is used as a purple and indigo dye. *S. peruviana* grows upon the coasts of Peru and Brazil. In America, the plant, seed, and root are used as astringents.

Statues (*staf'-is*) [*stasis*]. The same as *stasis*, pertaining to forces in a condition of equilibrium.

Station (sta'-shun) [statio, from stare, to stand]. Standing position or attitude.

Stationary (sta'-shun-a-re) [see Station]. Standing still; not moving. **S. Air**, the amount of air which is constantly in the lungs during normal respiration.

Statocyst (stat'-o-sist) [statós, standing; κύστις, cyst]. One of the vestibular sacs of the labyrinth which is supposed to act as the nervous mechanism on which static equilibrium depends.

Statometer (stat-om'-et-er) [statós, standing; μέτρον, a measure]. An instrument for measuring the degree of exophthalmos.

Status (sta'-tus) [L.]. A state. **S. arthriticus**, the nervous manifestations preceding an attack of gout. **S. cribrosus**, a scarcely macroscopic sieve-like condition of the brain or nerve-substance, due to absorption of minute vessels; observed in autopsies. Fr., *État criblé*. **S. epilepticus**, a condition in which epileptic attacks occur in rapid succession, the patient not regaining consciousness during the interval. **S. gastricus**, gastritis. **S. lymphaticus**, Paltauf's name for a condition of unstable equilibrium, coma, convulsions, and vomiting accompanying hyperplasia of the persisting thymus. Syn., *Lymphatism*; *Lymphotoxemia*; *Status thymicus*. **S. præsens**, the state of a patient at the time of examination. **S. thymicus**. See *S. lymphaticus*. **S. typhosus**. See *Typhoid State*. **S. verminosus**. See *Helminthiasis*.

Stauroplegia (stau-ro-ple'-je-ah) [σταυρός, crossed; πλῆγῃ, a stroke]. Crossed hemiplegia.

Stavesacre (stivus-a'-ker). See *Staphisagria*.

Staxis (staks'-is). See *Stillitidium*.

Steapsin (ste-ap'-sin) [στέψω, fat]. A ferment assisting in the saponification of the fats and found in the pancreatic juice.

Stearate (ste'-ar-at) [stearin]. A salt of stearic acid. Glycerol stearate is called stearin (q. v.).

Stearic Acid (ste-ar'-ik). See *Acid*, *Stearic*, and *Stearin*.

Stearin (ste'-ar-in) [στέψω, fat]. $C_{18}H_{37}O_2$ ($C_{18}H_{35}O_2$). A compound of stearic acid and glyceryl occurring in the harder animal fats, especially in tallow. It crystallizes in white, pearly scales.

Stearone (ste'-ar-on) [στέψω, fat]. $C_{18}H_{36}O$. A volatile liquid obtained by partial decomposition of stearic acid.

Stearopten (ste-ar-op'-ten) [στέψω, fat; πτερόν, winged; volatile]. The crystalline substance occurring naturally in solution in a volatile oil.

Stearrhea (ste-ar-e'-ah). See *Seborrhea*.

Steatite (ste'-at-it). See *Talc*.

Steatitis (ste-at-i'-tis) [στέψω, fat]. Inflammation of the fatty tissues.

Steat- (ste-at-o-) [στέψω, fat]. A prefix meaning fatty.

Steatocele (ste'-at-o-sil) [steato-; κύλη, tumor]. A swelling formed by a collection of fatty matter in the scrotum.

Steatoma (ste-at-o'-mah) [steato-; ὄμα, tumor].

1. A sebaceous cyst. 2. A lipoma. **S.**, Müller's, a lipofibroma.

Steatopygia (ste-at-o-pij'-e-ah) [steato-; πυγή, buttock]. Enormous fatness of the buttock, common among the women of some African tribes.

Steatopygous (ste-at-op'-ig-us) [see *Steatopygia*]. Characterized by excessive development of the buttocks.

Steatorrhea (ste-at-or-e'-ah) [steato-; ῥοή, flow].

1. See *Seborrhea*. 2. Fatty stools.

Steatosis (ste-at-o'-sis). 1. Fatty degeneration.

2. An abnormal accumulation of fat.

Steatozoon (ste-at-o-zo'-on) [steato-; ζῷον, an animal]. The parasite, *Demodex folliculorum*, contained in comedones.

Stechiometry, **Stœchiometry**, **Stoichiometry** (stek-e-om'-et-re, stoi-ke-om'-et-re) [στοιχείον, a first principle; μέτρον, a measure]. The estimation of the proportions in which elements combine to form compounds.

Steel. A form of iron holding an intermediate position between cast iron and wrought iron, and containing from 0.5 to 1.5 % of carbon. **S.**, **Tincture of**. See *Ferric Chlorid*, *Tincture of*. **S.**, **Wine of**. See *Ferric Citrate*, *Wine of*.

Steep. 1. A name for rennet. 2. To stand in water for making an infusion.

Stegomyia (steg-o-mil'-e-ah) [στεγανός, covered; μύα, a fly]. A genus of *Culicidae* founded by Theobald, represented in most tropical and subtropical countries; one species occurring in the warmer parts of southern Europe. The adults are usually very vicious biters, both by day and night. According to the experiments of the American Commission on Yellow Fever *S. fasciata* is the agent which spreads the germs of this disease. **S. fasciata**, Fabricius (1805), a very distinct and common species, easily distinguished by the thoracic ornamentation and by the last hind tarsal joint being white. It is almost cosmopolitan, but does not appear to occur in cold regions. It is one of the most troublesome and annoying of mosquitos; the bite is very irritating. Both male and female bite. It is the intermediate host of the hematophore *Filaria Bancroftii*, which also occurs in *Culex fatigans*, Wiedemann, and in *Anopheles*. The yellow-fever parasite is disseminated by this gnat. Syn., *Brindled* or *Tiger mosquito*.

Stellate (stel'-ät) [stella, a star]. Star shaped.

Stellwag's Sign. Absence or diminution in frequency of the winking movements of the eyelids and abnormal width of the palpebral aperture; it is seen in exophthalmic goiter.

Stenion (sten'-e-on) [στενός, narrow]. A craniometric point at the extremity of the smallest transverse diameter in the temporal fossa.

Steno- (sten-o-) [στενός, narrow]. A prefix meaning narrow or constricted.

Steno's Duct. See *Stenson's Duct*.

Stenocardia (sten-o-kar'-de-ah) [steno-; καρδιά, heart]. Angina pectoris.

Stenocephalous (sten-o-sef'-al-us) [steno-;

- κεφαλή**, head]. Having a head narrow in one or more of its diameters.
- Stenocephaly** (*sten-o-sef'-al-e*) [see *Stenocephalous*]. Narrowing of the head in one or more of its diameters.
- Stenochasmus** (*sten-o-kas'-mus*) [*steno-*, *χασμα*, a chasm]. Lissauer's term applied to a skull in which a line drawn from the point upon the rostrum of the sphenoid where it is inserted between the ala vomeris, to the center of the posterior nasal spine and to the basion, intersects with an angle of 74° to 94°.
- Stenochoria** (*sten-o-ko'-re-ah*) [*steno-*; *χώρα*, space]. Narrowing; stenosis.
- Stenodont** (*sten'-o-dont*) [*steno-*; *ὄντις*, tooth]. Provided with narrow teeth.
- Stenon's Duct.** See *Stenson's Duct*.
- Stenonian, Stenonine** (*sten-o'-ne-in*, *sten'-o-nen*). Named for Nicholas Stenson (Latinized Stenonianus), a Danish anatomist, 1638-1686.
- Stenopaic** (*sten-o-pa'-ik*) [*steno-*; *παῖς*, an opening]. Pertaining to or having a narrow slit; applied to lenses that allow the passage of rays only through a narrow slit.
- Stenosin** (*sten'-o-sin*), $\text{AsCH}_3\text{O}_2\text{Na}_2\text{H}_2\text{O}$, disodium methylarsenate, discovered by Baeuer, said to be a nontoxic arsenical salt. Dose 1 cgr. 1 to 5 times daily.
- Stenosis** (*sten'-o-sis*) [*στενός*, narrow]. Constriction or narrowing, especially of a channel or aperture, as *aortic stenosis*, *mitral stenosis*, etc. See *Signs*, *Aufrecht's*, *König's Symptom complex*. *S.*, *Dittrich's*, stenosis of the conus arteriosus.
- Stenotic** (*sten'-o-ik*) [*stenosis*]. Characterized by stenosis, produced by stenosis.
- Stenson's (Steno's) Duct.** The duct of the parotid gland. *S.'s Experiment*, temporary ligation of the aorta of the rabbit immediately below the point at which the renal arteries are given off, for the purpose of cutting off the blood-supply of the lower portion of the spinal cord. *S.'s Foramina*, the foramen foramina which transmit the anterior palatine vessels. *S.'s Veins*, the veins vorticosae of the choroid.
- Stentorophonous** (*sten-to-rō'-fō-nis*) [*Stentor*, a loud-voiced Greek in the Trojan war, *φωνή*, sound]. Having a loud voice.
- Stephanion** (*step'-an'-e-on*). See under *Cranio-metric Point*.
- Steppage-gait** (*step'-aj-gait*). The peculiar high-stepping gait seen in tabes dorsalis and certain forms of multiple sclerosis.
- Stercobilin** (*ster-kob'il-in*) [*stercus*, dung, *bilis*, bile]. A coloring matter found in feces, and identical with hydro-bilirubin.
- Stercoraceous** (*ster-ko-ra'-shus*) [*stercus*]. Fecal, having the nature of feces, containing feces as, *stercoraceous vomiting*.
- Stercoral** (*ster'-ko-ral*). See *Stercoraceous*.
- Stercorary** (*ster'-ko-ra-ri*) [*stercus*]. Fecal.
- Stercoremia** (*ster-ko-re'-mi-ah*) [*stercus*, dung, *haima*, blood]. A condition of the blood resulting from arrest of intestinal excretion and the absorption of toxic matters from the feces.
- Stercorin** (*ster'-ko-rin*) [*stercus*]. An extract from the feces resembling cholesterin.
- Stercus** (*ster'-kus*) [*Lat.*, "dung"]. Feces.
- Stere** (*ster*) [*στέρεος*, solid]. A measure of 1000 liters, a kiloliter.
- Stereo-** (*ster-e-o*) [*στερεός*, solid]. A prefix meaning solid or relating to a solid.
- Stereognosis** (*ster-e-og'-nō-sis*). See *Ante-agnosis*.
- Stereognosis** (*ster-e-og'-nō-sis*) [*stereos*, solid, knowledge]. The faculty of recognizing the nature and use of objects by contact and feeling them. Cf. *Stereognosis*.
- Stereognostic** (*ster-e-og'-nō-sis*) [*stereos*, solid, knowing]. 1. Pertaining to the recognition of solidity, or tridimensional forms. 2. Pertaining by sense of touch.
- Stereograph** (*ster'-e-o-graf*) [*stereos*, solid, to write]. Of Brown, an instrument used to make outline drawings of parts of the body.
- Stereometer** (*ster-e-om'-e-ter*) [*stereos*, solid, measure]. An apparatus for the determination of the specific gravity of liquids, gases, substances, powders, etc., as used in pharmacy.
- Stereometry** (*ster-e-om'-e-try*) [*stereos*, solid, measure]. 1. The determination of the specific gravity of substances. 2. The measurement of volume.
- Stereophantoscope** (*ste-re-o-fan'-to-skop*). See *Stereophoroscope*.
- Stereophoroscope** (*ste-re-o-fō'-s-kop*) [*stereos*, to carry, *φάω*, to see]. A stereoscopic zoetrope, an instrument for producing a series of images apparently in motion.
- Stereoplasm** (*stere-o-plazm*) [*stereos*, solid, to mold]. The solid part of the protoplasm of cells.
- Stereoscope** (*ste-re-o-skop*) [*stereos*, solid, to see]. An instrument by which two separate pictures of the same object are made to appear so that the reflected images are seen as one, thereby giving the appearance of solidity and relief.
- Stereoscopic** (*ste-re-o-skop'-ik*) [*stereos*, solid, to see]. Pertaining to stereoscope. *S. Vision*, binocular vision. See *Stereoscope*.
- Stereoscopy** (*ste-re-o-skop'-i*) [*stereos*, solid, to see]. The use of the stereoscope.
- Stereostroboscope** (*ste-re-o-skop'-i*) [*stereos*, solid, *στροβίλος*, a twisting, *σκοπεῖν*, to look]. An apparatus for the experimental study of points moving in their displacement.
- Stereotiles** (*ster-e-ot'-ils*). Tesserae or tessellæ affecting the harder portions of the body.
- Stereotypy** (*ster-e-ot'-i-ty*) [*stereos*, solid, *τύπος*, type]. Morbid persistence of a voluntary pulse when once started.
- Steresol** (*ster'-e-sol*). A liquid solid in an alcoholic solution of gum lac, having the balsam, phenol, oil of ginger, and camphor. It is used in dentistry and eye surgery.
- Steriform** (*ster'-e-form*). An almost colorless and odorless powder consisting of a mixture of sugar of milk and glycerol of potassium. *S. Chlorid*, a mixture of formic acid and ammonium chloride, so named because of its

and milk-sugar, 65 parts. **S. Iodid**, formaldehyd, 5 parts; ammonium iodid, 10 parts; pepsin, 20 parts; and milk-sugar, 65 parts.

Sterile (*ster'-il*) [*sterilis*, barren]. 1. Not fertile; not capable of reproducing. 2. Free from microorganisms or spores.

Sterility (*ster-il'-it-ē*) [*sterile*]. The condition of being sterile. **S., Facultative**. 1. A term suggested by Koch, of the University of Bonn, to designate a procedure which he has devised for preventing the possibility of conception for any length of time, without permanently depriving the subject of procreative power. He forms two folds of mucous membrane, one at the anterior, the other at the posterior, lip of the external orifice of the uterus. These act as valves permitting the outflow of the menstrual fluid and preventing the entrance of the spermatozoa. By removing the folds fertility may be restored. 2. Ludwig Pineus' term for sterility in women induced artificially by destroying the capacity of the endometrium as an organ of nidation by means of uterine atmocautis.

Sterilization (*ster-il-i-zā'-shun*) [*sterile*]. The act of rendering anything sterile; the destruction of microorganisms, particularly by means of heat. **S., Intermittent**, a method of sterilization in which an interval of time is allowed to elapse between the several heatings, giving an opportunity for any spores present to develop into adult microorganisms, in which form they readily succumb to the action of heat.

Sterilized (*ster'-il-izd*). Rendered sterile.

Sterilizer (*ster'-il-i-zer*) [*sterile*]. An apparatus for destroying the microorganisms attached to an object, especially by means of heat.

Sterisol (*ster'-is-ol*). A preparation containing sugar of milk, 2.98 parts; sodium chlorid, 0.672 part; potassium phosphate, 0.322 part; formaldehyd, 0.520 part; water, 95.506 parts. Used as an antiseptic in infectious diseases.

Sternal (*ster'-nal*) [*sternum*]. Pertaining to the sternum.

Sternberg's Disease. The tuberculous form of pseudoleukemia.

Sterno- (*ster-no-*) [*sternum*]. A prefix denoting connection with the sternum.

Sternochondroscapularis (*ster-no-kon-dro-skap-u-lar'-is*) [*sterno-*; *χόνδρος*, cartilage; *scapula*]. An inconstant muscle arising from the sternum and the first costal cartilage and extending to the upper border of the scapula.

Sternoclavicular (*ster-no-kla-vik'-u-lar*) [*sterno-*; *clavicle*]. Pertaining to the sternum and the clavicle.

Sternocleidal (*ster-no-kli'-dal*). Same as *Sternoclavicular*.

Sternocleidomastoid (*ster-no-kli-do-mas'-toid*) [*sterno-*; *κλεις*, key; *mastoid*]. Pertaining to the sternum, the clavicle, and the mastoid process, as the *sternocleidomastoid* muscle. See under *Muscle*.

Sternocoracoid (*ster-no-kor'-ak-oid*). Relating to the sternum and the coracoid.

Sterncostal (*ster-no-kos'-tal*) [*sterno-*; *costa*, a rib]. Pertaining to the sternum and the ribs.

Sternodymia (*ster-no-dim'-e-ah*) [*sterno-*; *δύειν*, to enter]. A form of somatodymia in which the union is in the sternums.

Sternodynia (*ster-no-din'-e-ah*) [*sterno-*; *δύειν*, pain]. Sternalgia; pain in the sternum.

Sternohyoid (*ster-no-hi'-oid*) [*sterno-*; *hyoid*]. Pertaining to the sternum and the hyoid bone, as the *sternohyoid* muscle. See under *Muscle*.

Sternomastoid (*ster-no-mas'-toid*). Relating to the sternum and the mastoid process of the temporal bone.

Sternoomphalodymia (*ster-no-om-fal-o-dim'-e-ah*) [*sterno-*; *ομφαλός*, a navel; *δύειν*, to enter]. A form of somatodymia in which the union is in both the sternal and umbilical regions.

Sternopagus (*ster-nop'-ag-us*) [*sterno-*; *πάγος*, fastened]. A double monster the parts of which are united at the sternum.

Sternopericardiac (*ster-no-per-e-kar'-de-ah*). Relating to the sternum and the pericardium.

Sternothyroid (*ster-no-thi'-roid*) [*sterno-*; *thyroid*]. Pertaining to the sternum and the thyroid cartilage, as the *sternothyroid* muscle. See under *Muscle*.

Sternotracheal (*ster-no-tra'-ke-al*) [*sterno-*; *trachea*]. Pertaining to the sternum and the trachea.

Sternotrypsis (*ster-no-tri-pe'-sis*) [*sterno-*; *τρύπησις*, a boring]. Perforation of the sternum.

Sternoxiphoid (*ster-no-si'-foid*). Relating to or connecting the sternum and the xiphoid process.

Sternum (*ster'-num*) [*στέρον*, breast-bone]. The flat, narrow bone in the median line in the front of the chest, composed of three portions—the manubrium, the gladiolus, and the ensiform or xiphoid appendix.

Sternutation (*ster-nu-la'-shun*) [*sternutatio*, a sneezing]. The act of sneezing.

Sternutatory (*ster-nu'-tal-o-re*) [see *Sternutation*]. 1. Producing sneezing. 2. An agent that causes sneezing.

Stertor (*ster'-tor*) [L., "a snoring"]. Sonorous breathing or snoring; the rasping, rattling sound produced when the larynx and the air-passages are obstructed by mucus.

Stertorous (*ster'-to-rus*) [*stertor*]. Characterized by stertor, as *stertorous* breathing.

Stethemia, **Stethæmia** (*steth-e'-me-ah*) [*στίθος*, chest; *αἷμα*, blood]. An accumulation of blood in the pulmonary vessels.

Stetho- (*steth-o-*) [*στίθος*, chest]. A prefix denoting pertaining to the chest.

Stethograph (*steth'-o-graf*) [*stetho-*; *γράφειν*, to write]. An instrument recording the respiratory movements of the chest.

Stethometer (*steth-om'-et-er*) [*stetho-*; *μετρον*, a measure]. An instrument for measuring the degree of expansion of the chest.

Stethoscope (*steth-on'-o-skōp*) [*stetho-*; *σκοπεῖν*, to view]. An apparatus for use in auscultation which may be attached to a binaural stethoscope.

Stethoparalysis (*steth-o-par-al'-is-is*). Paralysis of the muscles of the chest.

Stethophonometer (*steth-o-o'-fo-nom'-et-er*)

[*stetho-*; *φωνή*, sound; *μέτρον*, a measure]. An instrument for measuring the phenomena elicited by auscultation.

Stethophonometry (*steth-o-fo-nom'-et-re*) [see *Stethophonometer*]. The determination of the intensity of the acoustic phenomena associated with the lungs and heart.

Stethoscope (*steth'-o-skōp*) [*stetho-*; *σκοπεῖν*, to view]. An instrument for ascertaining the condition of the organs of circulation and respiration by the sounds made by these organs. It consists of a hollow tube, one end being placed over the locality to be examined, the other at the ear of the examiner. The binaural stethoscope consists of a V-shaped tube, the flexible branches being applied each to an ear of the listener. *S.*, **Differential**, one determining the time rather than the quality of the sounds heard, so that murmurs at two localities may be compared.

Stethoscopic (*steth-o-skop'-ik*). Pertaining to or detected by means of the stethoscope.

Stethoscopy (*steth-os'-ko-pe*) [see *Stethoscope*]. Examination with the aid of the stethoscope.

Sthenic (*sthen'-ik*) [*σθένος*, strength]. Strong; active. *S.* **Fever**, a form of fever marked by high temperature, quick and tense pulse, and highly colored urine.

Stibiated (*stib'-o-a-ted*) [*stibium*, antimony]. Containing antimony.

Stibiation (*stib-e-a'-shun*). Excessive use of antimonials.

Stibine (*stib'-in*). Antimony sulfid.

Stibium (*stib'-e-um*). Antimony.

Stibogram (*stib'-o-gram*) [*στίβος*, a beaten path; *γραμμά*, a writing]. A record of footsteps.

Stichochrome (*stik'-o-krom*) [*στίχος*, a row; *χρῶμα*, color]. Applied by Nissl to a somato-chrome nerve-cell in which the chromophilic substance is arranged in strias running in the same direction and usually parallel with the contour of the cell-body, partly also with the surface of the nucleus. Cf. *Arkyostichochrome*.

Sticking Plaster. Adhesive plaster.

Stiff-neck Fever. Epidemic cerebrospinal meningitis.

Stigma (*stig'-mah*) [*στίγμα*, a point; pl. *stig-mata*]. 1. A small spot or mark, especially a spot of hemorrhage in the palm or sole corresponding to the nail-marks of Christ, occurring in hysteric persons. 2. Any one of the marks or signs characteristic of a condition; generally used in the plural, as *hysteric stig-mata*. 3. That part of a pistil which receives the pollen. **Stigmata**, **Cohn's**, minute gaps in the interalveolar walls of the normal lung. *S.*, **Giuffrida-Rugieri's**, of **Degeneration**, the absence or incompleteness of the glenoid fossa. *S.* of **Graafian Follicle**, the point where the blood-vessels of the walls are absent and where it finally ruptures. **Stigmata**, **Malpighi's**, the orifices of the capillary veins that join the branches of the splenic vein at right angles. **Stigmata maydis**, *zea mays*. See under *Zea*. **Stigmata ovariorum**, small cicatrices seen in the ovaries after the escape of the ovums.

Stigmatic (*stig-mat'-ik*) [*stigma*]. Pertaining to a stigma.

Stigmatization (*stig-mat-i-zā'-shun*). The formation of stigmata.

Stilet, **Stilette** (*stil'-et'*) [Fr., dim. of *point*]. 1. A small, sharp-pointed instrument inclosed in a cannula 2. Passed into a flexible catheter.

Still-birth. The birth of a dead child.

Still-born. Born lifeless.

Stillier's Sign. Marked mobility of the tenth rib in neurasthenia and ptosis.

Stillicidium (*stil-is-id'-e-um*) [*stilla*, to drop; *cadere*, to fall down]. The flow of a drop by drop. *S.* **lacrimarum**, of tears from obstruction of the nasal duct; epiphora. *S.* **narium**, of the nose.

Stillier's Bundle. See *Krause's Tract*.

Stillier's Canal. 1. The canal of the spinal cord. 2. See *Canal*.

Stillier's Cells, **Stillier's Columns**, **Stillier's Fibers**, the association of the cerebellum.

Stillier's Fleece, the association of fibers formed around the dentate of the cerebellum.

Stillier's Gelatinous Substance, the central canal of the spinal cord.

Stillier's Nucleus. 1. The nucleus ruber of the midbrain region. 2. The nucleus of the glossal nerve in the fourth ventricle.

Stillier's Raphe, a narrow band connecting the midline of the oblongata.

Stillier's Saccus, an island of ganglion-cells in the spinal cord.

Stillier's Scissors, the supposed resemblance of a line of a pair of scissors seen in a section of the brain through the midline.

Stillier's Stillingia, the nucleus dentatus of the cerebellum.

Stillier-Clarke's Cells. See *Clarke's Cells*.

Stillingia (*stil-in'-je-ah*) [after *Benjamin Stillingia*, an English botanist]. A plant of the order *Euphorbiaceae*.

Stillingia of the U. S. P. is the root of *S. queen's root* or *queen's delight* and is an alternative in syphilis, scrofula, etc.

Stillingia, *S.*, **Fluidextract of** *tractum stillingiae*, U. S. P.). Dose, (2-4 Cc.).

Stimulant (*stim'-u-lant*) [*stimulus*]. 1. Stimulating. 2. An agent that stimulates.

S., **Cardiac**, one that stimulates the heart's action. *S.*, **Cerebral**, one that stimulates the action of the cerebrum. *S.*, **Hepatic**, one that stimulates the liver.

Stimulate (*stim'-u-lāt*) [see *Stimulant*]. To quicken; to stir up; to excite, to increase the activity.

Stimulation (*stim'-u-lā'-shun*) [see *Stimulant*]. 1. The act of stimulating. 2. The state of being stimulated.

Stimulator (*stim'-u-lā-tor*). A stimulant or agent.

Stimulus (*stim'-u-lins*). A stimulant.

for substances supposed to stimulate the phagocytes to destroy germs.

Stimulus (*stint'-u-lus*) [L.; pl., *stimuli*]. A goad, an impulse; anything capable of causing stimulation. **S., Adequate.** See *S., Homologous*. **S., Chemic**, one due to or produced by chemie means. **S.-difference**, the difference in activity between two stimuli. **S., Heterologous**, one acting upon the nervous elements of the sensory apparatus along their entire course. **S., Homologous**, one acting only upon the end-organ. **S., Mechanic**, one acting by mechanic means, as pinching or striking. **S., Subminimal**, one too weak to produce any obvious effect.

Stipa (*sti'-pah*) [*στίπα*, tow]. A genus of grasses. *S. vaseyi*, sleepy grass, is a species found in New Mexico in the Sacramento Mountains, the ingestion of which causes in horses a stupor which endures for several days.

Stipate (*sti'-pit*) [*stipare*, to press together]. Packed; crowded.

Stipatio (*sti-pi'-she-a*) [L.]. An aggregation forming an obstruction. **S. telæ cellulose infantum**, sclerema neonatorum.

Stirrup, Sturup-bone (*stir'-up*). The stapes.

Stitch. 1. A sudden, sharp, lancinating pain. 2. See *Suture* (2). **S.-abscess**, an abscess forming in a suture. **S., Marcy's Cobbler.** See *Suture, Cobbler's*. **S., Sclerocorneal**, a peculiar stitch devised by Kalt to secure rapid union of the wound and to prevent prolapse of the iris after simple extraction of cataract. Syn., *Kalt stitch*. **S. in the Side**, intercostal neuralgia.

Stoerk's Blennorrhea. Profuse chronic supuration and consequent hypertrophy of the mucosa of the nose, pharynx, and larynx.

Stoichiometry. See *Stoichiometry*.

Stokes' Disease. See *Goiter, Exophthalmic*.

S.'s Law, inflammation of serous or mucous membranes leads to paralysis of subjacent muscles. **S.'s Pulse.** See *Corrigan's Pulse*.

S.'s Reagent for Reducing Oxyhemoglobin, add some citric or tartaric acid to a solution of ferrous sulfate and ammonia enough to make it alkaline. **S.'s Sign.** 1. A violent abdominal throbbing felt on palpation to the right of the umbilicus in acute enteritis.

2. Marked feebleness of the first heart-sound, when occurring during fevers, calls for alcoholic stimulation. **S.'s Syndrome.** See *Adams-Stokes' Disease*.

Stokes-Adams' Disease. See *Adams-Stokes' Disease*.

Stokvis' Test for Bile-pigments. To 20 to 30 Cc. of urine add 5 to 10 Cc. of a zinc acetate solution (1:5). Wash the precipitate on a small filter with water, and dissolve in a little ammonia. When filtered, the filtrate will give, after standing in the air, a brownish green color, and show the absorption bands of biliverdin, one between C and D, the second at D, and the third between D and E.

Toll's Pneumonia. Bilious pneumonia; a variety of pneumonia with gastrohepatic symptoms.

Stolonization (*sto-lon-iz-a'-shun*) [*stolo*, a shoot]. The process of transforming, in certain organisms, one organ into another through external influences, such as gravitation, contact, light, etc.

Stoma (*sto'-mah*) [*στόμα*, mouth]. 1. A mouth. 2. A pore, as that between endothelial cells, establishing direct communication between adjacent lymph-channels.

Stomach (*stum'-ak*) [*στόμαχος*, the stomach].

The most dilated part of the alimentary canal, situated below the diaphragm in the left hypochondriac, the epigastric, and part of the right hypochondriac regions. It is connected at one end (cardiac end) with the esophagus, at the other (pyloric end) with the duodenum. Its wall consists of four coats—the serous, muscular, submucous, and mucous. The mucous coat contains the gastric glands (cardiac and pyloric glands), which secrete the gastric juice and mucus. **S.-bed**, the shelf-like support upon which the stomach rests, formed by the portion of the pancreas situated to the left of the median line. This is quite thick anteroposteriorly, and its upper surface (anterior surface of His) makes a large portion of the shelf. **S.-cough**, a reflex cough excited by irritation of the stomach. **S.-pump**, a pump for withdrawing the contents of the stomach. **S.-reefing.** Synonym of *Gastrorrhaphy*. **S.-tooth**, a lower canine tooth, especially one of the first dentition. **S.-tube**, a flexible tube for irrigation or evacuation of the stomach. **S.-worm Disease**, a disease of cattle due to species of *Strongylus*—*S. contortus*, *S. asterjagi*, *S. curticei*, *S. parkeri*, *S. retortiformis*, *S. fillicollis*, *S. oncophorus*.

Stomachal (*stum'-ak-al*) [*stomach*]. Pertaining to the stomach.

Stomachic (*stum'-ak'-ik*) [*stomach*]. 1. Pertaining to the stomach. 2. Stimulating the secretory activity of the stomach. 3. One of a class of substances which have an influence upon the work of the digestive organs.

According to Weiss, some (hydrochloric acid, pepsin, and other ferments) act by substitution in that they replace the natural juices; others (salicylic acid, menthol, creasote) arrest abnormal fermentation processes; others (cloves, cinnamon, peppermint) produce hyperemia and in that way influence the digestive function; others (the bitters and the proteids) stimulate the lymphoid tissue, producing lymphofluxion, lymphostasis, and leukocytosis.

Stomatitis (*stom-at-i'-tis*) [*stoma*, etc., inflammation]. Inflammation of the mouth.

S. aphthosa, S., Aphthous. See *Aphtha*.

S., Catarrhal, a simple form characterized by swelling of the mucous membrane, pain, and salivation. **S., Gangrenous.** See *Cancrum oris*. **S., Mercurial**, that arising from poisoning by mercury. **S., Mycotic.** See *Thrush*.

S., Scorbutic, that due to scurvy. **S., Ulcerative**, a form characterized by the formation of small ulcers on the cheeks, lips, and tongue, with copious salivation, pain, fetid breath, slight fever, and at times great prostration.

Stomato- (*stom-at-o-*) [*στόμα*, mouth]. A prefix meaning pertaining to the mouth.

Stomatol (*sto'-mat-ol*). An antiseptic compound said to consist of terpineol, 4 parts, soap, 2 parts, alcohol, 45 parts, aromatics, 2 parts; glycerol, 5 parts, water, 42 parts.

Stomatomy (*stom-at'-o-me*) [*stoma*; *τομή*, a cutting]. Incision of the os uteri.

Stomatomycosis (*stom-at-o-mi-ko'-sis*) [*stoma*-, *mycosis*]. A disease of the mouth due to fungi, especially *Oidium albicans*.

Stomatonecrosis, Stomatoma (*stom-at-o-ne-ko'-sis*, *stom-at-on'-o-mah*). See *Cancerum oris*.

Stomatopathy (*stom-at-op'-ath-e*) [*stomato*-, *πάθος*, disease]. Any disease of the mouth.

Stomatoplasty (*stom'-at-o-plas-te*) [*stomato*-, *πλασσω*, to form]. A plastic operation upon the mouth.

Stomatoscope (*stom'-at-o-skōp*) [*stomato*-, *σκοπέω*, to inspect]. An instrument for inspecting the cavity of the mouth.

Stomatosyrinx (*sto-mat-o-sir'-ing-t*) [*stomato*-, *σyrinx*, a tube]. The eustachian tube.

Stomatocephalus (*stom'-o-sef'-al-us*) [*stoma*; *κεφαλή*, head]. A variety of monster in which there is the same deformity as in rhinocephalus or in cyclocephalus, associated with a defect of the maxillary bones, so that the skin hangs in folds around the mouth.

Stomodæum (*stom-o-dæ'-um*) [*stoma*; *δαίμον*, by the way]. The primitive oral cavity of the embryo, formed by a depression of the ectoderm and afterward forming the mouth and upper part of the pharynx.

Stone. A hardened mass of mineral matter. See *Calculus*. **S., Blue**, copper sulfate crystals. **S., Gall-**, a biliary calculus. See *Gallstone*.

Stool. The evacuation of the bowels. **S.s., Acholic**, a light gray or clay-colored stools having the consistency of putty, which follows stoppage of the flow of bile into the duodenum. The color is due to the presence of the normal umbilic. The stools show, under the microscope, an abnormal amount of fat. This form of acholic stool is accompanied by icterus and cholera. **S.s.** Stools of the same color may occur in the absence of interference with the flow of bile, but when the stool contains an excessively large amount of fat and fatty acids. **S.s., Lead-pencil**, fecal discharges of a very small caliber. They occur independent of any general nervousness or local intestinal lesion and cannot be regarded as evidence of stricture or stenosis of the colon. **S.s., Schafskoth**. See *S.s., Sheep-dung*. **S.s., Sheep-dung**, the small round fecal masses similar to the dung of sheep due to atony of the intestine; this form of passage may occur in the so-called "stagnation" or "hungry" evacuation which is found in cases of morbid, e.g., after carcinomatous cachexia when the intestine becomes very much contracted. **S.-sieve of Bous**, an apparatus by means of which feces may be thoroughly and conveniently washed, so that undigested re-

mains of food, bits of mucus, even entire parasites are readily seen and counted.

Stop-needle. A lance-pointed needle used in the operation of dissection, having an eye, segment or shoulder upon the shaft to prevent too deep penetration.

Storax (*sto'-rak*). See *Styrac*.

Stovaine (*sto'-vayn*), $C_{12}H_{21}NO_3.HCl$. A hydrochlorate. A local anesthetic, used in spinal anesthesia.

Strabism (*strah'-izm*). See *Strabismus*.

Strabismal, Strabismic (*strah'-izm-ah-l*, *strah'-izm-ik*) [*strabismus*]. Relating to strabismus.

Strabismus (*strah'-izm-us*) [*strabō*, to squint, to squint, to squint]. Squint, that condition of the eyes in which the visual axes do not meet at the desired objective point in consequence of incoordinate action of the extraocular muscles. **S., Alternating**, one in which either eye fixes alternately. **S., Comitant**, one in which the squinting eye has full range of movement. **S., Concomitant**, one in which the squinting eye is fixed in the nasal side. **S., Divergent**, one in which the squinting eye is turned to the temporal side. **S., External**. See *S., Divergent*. **S., Hirschberg's Test** for rough estimate of the amount of squint is made by observing the position of the nasal reflection of a candle flame on the cornea in front of the eye to be tested, the subject placing his own eye near the candle. **S., Internal**. See *S., Divergent*. **S., Paralytic**, due to paralysis of one or more muscles. **S., Spasmodic**, due to a spasmodic contraction of an extraocular muscle.

Strabometry (*strah'-om-ē-tre*) [*strabō*, to squint, *metron*, measure]. The determination of the degree of ocular deviation in strabismus.

Strabotome (*strah'-o-tō-m*) [*strabō*, to squint, *tomē*, to cut]. A knife used in strabotomy.

Strabotomy (*strah'-o-tō-mē*) [*strabō*, to squint, *tomē*, to cut]. An operation for the correction of strabismus.

Strain (*stren*) [*UP*, *εστραίνω*, to strain, to draw tight]. 1. Excessive use or overuse of a part. 2. The condition of a part by overuse or wrong use, as strain. 3. To overexert to such an extent as to make violent efforts. 4. A sudden or violent domestic animal, often to such an extent as to cause injury.

Strait (*stret*) [*UP*, *εστραίνω*, to strain, to draw tight]. A narrow or contracted passage, the inferior or superior strait of the pelvis. **S., Inferior** of the pelvis. See *S., Inferior*. (1) **S.-jacket**, a strong jacket made of insane or delirious to prevent injury to themselves or to others. **S., Superior** of the pelvis. See *S., Inferior*.

Stramonium (*strem'-o-nē-um*) [*UP*, *εστραίνω*, to strain, to draw tight]. The stramonium of the 1818 code. The dried leaves of *Datura stramonium*, a herbaceous plant of the Solanaceae. It contains two alkaloids, *scopolamine* and *hyoscyamine*, which are identical with atropine and homatropine, the action of stramonium being due to the action of these alkaloids. It is used as a sedative, anodyne,

neuralgia, rheumatism, and pains of syphilitic origin. In asthma the leaves may be smoked in a tobacco pipe. Locally stramonium is employed as an ointment or cataplasm in irritable ulcers and inflamed surfaces. **S., Extract of** (*extractum stramonii*, U. S. P.). Dose $\frac{1}{2}$ gr. (0.01 Gm.). **S., Fluidextract of** (*fluidextractum stramonii*, U. S. P.). Dose 1 min. (0.05 Cc.). **S. Ointment** (*unguentum stramonii*, U. S. P.), an ointment made of stramonium extract, diluted alcohol, hydrous wool-fat, and benzoinated lard. **S., Tincture of** (*tinctura stramonii*, U. S. P.). Dose 8 min. (0.5 Cc.).

Strangling. See *Strangulation*.

Strangulated (*strang'-gu-la-ted*). 1. Choked.

2. Compressed so that the circulation is arrested, as *strangulated hernia*.

Strangulation (*strang'-gu-la'-shun*) [*strangulare*, to choke]. 1. The act of choking.

2. Constriction of a part producing arrest of the circulation, as *strangulation of a hernia*.

Strangury (*strang'-gu-re*) [*σπρίζω*, a drop; *αίον*, urine]. Painful urination, the urine being voided drop by drop.

Strap. 1. A long band, as of adhesive plaster.

2. To compress a part by means of bands, especially bands of adhesive plaster.

Strassburger's Cell-plate. The equatorial plate in which division of the nucleus occurs during karyokinesis.

Strassburg's Test for Bile-acids. Dip filter-paper into urine to which cane-sugar has been added, dry it, and apply a drop of sulfuric acid. In the presence of bile-acids a red coloration will be shown on the paper. For this test the liquid must be free from albumin.

Stratification (*strat'-e-fik-a'-shun*) [*stratum*; *facere*, to make]. Arrangement in layers.

Stratified (*strat'-e-fid*) [see *Stratification*]. Arranged in layers.

Stratiform (*strat'-e-form*) [*stratum*; *forma*, form]. Formed into a layer. **S. Fibrocartilage**, fibrocartilage lining bony grooves through which the tendons of muscles pass.

Stratum (*stra'-tum*) [L., from *sternere*, to strew].

A layer. **S. bacillatum**, **S. bacillosum**, **S. bacillorum**, the bacillary layer, the layer of rods and cones of the retina. **S. choriocapillare**. See *Tunica ruyschiana*. **S. corneum**, **S. granulosum**, **S. lucidum**, **S. malpighii**. See under *Skin*. **S. corticale**. See *Cortex* (3). **S. cutaneum**, the outer dermic layer of the tympanic membrane. **S. cylindrorum**, the bacillary layer of the retina. **S. episclerata**, the part of Tenon's capsule on the sclerotic coat. **S. epitrichiale**. See *Epitrichium*. **S. gelatinosum**, the fourth layer in the olfactory bulb, composed of large ganglion-cells with branched processes. Syn., *Ganglion-cell layer*. **S. glomerulorum**, the layer of the olfactory lobe (the second from the ventral side) containing the olfactory glomerules. **S. granulosum**, a layer of minute cells or one of cells containing many granules. 2. The external granular layer of the retina. 2. Meynert's name for the layer

of small, irregular cells composing the fourth stratum of the cortex in the five-stratum type.

3. The layer of the olfactory lobe lying between the medullary ring and the stratum gelatinosum. 4. The layer of the epidermis covering the rete mucosum. 5. A histologic appearance in that portion of the dentin immediately underlying the enamel and cementum of a tooth. **S. griseum centrale**. See *Entocineria*. **S. lacunosum**, the inner portion of the fifth or outer layer of the hippocampus. **S. lucidum**, a translucent layer of the epidermis consisting of irregular transparent cells with traces of a nucleus. **S. moleculare**. See *Layer, Molecular*. **S. mucosum**. See *Rete mucosum*. **S. nervum of Henle**, the layers of the retina exclusive of the rods and cones. Syn., *Brucke's tunica nervosa*. **S. oriens**, the third layer, counting from within outward, of the hippocampus. **S. proligerum**, the discus proligerus and cumulus proligerus regarded as one. Syn., *Membrana cumuli*. **S. reticulatum**, Arnold's, the network formed by the fibers connecting the occipital lobe with the thalamus before they enter the latter. **S. spinosum**. See *Prickle-layer*. Consecutive hypertrophy of this layer constitutes acanthosis. **S. vasculosum**. See *Tunica vasculosa*. **S. vasculosum cutis**, the subpapillary layer of the derma; the part of the corium immediately below the papillas. **S. zonale**, the superficial portion of the fifth or outer layer of the hippocampus.

Straus' Sign. In facial paralysis from a central cause the hypodermatic injection of pilocarpin causes no appreciable difference in the perspiration of the two sides, either as to time or quantity, whereas there is a marked retardation of the secretion on the affected side in severe peripheral paralysis.

Strauss' Reaction. The injection of material containing the bacillus of glanders into the abdominal cavity of a male guineapig is followed in a few days by a characteristic, generally purulent, inflammation of the testes.

S.'s Sign, the administration of fatty food by the mouth causes an increase in the amount of fatty constituents in the effusion of chylous ascites.

Strawberry-tongue. The characteristic tongue of scarlatina, in which the vessels of the fungiform papillas become turgid, causing the papillas to stand out as red points, in marked contrast with the thick coating of fur on the filiform papillas.

Streak (*strik*). A furrow, line, or stripe. **S.s.**, **Knapp's Angioid**, pigment streaks appearing occasionally in the retina after hemorrhage.

S., Medullary. See *Medullary Grouse*. **S., Meningitic.** See *Tache cérébrale*. **S., Primitive**, an opaque band extending some distance forward from the posterior margin of the area pellucida, and forming the first noticeable sign of the development of the blastoderm.

Stream (*strim*) [ME., *stream*]. To flow; applied to movement in protoplasm and in blood corpuscles.

Strengthening Plaster. Emplastrum roburans or non-plaster.

Strephotome (stref'-o-lōm) [σφῆψα, twist; τέμνω, to cut]. An instrument shaped like a corkscrew, used to secure union in the operation for the radical cure of hernia.

Strepto- (strep-to-) [σπεντός, twisted]. A prefix signifying twisted.

Streptoangina (strep-to-an-jī'-nah). A pseudomembranous deposit in the throat due to streptococci (J. E. Walsh). Cf. *Diphtheroid* (2).

Streptobacillus (strep-to-bas-il'-us). A bacillus forming twisted chains.

Streptobacteria (strep-to-bak-te'-re-ah) [strepto-; βκτήριον, bacterium]. Short, rod-shaped bacteria forming chains.

Streptococcal, Streptococcic, Streptococcus (strep-to-kok'-al, -ik, -us). Relating to or due to streptococci.

Streptococcemia (strep-to-kok-se'-me-ah) [streptococcus; αἷμα, blood]. The presence of streptococci in the blood.

Streptococcus (strep-to-kok'-us) [strepto-; κόκκος, a kernel]. See under *Bacteria*. **S.-angina**, angina due to streptococci. **S.-curve**, the remitting temperature-curve in hectic fever, supposed to depend upon the streptococcus (Petruschkev).

Streptocolysin (strep-to-kol'-is-in) [streptococcus; λύω, to loose]. A hemolysin produced in cultures of streptococci.

Streptocosis (strep-to-kō'-sis). Infection by streptococci.

Streptocyte (strep'-to-sit) [strepto-; κύτος, cell]. A cell presenting a twisted appearance or occurring with others in twisted chains; a streptococcus.

Streptomycosis (strep-to-mi-kō'-sis) [streptococcus; μύκων, fungus]. Infection with streptococci.

Streptopus (strep'-to-pus) [strepto-; ποῦς, foot]. Twisted stalk, a genus of liliaceous plants. *S. distortus* is indigenous to Europe and America, and is used in infusion as a gargle.

Streptosepticemia (strep-to-sep-tis-e'-me-ah). Septicemia due to invasion of streptococci.

Streptothrical (strep-to-thrik'-al). Relating to or due to members of the genus *Streptothrix*.

Streptothrix (strep'-to-thriks). See *Cladothrix* under *Bacteria*.

Stretcher (strech'-er). A cot or litter for carrying the sick.

Stria (stri'-ah) [L.]. A streak or white line. **S.s, Acoustic, S., Auditory**, transverse white lines on the lower part of the floor of the fourth ventricle, which unite with the auditory nerve-roots. **Striæ gravidarum**, the atrophic striae observed upon the abdomen in pregnant women. **S., Hensen's**. See *Membrane*, *Krause's*. **S.s, Lancisi's, Striæ longitudinales**, long, slightly elevated lines on the upper surface of the corpus callosum. **Striæ medullares**. See *S.s, Acoustic*. **S. medullaris**, a band of white matter adjacent to the tænia thalami (Barker). **S. medullaris thalami**, an oblique furrow on the superior

aspect of the thalamus. **Striæ musculares**, the transverse markings of striated muscle. **Striæ, Schreger's, Schreger's lines**. **S. terminalis**, tænia semicircularis.

Striate, Striated (stri'-at, stri'-a-tah) [striat, Striped. **S. Body**, the corpus striatum. **S. Muscle**. See under *Muscle*, and *Marine Tissue*.

Striation (stri-a'-shun) [striat] 1. The act of being striated. 2. A striated structure. **Tabby-cat**. See *Tabby-cat Striation*.

Striatum. See *Stratum*. **S. oriens**. See *Stratum oriens*.

Stricture (strikt'-tūr) [strictura, from stringere, draw tight]. A narrowing of a canal from external pressure, or as a result of inflammation or other changes in its walls. **S., Cicatricial**, a stricture due to cicatricial tissue. **S., Functional**. See *S., Spasmodic*. **S., Impassable, S., Impassable**, one not permitting passage of an instrument. **S., Irritable**, in which the passage of an instrument causes great pain. **S., Organic**, one due to structural changes in or about a canal. **S., Spasmodic**, one due to muscular spasm.

Stricturotome (strikt'-tu-ro-tōm) [stricturotomy, to cut]. An instrument for dividing a stricture.

Stricturotomy (strikt-tu-ro-tō-mē) [see *Stricturotome*]. The operation of incising a stricture.

Stridor (stri'-dor) [stridere, to make a striding sound]. A peculiar, harsh, vibrating sound produced during expiration. **S., Laryngeal, Congenital**. Respiratory stridor (habitual).

Stridulous (strid'-u-lus) [stridor]. Characterized by stridor. **S., Laryngismus**. See *Laryngismus stridulus*.

Stringent (strin'-jent) [stringere, to bind]. Binding.

Striacellular (stri-o-sel'-u-lar). Relating to composed of striated muscle-fiber and cells.

Stripe (strip) [ME., *stripe*, a streak, a streak; a discolored mark. **S., Bergmann's**, the conductor sonorus, one of the striated muscles often seen running obliquely from the side. Ger., *Klangsch.* **S., German's**. See *Baillarger's Layer*. **S.s of Retzius**, the lines extending more or less parallel to the free surface of the tooth, due to increase in growth and density of the enamel. **Vicq d'Azyr's**. See *Baillarger's Layer*.

Strobilus (strob'-il-us) [strobilus, a panicle]. The tape-worm.

Stroboscope (stro'-bo-skōp) [στροβίσκος, to view]. An instrument by which a series of slightly different pictures passing rapidly in succession is made to appear as a continuous object in motion; a stroboscope. **Direct**, one in which the figures and figures revolve in the same direction; a *direct stroboscope*. **S., Reverse**, one in which the figures and figures revolve in opposite directions; a *reverse stroboscope*.

Stroboscopic (strob-o-skōp'-ik) [stroboskop]. Pertaining to the stroboscope.

Strobostereoscope (*stro-bo-ster'-e-o-skōp*). See *Stereostereoscope*.

Stroke (*strok*). A sudden attack; the word is used colloquially for apoplexy and paralysis.

Stroma (*stro'-mah*) [*στρώμα*, a bed]. The tissue forming the framework for the essential part of an organ. **S.**, **Cancer**, the fibrous-tissue element of a cancer. **S.**, **His**', the trabecular framework of the mammary gland. **S. of Rollet**, an insoluble, spongy network forming the structure of an erythrocyte, within the interstices of which is embedded a soluble, finely granular substance, the hemoglobin.

Strombodes jenneri (*strom-bo'-dēs jen'-er-i*). A name proposed by Sjöbring for the micro-organism of vaccinia.

Stromeyer's Cephalhematocoele. See under *Cephalhematocoele*. **S.'s Splint**. See *Splint*, *Stromeyer's*.

Strongylus (*stron'-jil-us*) [*στρογγύλος*, round]. A genus of nematode worms found in the lower animals, and occasionally in man.

Strontia (*stron'-she-ah*). Strontium oxid.

Strontium (*stron'-she-um*) [after *Strontian*, in Scotland]. A metallic element belonging to the group of alkaline earths. It has a specific gravity of 2.5, an atomic weight of 86.9, and a valence of two. Symbol *Sr*. **S. Acetate**, $2\text{Sr}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{H}_2\text{O}$, a white crystalline powder, soluble in water, used as an anthelmintic. Dose $\frac{1}{4}$ – $\frac{1}{2}$ gr. (0.016–0.05 Gm.).

S. Arsenite, $\text{Sr}(\text{AsO}_2)_2 + 4\text{H}_2\text{O}$, a white powder, soluble in water, used as an alternative and tonic in skin diseases and malarial conditions. Dose $\frac{1}{8}$ – $\frac{1}{4}$ gr. (0.002–0.004 Gm.).

S. Bromid (*strontii bromidum*, U. S. P.), $\text{SrBr}_2 \cdot 6\text{H}_2\text{O}$, has been used in epilepsy, diabetes, gastrectasis, rheumatoid arthritis, and lithemia. Dose 15–30 gr. (1–2 Gm.).

S. and Caffein Sulfonate, $(\text{C}_8\text{H}_7\text{N}_4\text{O}_2\text{SO}_3)_2 \cdot \text{Sr}$, soluble in water, used as a diuretic. Syn., *Symphoral strontium*. **S. Glycerinophosphate**, a white powder, soluble in water, containing 26–27% of phosphoric acid. **S. Iodid** (*strontii iodidum*, U. S. P.), $\text{SrI}_2 \cdot 6\text{H}_2\text{O}$, is used like the other oxids.

S. Lactate, $\text{Sr}(\text{C}_2\text{H}_3\text{O}_2)_2 \cdot 3\text{H}_2\text{O}$, is used in nephritis, albuminuria, rheumatism, and gout. Dose 10–30 gr. (0.65–2.0 Gm.). **S. Loretinate** (basic), $\text{Sr} \cdot \text{I} \cdot \text{O} \cdot \text{C}_6\text{H}_4\text{N} \cdot \text{SO}_3$, fine, bright needles, slightly soluble in water, decomposed at 300° C. **S. Loretinate** (normal), $\text{Sr}(\text{I} \cdot \text{OH} \cdot \text{C}_6\text{H}_4\text{N} \cdot \text{SO}_3)_2 \cdot \text{H}_2\text{O}$, orange-red, prismatic crystals, sparingly soluble in water. **S. Oxid**, strontia, *SrO*, strontium combined with oxygen. **S. Phosphate**, $\text{Sr}_3(\text{PO}_4)_2$, a white powder, devoid of taste, soluble in acids; used as a nutritive and tonic. Dose 10–30 gr. (0.65–2.0 Gm.).

S. Salicylate (*strontii salicylas*, U. S. P.), $\text{Sr}(\text{C}_7\text{H}_5\text{O}_2)_2 \cdot \text{H}_2\text{O}$, white crystals, soluble in water; used in gout, rhoma, etc. Dose 10–40 gr. (0.65–2.6 Gm.).

Strophanthin (*strof-an'-thin*) [*strophanthus*]. **Strophanthinum** (U. S. P.), $\text{C}_{20}\text{H}_{34}\text{O}_{10}$. A toxic alkaloid, soluble in water and alcohol, derived from strophanthus. Dose $\frac{1}{100}$ – $\frac{1}{50}$ gr. (0.0002–0.0003 Gm.). **S. Tannate**, a yel-

lowish, amorphous powder containing 50% of strophanthin, soluble in water; used as a heart tonic. Dose $\frac{1}{15}$ – $\frac{1}{6}$ gr. (0.0004–0.001 Gm.).

Strophanthus (*strof-an'-thus*) [*στροφῶθος*, a twisted band; *ἄθος*, flower]. A genus of plants of the order *Apocynaceae*, some of the species of which are used for the preparation of arrow-poison in Africa. The strophanthus of the U. S. P. is the ripe seed of *S. kombé*, it contains a crystalline glucosid, *strophanthin*, and an alkaloid, *inein*. Strophanthus is a muscle-poison, but in small doses is a cardiac and perhaps a vascular stimulant. It is used in the same cases as digitalis. **S.**, **Tincture of** (*tinctura strophanthi*, U. S. P., B. P.). Dose 5–15 min. (0.32–1.0 Cc.).

Strophantism (*strof-jan'-tizm*). Poisoning from strophanthin; the symptoms resemble those of digitalism.

Strophulus (*strof'-u-lus*) [*στροφῶλος*, a twisted band]. A form of miliaria occurring in infants. Syn., *Red gum*; *Tooth-rush*. **S. pruriginosus**, an eruption occurring in children, and characterized by disseminated, intensely itching papules.

Structural (*struk'-tū-rah*) [*structura*, structure]. Pertaining to or affecting the structure.

Struempell's Disease. 1. Polienccephalitis. 2. Chronic ankylosing inflammation of the vertebral column. **S.'s Type of Spastic Paralysis**, the hereditary, familiar form of spastic spinal paralysis.

Struempell-Leichtenstern's Disease. Acute encephalitis of infancy.

Struma (*stru'-mah*) [L.]. 1. Scrofula. 2. Goiter. **Strumæ lipomatodes aberratæ renis**, Grawitz's term for a group of new-growths of kidney, usually benign, but, at times, serving as the foci of origin of malignant tumors. Regarded by some pathologists as endotheliomas, by others as adrenal rests (Cf. under *Rest*). Grawitz includes here: Renal adenoma (Klebs, Sabourin); alveolar renal adenoma (Weichselbaum and Greenish); adenoma carcinomatodes renis (Klebs); angioma cavernosum renis; myxolipoma telangiectodes incapsulatum renis utrisque; myxoma lipomatodes renis, myxoma renis; strumæ suprarenales (Virchow).

Strumiprival, **Strumiprivo** (*stru-mi-pri'-val, -vus*) [*struma*, *privo*, to deprive]. Deprived of the thyroid; due to removal of the thyroid; thyroprival.

Strumous (*stru'-mus*) [*struma*]. Scrofulous.

Struve's Test for Blood in Urine. To the urine, previously treated with ammonia or caustic potash, add tannin and acetic acid until the mixture has an acid reaction. In the presence of blood a dark precipitate is formed. When this is filtered and dried, the hemin crystals may be obtained from the dry residue by adding ammonium chlorid and glacial acetic acid.

Strychnin (*strih'-nin*) (see *Strychnos*). **Strychnina** (U. S. P.), $\text{C}_{21}\text{H}_{33}\text{N}_2\text{O}_2$. One of the alkaloids of *nux vomica*. Dose $\frac{1}{10}$ – $\frac{1}{5}$ gr.

(0.0011-0.0033 Gm.); hypodermatically in chronic alcoholism. $\frac{1}{10}$ - $\frac{1}{8}$ gr. (0.003-0.006 Gm.). **S. Acetate**, $C_{21}H_{22}N_2O_7 \cdot C_2H_3O_2$, small white crystals, soluble in 96 parts of water. Use and doses the same as the alkaloid. **S. Arsenate**, $C_{21}H_{22}N_2O_7 \cdot As_2O_5$, a white, crystalline powder with bitter taste, soluble in 14 parts of cold water, 5 parts of hot water. It is used as a tonic and alternative in tuberculosis, malaria, etc. Dose $\frac{1}{10}$ - $\frac{1}{8}$ gr (0.001-0.004 Gm.); hypodermatically, 0.5% in liquid paraffin; of this 4-15 min. (0.25-0.9 Cc.) daily. **S. Arsenite**, $(C_{21}H_{22}N_2O_7)_3 \cdot As_2O_3$, a white, crystalline powder, soluble in 10 parts of boiling water. It is tonic, alternative, and antiperiodic. Dose $\frac{1}{10}$ - $\frac{1}{8}$ gr (0.001-0.004 Gm.); subcutaneous dose 4-15 drops of a 0.5% solution in liquid paraffin. **S. Bisaccharinate**, **S. diorthosulfamin-benzoate**, used as is the arsenite. **S. Camphorate**, $C_{21}H_{22}N_2O_7 \cdot C_{10}H_{16}O$, small white crystals or crystalline powder soluble in water, used as is the alkaloid. **S. Citrate**, $C_{21}H_{22}N_2O_7 \cdot C_6H_5O_7$, white crystals, soluble in water, usage and dosage the same as the alkaloid. **S. Ferricitrate**, iron and strychnin citrate. **S. Hydrid**, obtained by the action of metallic sodium on strychnin in a boiling alcoholic solution and differing in physiologic action from strychnin, it may, therefore, be used as a physiologic antidote in strychnin-poisoning. **S. Hydrobromate**, $C_{21}H_{22}N_2O_7 \cdot HBr$, white acicular crystals, soluble in 32 parts of water, used as a tonic and sedative. Dose $\frac{1}{10}$ - $\frac{1}{8}$ gr (0.002-0.005 Gm.). **S. Hydrochlorate**, $C_{21}H_{22}N_2O_7 \cdot HCl + 3H_2O$, white needles, soluble in 50 parts of water at 22° C. Usage and doses the same as the alkaloid. **S. Hydroiodate**, $C_{21}H_{22}N_2O_7 \cdot HI$, white crystals, soluble in water. Used as is the alkaloid. **S. Hypophosphite**, a white powder, used as a tonic in tuberculosis. Dose $\frac{1}{10}$ - $\frac{1}{8}$ gr (0.002-0.005 Gm.). **S. with Iron and Quinin Citrate**, iron and quinin citrate with strychnin, greenish-brown, transparent scales, soluble in water, and containing 1.4% of pure strychnin. It is tonic and antiperiodic. Dose 3-7 gr (0.2-0.45 Gm.). **S. Lactate**, $C_{21}H_{22}N_2O_7 \cdot C_3H_5O_2$, a white, crystalline powder, soluble in water. Usage and dosage the same as the alkaloid. **S. Nitrate** (*strychnine nitrox*, U. S. P.), $C_{21}H_{22}N_2O_7 \cdot NH_4NO_3$, silky needles, soluble in 50 parts of water, 60 parts of alcohol, or 2 parts of boiling water or alcohol. Usage and dosage the same as the alkaloid. **S. Oleate**, a mixture of strychnin in oleic acid, soluble in ether and oleic acid, it is used in the external administration of strychnin. **S. orthosulfamin-benzoate**. See *S. Saccharinate*. **S. Phenolsulfate**. See *S. Sulfocarbolsulfate*. **S. Phosphate**, $(C_{21}H_{22}N_2O_7)_2 \cdot H_2PO_4 + 9H_2O$, a white, crystalline powder, soluble in water. Usage and dosage the same as the alkaloid. **S. Saccharinate**, $C_{21}H_{22}N_2O_7 \cdot C_6H_5SO_2 \cdot COONH_4$, a true salt of strychnin and saccharin, a white, sweet powder, used in all cases where

the alkaloid is indicated to decrease the dose. **S. Salicylate**, $C_{21}H_{22}N_2O_7 \cdot C_6H_4O_2$, a white powder, soluble in water and alcohol, in rheumatism and chorea. Dose the same as the alkaloid. **S. Sulfate**, $C_{21}H_{22}N_2O_7 \cdot SO_4$, U. S. P., $C_{21}H_{22}N_2O_7 \cdot SO_4 + 5H_2O$, white, odorless needles or prisms, which effloresce in dry air and are soluble in 50 parts of water, 100 parts of alcohol, 50 parts of boiling water, or 8 parts of alcohol, melt at 200° C. The same as the alkaloid slightly from the alkaloid. Dose $\frac{1}{10}$ - $\frac{1}{8}$ gr (0.002-0.005 Gm.). **S. Sulfocarbolsulfate**, **Sulfophosphate**, a white powder, soluble in water or alcohol. **S. and Hydroiodate**, $C_{21}H_{22}N_2O_7 \cdot HI \cdot 2H_2O$, white crystals, soluble in water.

Strychninism (*stri'k'ni-nizm*) [*stryk'ni-nizm*], state of being under the influence of strychnin.

Strychnize (*stri'k'ni-ze*) To bring under the influence of strychnin.

Strychnos (*stri'k'ni-oz*) [*stryk'ni-oz*], the nightshade.

A genus of the *Loganiaceae*. *S. nuxvomica* is in the Gaboon region. It contains strychnin in the bark, leaves and root. From the arrow-poison, *taris*, comes the *M. nuxvomica*, *braja*, or *abanga*, a compound of seeds of *S. nuxvomica*. *S. ignita*, *S. ignita*, from the Philippines act in the same manner as *nuxvomica*, but contain more strychnin, less brucin than it does. *S. nuxvomica* is indigenous to the East Indies. The *nuxvomica*, *chillij*, *chilling* are used in clear muddy water. They contain strychnin nor brucin, and are used in diabetes and gonorrhea. The root is employed in dysentery. The bark of *S. nuxvomica*, of South America, contains more alkaloid, but a bitter substance, and is used as a substitute for quinin. *S. nuxvomica* of Java, from the west bank of the Java river, produces a bitter taste, and is used 1.5% strychnin and a little brucin. The seed and leaves contain 1.4% strychnin and only traces of brucin. *S. nuxvomica* Guiana, furnishes curara.

Stub-thumb. Abbreviation and contraction of the phalanx of the thumb.

Stump [*stev*, *stump*, *stump*]. The remains of a limb or other part left attached to the body after an amputation.

Stun [*AS*, *stun*], to make a din. To render temporarily insensible, as by a blow.

Stupe (*stupe*) [*stupe*, *stupe*]. A condition of the body resulting from the application of heat or counter-irritation, such as a cloth wrung out of hot water and applied with a counter-irritant as turpentine.

Stupeficient, **Stupefactive** [*stu-pe-fi-sient*, *stu-pe-fi-ent*] (*stupe*, *stupe*, *stupe*). To render insensible.

Stupor (*stu'por*) [*L.*]. A state of partial consciousness from which the individual can be roused.

Sturm's Focal Interval. The period between the principal focal lines of a lens.

Stuttering (*stut'-er-ing*) [Icel., *stauta*, to stutter]. A hesitation in speech due to an inability to enunciate the syllables without repeated efforts.

Sty, Stye (*sti*). See *Hordeolum*.

Style, Stylet (*stil, sti-let'*) [*στυλος*, pillar]. 1. A probe. 2. A wire inserted into a catheter or cannula in order to stiffen the instrument or to perforate the tissues.

Stylo- (*sti-lo-*) [*στυλος*, pillar]. A prefix denoting pertaining to the styloid process of the temporal bone.

Styloglossus (*sti-lo-glos'-us*). See under *Muscle*.

Stylohyoid (*sti-lo-hi'-oid*) [*stylo-*; *hyoid*]. 1. Pertaining to the styloid process of the temporal bone and the hyoid bone, as the *stylohyoid* muscle. See under *Muscle*. 2. Pertaining to the stylohyoid muscle.

Styloid (*sti'-loid*) [*στυλος*, pillar; *ειδος*, like]. Resembling a stylus.

Stylomastoid (*sti-lo-mas'-toid*) [*stylo-*; *mas-toid*]. Pertaining to the styloid and mastoid processes.

Stylomaxillary (*sti-lo-maks'-il-a-re*) [*stylo-*; *maxilla*]. Pertaining to the styloid process and the maxilla.

Stylopharyngeus (*sti-lo-far-in-je'-us*). See under *Muscle*.

Stylus (*sti'-lus*) [L., "a stake"]. A pointed instrument for making applications.

Stype (*stip or sti-pe*) [Fr.; *στυπη*, stiffness]. A tampon or pledget, especially such as is used in producing local anesthesia.

Styphage, Stypage (*ste-fah-jeh, ste-pah-jeh*). The production of local anesthesia by an application made with a stype. *S.*, *Bailey's*, a revulsive, the application of cotton pledgets wet with methyl chlorid.

Styptic (*stip'-tik*) [*στυπτικός*, astringent]. 1. Checking hemorrhage by contracting the blood-vessels. 2. An agent that checks hemorrhage by causing contraction of the blood-vessels.

Stypticin (*stip'-tis-in*). See *Colarnin Hydrochlorate*.

Styracin (*sti'-ra-sin*). See under *Styrax*.

Styracol (*sti'-ra-kol*). Guaiacol cinnamate, $C_6H_4(OCH_3)C_6H_4O_2$. It is given internally in catarrhal affections of the digestive tract and in pulmonary tuberculosis.

Styrax (*sti'-raks*) [*στυραξ*, storax]. Storax; a balsam obtained from the inner bark of *Liquidambar orientalis*, or oriental sweet-gum. It contains a volatile oil, styrol, several resins, an amorphous substance called storacin, cinnamic acid, and styracin (the cinnamate of cinnamyl). It is stimulant, expectorant, and antiseptic, acting like benzoin and tolu, and is used in bronchial affections and catarrh of the urinary passages. Externally it is an antiseptic and parasiticide. It is a constituent of *frari's* balsam. Dose 5-20 gr. (0.32-1.3 Gm.).

Styrol (*sti'-rol*), C_6H_6 . Cinnamene; phenylethylene. A colorless, highly refractive liquid hydrocarbon, obtained by heating styracin with calcium hydrate.

Styrone (*sti'-rön*) [*styrax*]. Cinnamic alcohol, $C_9H_{10}O$. *S.* Crystals, *S.*, Crystallized, cinnamic alcohol.

Styryl Alcohol (*sti'-ril*). See *Styrone*.

Sub- [L.]. A prefix denoting under or beneath; in chemistry, a prefix denoting—(1) the lower of two compounds of the same elements; (2) a basic salt.

Subacetate (*sub-as'-et-ät*) [*sub-*; *acetum*, vinegar]. A basic acetate.

Subacid (*sub-as'-id*) [*sub-*; *acidum*, acid]. Moderately acid.

Subacidity (*sub-as-id'-it-e*) [*subacid*]. A condition of moderate acidity.

Subacromial (*sub-ak-ro'-me-äl*) [*sub-*; *acro-miön*]. Below the acromion.

Subacute (*sub-ak-üt'*) [*sub-*; *acutus*, sharp]. Moderately acute.

Subagitatix (*sub-aj-it-a'-triks*) [L.]. One who practises tribadism.

Subancestral (*sub-an-est'-ral*). Not in the direct line of descent.

Subanconeus (*sub-an-ko-ne'-us*). See under *Muscle*.

Subaponeurotic (*sub-ap-on-u-ro'-ik*) [*sub-*; *aponeurosis*]. Beneath an aponeurosis.

Subarachnoid (*sub-ar-ak'-noid*) [*sub-*; *arach-noid*]. Beneath the arachnoid membrane, as the *subarachnoid* space.

Subarcuate (*sub-ar'-ku-ät*) [*sub-*; *arcus*, an arc]. Slightly arcuate.

Subastragalar, Subastragaloid (*sub-as-trag'-al-ar, sub-as-trag'-al-oid*) [*sub-*; *astragalus*]. Below the astragalus.

Subatloidean (*sub-at-loid'-e-an*). Located beneath the atlas.

Subatomic (*sub-at-om'-ik*). Underlying atoms.

Subaudition (*sub-aw-dish'-on*) [*sub-*; *audire*, to hear]. The act or ability of comprehending what is not expressed.

Subbrachycephalic (*sub-bra-ke-se'-a'-lik*). Having a cephalic index from 80° to 84°.

Subcalcarine (*sub-kal'-ka-ren*) [*sub-*; *calcarine*]. Situated beneath the calcarine fissure, as the *subcalcarine* convolution. *S.* **Convolution**, a narrow convolution ventrad of the cuneus and lying between the collateral and calcarine fissures.

Subcapsular (*sub-kap'-su-lar*) [*sub-*; *capsula*, capsule]. Beneath a capsule.

Subcarbonate (*sub-kar'-bon-ät*) [*sub-*; *carbonate*]. A basic carbonate.

Subclavian (*sub-kla'-ve-an*) [*sub-*; *clavis*, key]. Lying under the clavicle, as the *subclavian* artery.

Subclavicular (*sub-kla'-vik'-u-lar*). The first rib.

Subclavicular (*sub-kla'-vik'-u-lar*). Beneath the clavicle.

Subclavius (*sub-kla'-ve-us*). See under *Muscle*.

Subcollateral (*sub-kol-at'-er-äl*) [*sub-*; *collateral*]. Ventrad of the collateral fissure of the brain.

S. **Gyrus**, a convolution connecting the occipital and temporal lobes.

Subconjunctival (*sub-kon-jungk-tiv'-völ*) [*sub-*; *conjunctiva*]. Situated beneath the conjunctiva.

- Subconscious** (sub-kon'-shus). Imperfectly conscious.
- Subconsciousness** (sub-kon'-shus-nes) [sub-conscious]. Imperfect consciousness; that state in which mental processes take place without the mind being distinctly conscious of its own activity.
- Subcoracoid** (sub-kor'-ak-oid) [sub-; coracoid]. Situated below the coracoid process.
- Subcortical** (sub-kor'-tik-ul) [sub-; cortex]. Beneath the cortex.
- Subcranial** (sub-kra'-ne-ul) [sub-; cranium, cran-ium]. Situated beneath the cranium.
- Subcrepitant** (sub-krep'-it-ant) [sub-; crepitare, to make a crackling noise]. Almost crepitant, as subcrepitant rale. See *Rale*, *Subcrepitant*.
- Subcrepitation** (sub-krep'-it-ant-shun). An indistinctly crepitant sound.
- Subcrureus** (sub-kru'-re-us). See under *Muscle*.
- Subculture** (sub-kul'-tur) [sub-; culture]. In bacteriology, a secondary culture made from a primary culture.
- Subcutaneous** (sub-ku'-ta-ne-us) [sub-; cutaneous]. Beneath the skin; hypodermatic.
- Subcuticular** (sub-ku'-tik-ul-er) [sub-; cutis, skin]. Beneath the epidermis, as a subcuticular suture.
- Subcutine** (sub-ku'-tin). Paraphenolsulfonate of paraamidobenzoic ethyl ester; small acicular crystals melting at 195.6° C.; soluble in 100 times its weight in water. Its solutions can be sterilized. It is recommended as a local anesthetic.
- Subdiaphragmatic** (sub-di-a-frag-mat'-ik) [sub-; diaphragm]. Under the diaphragm.
- Subdicrotic** (sub-di-krot'-ik). Obscurely di-crotic.
- Subduction** (sub-duk'-shun) [sub-; ducere, to lead]. Malley's term for deorsumduction.
- Subdural** (sub-du'-ral) [sub-; dura]. Beneath the dura.
- Subencephalon** (sub-en-sef'-al-on) [sub-; *encephalon*, brain]. The medulla oblongata, pons, and corpora quadrigemina taken together.
- Subendocardial** (sub-en-do-kar'-de-ul) [sub-; endocardium]. Beneath the endocardium.
- Subendothelium** (sub-en-doth'-e-le-um). The layer of connective-tissue cells between the mucosa and the epithelium of the bladder, intestine, and bronchi.
- Subendymal** (sub-en'-dim-ul). Beneath the ependyma.
- Subepidermal, Subepidermatic, Subepidermic** (sub-ep-e-der'-mat, sub-ep-e-der'-mat'-ic, sub-ep-e-der'-mit) [sub-; epidermis]. Situated beneath the epidermis.
- Subepithelial** (sub-ep-e-the'-le-ul) [sub-; epithelium]. Situated under an epithelial surface.
- Suberin** (su'-ber-in). See *Cutin* (1).
- Subese** (sub'-ese) [sub-; *esere*, to eat]. Underfed, if in the opposite of obese.
- Subfalceiform** (sub-fal'-se-form) [sub-; falce, a sickle]. Somewhat sickle-shaped.
- Subfascial** (sub-fash'-e-ul) [sub-; fascia]. Beneath the fascia.
- Subfebrile** (sub-feb'-ril) [sub-; *febris*, fever]. Slightly febrile.
- Subflavor** (sub-fa'-vor). A secondary or subordinate flavor.
- Subflavous** (sub-fa'-vus) [sub-; flavus, yellow]. Somewhat yellow. *S. Ligament*, the segment of yellowish elastic material found between the laminae of adjacent vertebrae.
- Subgallate** (sub-gal'-late). A lower salt of gallic acid. *S., Bismuth*. See *Bismuth*.
- Subgemmal** (sub-jem'-ul). Beneath a taste bud.
- Subgeneric** (sub-jen'-er-ik). Relating to a sub-genus.
- Subgeniculate** (sub-jen-ik'-u-late). Imperfectly geniculate.
- Subgenus** (sub-jen'-us). A subordinate genus, a subdivision of a genus higher than a species.
- Subglenoid** (sub-gl'e'-noid) [sub-; *glenoid*, beneath the glenoid fossa, as subglenoid ossification of the humerus].
- Subglossal** (sub-glos'-al). See *Hypoglossal*.
- Subhyaloid** (sub-hi'-al-oid). Beneath the hyaloid membrane of the eye.
- Subhyoid** (sub-hi'-oid) [sub-; *hyoid*]. Beneath the hyoid bone. *S. Bursa*, a bursa lying between the thyroid gland and the hyoid bone and the conjoint insertion of the thyrohyoid, sternohyoid, and sternaloid muscles. Syn., *Boyer's bursa*.
- Subiculum** (sub-ik'-u-lum) [sub-; *iculus*, a layer]. The uncinate convolution.
- Subinflammation** (sub-in-fam'-e-shun) [sub-inflammation]. A slight degree of inflammation.
- Subinfrance** (sub-in'-frans) [sub-infrare, to enter secretly]. Antisiparion of inflammation.
- Subinfrant** (sub-in'-frant). Incoming waves applied to malarial fevers in which a new paroxysm begins before the termination of the preceding one.
- Subinvolution** (sub-en-vo-lu'-shun) [sub-; *involutio*, a rolling up]. Imperfect involution. *S. of the Uterus*, the imperfect contraction of the uterus after delivery.
- Subiodid** (sub-i'-o-did). That iodid of a series having the least iodine.
- Subjacent** (sub-jat'-ent) [sub-; *jacere*, to lie]. Lying beneath.
- Subject** (sub'-jekt) [sub-; *jacere*, to throw]. 1. An individual that serves for purposes of experiment or study, or that is under observation or treatment. 2. A subject-matter.
- Subjective** (sub-ek'-tiv) [subjace]. 1. Relating to the individual himself. 2. A sensation experienced by the patient himself, and not amenable to physical explanation. *S. Sensation*, one not caused by external objects.
- Subjectivity** (sub-ek'-tiv-ee-tee) [subjace, to throw under]. *Subjectivity*.
- Subjectoscope** (sub-jek'-tiv-skop). An instrument for examining subjective visual sensations.
- Subkatabolism** (sub-kat-ab'-ol-izm). Katabolism stands a condition marked by the rapid desiccation, and premature senescence of the cells due to suboxidation, excessive stress, fatigue, etc.

Sublamin (*sub'-lam-in*). A soluble compound of mercury sulfate and ethylenediamin containing 43% of mercury. It is used as a disinfectant and intramuscularly in syphilis. Dose 2-6 dr. (7.7-23.3 Cc.) of 1% solution in normal salt solution.

Sublatio (*sub-lat'-she-o*) [L.]. Removal. **S. retinae**, detachment of the retina.

Sublimate (*sub'-lim-at*) [*sublimare*, to lift up high]. A substance obtained by sublimation. **S.**, Corrosive, mercuric chlorid. See *Mercury Bichlorid*.

Sublimation (*sub-lim-a'-shun*). The vaporization and condensation of a volatile solid.

Sublime (*sub-lim'*) [see *Sublimate*]. 1. To subject to sublimation. 2. To undergo sublimation.

Sublingual (*sub-lin'-gwaf*) [*sub-*; *lingua*, tongue]. 1. Lying beneath the tongue. 2. Pertaining to the parts lying beneath the tongue.

Sublinguitis (*sub-lin-gwaf'-tis*) [*sub-*; *lingua*, tongue; *itis*, inflammation]. Inflammation of the sublingual gland.

Sublobular (*sub-lub'-u-lar*) [*sub-*; *lobule*]. Situated beneath a lobule. **S. Veins**, the radicles of the hepatic veins, situated at the base of a cluster of lobules.

Subluxation (*sub-luks-a'-shun*) [*sub-*; *luxation*]. Incomplete luxation.

Submammary (*sub-mam'-u-re*) [*sub-*; *mamma*, breast]. Situated beneath the breast.

Submarginal (*sub-mar'-jin-al*) [*sub-*; *margin*]. Situated near the border or margin.

Submarine (*sub-mar-en*) [*sub-*; *marine*]. A dental term applied to conditions and materials in the treatment and management of which the parts are filled with the fluids of the mouth.

Submaxillary (*sub-mak'-il-a-re*) [*sub-*; *maxilla*]. 1. Lying beneath the lower maxilla, as the submaxillary gland. 2. Pertaining to the submaxillary gland.

Submaxillitis (*sub-mak'-il-i'-tis*). Inflammation of the submaxillary gland.

Submeningeal (*sub-men-in'-je-al*). Beneath the meninges.

Submental (*sub-men'-tal*) [*sub-*; *mentum*, chin]. Situated under the chin.

Submerge (*sub-merj'*) [*sub-*; *mergere*, to dip]. To place under the surface of a liquid.

Submersion (*sub-mer'-shun*) [*submerge*]. The act of submerging; the condition of being under the surface of a liquid.

Submesaticephalic (*sub-mes-at-e-sef'-a'-lik*). Having a cephalic index of 75° to 76°.

Submorphous (*sub-mar'-fus*) [*sub-*; *morphe*, form]. Having the characters both of a crystalline and of an amorphous body; applied to calculi.

Submucous (*sub-mu'-kus*) [*sub-*; *mucous*]. Situated beneath a mucous membrane.

Subnasal (*sub-na'-sal*) [*sub-*; *nasus*, nose]. Situated below the nose. **S. Point**. See under *Cranioelectric Point*.

Subnitrate (*sub-ni'-trad*) [*sub-*; *nitrate*]. A basic nitrate.

Subnormal (*sub-nor'-mal*) [*sub-*; *norma*, rule]. Below normal.

Subnotochordal (*sub-no-lo-kord'-al*). Below the notochord.

Subnucleus (*sub-nu'-kle-us*) [*sub-*; *nucleus*]. Any one of the smaller groups of cells into which a large nerve-nucleus is divided by the passage through it of nerve-bundles.

Suboccipital (*sub-ok-sip'-it-al*) [*sub-*; *occiput*]. Situated beneath the occiput.

Suboxid (*sub-oks'-id*) [*sub-*; *δξός*, acid]. One of two oxids containing the less oxygen.

Suboxidation (*sub-oks-id-a'-shun*). Deficient oxidation.

Subpapular (*sub-pap'-u-lar*). Indistinctly papular.

Subparietal (*sub-par-i'-et-al*) [*sub-*; *paries*, wall]. Situated beneath the parietal bone, convolution, or fissure.

Subpatellar (*sub-pat-el'-ar*) [*sub-*; *patella*, kneecap]. Situated beneath the patella.

Subpeduncular (*sub-pe-dung'-ku-lar*) [*sub-*; *pedunculus*, peduncle]. Situated beneath a peduncle.

Subpericardial (*sub-per-e-kur'-de-al*) [*sub-*; *pericardium*]. Situated beneath the pericardium.

Subpericranial (*sub-per-e-kru'-ne-al*). Beneath the pericranium.

Subperiosteal (*sub-per-e-os'-te-al*) [*sub-*; *periosteum*]. Beneath the periosteum.

Subperitoneal (*sub-per-e-ton-e'-al*) [*sub-*; *peritoneum*]. Beneath the peritoneum.

Subperitoneoabdominal (*sub-per-it-on-e-o-ab-dom'-in-al*). Beneath the abdominal peritoneum.

Subperitoneopelvic (*sub-per-it-on-e-o-pell'-vik*). Beneath the peritoneum of the pelvis.

Subpersonal (*sub-per'-son-al*). Having individuality in a very slight degree.

Subpetrosal (*sub-pet-ro'-sal*). Below the petrosa.

Subphrenic (*sub-fren'-ik*). Synonym of *Subdiaphragmatic*.

Subplacenta (*sub-pla-sent'-ah*). The decidua vera.

Subplantigrade (*sub-plant'-e-grad*). Incompletely plantigrade, walking with the heel slightly elevated.

Subpleural (*sub-plu'-ral*) [*sub-*; *pleura*]. Beneath the pleura.

Subpontine (*sub-pan'-tin*) [*sub-*; *pons*]. Beneath the pons.

Subpreputial (*sub-pre-pu'-she-al*) [*sub-*; *preputium*, prepuce]. Beneath the prepuce.

Subpubic (*sub-pu'-bik*) [*sub-*; *pubes*, pubis]. Situated beneath the pubic arch or symphysis.

Subpulmonary (*sub-pul'-mon-a-re*) [*sub-*; *pulmo*, the lung]. On the ventral side of the lungs.

Subretinal (*sub-ret'-in-al*) [*sub-*; *retina*]. Beneath the retina.

Subsalt. A basic salt.

Subsaturation (*sub-sat-u-ra'-shun*). Incomplete saturation.

Subscapular (*sub-skap'-u-lar*) [*sub-*; *scapula*]. 1. Beneath the scapula, as the subscap-

ular muscle, or subscapularis. 2. Pertaining to the subscapular muscle.

Subscapularis (sub-skap-u-lu'-ris). See under *Muscle*.

Subscleral (sub-skle'-raf). Beneath the sclera.

Subscription (sub-shrip'-shun) [sub-, scribere, to write]. That part of a prescription containing the directions to the pharmacist, indicating how the ingredients are to be mixed and prepared.

Subsensation (sub-sen-sa'-shun). A subordinate sensation.

Subseptal (sub-sep'-tal) Situated below a septum.

Subseptate (sub-sep'-at) [sub-, septum, a hedge]. Partially divided.

Subserous (sub-se'-rus) [sub-, serous]. Beneath a serous membrane.

Subserrate (sub-ser'-at). Slightly serrate.

Subsibilant (sub-sib'-il-ant). Having a sound like muffled whistling.

Subspinous (sub-epi'-nur) [sub-, spine]. 1. Beneath a spine. 2. Beneath the spinal column.

Substage (sub'-stay). The parts beneath the stage of a microscope, including the diaphragm, condenser, illuminator, and other accessories.

Substance (sub'-danz) [substantia, substance].

1. The material of which anything is composed. 2. A tissue. *S.*, **Albile**, the portion of the chyme which is utilized for nourishing the body. *S.*, **Alimentary**, an article of food. *S.*, **Basis**, the intercellular or ground-substance. *S.*, **Cell**, cell protoplasm. *S.*, **Contractile**. 1. Living protoplasm which has the property of contracting. 2. The contractile portion of a muscular fiber. *S.*, **Cortical**, the peripheral portion of an organ, situated just beneath the capsule. *S.*, **Gray**. See *Substantia cinerea*. *S.*, **Ground**, the homogeneous matrix or intracellular substance of a tissue in which the cellular elements and fibers are embedded. *S.*, **Haptophorous**, a toxoid. *S.*, **Immune**, the immune body. *S.*, **Interstitial**. See *Euchyloma*. *S.*, **Interstitial**. 1. The connective tissue of an organ. 2. **Achromatin**. *S.*, **Intertubular**, the matrix of dentin in which the dentinal canals are placed. *S.*, **Intervertebral**, the intervertebral discs. *S.*, **Living**, protoplasm. *S.*, **Medullary**. 1. The part of an organ constituting its central or contradistinction to its peripheral or cortical portion. 2. The tissue forming the medulla, as in bone. *S.*, **Parietal**, the matrix of the cartilage. *S.* of **Rolando**. See *Substantia gelatinosa*. *S.*, **Rollet's Secondary**. See *Disc, Interstitial*. *S.*, **Rovidas' Hyaline**, a nucleoprotein insoluble in water forming a large proportion of the constituents of pus-corpuscles. It expands but a tough shiny mass when treated with a 1% osmic acid solution. It is soluble in alkalis but quickly changed by them. *S.*, **Sarcous**, the substance of a sarcous element. *S.* of **Schwann**, White, the medullary sheath of a nerve fiber. *S.* **sensibilisatrice**, Bordet's name (1899) for the

intermediate body. *S.*, **Stilling's Gelatinum**, the gelatinous substance lining the central canal of the spinal cord. *S.*, **Supporting**, a supporting tissue, as the meninges and connective tissue. *S.*, **White Reticular**, the reticulated layer of white tissue on the anterior half of the uncus of the cerebellum.

Substandard (sub-stand'-ard). Below the standard requirements.

Substantia (sub-stan'-the-ah) [1.].

S. **alba**, the white fibrous tissue of the brain and nerves. Syn. *Alba*. *S.* **cinerea**, the gray matter of the nervous system. *S.* **corticalis**. See *Substance cortical*. *S.* **teruginea**. Synonym of *Locus cinereus*. *S.* **fusca**. See *Locus niger*. *S.* **gelatinum**, a peculiar gelatinous tissue found in the spinal cord near the tip of the posterior horn.

S. **Substantia of Rolando**. *S.* **glomerulosa**, the

cortical substance of the kidney. *S.* **grana**, the gray matter of the spinal cord. *S.* **grana centralis**. See *Entocorrea*. *S.* **nigra**, the

Locus niger. *S.* **perforata lateralis**, the

anterior perforated space of the brain. *S.* **perforata posterior**, the posterior perforated

space of the brain. *S.* **propria**, the

tissue of a part, especially the middle layer (lamina propria) of the tympanic membrane.

S. **reticularis alba**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

S. **reticularis**. See *Substantia alba*.

Subtuberal (*sub-tu'-ber-ul*). Situated beneath a tuber.

Subungual (*sub-un'-gual*) [*sub-*; *unguis*, nail]. Beneath the nail.

Suburethral (*sub-u-re'-thral*) [*sub-*; *urethra*]. Beneath the urethra.

Subvaginal (*sub-vaj'-in-al*) [*sub-*; *vagina*, sheath]. Beneath a sheath. **S. Space**, the space beneath the sheath of dura mater surrounding the optic nerve.

Subvertebral (*sub-ver'-te-bral*) [*sub-*; *vertebra*]. Beneath a vertebra.

Subvitreal (*sub-vit'-rin-al*). Beneath the vitreous humor.

Subzonal (*sub-za'-nal*) [*sub-*; ζώνη, zone]. Beneath the zona pellucida.

Subzygomatic (*sub-zi-go-mat'-ik*) [*sub-*; *zygoma*]. Below the zygoma.

Succagag, **Succagogue** (*suk'-ag-og*) [*succus*, juice, ἀγώγιος, a leading]. A drug which stimulates the secretory function.

Succedaneous (*suk-se-da'-ne-us*) [*succedere*, to take the place of]. Relating to or acting as a succedaneum.

Succedaneum (*suk-se-da'-ne-um*) [see *Succedaneus*]. A substitute. **S.**, **Caput**. See **Capit succedaneum**.

Succenturiate (*suk-sen-tu'-re-āt*) [*succenturiare*, to receive as a substitute]. Accessory.

Succinate (*suk'-sin-it*) [*succinum*, amber]. A salt of succinic acid.

Succinic Acid (*suk-sin'-ik*). See **Acid, Succinic**.

Succinonitril (*suk-sin-o-nī'-tril*). Ethylene cyanid, $C_4H_4N_2$, a crystalline body.

Succinum (*suk-si'-num*) [L.]. Amber, a fossil resin found in the alluvial deposits of Central Europe, and thought to be derived from an extinct species of pine. It contains a volatile oil, *oleum succini*, used in hysteria, whooping-cough, amenorrhea, and locally as a rubefacient in chronic rheumatism, whooping-cough, and infantile convulsions. Dose 5-15 min (o 32-10 Cc.). Unof.

Succinylcholin (*suk-sin-il-kin'-in*), $C_7H_{15}N_2O_2$. A quinin ester, $C_7H_{15}N_2O_2$. A quinin ester, crystallizing in white needles, readily soluble in alcohol and ether. Melts at 97° C.; taste unpleasant and bitter.

Succorhea, **Succorrhœa** (*suk-or-e'-ah*) [*succus*; *ρῆξις*, to flow]. An excessive flow of a secretion. **S.**, **Pancreatic**, a pathologic increase of the pancreatic juice when the secretory innervation of the gland is exaggerated.

Succory (*suk'-or-e*). The chicory, *Cichorium intybus*. See **Chicory**.

Succuba (*suk'-u-bah*) [*sub-*; *cumbere*, to lie]. A female demon formerly believed to consort with men in their sleep. Cf. *Incubus* (2).

Succulent (*suk'-u-lent*) [*succus*]. Juicy.

Succus (*suk'-usi*) [L.]. 1. A vegetable juice. 2. An animal secretion. **S. anisi ozonatus**. See **Manol**. **S. entericus**, the intestinal juice, secreted by the glands of the intestinal mucous membrane. It is thin, opalescent, alkaline, and has a specific gravity of 1.011.

Its chief function is probably to act as a diluent. It contains an amylolytic and a proteolytic ferment. **S. gastricus**, the gastric juice. **S. olutkombul**, the glutinous sap of the bark of *Abroma angusta*. **S. pancreaticus**, the pancreatic juice.

Succussion (*suk-ush'-un*) [*succutere*, to shake up]. A shaking, especially of the individual from side to side, for the purpose of determining the presence of fluid in a cavity or hollow organ of the body. **S.-sound**, **S.-splash**, the peculiar splashing sound heard when the patient is shaken in hydropneumothorax or pyopneumothorax, or in cases of dilated stomach containing fluid.

Sucholoalbumin (*su-ko-lo-al'-bu-min*) [*oûs*, swine; *ζωή*, bile; *albumin*]. A poisonous proteid classed among the albumoses obtained from cultures of the bacillus of hog cholera.

Sucholotoxin (*su-ko-lo-toks'-in*) [*oûs*, swine; *ζωή*, bile; *τοξίν*, poison]. A feebly toxic base obtained by de Schweinitz from cultures of swine-plague bacillus. Cf. *Susotoxin*.

Suckling (*suk'-ling*) [*sugere*, to suck]. A suckling child; a nursing.

Sucramin (*su-kram'-in*). The ammoniacal salt of saccharin. A sweetening agent differing from saccharin in its insolubility in the solvents of that substance.

Sucrate (*su'-krat*). A chemie combination containing sucrose.

Sucrol (*su'-krol*). See **Dulcin**.

Sucrose (*su'-krōs*). See **Saccharum**.

Suction (*suk'-shun*) [*suctio*, a sucking]. The act of sucking. **S.-plate**, in dentistry, a plate constructed so as to be held in place by atmospheric pressure.

Sudamen, **Sudamina** (*su-da'-men*, *su-dam'-in-ah*) [*sudor*, sweat]. An eruption of translucent, whitish vesicles, due to a noninflammatory disturbance of the sweat-glands, consisting in a collection of sweat in the ducts of the sweat-glands or beneath the epidermis, and occurring in fevers and profuse sweating.

Sudamina crystallina. See *Malaria alta*.

Sudan (*su-dan'*). $C_{15}H_{11}N_2O$. A diazo-compound from alphanaphthalamine with naphthol, a brown powder used as a stain, soluble in alcohol, ether, fats, and oils. Syn., **Pigment brown**. **S. III**, $C_{22}H_{16}N_2O$, a diazo-compound from amidoazobenzene and betanaphthol; a brown powder, soluble in alcohol, ether, benzene, petroleum ether, oils, and fats. **S. Yellow G**, $C_{17}H_{13}N_2O_2$, a diazo-compound from anilin and resorcinol; a brown powder used as a stain, soluble in alcohol, fats, and oils.

Sudation (*su-da'-shun*) [*sudor*]. The act of sweating.

Sudatorium (*su-dat'-o'-re-um*) [*sudor*]. 1. A hot-air bath. 2. A room for the administration of a hot-air bath.

Sudol (*su'-dol*). A preparation used to check excessive sweating, said to consist of wool-fat and glycerol with 30% of formaldehyd and oil of wintergreen.

Sudor (su'-dôr) [L.] Sweat. **S. anglicus**. See *Miliaria*. **S. cruentus**. Synonym of *Hematidrosis*. **S. nocturnus**, night-sweat. **S. sanguinosus**. See *Hematidrosis*. **S. urinosus**. See *Uridrosis*.

Sudoral (su'-dôr-ul) [sudor] Pertaining to or characterized by sweating.

Sudoresis (su-dor-e'-sis). Excessive sweating.

Sudoriferous (su-dor-îf'-er-us) [sudor, ferre, to bear]. Producing sweat.

Sudorific (su-dor-îf'-ik) [sudor, facere, to make] 1. Inducing sweating 2. An agent inducing sweating.

Sudoriparous (su-dor-îp'-er-us) [sudor, parere, to beget]. Secreting sweat.

Suet (su'-et) [sebum, suat] The internal fat of the abdomen of the sheep or cattle. **S. Mutton-** (*sebum proparatum*, U.S.P., B.P.), consists of stearin, palmitin, and olein, and is used as an emollient and in the preparation of ointments.

Suffocation (su'-fô-kô'-shun). Interference with the entrance of air into the lungs by means other than external pressure on the trachea.

Suffocative Catarrh. Capillary bronchitis.

Suffumigation (su'-fû-mî-gâ'-shun) [suffu, mîgare] 1. The act of fumigating from underneath. 2. A substance used for fumigation.

Suffusion (su'-fû'-shun) [sub-, fundere, to pour]. A spreading of a liquid over a surface, an extensive superficial extravasation of blood.

Sugar (shûg'-ar) [ME., *succe*, sugar] The generic name of a class of sweet carbohydrates. See *Saccharum*. Chemically, sugars are divided as follows: *cane-sugar*, $C_{12}H_{22}O_{11}$, *glucose*, *grape-sugar* or *dextrose*, $C_6H_{12}O_6$, *lactose*, *sugar of milk*; and *inulin*, a variety found in certain muscular tissues and in the juice of asparagus. **S.**, **Acorn**, acornite. **S.**, **Beet-**, saccharose obtained from species of *Beta*, especially the common beet, *Beta vulgaris*. **S.**, **Date-**, sugar from the fruit of *Phoenix dactylifera*. **S.**, **Diabetic**, glucose. **S.**, **Fruit-**, levulose. **S.**, **Grape-**, glucose in the solid state. **S.**, **house** **Eczema**, an *eczema* sometimes observed in laborers employed in sugar refineries. **S.**, **Invert**. See *Invert sugar*. **S.** of **Lead**, plumbi acetate. **S.**, **Left-rotating**, levulose. **S.**, **Leo's**. See *Linosy*. **S.** of **Malt**, maltose. **S.**, **Maple**, saccharose obtained from the sugar-maple. **S.**, **Meat**, inosit. **S.**, **Mucin**, levulose.

Sugarine (shûg'-ar-in). Methylbenzyl sulfonid, a compound said to have 400 times greater sweetening power than sugar.

Sugent (su'-jent) [impere, to suck]. Sucking, absorbent.

Suggestant (sug-est-ant). Fitted for sucking.

Suggestible (sug-est-î-bil) [suggestion]. Amenable to suggestion.

Suggestion (sug-est'-chun) [suggerere, to suggest, from sub, under, gerere, to bring]. 1. The artificial production of a certain psychic state in which the individual experiences such sensations as are suggested to him or

ceases to experience those which he is instructed not to feel. 2. The thing suggested. **S.**, **Posthypnotic**, the command to perform an act given the subject while in the hypnotic stage, and causing him to execute these acts after his return to his normal condition. **S.**, **Self-**, a suggestion made by the subject to himself, or a suggestion of his personality to another without external suggestion. **S.**, **therapy**, treatment of an ordered state by means of suggestion.

Suggillation, **Suggillation** (sug-ig-ill-ay-shun) [suggillare, to beat black and blue] An ecchymosis of the skin.

Sulcate (sul'-kat) [sulcus] Furrowed, grooved.

Sulcus (sul'-cus) [L., of sulci] A furrow or groove, applied especially to the furrows of the brain. See under *Furrow*. 1. A furrow on the nasal or ventricular surface of the brain. **S.**, **ad aqueductum vestibuli**.

Suliform. **S.**, **Cacuminal**, in comparative neurology, one beginning at the posterior angle of the flocculus and extending caudad in a direction parallel to the middle line, and fuses with its opposite from the other side.

S. centralis. See *Furrow of the brain*. **S.**

Culminal, in comparative neurology, one dividing the culmen from the rostrum and extending lateral to the middle line of the middle cerebral peduncle. **S.**, **habenæ**, the anterior or transverse sulcus of the habenula, usually joined to the habenular part of the interparietal sulcus. **S.**, **Floccular**, in comparative neurology, a sulcus separating the flocculus from the pons and from the surface of the middle cerebral peduncle. It arises just dorsal of the anterior median sulcus, extends dorsocaudomedial to the habenula, loops to the caudal limit of the flocculus. **S.**

Furcal, in comparative neurology, a sulcus just caudad of the culmen forming a clear mark of division between the *S. habenæ* and ventral branches of the stem of the pons of the cerebellum. **S.**, **habenæ**, the sulcus along the dorsomedial angle of the habenula just dorsal of the habenula. **S.**, **Hippocampic**, a constant feature of the cerebellum, running from the splenium to near the tip of the temporal lobe. It is collected with the *S. habenæ* by *S. maior*. See *Habenular sulcus*. **S.**

horizontalis cerebelli. See *S. Habenæ*. **S.**, **hypothalamicus**. See *S. Habenæ*. **S.**, **terflocular**, in lower mammals, a deep sulcus dividing the paraflocculus into two parts, the

supraflocculus dorsal and the infraflocculus ventral. **S.**, **Intraparietal**, that dividing the parietal from the temporal sulcus. **S.**, **limitans**, the furrow between the pons and the thalamus. **S.**, **Monro's**. See *Monro's sulcus*. **S.**, **Nodular**, in comparative

neurology, one apparently representing a central fissure and separating the nodulus of the cerebellum from the vermis. **S.**, **Peduncular**, of

Willer, a groove on the lower surface of the cerebellum lodging the *S. Habenæ*. See *Oculomotor fissure*. **S.**, **peduncularis**. See *S. Habenæ*. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

furrow separating the precentral gyrus from the postcentral gyrus. **S.**, **Precentral**, the

in front of the fissure of Rolando and running nearly parallel with it. **S., Pyramidal**, in comparative neurology, one arising just caudad of the peduncular sulcus and extending caudodorsomesad in the form of a crest; it divides the tuberal and pyramidal lobes. **S., Reil's**, the sulcus in the bottom of the sylvian fissure, separating the insula from the remainder of the hemisphere. **S. spiralis**, the grooved extremity of the lamina spiralis of the cochlea. **S. tubæ eustachii**, **S. tubarius**, a depression on the petrosa for the cartilaginous part of the eustachian tube. Syn., *Groove for the eustachian tube*; *Semicanalis tubæ eustachii*. **S. tympanicus**, a furrow on the concave surface of the tympanic plate for attachment of the membrana tympani. **S., Uvular**, in comparative neurology, one marking the boundary of the pyramidal lobe, arising at the caudal angle of the flocculus and extending caudoventromesad. **S., Vertical**. Same as **S., Precentral**. **S., Waldeyer's**, the sulcus spiralis of the cochlea.

Sulfaldehyd (*sul'-al'-de-hid*) [*suljur*; *aldehyd*]. An oily liquid of repulsive odor produced by the action of hydrosulfuric acid on acetic aldehyd; it is a hypnotic.

Sulfaminol (*sul'-jam'-in-ol*) [*suljur*; *amin*], $C_{12}H_{16}SNO_2$. Thioxidyphenylamin, a powder obtained by the action of sulfur on the salts of methoxydiphenylamin. It is used as an antiseptic in diseases of the antrum and frontal sinuses and in laryngeal tuberculosis. **S.-creasote**, an 8% solution of sulfaminol in creasote, soluble in alcohol; used as an antiseptic in rhinolaryngology. **S.-eucalyptol**, an 8% solution of sulfaminol in eucalyptol, soluble in alcohol; used in the same way as is sulfaminol-creasote. **S.-guaiacol**, an 8% solution of sulfaminol in guaiacol, soluble in alcohol; used as is sulfaminol-creasote. **S.-menthol**, an 8% solution of sulfaminol in menthol, soluble in alcohol; used as is sulfaminol-creasote. **S. Salicylate**, 8% of sulfaminol with salicylic acid, used in rheumatism. Dose 3-6 gr. (0.2-0.4 Gm.).

Sulfanilic Acid (*sul'-jan-il'-ik*). See *Acid, Sulfanilic*.

Sulfate (*sul'-jät*) [*suljur*]. A salt of sulfuric acid.

Sulfhydrate (*sul'-hi'-drät*) [*suljur*; *Üdwp, water*]. A compound of a base with the univalent radicle, *sulhydril*, SH.

Sulfhydric Acid. Used improperly as a synonym of sulfureted hydrogen.

Sulfid (*sul'-jid*) [*suljur*]. A compound of sulfur with an element or basic radicle.

Sulfur. See *Aurcolin*.

Sulfid (*sul'-fin-id*). Saccharin.

Sulfite (*sul'-fit*) [*suljur*]. A salt of sulfurous acid.

Sulfo- (*sul'-fo-*) [*suljur*]. A prefix denoting containing sulfur.

Sulfoazotized (*sul'-fo-as'-o-tized*). Containing sulfur and nitrogen.

Sulfobenzid (*sul'-fo-ben'-sid*), $C_{12}H_{10}SO_2$. A crystalline substance obtained from benzene

by action of fuming sulfuric acid; soluble in ether; melts at $129^\circ C.$, boils at $376^\circ C.$ Syn., *Diphenylsulfone*.

Sulfocarböl (*sul'-fo-kar'-bol*). See *Acid, Sulfocarbolic*.

Sulfocarbonate (*sul'-fo-kar'-bo-lät*) [*suljur*; *carbolic*]. A salt of sulfocarbolic acid.

Sulfocarbolic Acid (*sul'-fo-kar-bol'-ik*). See *Acid, Sulfocarbolic*.

Sulfocarbonated (*sul'-fo-kar'-bon-a-ted*). Containing sulfur and carbonic acid.

Sulfocarbonilid (*sul'-fo-kar-bon-il'-id*), $C_{11}H_{12}N_2S$. A crystalline substance obtained from anilin by action of alcohol and carbon disulfid with heat; soluble in alcohol and ether, melts at $153^\circ C.$ Syn., *Thiocarbonilid*.

Sulfocarbonism (*sul'-fo-kar'-bon-izm*). Poisoning by carbon disulfid through ingestion of some substance containing it or through inhalation of the fumes in manufactures (caoutchouc, etc.); marked by narcosis, with fall of temperature, convulsive chills, odor of radish on the breath, and in severe cases with peripheral paralysis, general anesthesia, and muscular atrophy.

Sulfon (*sul'-fo-jon*). A mixture of zinc sulfid and calcium sulfate.

Sulfonal (*sul'-fo-nal*) [*suljur*], $C_8H_{10}S_2O_4$. Diethylsulfon-dimethylmethane, a crystalline substance soluble in 15 parts of boiling water and about 450 parts of cold water. It is used as a hypnotic in insomnia from functional causes. Dose 10-40 gr. (0.65-2.6 Gm.).

Sulfonalism (*sul'-jon-al-izm*). A group of symptoms said to be occasioned by the prolonged administration of sulfonal.

Sulfonate (*sul'-jon-at*). A salt of sulfonic acid.

Sulfonation (*sul'-jon-a'-shun*). In chemistry the introduction of a sulfo-group in place of aromatic hydrogen atoms.

Sulfonethylmethane (*sul'-jon-eth-il-me'-thane*). *Sulphonethylmethanum* (U. S. P.), $C_8H_{10}S_2O_4$. A product of the oxidation of mercaptol. Dose 15 gr. (1 Gm.).

Sulfonmethane (*sul'-jon-me'-thane*). *Sulphonmethanum* (U. S. P.), $C_7H_{10}S_2O_4$. Dose 15 gr. (1 Gm.).

Sulfoparaldehyd (*sul'-fo-par-al'-de-hid*), $(C_2H_5S_2)_2$. A crystalline substance, soluble in alcohol, insoluble in water, recommended as a hypnotic. Syn., *Triithaldehyd*.

Sulfophenate, **Sulfophenylate** (*sul'-fo-je'-nät*, *sul'-fo-jen'-il-at*). See *Sulfocarbonate*.

Sulfophenol (*sul'-fo-je'-nol*). See *Acid, Sulfocarbolic*.

Sulfosalicylic Acid. See *Acid, Sulfosalicylic*.

Sulfosot (*sul'-fo-sot*). Potassium creasote sulfonate. It is antituberculous. Dose 5-20 gr. (0.3-1.3 Gm.) several times daily.

Sulfourea (*sul'-fo-u'-re-ah*). See *Thiourea*.

Sulfovinic Acid (*sul'-fo-vi'-nik*), $C_2H_5HSO_4$, ethylsulfuric acid, a monobasic acid formed by the action of sulfuric acid on alcohol.

Sulfoxism (*sul'-foks'-izm*). Poisoning with sulfuric acid.

Sulfur (*sul'-jur*) [*L.*, probably from *Skt.*, *sulvri*, sulfur]. A nonmetallic element

found native in volcanic regions (*volcanic sulfur*), and occurring combined with several metals, especially iron and copper, in the form of sulfids, called iron and copper pyrites. Sulfur can exist in various allotropic forms. The ordinary sulfur is a yellow, brittle solid, having a specific gravity of 2.07 and an atomic weight of 31.83. Symbol S. Its valence is two or six. Sulfur combines with oxygen to form sulfurous oxid (*sulfur dioxide*), SO_2 , and sulfuric oxid (*sulfur trioxide*), SO_3 , which by uniting with water form corresponding acids—sulfurous acid, H_2SO_3 , and sulfuric acid, H_2SO_4 . Other acids are also formed, hypsulfurous acid, H_2SO_2 , thiosulfuric acid, $\text{H}_2\text{S}_2\text{O}_3$, and a series of acids termed thionic acids, viz., $\text{H}_2\text{S}_2\text{O}_6$, $\text{H}_2\text{S}_3\text{O}_6$, $\text{H}_2\text{S}_4\text{O}_6$, and $\text{H}_2\text{S}_5\text{O}_6$. Sulfurous oxid, SO_2 , is employed as a disinfectant by fumigation. With hydrogen sulfur forms the offensively smelling gas, hydrogen sulfid (hydrosulfuric acid or sulfureted hydrogen), H_2S . With metals and other bases it forms sulfids. Sulfur is laxative and diaphoretic. It has been used in hemorrhoids, chronic rheumatism, gout, and locally in diphtheria and in various diseases of the skin, especially acne and scabies. **S.-alcohol**, metaplan. **S., Balsam of**, a solution of sulfur in linseed oil. **S. Dioxid**, See *Sulfur*. **S. Iodid** (*sulphuris iodidum*, U. S. P., B. P.), S_2I_2 , employed in various skin diseases. From it is prepared *unguentum iodidi* (B. P.). **S., Milk of**, See *S.*, *Precipitated*. **S. Ointment** (*unguentum sulphuris*, U. S. P., B. P.), an ointment prepared from washed sulfur. **S., Precipitated** (*sulphur precipitatum*, U. S. P., B. P.), Dose 1-3 dr. (4-12 Gm.). **S., Ruby**, See *Arsenic Dioxid*. **S., Spirit of**, sulfuric acid. **S., Sublimed** (*sulphur sublimatum*, U. S. P., B. P.), a fine yellow powder, having a slight characteristic odor, and a faintly acid taste. Dose 1-3 dr. (4-12 Gm.). Syn., *Miner's of sulfur*. **S. Trioxid**, See *Sulfur*. **S., Vegetable**, See *Lycopodium*. **S., Washed** (*sulphur lotum*, U. S. P.), a fine yellow powder without odor or taste. Dose $\frac{1}{2}$ dr.— $\frac{1}{2}$ oz. (2-16 Gm.).

Sulfuraria (*sul-fur-ee-rah*). A sediment of the San Filippo springs, used in skin diseases. A yellow powder, containing sulfur, 12.06%; calcium sulfid, 16.35%; organic substances, 13.14%; silica and strontium sulfate, 1.07%.

Sulfurated (*sul-fur-ee-ated*) [*sul-fur*]. Combined with sulfur.

Sulfuration (*sul-fur-ee-shun*) [*sul-fur*]. The act of dressing, anointing, or impregnating with sulfur.

Sulfuret (*sul-fur-ee-ey*). A sulfid. **S., Golden**, a sulfuret of antimony obtained by precipitating antimony acid by sulfureted hydrogen.

Sulfureted (*sul-fur-ee-ah*) [*sul-fur*]. Combined with sulfur. **S. Hydrogen**, See under *Sulfur*.

Sulfureus (*sul-fur-ee-us*). 1. Used by Maxon (1879) and early chemists in the sense of

combustible, as those substances capable of burning were supposed to contain a "sulfur" which gave them that property. 2. See *Sulfurous*.

Sulfuric (*sul-fur-eeb*) [*sul-fur*]. Combined with sulfur, derived from sulfur trioxid, SO_3 . **S. Acid**, See *Acid*, *Sulfuric*, and *Sulfur*.

Sulfuricity (*sul-fur-ee-tee*) The state of being sulfurous.

Sulfurize (*sul-fur-ee-ize*) To impregnate with sulfur.

Sulfurous (*sul-fur-ee-us* or *sul-fur-ee-us*) [*sul-fur*]. 1. Of the nature of sulfur. 2. Combined with sulfur, derived from sulfur dioxide, SO_2 . **S. Acid**, See *Acid*, *Sulfuric*, and *Sulfur*.

Sulphocalcine (*sul-fu-kal-see-n*). A proprietary antiseptic and solvent said to contain calcium oxid, washed sulfur, benzolene, and extract of pancreas, and oils of wintergreen and eucalyptus, used as a gargle or spray in diphtheria.

Sulphogen (*sul-fu-jen*). A proprietary antiseptic and solvent said to consist of sulfur, benzolene, aromatics, and the active principle of benzolene. It is indicated in gastric dyspepsia, etc.

Sulphume (*sul-fu-m*). A proprietary preparation said to be "liquid sulfur."

Sulphur, See *Sulfur* and its derivatives.

Sulphurine (*sul-fu-meen*). A preparation of some of the higher sulfids of sodium and potassium with sulfur.

Sumbul (*sum-bul*). Mark root. The root of the U. S. P. is the dried rhizome and root of an undetermined plant, probably of the family *Umbelliferae*. It contains angelicin, $\text{C}_{15}\text{H}_{12}\text{O}_2$, and a little valerinin and $\text{C}_8\text{H}_{16}\text{O}_2$. It is used as a narcotic in neurasthenia, hysteria, and in anemia, chronic liver disease, etc. Dose $\frac{1}{2}$ to 2 dr. (2-8 Gm.). **S., Extract of** (*extractum sumbul*, U. S. P.). Dose 4 gr. (0.25 Gm.). **S., Fluidextract of** (*fluidextractum sumbul*, U. S. P.). Dose 30 min. (2 Cc.). **S., Tincture of** (*tinctura sumbul*, B. P.). Dose 20 min.—1 dr. (1-2 Cc.).

Summer-complaint, See *Cholera infantum*.

Summer-rash, Lichen tropicus.

Sunburn, Superficial inflammation of the skin caused by exposure to the sun.

Sunstroke, Insolation.

Super- (*su-per*) [*su*, "above" or "superior"]; a prefix denoting above, upon, or exterior to.

Superalbal (*su-per-al-bah*). Situated in the upper part of the substance alba.

Superalimentation (*su-per-al-men-tay-shun*) [*super*, *alimentation*]. Overfeeding.

Superatrophy (*su-per-at-rof-ee*). Excessive atrophy.

Supercarbonate (*su-per-kar-bon-ate*). A carbonate.

Supercentral (*su-per-sen-tral*). Lying above the center.

Supercerebral (*su-per-see-re-bral*). In the superior part of the cerebrum.

Superciliary (*su-per-sil-ee-ary*; *su-per*, *cilium*, *cilium*). Pertaining to the eyebrows. **S. Entropion**, an entropion of the eyebrow against the cornea.

Supercilium (*su-per-sil'-e-um*) [L.]. The eye-brow.

Superduct (*su'-per-dukt*). To elevate; to lead upward.

Superduction (*su-per-duk'-shun*). Maddox's term for sursumduction.

Superdural (*su-per-du'-ral*). Lying in the upper part of the dura.

Superevacuation (*su-per-e-vak-u-a'-shun*). Excessive evacuation.

Superexcitation (*su-per-ek-si-ta'-shun*). Excessive excitement.

Superextension (*su-per-eks-ten'-shun*) [*super-*; *extendere*, to extend]. Excessive extension.

Superfecundation (*su-per-je-kun-du'-shun*) [*super-*; *fecundus*, fertile]. The fertilization of more than one ovum of the same ovulation resulting from separate acts of coitus.

Superfertilation (*su-per-je-ta'-shun*) [*super-*; *jetus*]. A fertilization of an ovum when there is another from a previous ovulation in the uterus.

Superficial (*su-per-fish'-al*) [*super-*; *facies*, face]. Confined to or pertaining to the surface.

Superficialis (*su-per-fish-e-a'-lis*) [L.]. 1. Superficial. 2. A superficial part, as *superficialis vasa*, a superficial branch of the radial artery.

Superfunction (*su-per-junk'-shun*). Excessive action of an organ or structure.

Supergenual (*su-per-jen'-u-al*) [*super-*; *genu*, knee]. Situated above the knee.

Superhumeral (*su-per-hu'-mer-al*). Borne upon the shoulders; situated above the shoulders.

Superhumeral (*su-per-hu'-mer-a'-le*). The acromion.

Superimpregnation (*su-per-im-preg-na'-shun*). 1. See *Superfertilation*. 2. Polyspermy, the piercing of the ovum by several sperm-cells.

Superincumbent (*su-per-in-kum'-bent*) [*super-*; *incumbere*, to lie upon]. Lying or resting upon something else.

Superior (*su-pe'-re-or*) [comparative of *superus*, high]. Higher; denoting the upper of two parts.

Superlabia (*su-per-la'-be-ah*) [*super-*; *labium*, a lip]. The clitoris.

Superligamen (*su-per-lig'-am-en*) [*super-*; *ligamen*, a bandage]. An outer bandage to hold a surgical dressing in place.

Supermedial (*su-per-me'-de-al*). Above the middle.

Supermotility (*su-per-mo-til'-it-e*). Excessive motility.

Supernormal (*su-per-nor'-mal*). Pertaining to a faculty or phenomenon which is beyond the level of ordinary experience; pertaining to a transcendental world.

Supernumerary (*su-per-nu'-mer-a-re*) [*super-*; *numerus*, a number]. Existing in more than the usual number.

Superolateral (*su-per-o-lat'-er-al*). Located in the upper part of the side of a structure.

Superoxygenation (*su-per-oks-e-jen-a'-shun*). Excessive oxygenation.

01

Superpetrosal (*su-per-pet-ro'-sal*). Situated on the upper part of the petrosa.

Superphosphate (*su-per-jos'-di*). An acid phosphate.

Supersalt (*su'-per-saw'll*). An acid salt.

Supersaturate (*su-per-sat'-u-rat*) [*super-*; *saturare*, to saturate]. To saturate to excess; to add more of a substance than a liquid can dissolve.

Supersensitive (*su-per-sen'-sil-iv*). Abnormally sensitive.

Superspinatus (*su-per-spi-na'-tus*). In veterinary anatomy an extensor of the humerus which has no exact analog in man.

Supertension (*su-per-ten'-shun*). See *Hypertension*.

Superversion (*su-per-vur'-shun*). See *Sursumversion*.

Supination (*su-pin-a'-shun*) [*supinus*, on the back]. 1. The turning of the palm of the hand upward. 2. The condition of being supine.

Supinator (*su'-pin-a-tor*). See under *Muscle*.

Supine (*su-pin')* [*supinus*, on the back]. Lying on the back face upward or palm upward.

Suplalbumin (*su-plag-al'-bu-min*). See *Schulobalbumin*.

Suplago toxin (*su-plag-o-tox'-in*). See *Schulotoxin*.

Supplemental (*sup-le-men'-tal*) [*supplere*, to complete]. Additional. S. Air. See under *Respiration*.

Suppository (*sup-oz'-it-a-re*) [*suppositorium*, from *sub-*, under, *ponere*, to place]. A solid medicated compound designed to be introduced into the rectum, urethra, or vagina. Its consistence is such that while retaining its shape at ordinary temperatures, it readily melts at the temperature of the body. The basis of most suppositories is oil of theobroma. For urethral suppositories a mixture of gelatin and glycerol is used. The only suppositories that are official are the glycerol suppositories (*suppositoria glycerini*, U. S. P.). See under *Glycerin*.

S., Tannic-acid, one part of tannin to five parts of cacao-butter.

Suppression (*sup-resh'-un*) [*suppressio*, a keeping back]. A sudden cessation of secretion, as *suppression* of the urine or of the menses.

Suppurant (*sup'-u-rant*) [*suppuratio*].

1. Promoting suppuration. 2. An agent promoting suppuration.

SUPERNUMERARY THUMB.
(Moulins.)

Suppuration (*sup-u-ra'-shun*) [*supurare*, to form pus]. The formation of pus.

Suppurative (*sup'-u-ra-tiv*) [*suppuration*].
1. Producing pus. 2. An agent that favors suppuration.

Supra- (*su-prah-*) [L., "above"] A prefix signifying upon or above.

Supraacromial (*su-prah-ak-ro'-me-ah*) [*supra-*; *acromion*]. Situated above the acromion.

Supraauricular (*su-prah-su-rik'-u-lar*) [*supra-*; *auricle*]. Above the external ear. S. Point. See under *Cranioelectric Point*.

Suprachoroid (*su-prah-ko'-roid*) [*supra-*; *choroid*]. Above the choroid or the choroid plexus.

Suprachoroidea (*su-prah-ko-roid'-e-ah*). The choroid layer next to the sclera.

Suprclavicular (*su-prah-kla-zik'-u-lar*) [*supra-*; *clavicle*]. Above the clavicle.

Supracondylar, Supracondyloid (*su-prah-kon'-dil-ar, su-prah-kon'-dil-oid*) [*supra-*; *condyle*]. Above a condyle.

Supracostal (*su-prah-kos'-tal*) [*supra-*; *costa*, a rib]. Above the ribs.

Supracotyloid (*su-prah-kot'-il-oid*) [*supra-*; *cotyled*]. Above the cotyloid cavity.

Supraepicondylar (*su-prah-e-pi-kon'-dil-ar*). Situated above an epicondyle.

Supragenual. See *Supergenual*.

Supraglenoid (*su-prah-glen'-oid*). Above the glenoid cavity.

Supraglottic (*su-prah-glot'-ik*) [*supra-*; *glottis*, glottis]. Above the glottis.

Suprahepatic (*su-prah-hep-at'-ik*). Above the liver. S. Veins, the hepatic veins.

Suprahyoid (*su-prah-hi'-oid*) [*supra-*; *hyoid*]. Above the hyoid bone.

Suprainguinal (*su-prah-in'-guin-al*). Above the groin.

Supralabialis (*su-prah-la-be-n'-lis*). See *Levator labii superioris* under *Muscle*.

Supraliminal (*su-prah-lim'-i-n-al*) [*supra-*; *limen*, threshold]. Lying above the threshold. S. Consciousness, the empiric self of common experience.

Supralumbar (*su-prah-lum'-bar*). Above the loin.

Supramalleolar (*su-prah-mal'-e-o-lar*) [*supra-*; *malleolus*]. Above a malleolus.

Supramammary (*su-prah-mam'-u-re*) [*supra-*; *mamma*, breast]. Above the mamma.

Supramandibular (*su-prah-man-dib'-u-lar*). Situated above the mandible.

Supramarginal (*su-prah-mar'-jin-al*) [*supra-*; *margin*]. Above an edge or margin, as the *supramarginal* convolution of the brain.

Supramastoid (*su-prah-mas'-toid*) [*supra-*; *mastoid*]. Above the mastoid process of the temporal bone.

Supramaxillary (*su-prah-maks'-il-o-re*) [*supra-*; *maxilla*]. Pertaining to the superior maxilla.

Supramental (*su-prah-men'-tal*) [*supra-*; *mentum*, chin]. Above the chin.

Supranuclear (*su-prah-nu'-kle-ar*). Above the nucleus.

Supraoblique (*su-prah-ob-li'-k-us*) [*supra-*; *obliquus*, slanting]. Common name for the oblique superior muscle of the eye.

Supraoccipital (*su-prah-ok-sip'-it-al*) [*supra-*; *occiput*]. 1. Above the occipital bone. 2. The upper part of the occipital bone.

Supraomphalodymia (*su-prah-om-fal'-o-dim-e-ah*) [*supra-*; *omphalos*, navel; *dymia*, to enter]. A form of somatosthenia in which the union is in the suprarenal region.

Supraorbital (*su-prah-or-bit-al*) [*supra-*; *orbit*]. 1. Above the orbit, as the *supraorbital* nerve. 2. Pertaining to the supraorbital nerve.

Suprapatellar (*su-prah-pat'-el-ar*) [*supra-*; *patella*]. Above the patella.

Suprapelvic (*su-prah-pel'-ik*) [*supra-*; *pelvis*]. Above the pelvis.

Suprapineal (*su-prah-pin'-e-al*) [*supra-*; *pinna*]. Above the pineal gland.

Suprapontine (*su-prah-pont'-in*) [*supra-*; *pons*, a bridge]. Above or in the superior part of the pons.

Suprapubic (*su-prah-pu'-bik*) [*supra-*; *pubes*]. Above the pubes.

Suprarenaden (*su-prah-ren'-ad-en*). A preparation made from the suprarenal capsule used in Addison's disease, neurasthenia, etc. Dose, 15-25 gr. (1.0-2.0 g.) 3 or 4 times.

Suprarenal (*su-prah-ren'-al*) [*supra-*; *ren*, the kidney]. 1. Above the kidney, as the *suprarenal* capsule. 2. Pertaining to the suprarenal capsule. S. Body, S. Capsule, a small triangular organ situated above the kidney, and consisting of an external or cortical and an internal or medullary portion. The cortex consists of polygonal cells disposed in three layers—the zona glomerulosa, zona fasciculata, and zona reticularis. Fibrous septulae, derived from the capsule, extend into the organ and separate the groups of cells. The medulla contains cords and networks of polygonal cells, and in its center ganglion-cells and nonmedullated nerve fibers. The function of the suprarenal body is not definitely known—it is believed to bear some relation to pigment production. S. Epithelioma. See *Gonorrhea's* *Journal* 5. Rests. See *Rests*, *Adrenal*.

Suprarenne (*su-prah-ren'*). A suprarenal capsule.

Suprarennin (*su-prah-ren'-in*). A synonym of *Suprarenin*.

Suprascapular (*su-prah-skap'-u-lar*) [*supra-*; *scapula*]. Above or in the upper part of the scapula.

Supraspinal (*su-prah-spi'-nal*) [*supra-*; *spina*]. Above a spine.

Supraspinale (*su-prah-spi-na'-le*). See *Supraspinatus*.

Supraspinatus (*su-prah-spi-na'-tus*) [*supra-*; *spina*]. Above the spine, as the *supraspinatus* muscle. See under *Muscle*.

Supraspinous (*su-prah-spi-nus*) [*supra-*; *spina*]. Above the spine, as the *supraspinous* process.

the scapula or of a vertebra. **S. Fossa**, the triangular depression above the spine of the scapula.

Suprasternal (su-prah-ster'-nal) [supra-; sternum]. Above the sternum.

Suprasylvian (su-prah-sil'-ve-an). Above the sylvian fissure.

Supratemporal (su-prah-tem'-po-ral) [supra-; temporal]. Above the temporal region.

Supratrochlear (su-prah-trok'-le-ar) [supra-; trochlea]. Above the trochlea or pulley of the superior oblique muscle.

Supraturbinal (su-prah-tur'-bin-al). The superior turbinate bone.

Supravaginal (su-prah-raj'-in-al) [supra-; vagina]. 1. Above a sheath; on the outside of a sheath. 2. Above the vagina.

Supraverse (su'-prah-verj) [supra-; vergere, to incline]. To diverge in a vertical plane.

Supraverge (su-prah-ver'-jenz). The ability of the two eyes to diverge in a vertical plane, an ability measured by a prism of 2°-3°. Syn., **Sursumvergence**. **S., Right**, the ability to overcome prisms, base down, before the right eye, or base up before the left eye.

Sura (su'-rah) [L.]. 1. The calf of the leg. 2. A form of toddy made in western Africa from the sap of the oil-palm.

Sural (su'-ral) [sura]. Pertaining to the calf of the leg.

Surcingle (sur'-sin-gl) [super-; cingulum, a belt]. The tail of the corpus striatum.

Surculus (sur'-ku-lus) [L., "a twig, shoot"; pl., *surculi*]. In biology, a sucker. **Surculi fellei**, the ductules conveying the bile to the hepatic ducts.

Surdity (sur'-dit-e) [surdus, deaf]. Deafness.

Surdomutitas (sur-do-mut'-tit-as) [surdus; mutus, mute]. Deaf-mutism.

Surexcitation (sur-eks-i-ta'-shun) [super-; excitatio, a rousing]. Excessive excitement.

Surface (sur'-fis) [Fr., *surface*]. 1. The exterior of a body. 2. The face or faces of a body; a term frequently used in anatomy in the description of bones. **S., Fixation**, a curved surface the points of which occupy in the two monocular fields positions which are identical horizontally, regardless of vertical disparity. **S., Labial**, the surface of a tooth-crown which is toward the lips. **S.-wells**, those which obtain their supply from the subsoil water.

Surgeon (sur'-jun) [see *Surgery*]. One who practises surgery.

Surgeonry (sur'-jun-re). The practice of a surgeon.

Surgeonship (sur'-jun-ship). The office of a surgeon.

Surgery (sur'-jer-e) [OF., *chirurgie*, from *chelp*, hand; *εργειν*, to work]. The branch of medicine dealing with diseases requiring operative procedure. **S., Antiseptic**, the application of antiseptic methods in the treatment of wounds. **S., Major**, that in which the operations are important and involve

risks to life. **S., Minor**, that part of surgery including procedures not involving danger to life, as bandaging, the application of splints, dressings, sutures, counterirritation, cauterization, and bloodletting. **S., Plastic**, repair of defects by transference of tissue.

Surgical (sur'-jik-al) [surgery]. 1. Pertaining to surgery. 2. Produced by surgical operations. **S. Kidney**, suppuration of the kidney due to disease of the genitourinary tract. **S. Neck** (of the humerus), the constricted part of the shaft below the tuberosities, so called because it is a common seat of fracture.

Surinam Bark (su'-rin-am). The bark of *Andira retusa*, used as an anthelmintic.

Surinamin (su-rin-am'-in). An alkaloid found by Hüttenschmid, 1824, in the bark of *Andira retusa*. It forms fine, gleaming needles, without taste or odor and of neutral reaction, soluble in water, and with anthelmintic action. Syn., *Andirin*; *Geoffroyin*.

Surons (su'-rons). Skins which have served the purpose of carrying drugs, especially from South America.

Surra (soor'-rah) [native Indian name]. An epizootic pernicious anemia in horses, mules, and camels due to *Trypanosoma evansi*.

Surrenal (sur-re'-nal) [supra-; ren, the kidney]. 1. Suprarenal. 2. A suprarenal gland.

Sursumduction (sur-sum-duk'-shun) [sursum, up; ducere, to lead]. 1. The power of the two eyes of fusing two images when one eye has a prism placed vertically before it. 2. See *Supraverge*. 3. A movement of either eye alone upward. **S., Right**, the absolute power that the right eye has to rotate upward.

Sursumvergence (sur-sum-usur'-jenz) [sursum; vergere, to bend]. The turning of the eyes upward; supravergence.

Sursumversion (sur-sum-ver'-shun) [sursum; vertere, to turn]. The movement of both eyes up.

Surumpe. The name in the Andes for hyperesthesia of the retina observed at great altitudes.

Survivorship (sur-vi'-vor-ship) [super; vivere, to live]. In medical jurisprudence the probability of a certain individual having survived others when all concerned were in the same accident and all were killed.

Susceptivity (sus-sep-tiv'-it-e) [suscipere, to undertake]. The state or quality of being susceptible.

Suscitability (sus-si-ta-bil'-it-e) [suscitare, to lift up]. The quality of being easily roused or excited.

Suscitation (sus-si-ta'-shun). The act of exciting.

Susotoxin (su-so-lok'-sin) [sus, pig; *τοξικη*, poison]. $C_{10}H_{15}N_2$. A ptomain found in cultures of the bacillus of hog cholera.

Suspension (sus-pen'-shun) [sub-; pendere, to hang]. Hanging; a mode of treatment of tabes dorsalis and other nervous diseases.

In which the patient hangs by the neck, chin, and shoulders.

Suspensory (sus-pen'-sō) [see *Suspension*]

1. Serving for suspension, as *suspensory* ligament, *suspensory* bandage. 2. A device for suspending a part.

Sustentaculum (sus-len-tak'-u-lum) [*susten-tare*, to support]. A support. *S. tali*, a process of the os calcis supporting the astragalus.

Susurrus (su-sū'-rus) [L.]. A soft murmur.

Sutural (su'-tu-ral) [suture]. Pertaining to a suture.

Suture (su'-tur) [sutura, from *sueo*, to sew].

1. A line of joining or closure, as a *cranial suture*. 2. A stitch or series of stitches used in closing the lips of a wound.

S., **Arcuate**, *S.*, **Basilar**, the junction between the basilar surface of the occipital bone and the posterior surface of the body of the sphenoid.

S., **Billroth's**, the buttonhole stitch. *S.*, **Biparietal**. See *S.*, **Sagittal**.

S., **Blatin's**, a modification of Gely's in which one needle and two threads of different colors are used. *S.*, **Buried**, one completely covered by and not involving the skin.

S., **Catgut**, one in which the material employed is catgut. *S.*, **Chainstitch**, the sewing machine stitch.

S., **Circular**, one that is applied to the entire circumference of a divided part, as the intestine. *S.*, **Cobbler's**, one made by arming a needle with two threads.

S., **Continuous**, *S.*, **Glover's**, one in which the thread passes across the wound continually in the same direction, and is tied only at the beginning and end. *S.*, **Coronal**, the union of the frontal with the parietal bones trans-

versely across the vertex of the skull. *S.*, **Cranial**, the line of union of two or more cranial bones. *S.*, **Cross**, the applica-

tion of two single stitches to a T-wound. *S.*, **Czerny's**, for intestinal wounds, one in which the needle is passed from the serous surface through the wound, down to, but not including, the mucous membrane, and through the wound on the opposite side, and out on the serous surface.

S., **Czerny-Lembert**, the application of Lembert sutures after the Czerny sutures are in place. *S.*, **Dry**, one carried through adhesive plaster straps applied to the lips of the wound. *S.*, **Ethmo-**

frontal, the union between the frontal and ethmoid bones. *S.*, **Ethmolacrimal**, the union between the lacrimal and ethmoid bones. *S.*, **Ethmosphenoid**, the union between the sphenoid and ethmoid bones. *S.*, **Ford's Friction-knot**, a square knot is tied for the first stitch, then the needle is passed as for a single knot stitch, turning the thread twice around the needle instead of once. The last stitch is a square knot.

S., **Ford's Single-knot**, the needle is passed through the divided tissue and, without turning the thread, a square knot is tied. For the second stitch the thread is held or thrown so that the needle will emerge in a loop, and when it is drawn through, a single knot will

be formed. *S.*, **Ford's Square-knot**, the same steps are taken as for the single knot, and for the second stitch pass the needle under the thread connecting the knots in the opposite direction from which the needle was inserted into the tissue.

S., **The Four Masters'**, a suture of the intestine used in the thirteenth century in which the trachea of a goose was used as a means of support and the ends of the severed intestine brought into position on it and secured with two interrupted stitches which did not pass the trachea. *S.*, **Frontal**, a suture which at birth joins the two frontal bones from the vertex to the root of the nose; that which afterward becomes obliterated. *S.*, **Frontomaxillary**, the union between the frontal and maxillary bones. *S.*, **Frontomaxillary**, the union between the superior maxillary and frontal bones. *S.*, **Frontonasal**, the union between the nasal and frontal bones. *S.*, **Frontoparietal**. See *S.*, **Coronal**. *S.*, **Frontosphenoid**, the union between the sphenoid, the sphenoid bone and the frontal bone. *S.*, **Frontotemporal**, the union between the frontal and temporal bones. *S.*, **Graham's Method of**, in suturing a wound it consists in placing in each turn of the knot a running pull thread. *S.*, **Granny-knot**, a square knot stitch is formed and the needle is passed in the opposite direction from which it was inserted under the thread in forming a square knot. *S.*, **Grieg Smith's**, a modification of Appolito's method, which removes the necessity of the insertion of a foreign substance in the lumen of the gut. *S.*, **Harleip**, *S.*, **Twisted**, one in which the edges of the wound are transfixed with pins and approximated, secured by twisting or wrapping the ends of the pins with thread. *S.*, **Intermaxillary**, the union between the superior maxillary bones. *S.*, **Internasal**, the union between the nasal bones. *S.*, **Interparietal**. See *S.*, **Sagittal**. *S.*, **Interrupted**, one of a series of sutures passed through the margins of the wound, and each of which is tied separately. *S.*, **Jugal**. See *S.*, **Sagittal**. *S.*, **Kalt**. See *Stitch Suture*. *S.*, **Lambdoid**, the union between the two superior borders of the occipital bone and the parietal bones. *S.*, **Larry's**, a double glove suture with threads of a different color. *S.*, **Lembert's**, an intestinal suture for wounds in which the needle is passed transversely to the wound through the peritoneal and muscular coats and out again on one side of the wound and then carried across the wound and made to penetrate the two outer coats as before. *S.*, **Lewis'**, a modification of the right-angle stitch. *S.*, **Longitudinal**. See *S.*, **Appolito**. *S.*, **Marcey's**, the cobbler-stitch used for hernia. *S.*, **Mastoocephal**. See *S.*, **Coronal**. *S.*, **Mastoparietal**. See *S.*, **Parietomastoid**. *S.*, **Mattress**, a continuous suture which is made back and forth through both lips of a wound. *S.*, **Maxillofacial**, the union between the lacrimal and maxillary

SUTURE OF LE DENTU.

TENDON-SUTURE OF LE FORT.

TENDON-SUTURE.—(Welfler, after Lejars.)

TONGUE AND GROOVE SUTURE.

LEMBERT'S SUTURE.

JOSEPH'S SUTURE

maxillary bones. **S.**, **Mediofrontal**. See **S.**, **Frontal**. **S.**, **Metopic**. See **S.**, **Frontal**. **S.**, **Mitchell-Hunner's**, the application of a quilted suture to the mesenteric border of the gut. **S.**, **Nasofrontal**, the frontonasal suture. **S.**, **Nasomaxillary**, the union between the superior maxillary and nasal bones. **S.**, **Occipital**. See **S.**, **Lambdoid**. **S.**, **Occipitomastoid**, the union between the mastoid portion of the temporal bone and the occipital bone. **S.**, **Occipitoparietal**. See **S.**, **Lambdoid**. **S.**, **Palatine**, the union between the palatal bones. **S.**, **Palatine Transverse**. See **S.**, **Palatomaxillary**. **S.**, **Palatomaxillary**, a suture between the palatal processes of the os palatinum and the superior maxilla. **S.**, **Parallel**, a continuous subcuticular suture. **S.**, **Parietomastoid**, the union between the mastoid portion of the temporal bone and the parietal bone. **S.**, **Petrooccipital**, the union between the occipital bone and the petrous portion of the temporal. **S.**, **Petro-sphenoid**, the union between the great wing of the sphenoid bone and the petrous portion of the temporal. **S.**, **Pin-**. See **S.**, **Hare-lip**. **S.**, **Quill-**, **S.**, **Quilled**, one in which a doubled thread is passed and tied over quills or pieces of a soft catheter. **S.**, **Quilted**, one similar to a mattress suture. **S.**, **Relaxation-**, one introduced some distance from the wound-margin, carried through its depths, and made to emerge at some distance on the opposite side, to relieve the tension of the wound-sutures proper. **S.**, **Sagittal**, the union between the superior borders of the parietal bones. **S.**, **Sclerocorneal**, of **Kalt**. See **Stitch**, **Sclerocorneal**. **S.**, **Shotted**, one in which both ends of the suture are passed through a perforated shot, which is then tightly compressed. **S.**, **Sphenomalar**, the union between the malar bone and the great wing of the sphenoid. **S.**, **Sphenopalatine**, a cranial suture between the sphenoid and palatine bones. **S.**, **Sphenoparietal**, the union between the greater wing of the sphenoid bone and the parietal bone. **S.**, **Sphenotemporal**, the union between the temporal and the sphenoid bone. **S.**, **Squamoparietal**, **S.**, **Squamosal**, the union between the squamous portion of the temporal bone and the parietal bone. **S.**, **Squamosphenoid**, the union between the great wing of the sphenoid and the squamous portion of the temporal bone. **S.**, **Subcuticular**, a buried, continuous suture in which the needle is passed horizontally into the true skin back and forth until the wound is closed. **S.**, **du Verger's**, a modification of the four masters'; he used only two stitches, both of which included the foreign support. **S.**, **Watson's**, a glove's stitch uniting the gut over a cannula of fish-glue. **S.**, **Weber's**, a fine groove or suture on the inner surface of the nasal process of the superior maxilla. **S.**, **Wormian**, **Anterior**, the upper part of the lambdoid suture.

Suzanne's Gland. A mucous gland found in

the floor of the mouth close to the median line.

Swallowing. Deglutition.

Swallow's-nest. The *nestus hirundinis*.

Swamp-sassafras. The *Magnolia glauca*, the bark of which is aromatic and diaphoretic.

Sweat (*sudor* [AS., *sweat*]). The secretion of the sudoriferous glands, consisting of a transparent, colorless, aqueous fluid, holding in solution neutral fats, volatile fatty acids, cholesterol, traces of albumin and urea, lactic acid, sodium lactate, sodium chloride, potassium chloride, and traces of alkali phosphates. **S.**, **Bloody**. See **Hæmorrhoid**. **S.**, **English**. See **Sweating-sickness**.

S.-gland, one of the small glands secreting the sweat, situated in the true skin and subcutaneous areolar tissue, consisting of a convoluted tube from which the excretory duct passes outward through the skin. In its passage through the epidermis the duct is more or less spiral. **S.**, **Picardy**. See **Sweating-sickness**.

Sweating-sickness. An infective, febrile epidemic disorder, characterized by a rapid onset and profuse perspiration. It was prevalent in England at the end of the fifteenth and first half of the sixteenth century. **S.**, **English sweat**; *Malaria*, *Immedy fever*, *Sudor anglicus*; Fr., *Sudette malariale*, *Chol. Schweissfriesel*.

Swediaur's Disease. See **Robert's Disease**.

Swedish Movements. Certain gymnastic exercises intended to exercise and develop the human body, and assist in good nutrition, etc.

Sweet. Having a taste like that of sugar or honey.

Sweetbread. 1. The pancreas. 2. The thymus.

Swelling (*swell-ing*) [MF., *swollen*, to swell]. Any morbid enlargement, inflation, tumescence, or protuberance. **S.**, **Albuminous**. See **S.**, **Cloudy**. **S.**, **Blennorrhagic** (but the knee the enlargement of the knee which occurs in gonorrhœal synovitis). **S.**, **Cloudy**, a swelling of cells due to disturbed nutrition. **S.**, **Glassy**, amyloid degeneration. **S.**, **Lactæal**, a swelling of the breast due to obstruction of the lactæal ducts. **S.**, **Sommering's Crystalline**, an annular swelling found in the lower part of the capsule, behind the iris, after extraction of the crystalline lens. **S.**, **White**. 1. A disease of the bones which causes them to dilate as if distended by pressure from within. 2. A tumour, usually of the wrist or ankle, due to cysts. Syn., *Hyposthosis*.

Swine-fever. Hog cholera.

Swine Plague. An infectious disease of swine, due to the bacillus of swine plague.

Swoon. Syncope.

Sycoceryl (*si-coc-er-yl*). Applied to an alcohol the acetate of which is a constituent of sycoretin. **S.**, **Hydrate**, sycoceryl alcohol.

Sycoretin (*si-coc-er-ty-n*) [Lous., fig., cork, resin]. A resin found in 1855 in *Eucalyptus* in New South Wales.

Sycose (si'-kōz). Saccharin.

Sycosiform (si-kō'-se-form) [sycosis; forma, form]. Resembling sycosis.

Sycosis (si-kō'-sis) [σύνκωσις, a fig-like excrescence on the flesh]. An inflammatory disease affecting the hair-follicles, particularly of the beard, and characterized by papules, pustules, and tubercles, perforated by hairs, together with infiltration of the skin and crusting. **S. parasitaria**, **S., Parasitic**, barber's itch, a disease of the hair-follicles, usually affecting the region covered by the beard, and due to the presence of the trichophyton fungus.

Sydenham's Chorea. See *Chorea*, *Sydenham's*. **S.'s Cough**. See *Cough*, *Sydenham's*.

Syllabic Utterance. Scanning speech.

Sylvester's Method. See under *Artificial Respiration*.

Sylvian (sil'-ve-an). Described by the anatomist Sylvius (1478-1555). **S. Angle**, the angle formed by the posterior limb of the sylvian fissure with a line perpendicular to the superior border of the hemisphere. **S. Aqueduct**. See *Aqueductus sylvii*. **S. Artery**, the middle cerebral artery, lying in the fissure of Sylvius. **S. Fissure**. See *Fissure of Sylvius*. **S. Fossa**, **S. Valley**, the depression which appears on the surface of the brain about the end of the second month of fetal life and afterward becomes the sylvian fissure. **S. Vein**, one of the veins of the convexity of the brain, which courses at first along the fissure of Sylvius and then ascends across the hemisphere. **S. Ventricle**, the fifth ventricle.

Sylviduct (sil'-ve-duk't). The aqueduct of Sylvius.

Sym- (sim-). The same as *Syn-*.

Symbiosis (sim-be-a'-sis). See *Commensalism*.

Symblepharon (sim-blef'-ar-on) [σύν, together; βλέφαρον, the eyelid]. Adhesion of the eyelids to the eyeball. **S., Anterior**, when the edge of the lid is adherent. **S., Posterior**, when the adhesion is at the conjunctival fold. **S., Total**, when the entire lid is adherent.

Symblepharopterygium (sim-blef'-ar-o-ter-i-j'-e-um). A variety of symblepharon in which a cicatricial band resembling a pterygium connects the lid and the eyeball.

Syme's Amputation, **S.'s Operation**. Amputation at the ankle-joint.

Symmélus, **Symélus** (sim'-el-us) [σύν, together; μέλος, a limb]. A species of monster characterized by imperfect development of the pelvis and lower extremities with more or less intimate fusion of the latter.

Symmetric, **Symmetrical** (sim-el'-rik, sim-el'-rik-al) [συμμετρία, proportion]. Pertaining to or exhibiting symmetry. **S. Gangrene**. See *Sphaceloderma*.

Sympathetic (sim-path-el'-ik) [see *Sympathy*].

1. Pertaining to or produced by sympathy.
2. Conveying sympathy or sympathetic im-

pulses, as the *sympathetic* system. **S. Ganglions**. See under *S. System*. **S. Irritation**, irritation of an organ arising from irritation of another related organ, as *sympathetic irritation* of one eye from irritation of the other. **S. Nerve**. See *S. System*. **S. Ophthalmia**, inflammation of one eye arising subsequent to inflammation of the other eye. **S. Plexuses**. See under *S. System*. **S. System**, a system of ganglions (*sympathetic ganglions*) forming a chain from the cranium to the end of the spinal column, connected together by nerve-fibers, and supplying the viscera and blood-vessels. At intervals the sympathetic nerves and ganglions form plexuses (*sympathetic plexuses*).

Sympatheticectomy (sim-pa-thet-e-sek'-to-me). Excision of parts of the sympathetic nerve.

Sympatheticoparalytic (sim-path-et-ik-o-par-al-i'-ik). Due to paralysis of the sympathetic nerve.

Sympatheticotonic (sim-path-et-ik-o-ton'-ik). Applied to migraine caused by tonic contraction of the arteries due to overaction of the sympathetic.

Sympathiconeuritis (sim-path-ik-o-nu-ri'-is). Inflammation of the sympathetic nerve.

Sympathicotripsy (sim-path-ik-o-trip'-se) [sympathy; τριψω, to crush]. In treatment of mental diseases, crushing of the superior cervical ganglion.

Sympathism (sim'-path-izm). Susceptibility to hypnotic suggestion.

Sympathist (sim'-path-ist). One who is susceptible to hypnotic suggestion.

Sympathy (sim'-path-e) [σύν, together; πάθος, suffering]. The mutual relation between parts more or less distant, whereby a change in the one has an effect upon the other.

Symperitoneal (sim-per-it-on-e'-al) [syn; peritoneum]. Connecting artificially two parts of the peritoneum.

Symphiocephalus (sim-fi-o-sef'-al-us) [syn; φέρω, to grow; κεφαλή, the head]. A twin monster with the union in the head.

Symphorol (sim'-for-ol) [syn; φέρω, that which is brought forth]. A generic name for the caffeine sulfates or sulfocaffeinates. **S. L**, lithium and caffeine sulfonate. **S. N**, sodium and caffeine sulfate. **S. S**, strontium and caffeine sulfonate.

Symphysal, **Symphyseal** (sim'-fiz-al, sim'-fiz-e-al) [symphysis]. Pertaining to a symphysis.

Symphyseorrhaphy, **Symphysiorrhaphy** (sim-fiz-e-or'-a-f-e) [symphysis; ραφή, a seam]. Suture of a divided symphysis.

Symphysiotomy (sim-fiz-e-ol'-o-me) [symphysis; τομή, a cutting]. The operation of dividing the symphysis pubis for the purpose of increasing the diameters of the pelvic canal and facilitating labor.

Symphysis (sim'-fiz-is) [σύν, together; φέρω, to grow]. The line of junction of two bones.

S. cartilaginosa, synchondrosis. **S. ligamentosa**, syndesmosis. **S. mandibulæ**, **S. menti**, the central vertical ridge upon

the outer aspect of the lower jaw, showing the line of union of the two halves. **S. pubis**, the line of junction of the pubic bones.

Sympiesometer (sim'pe-es-om'et-ee) [sîn, together, πίπν, a squeezing, μέτρον, a measure] An apparatus for estimating pressure.

Symplocarpus foetidus (sim'plo-kar'-pus fel'id-us) *Dracopis foetidus*, or skunk-cabbage, the rhizome of which is stimulant, antispasmodic, and narcotic, and has been used in asthma, chronic rheumatism, chorea, hysteria, etc. Dose 10-20 gr. (0.65-1.3 Gm.).

Symplocos (sim'plo-kos) [σύνπλοκος, twined]. A genus of the *Styracaceae*. The leaves of *S. alstonia*, a tree of South America, are used as maté and also as a digestive and diaphoretic. *S. platyphylla*, sweetleaf, is indigenous to the southern United States and South America; the root bark is used in intermittent fever. *S. racemosa* is indigenous to India, and furnishes a red coloring-matter and both bark, used in plasters. It contains lotourin, colioturin, and lotouridin. *S. tinctoria*, sweetleaf, of South Carolina, contains in its sweet leaves a yellow coloring-matter. The root is used as a digestive.

Symptom (sim'p-tom) [sîn, together; σύνπτω, a falling]. The change in a patient occurring during disease and serving to point out its nature and location. See **Sign**. **S.**, Accessory, **S.**, Assident, a minor symptom. **S.**, Accidental, one intervening in the course of a disease without having any connection with it. **S.-complex**, the ensemble of symptoms of a disease. See also **Syndrome**. **S.-complex**, **Avellis'**, paralysis of one-half of the soft palate, associated with a recurrent paralysis on the same side. **S.-complex**, **Benedikt's**, tremor of one side of the body, in part or wholly, and oculomotor paralysis of the other side. **S.-complex**, **Bernhardt-Roth's**. See **Bernhardt's Paresis**. **S.-complex**, **Erb-Goldflam's**. See **Erb's Disease**. **S.-complex**, **Escherich's**. See **Pseudotetanus**. **S.-complex**, **Friedmann's Vasomotor**, a train of symptoms following injury to the head, consisting of headache, vertigo, nausea and intolerance of mental and physical exertions and of galvanic excitation; it is occasionally associated with ophthalmoplegia and mydriasis. These phenomena may subside and recur with greater intensity, with fever, unconsciousness, and paralysis of the cranial nerves, ending in fatal coma. They are probably due to an encephalitis of slow development with acute exacerbations. **S.-complex**, **Hoppe-Goldflam's**. See **Erb's Disease**. **S.-complex**, **Putnam-Dana's**, combined sclerosis of the lateral and posterior columns of the spinal cord. **S.-complex**, **Roth's**. See **Bernhardt's Paresis**. **S.-complex**, **Wilk's**. See **Erb's Disease**. **S.**, Concomitant, accessory phenomena occurring in connection with the essential phenomena of a disease. **S.**, Constitutional, **S.**, Gen-

eral, one produced by the effect of the disease on the whole body. **S.**, Dissociation. See **Dissociation symptom**. **S.**, Equivocal, one of doubtful significance. **S.**, Local, or indicating the concentration of a disease in a certain part of the body. **S.**, Objective, one observed by the physician. **S.**, Rational, a subjective symptom. **S.**, Signal, the first disturbance of sensation preceding a more extensive convulsion, as the heralding an attack of epilepsy. **S.**, Subjective, one observed only by the patient. **S.**, turpitudinis, *nausephorantia*.

Symptomatic (sim'p-tom-et-ik) [sym'p-tom-ia]. 1. Pertaining to or of the nature of a symptom. 2. Affecting symptoms, as symptomatic treatment. **S.** Anthrax. See **Parasitology**.

Symptomatology (sim'p-tom-et-ol-og-ee) [symptom, λόγος, narrative]. The account of symptoms, the symptoms of disease taken together as a whole.

Sympus (sim'pus) [sîn, together, πύς, leg]. A monster in which there is a coalescence of the lower limbs.

Syn- (sîn) [sîn, together]. A prefix signifying with or together.

Synadelphus (sin-ol-el'-fus) [syn-, disadelphos, brother]. A monster having eight arms with but one head and trunk.

Synalgia (sin-ol'-je-ah) [syn-, ἀλγία, pain]. Pain felt in a distant part from an injury or stimulation of another part.

Synanthema (sin-an'-them-ah) [συνανθήκη, blossom together]. A group of effluorescences on the skin.

Synantherin (sin-an'-ther-in) See **Insulin**.

Synanthrose (sin-un'-thros). See **Lecithin**.

Synapse (sin-op'-ee) See **Synapsis**.

Synapsis (sin-op'-ee) [syn-, ἀπν, to clasp]. The anatomic relation of one neurone and another. The intertwining of the terminal arborizations of the neurones by means of which nerve impulses may pass from one to another. **Syn.**, **Synapse**.

Synaptase (sin-op'-tee) See **Fusulin**.

Synarthrodia (sin-ar-thro'-de-ah). See **Synarthrosis**.

Synarthrodial (sin-ar-thro'-de-ah) [synarthrosi]. Pertaining to or of the nature of a synarthrosis.

Synarthrophysis (sin-ar-thro-fi'-sis) [syn-, ἀρθρ, joint; φύω, to grow]. Progressive development of the joints.

Synarthrosis (sin-ar-thro'-sis) [syn-, ἀρθρ, a joint]. A form of articulation in which the bones are immovably bound together without any intervening synovial cavity. The joints are sutures, in which processes are interlocked behind levers, in which a thin plate of cartilage is inserted into a cleft of another, and gomphosis, in which a conical process is held by a socket.

Syncaryosis (sin-kar-ee'-sis) [syn-, κάρω, to knit]. A term proposed by Huxley for the invagination or the growth of the walls of adjacent cells.

Syncephalus (*sin-sef'-al-us*) [*syn-*; *κεφαλή*, head]. A monster with two heads fused into one.

Synchondrosis (*sin-kon-dro'-sis*) [*syn-*; *χόνδρος*, a cartilage]. A joint in which the surfaces are connected by a growth of cartilage. *S.*, **Sacroiliac**, the union between the sacrum and the ilium.

Synchondrotomy (*sin-kon-drot'-o-me*) [*syn-*; *χόνδρος*, cartilage; *τέμνω*, to cut]. A division of the cartilage uniting bones, especially of that of the symphysis pubis.

Synchronous (*sin'-kro-nus*) [*syn-*; *χρόνος*, time]. Occurring at the same time.

Synchysis scintillans (*sin'-kis-is sin'-til-lans*) [*syn-*; *χρῆσις*, a mixing together]. The presence of bright, shining particles in the vitreous humor of the eye.

Synclonus (*sin'-klo-nus*) [*syn-*; *κλόνος*, clonus]. 1. Clonic movements occurring simultaneously in several muscles. 2. A disease thus characterized, as chorea.

Syncope (*sin'-ko-pal*) [*syn-*; *κοπή*, to strike or cut]. Swooning or fainting, a partial or complete temporary suspension of the functions of respiration and circulation from cerebral anemia. *S.*, **Local**, sudden pallor and insensibility of a part.

Syncope (*sin'-ko-pe*) [*syn-*; *κόπτειν*, to strike or cut]. Swooning or fainting, a partial or complete temporary suspension of the functions of respiration and circulation from cerebral anemia. *S.*, **Local**, sudden pallor and insensibility of a part.

Syncyanin (*sin-si'-an-in*). A blue pigment elaborated by *Bacillus cyanogenus*.

Syncytial (*sin-sil'-e-al*) [see *Syncytium*]. Pertaining to a syncytium.

Syncytium (*sin-sil'-e-o'-mah*) [*syncytium*; *συν*, a tumor]. A tumor composed of syncytial tissue. *S.* **malignum**, malignant degeneration of the villi of the chorion. See *Decidua malignum*.

Syncytium (*sin-sil'-e-um*) [*syn-*; *κύτος*, a cell]. 1. A mass of protoplasm with numerous nuclei. 2. The collection of epithelial cells forming the outermost covering of the chorionic villi.

Syndactylia, **Syndactylism**, **Syndactyly** (*sin-dak-til'-e-ah*, *sin-dak'-til-izm*, *sin-dak'-til-e*) [*syn-*; *δάκτυλος*, finger]. Adhesion between fingers or toes; webbed fingers; webbed toes.

Syndectomy (*sin-dek'-to-me*). See *Peritomy*.

Syndesmitis (*sin-dez-mit'-tis*) [*σύνδεσμος*, a ligament; *τις*, inflammation]. 1. Inflammation of a ligament. 2. Conjunctivitis.

Syndesmography (*sin-dez-mog'-ra-fe*) [*syndesmos*; *γράφω*, to write]. The branch of anatomy treating of ligaments.

Syndesmology (*sin-dez-mol'-o-je*). See *Syndesmography*.

Syndesmosis (*sin-dez-mol'-sis*) [*syndesmos*]. A form of articulation in which the bones are connected by ligaments.

Syndesmotomy (*sin-dez-mol'-o-me*) [*syndesmos*; *τέμνω*, to cut]. 1. Dissection of the ligaments. 2. The division of a ligament.

Syndrome (*sin'-drōm*) [*σύν*, together; *δρομος*, a running]. The aggregate symptoms of a

disease; a complex of symptoms. See *Symptom-complex*. *S.*, **Basedow's**, tachycardia, flashes of heat, sweating crises. *S.*, **Brissaud-Marie's**, hysteric glossolabial hemispasm. *S.* of **Brown-Séguard**. See *Brown-Séguard's Paralysis* under *Sign*. *S.*, **Charcot's**, intermittent claudication, an affection connected with arteriosclerosis of the lower extremities. *S.*, **Cotard's**, "délire chronique des négations." A form of paranoia characterized by delusions of negation, with sensory disturbances and a tendency to suicide. *S.*, **Dercum's**, adiposis dolorosa. *S.*, **Duchenne's**, labioglossolaryngeal paralysis. *S.*, **Duckworth's**, complete stoppage of respiration several hours before that of the heart in certain cerebral diseases attended by intracranial pressure. *S.*, **Dupré's**, meningism; pseudomeningitis. *S.*, **Erb's**. Synonym of *Asthenic bulbar paralysis*. *S.*, **Gaston's**, anesthetic prurigo sometimes observed in cases of alcoholism. *S.*, **Jackson's**, associated paralysis of the soft palate and larynx, accompanied by paralysis of the trapezius, sternomastoid, and one-half of the tongue. *S.*, **Levulosurie**. See *S.*, **Marie-Robinson's**. *S.*, **Marie-Robinson's**, a variety of diabetes with melancholia, insomnia, impotence, and the presence in the urine of a levulose that disappears rapidly on the suppression of carbohydrates. *S.*, **Millard-Gubler's**. See *Gubler's Hemiplegia*. *S.* of **Pierre Marie**, hypertrophic osteoarthropathy. *S.*, **Potain's**, dyspepsia and dilation of the right ventricle with accentuation of the pulmonary sound, observed during the digestive process in cases of gastrectasis. *S.*, **Riegel's**, the association of tachycardia with troubles simulating asthma. *S.*, **Rosenbach's**, a variety of paroxysmal tachycardia consisting in the association of cardiac, respiratory, and gastric troubles. *S.*, **Stokes'**. See *Adams-Stokes' Disease*. *S.* **temporanea di Gubler**. See *Gubler's Hemiplegia*. *S.*, **Tuffier's**, a congenital state of general tissue debility, resulting in relaxation and displacement of various organs, such as splanchnoptosis, varicocele, uterine displacements, etc. *S.* of **Weber**, paralysis of the oculomotor nerve of one side and of the extremities, the face and the hypoglossal nerve of the other side. It is usually due to a lesion limited to the inferior and inner part of one cerebral peduncle. *S.*, **Weil's**, unilateral hyperesthesia of the muscles, nerve-trunks, and bones, sometimes seen in cases of pulmonary tuberculosis.

Synechia (*sin-e-ki'-ah* or *si-ne'-ke-ah*) [*σύν*, together; *ἔχειν*, to hold]. A morbid union of parts; especially, adhesion of the iris to a neighboring part of the eye. *S.*, **Annular**, *S.*, **Circular**, exclusion of the pupil. *S.*, **Anterior**, adhesion between the iris and transparent cornea. *S.*, **Posterior**, adhesion between the iris and crystalline lens. *S.*, **Ptoxis diploia**. *S.*, **Total**, adhesion of the entire surface of the iris to the lens.

Synechotomy (*sin-ek-ot'-o-me*) [*synechia*; *-enai*, to cut] The division of a synechia.

Synectenterotomy (*sin-ek-ten-ter-ot'-o-me*) [*syn-ecthia*; *enterotomy*] The division of an intestinal adhesion.

Synergic (*sin-er'-jik*) [*synergy*]. Pertaining to synergy.

Synergist (*sin'-er-jist*) [*synergy*]. An agent cooperating with another.

Synergy (*sin'-er-je*) [*syn*; *lgon*, work]. The cooperative action of two or more agents (*synergists*) or organs.

Synesis (*sin'-e-sis*) [*synesis*, a coming together]. Faculty of comprehension, intelligence, sagacity.

Synesthesia (*sin-es-the'-ze-ah*) [*syn*; *aluthe*, sensation]. A secondary sensation or subjective impression accompanying an actual perception.

Synetion, Synætion (*sin-e'-shun*) [*syn*; *aluthe*, cause]. A cause which cooperates with another to produce disease.

Syngenesia (*sin-jen'-e-sis*) [*syn*; *genesis*, generation]. 1. The theory that the embryo is the product of the union of the male and female elements; also the theory that the embryo contains within itself the germs of all future generations developed from it. 2. Reproduction by union of male and female elements.

Syngenetic (*sin-jen-e'-tik*) [see *Syngenesia*]. Propagated by means of both parents.

Syngignoscism (*sin-jig'-nos-izm*) [*syn*; *gignosco*, to know]. Hypnotism, so termed from the agreeing of one mind with another.

Synizesis (*sin-iz-e'-sis*) [*syn*; *izein*, to sit]. Closure. S. *pupillæ*, closure of the pupil.

Synkinesis (*sin-ken-e'-sis*) [*syn*; *kinasis*, movement]. Involuntary movement taking place in one part of the body synchronously with or in consequence of a voluntary or reflex movement in another part.

Synneurosis (*sin-nuro'-sis*). See *Syndesmosis*.

Synocha, Synochus (*sin'-o-ka*, *sin'-o-kus*) [*syn*; *izein*, to hold on]. Any continued fever.

Synophthalmus (*sin-oph-thal'-mus*). See *Cyclops*.

Synorchism (*sin-or'-kizm*) [*syn*; *orchis*, testicle]. Partial or complete fusion of the two testicles.

Synosteophyte (*sin-os'-to-fo-it*) [*syn*; *ostheon*, a bone; *physis*, a growth]. Congenital bony ankylosis. Syn. *Synostosis congenita*.

Synosteotome (*sin-os'-to-fo-im*). A knife for the dissection of joints.

Synostosis (*sin-os'-to-sis*) [*syn*; *ostheon*, bone]. A union of normally separate bones by osseous material. S. *congenita*. See *Synosteophyte*. S., *Tribasilar*, shortening of the base of the skull and consequent curvature of the basal parts of the brain; a cause of imbecility.

Synostotic (*sin-os'-to-tik*) [*synostosis*]. Pertaining to or of the nature of synostosis.

Synotus (*sin-ot'-tus*) [*syn*; *otus*, ear]. A monster characterized by fused ears.

Synovia (*sin-o'-ve-ah*) [*syn*; *ova*, an egg]. The clear, alkaline, lubricating fluid secreted within synovial membranes.

Synovial (*sin-o'-ve-ah*) [*synovia*]. Pertaining to the synovia. S. *Bursa*. See *Bursa*. S. *Membrane*. See *Membrane*. S. *Sheath*, a synovial membrane which lines the cavity attached to a bone and through which a tendon glides.

Synovitis (*sin-o'-vi-tis*) [*synovia*, *itis*, inflammation]. Inflammation of a synovial membrane. S., *Acute Suppurative*, a very common purulent form, of the nature of traumatic origin, leading to ankylosis. See *Arthritis*, *Six empyema articuli*, *Pyarthrosis*. S. *hyperplastica*, S. *hyperplastica granulosa*, S. *hyperplastica lævis*, S. *hyperplastica pannosa*, *arthritus fungosa*.

Synergetics (*sin-ter-e'-tik*) [*synergetes*, to work closely]. Hygiene.

Synthesis (*sin'-the-sis*) [*syn*, with; *thesis*, a place]. In chemistry, the artificial formation of a compound by combining its constituents.

Synthetic (*sin-the'-tik*) [*synthesis*]. Pertaining to or produced by synthesis.

Syntheticism (*sin'-the-tizm*) [*synthesis*]. The sum of operations and means necessary to reducing a fracture and holding the parts in position.

Synthol (*sin'-thol*). A chemically pure synthetic substitute for alcohol. It is colorless and nonirritant.

Syntonin (*sin'-to-nin*) [*syntonin*, contained]. An albumin obtained by the action of dilute hydrochloric acid upon the mass of muscle.

Syntopic (*sin-top'-ik*) [*syn*, together; *topos*, place]. Applied by Watkiss to a descriptive description which points out the location of a part or organ to the viscera or soft parts of the organism.

Syntopy (*sin'-to-pi*). The relation of an organ or part to the viscera of the organism. Cf. *Holotopy*, *Idiotopy*, *Stelotopy*.

Syntoxoid (*sin-tok'-oid*) [*syn*; *toxos*, curved; *oides*, likeness]. A toxin having the same affinity as toxin for antitoxin.

Syntrophus (*sin'-tro-fus*) [*syn*; *tropein*, a turn]. A congenital disease.

Synulodynia (*sin-u-lod-in'-e-ah*) [*synulodynia*, a scarring over; *odyn*, pain]. Part of a curatrix.

Syphilicoma (*si'-fil-ik'-o-ma*) [*syphilis*, *coma*, to take care of]. A hereditary disease.

Syphilid, Syphilide (*si'-fil-id*) [*syphilis*]. A disease of the skin due to syphilis. It may be erythematous, macular, annular, lenticular, squamous, nodular, papular, bullous, tubercular, rupial, etc. S., *Secondary*, any syphilid occurring during the secondary stage of syphilis. S., *Tertiary*, any syphilid occurring during the tertiary stage of syphilis.

Syphilidologist. See *Syphilologist*.

Syphulin (*si'-fil-in*). See *Syphilin*.

Syphilis (*si-f-il-is*) [origin obscure]. A chronic infectious disease, characterized by a variety of structural lesions of which the chancre, the mucous patch, and the gumma are the most distinctive. A spirochete which has been found in the lesions has been accepted as the cause. The disease is generally acquired in sexual congress, hence its earliest manifestations appear upon the genital organs, but any abraded surface of the body, if brought in contact with the syphilitic poison, may give entrance to the infection. The earliest lesion of acquired syphilis is the *chancre*, *initial sclerosis*, or *primary sore*, which appears after a period of incubation varying from two to three weeks. It is usually a reddish-brown papule with an ulcerated central spot, and has a slight serous or purulent discharge. Taken between the fingers it is found to have a peculiar cartilaginous hardness. Microscopically it consists of an accumulation of round cells, epithelioid cells, with, perhaps, a giant-cell here and there. The blood-vessels present a hyperplasia of the intima, to which in part the induration of the chancre is due. Very soon after the appearance of the chancre the nearest lymphatic glands become enlarged and indurated—the *indolent buboes* of syphilis. The *mucous patch*, *condyloma latum*, *moist papule*, or *mucous tubercle* is located upon mucous membranes, at mucocutaneous junctions, or where two skin surfaces are in habitual contact, and is a flat, scarcely elevated patch, generally covered by a whitish pellicle. The *gumma* or *gummy tumor* is a rounded nodule, varying in size from the dimensions of a pea to those of a small apple. Its favorite seats are the periosteum of flat bones, the membranes of the brain, the liver, spleen, and testicle. It is usually soft, and contains in its interior a gelatinous "gummy" material. Another important though not distinctive lesion produced by syphilis is a diffuse sclerosis of the blood-vessels, especially of the parenchymatous organs. The clinical course of syphilis is generally divided into three stages: the *primary* (*primary syphilis*), characterized by the presence of the chancre and of the indolent bubo; the *secondary* (*secondary syphilis*), by the mucous patch, cutaneous eruptions, sore throat, and general enlargement of the lymphatic glands; the *tertiary* (*tertiary syphilis*), by the gumma and by severe skin-lesions. Between the appearance of the chancre and the secondary manifestations a period of six weeks usually elapses. The tertiary phenomena follow the secondary after a stage of quiescence of variable length. Syphilis also bears an important, but as yet obscure, relation to certain diseases of the nervous system, such as locomotor ataxia and parietic dementia. **S.**, **Congenital**. See **S.**, **Hereditary**. **S.**, **d'emblée**, the invasion of syphilis without a local lesion. **S.**, **Extragenital**, that in which the first lesion is situated elsewhere than on the genital organs. **S.**, **Hereditary**,

syphilis transmitted from parent to offspring. See *Colles' Law*; *Sign*, *Demarquay's*, *Hutchinson's*, *Krisowski's*, *Silvest's*, *Wagner's*. **S.**, **insontium**, syphilis of the innocent, i. e., syphilis acquired in an innocent manner, or nonvenereal syphilis. **S.**, **Justus' Blood-test** in. See *Justus' Test*. **S.**, **Marital**, syphilis acquired in lawful wedlock. **S.**, **Non-venereal**. Synonym of *S. insontium*. **S.**, **œconomica**, a form of syphilis insontium in which the disease is acquired through eating and drinking or household utensils, or by incidental contact with syphilitic persons. **S.**, **Pulmonary**, a rare disease which is either hereditary or follows the initial attack after from 10 to 20 years or longer. Two forms may be differentiated—a chronic interstitial indurative process and a growth of gummas. **S.**, **technica**, syphilis acquired in following one's occupation, as by physicians, midwives, nurses. **S.**, **Venereal**, syphilis acquired in illegitimate sexual intercourse. **S.**, **Visceral**, syphilis of the viscera—the lesions are either inflammatory or gummatous.

Syphilitic (*si-il-il'-ik*) [*syphilis*]. Pertaining to or affected with syphilis.

Syphilitoxin (*si-il-e-tox'-in*) [*syphilis*; *τοξικό*, poison]. The supposed specific virus of syphilis.

Syphilization (*si-il-i-za'-shun*) [*syphilis*]. 1. Inoculation with syphilis, especially inoculation for the purpose of conferring immunity to future attacks. 2. The state produced by inoculation with syphilis.

Syphilocerebrosis (*si-il-o-ser-e-bro'-sis*). Syphilis affecting the brain.

Syphiloderm (*si-il-o-derm*). See *Syphilid*.

Syphilogenesis, **Syphilogeny** (*si-il-o-jen'-e-sis*, *si-il-oj'-en-e*) [*syphilis*; *γενᾶν*, to produce]. The origin or development of syphilis.

Syphilographer (*si-il-og'-ra-fer*) [see *syphilography*]. One who writes on syphilis.

Syphilography (*si-il-og'-ra-fe*) [*syphilis*; *γραφῆναι*, to write]. A treatise on syphilis.

Syphiloid (*si-il-oid*) [*syphilis*; *εἶδος*, like]. 1. Resembling syphilis. 2. A disease resembling syphilis.

Syphilologist (*si-il-ol'-o-jist*) [*syphilis*; *λόγος*, science]. A specialist in the treatment of syphilis.

Syphiloma (*si-il-o'-mah*) [*syphilis*; *όμα*, tumor]. 1. A syphilitic gumma. 2. A term introduced by Ernst Wagner as a substitute for gumma.

Syphilophobia (*si-il-o-fo'-be-ah*) [*syphilis*; *φόβος*, dread]. 1. A condition in which the patient imagines himself to be infected with syphilis. 2. A morbid dread of syphilitic infection.

Syriac Ulcer. Synonym of *Diphtheria*.

Syringe (*sir'-inj*) [*σπυγῆ*, a pipe]. An apparatus for injecting a liquid into a cavity.

Syringenin (*sir-in'-jen-in*) [*Syringa*, a genus of shrubs]. $C_{15}H_{22}O_6 + H_2O$. A dissociation product of syringin by action of dilute acids; a clear, rose-red, amorphous mass, soluble in alcohol, insoluble in water and ether.

Syringin (*sir-in'-jin*) [*Syringa*]. A crystalline glucosid obtained from *Syringa vulgaris*, $C_{17}H_{26}O_6 + H_2O$, white, tasteless, acicular crystals, soluble in alcohol and hot water, boils at $191^\circ C$. It is antipyretic and antiperiodic; used in malaria. Syn., *Lilacin*; *Ligustrin*.

Syringious (*sir-in'-jé-us*) [*syrē*, a tube] Fistulous.

Syringitis (*sir-in'-ji'-tis*) [*syrinx*; *itis*, inflammation]. Inflammation of the eustachian tube.

Syringomyelia (*sir-in'-go-mi'-e'-le-ah*) [*syrinx*; *myelos*, marrow]. A condition characterized by the presence of cavities in the substance of the spinal cord. It is believed to be the result of faulty development either affecting the central canal, so that the latter remains in an embryonal condition, and sends a diverticulum into the posterior portion of the cord, which may become constricted off, or groups of embryonal neuroglia cells remain in the neighborhood of the central canal or in the posterior portion of the spinal cord and in later life take on active development and form a gliomatous tumor. The degeneration of the latter then gives rise to cavities in the cord. Syringomyelia occurs usually between the ages of 20 and 30, and is characterized by progressive atrophy of the muscles, especially of the upper extremity, by loss of the pain-sense and temperature-sense, with preservation of the tactile and muscular sense (the so-called "dissociation symptom"), and by vasomotor and trophic changes in the skin, joints, etc. Syn., *Myelosyringium*. S., Grasset-Rauzier's Type of, a form with marked sudoral and vasomotor symptoms. S., Schlesinger's Type of, the dorsolumbar type.

Syringomyelocoele (*sir-in'-go-mi'-el-o-sil*) [*syrinx*, *myelos*, marrow, *coele*, cavity]. A form of spina bifida in which the protruding mass consists of membrane and nerve substance, and the cavity of which communicates with the central canal of the spinal cord.

Syringotome (*sir-in'-go-tōm*) [*syrinx*; *clavex*, to cut]. An instrument for incising a fistula.

Syringotomy (*sir-in'-gō'-ō-mē*) [*syrinx*; *tomē*, a cutting]. The operation of cutting a fistula, especially a fistula in ano.

Syrinx (*sir'-en-ks*) [*syrē*, a tube]. The eustachian tube.

Syrup (*sir'-up*) [*syrupus*, *syrup*]. 1. A concentrated solution of sugar in water. U. S. P., B. P. 2. A preparation consisting of a solution of a medicinal substance in sugar. S., *Dusart's*, a preparation having the chief ingredient ferric phosphate $Fe_2(PO_4)_3$ dr. 12-8 (C.).

Syrupy (*sir'-u-pi*) [*syrus*]. Resembling a syrup.

Syssarcosis (*sis-sar-si'-sis*) [*syssar*, to eat flesh]. The name of disease by the eating of muscular tissue.

Syssomus (*sis-sō-mus*) [*syssō*, together, *syssō*, body]. A double monster joined by the trunk.

System (*sir'-tem*) [*systema*, from *stēnō*, to narrow, to stand]. 1. A method of arrangement. 2. A combination of parts forming a whole, as the digestive system, the nervous system. 3. The body as a whole. S., *Bernard*. See under *Identification*. *See* *Hereditary*.

Centimeter-gram-second, the system based upon the use of the centimeter, gram, and second as units of length, mass, and time, respectively. S., *Galton*. See under *Classification*. S., *disease*, S., *lesion*, a lesion of the cerebrospinal axis affecting a mass of nerve fibers or nerve cells having common anatomic relations and chemical properties. S., *Havers'*, the concentric arrangement of the bony lamellae around a cap or ten in number around a haversian canal. S., *Pedal*, a ganglionic system of the foot. S., *Portal*, the system of veins collecting the venous blood from the digestive tract.

Systematic (*sis-tē-mat'-ik*) [*systema*]. Pertaining to or affecting a system.

Systemic (*sis-tē-mat'-ik*) [*systema*]. 1. Of or pertaining to a system. 2. Pertaining to the whole organism.

Systole (*sis-tō'-lē*) [*syssō*, together, *stōlē*, to place]. The contraction of the heart.

Systolic (*sis-tō'-lē*) [*stōlē*]. Pertaining to the systole, occurring during systole.

Syzygium (*sis-i'-gi-um*) [*syssō*, together, *giōn*, a genus of East Indian trees, of which a single branch is used in divination].

Szabo's Test for Hydrochloric Acid in the Contents of Stomach. Mix together equal parts of a 5% solution of anhydrous barium cyanid and soda ferri extracts. This is a pale yellow liquid, which changes to brownish on the addition of a solution containing HCl.

T

T. An abbreviation of *tension* and *temperature*.

Tabacosis (*tab-ak-o'-sis*) [*tabacum*]. A state of poisoning produced by the excessive use of tobacco.

Tabacum (*tab-ak'-um*). See *Tobacco*.

Tabatière anatomique (*tahb-ah-t-e-ar ahn-ah-t-ôm-ék*) [Fr., "anatomic snuff-box"]. The depression at the base of the thumb between the tendons of the extensor primi and extensor secundi intermodii pollicis.

Tabby-cat Striation. Peculiar markings occurring on muscles that have undergone extreme fatty degeneration, especially seen in the heart muscle.

Tabefaction (*tab-e-fak'-shun*) [*tabefacere*, to melt]. Wasting; emaciation.

Tabella (*ta-bell'-ah*) [L.]. A troche.

Tabes (*ta'-bez*) [L.]. A wasting or consumption.

The word is generally used as a synonym of *Tabes dorsalis*. **T. dolorosa**, a form in which pain is the dominating feature. **T. dorsalis**, locomotor ataxia, a disease dependent upon sclerosis of the posterior columns of the spinal cord. The symptoms are lightning-pains; unsteadiness and incoordination of voluntary movements, extending to the upper extremities; disorders of vision, among others the Argyll Robertson pupil; cutaneous anesthesia; girdle-sense; abolition of the patellar reflex; diminution of sexual desire; disturbance of the sphincters. **T.**, Hereditary. See *Friedreich's Disease*. **T. mesenterica**, tuberculous disease of the mesenteric glands in children, with progressive wasting. **T.**, Spasmodic, lateral sclerosis of the spinal cord.

Tabetic (*tab-et'-ik*). 1. Affected with tabes; of or pertaining to tabes. 2. Pertaining to or affected with tabes dorsalis.

Tabetiform (*tab-et'-if-orm*). Resembling tabes.

Tabic (*tab'-ik*). See *Tabetic*.

Tabid (*tab'-id*). See *Tabetic*.

Tablature (*tab'-lat-ür*) [*tabula*, a table]. Separation into tables, as exemplified in the frontal, parietal, and occipital bones.

Table (*ta'-bl*) [*tabula*]. 1. A flat-topped piece of furniture, as an *operation table*, *examining table*. 2. A flat plate, especially one of bone, as a *table of the skull*.

Tablespoon. A large spoon, holding about 15 Cc. or 4 fluidrams.

Tablet (*tab'-let*) [*table*]. A lozenge; a troche.

Tabloid (*tab'-loid*) [*table*; *eidōs*, like]. A flat troche.

Tacamahac (*tah'-am-a-hak*) [Mexican]. A resin produced by various trees.

Tache (*tahsh*) [Fr.]. A spot. **Taches blanches**, certain white spots described by Hanot as occurring on the liver, especially on its convex surface, in infectious diseases. Microscopically they present a leukocytic infiltration and bacteria. **T. bleuâtre**, a spot of a delicate blue tint, sometimes ob-

served on the skin of typhoid-fever patients.

T. cérébrale, **T. méningéale**, the red line made when the finger-nail is drawn over the skin; due to vasomotor paresis and occurring especially in meningeal irritation.

Tachetic (*tak-et'-ik*) [*tache*]. Relating to the formation of reddish-blue or purple patches (taches).

Tachia (*tak'-e-ah*) [*tachi*, an ant so called by the Galibis because they harbor ants]. A genus of shrubs and trees of the *Gentianaceæ*.

The root of *T. guianensis*, a species of Brazil and Guiana, is used as is gentian and also as an antipyretic and prophylactic against malaria. Dose of *tincture* 1 or 2 drops.

Tachiol (*tak'-e-ol*). A modification of silver fluorid; employed as a surgical antiseptic in solution of 1 : 1000 to 1 : 100 and in ophthalmic practice.

Tachy- (*tak'-e-*) [*ταχύς*, swift]. A prefix meaning swift.

Tachycardia (*tak'-e-kar'-de-ah*) [*tachy-*; *καρδία*, heart]. Excessive rapidity of the heart's action. **T.**, **Essential**, that occurring in paroxysms, and due to functional disturbance of the cardiac nerves.

Tachygraph (*tak'-ig-raf*). See *Hemetachometer*.

Tachygraphy (*tak'-ig-raf-e*) [*ταχύς*, swift; *γράφειν*, to write]. The estimation of the rate of flow of arterial blood by means of the tachygraph.

Tachyphrenia (*tak'-e-fre'-ne-ah*) [*tachy-*; *φρήν*, mind]. Morbid mental activity.

Tachypnea (*tak'-ip-ne'-ah*) [*tachy-*; *πνοή*, breath]. Abnormal frequency of respiration.

Tactile (*tak'-til*) [*tactus*]. Pertaining to the sense of touch. **T.** Cells, cells representing special sensory nerve-endings, found in the deeper layers of the epidermis or the adjacent stratum of corium. **T.** Corpuscles, special sensory nerve-endings exhibiting more complexity of structure than the tactile cells.

Tactometer (*tak'-tom-et-er*) [*tactus*; *μέτρον*, a measure]. An instrument for estimating tactile sensibility; an esthesiometer.

Tactus (*tak'-tus*) [*tangere*, to touch]. Touch. **T. eruditus**, **T. expertus**, special sensitiveness of touch acquired by long experience.

Tædium vitæ (*te'-de-um vi'-te*) [L.]. Weariness of life.

Tænia (*te'-ne-ah*) [L., "a band"]. 1. A band or band like structure. 2. Tænia, see *Tape-worm*. **T. coenurus**, a parasite found in the intestine of the dog. **T. echinococcus**. See *Tape-worm*, *Dog*. **T. fornicis**, one of the peduncles of the pineal gland. **T. hippocampi**, the corpus fimbriatum of the hippocampus major. **T. mediocanellata**, **T. saginata**. See *Tape-worm*, *Beef*. **T. semicircularis**, a narrow band on the floor of the lateral ventricle, between the caudate nucleus

and the optic thalamus. **T. solium.** See *Tapeworm, Fork*. **T. thalami,** the habenula. **T. violacea,** a bluish, longitudinal band on the floor of the fourth ventricle.

Tagetes (ta-jé-tés). A genus of plants of the order *Compositae*. *T. erecta*, African marigold, and *T. patula*, French marigold, are used as substitutes for calendula.

Tagliacotian Operation (tah-le-ah-ko'-she-un). See *Operation, Italian*.

Tagma (tag'-mah) [tápmā, that which has been arranged]. An aggregate of molecules.

Tagulawayá. See *Balsam, Tagulawayá*.

Tail (tah). 1. The caudal extremity of an animal. 2. Anything resembling a tail.

Tailfever's Valve. A valvular fold of mucous membrane about the middle of the nasal duct.

Tailor's Spasm. An occupation-neurosis occurring in tailors, and characterized by spasm of the muscles of the arm and hand.

Tait's Law. In every disease of the abdomen or pelvis in which the health is destroyed or the life threatened, and in which the condition is evidently not due to malignant disease, an exploration of the cavity by celiotomy should be made. **T.'s Method,** perineorrhaphy.

Takadiastase (tah-ah-dí'-as-ás). A diastatic ferment obtained from wheat-bran by action of the spores of the fungus *Eurotium oryzae* (Taka-moyashi). It is used in digestive disorders, especially those resulting from deficient secretion of saliva and hyperacidity of the stomach. Dose 2-5 gr. (50-150 mg.).

Takosis (tah-ko'-sis) [tákos, to waste]. A highly contagious fatal disease of goats.

Talalgia (tal-ah'-je-ah) [talus, heel, dolor, pain]. Pain in the heel.

Talbot's Law. When the visual stimuli proceeding from a revolving disc are completely basal and the sensation is uniform, the intensity is the same as that which would occur if the same amount of light were spread uniformly over the disc.

Talbot-Plateau's Law. See *Talbot's Law*.

Talc, Talcum (tal'-k) [Ar., talq, tal]. $3\text{MgO} \cdot 5\text{SiO}_2 \cdot \text{H}_2\text{O}$. The talcum of the U. S. P. is a native hydrous magnesium silicate. It is a white, grass powder, used as a dusting-powder. Syn., *Scapolite, Steatite*. **T., Purified** (talcum purificatum, U. S. P.), talc, hydrochloric acid, and water.

Talipes (tal'-ép-é) [talus, ankle, pes, foot]. Club-foot, a deformity depending upon contraction of one or more muscles or tendons about the foot, either congenital or acquired. **T. calcaneus,** talipes in which the patient walks upon the heel alone. **T. cavus,** an increased curvature of the arch of the foot. **T. equinus,** talipes in which the heel is elevated and the weight thrown upon the anterior portion of the foot. **T. percurvus,** excessive plantar curvature. **T. planus,** flat foot, spay-foot. **T. valgus,** talipes in which the foot is everted. **T. varus,** a variety, the reverse of the last, in which the foot is bent inward. Combinations of these occur, called *T. equinovagui,*

T. equinovarus, T. calcaneovagui, T. calcaneovarus, etc.

Tallermer Treatment. The local application of superheated dry air, the air being introduced into a cylinder.

Tallow (tal'-u) [O. D. talg]. The fat extracted from suet, the solid fat of nature, tallow, and other ruminants.

Tallqvist's Method. To determine approximately hemoglobin percentage, allow a drop of blood to soak into a bit of filter paper and compare with the naked eye the color depth of the stain with a series of printed standard tints of known value.

Talma's Disease. *Myotonia asquima*.

Talo- (ta'-lo, [talus, ankle]. A prefix denoting pertaining to the ankle or to the astragalus.

Talocalcanean (ta-lo-kal-ka'-se-an). See *talocalcaneal*.

Talocrural (ta-lo-kru'-al) [tal-, crur, leg]. Relating to the astragalus and the tibia of the leg.

Talofibular (ta-lo-fib'-u-lar). Relating to the astragalus and the fibula.

Talonavicular (ta-lo-nar-ik'-u-lar). See *astragalonavicular*.

Taloscaphoid (ta-lo-ska'-oid). See *astragalscapoid*.

Talotibial (ta-lo-tib'-e-al). See *Astragalotibial*.

Talpa (tal'-pa) [L.] A mole or mole.

Talpiform (tal'-pe-form) [talpa, mole, form]. Wren-shaped.

Talus (ta'-lus) [L.] 1. The astragalus. 2. The ankle.

Tamar indien. An aromatic condiment of India.

Tamarind (tam'-ar-in-dí) [Ar., tamar, a ripe date; Hind., India]. *Tamarindus indica*, a tree of the order *Leguminosae*. The pericarpium of the fruit (tamarindus, U. S. P., Fr., F., laxative and refrigerant. Dose 1 dram (4 gr.) Gm.).

Tambour (tam'-boor) [Fr.] A drum, a drum-like instrument used in phonography, consisting of a metal cylinder over which is stretched an elastic membrane, and from which or to which passes a tube for transmitting a current of air. It is connected with another apparatus upon which changes in pressure in the tambour are recorded.

Tampicin (tam'-pí-in). A purgative resin, H_2O_{10} , from the resin of *Tampicoa* (*Ipomoea similans*).

Tampon (tam'-pon) [Fr.] 1. A plug of sponge, or other material inserted into the vagina, nose, or other cavity. 2. To pad with a tampon.

Tamponade (tam-pón-ád) [Fr.] The padding with a tampon.

Tanacetin (tan-á-sét-in). See under *Tanacetum*.

Tanacetum (tan-á-sét-tum). See *Tanacetum*.

Tanalum (tan-á-lum) [tanning, alum]. Or

medium tanninhydrate, used in dyeing of the wool and cotton.

Tanghinia (tan-jin'-e-ah). *T. tanghinia*, the official bark of Malabar, a name of

- respiratory poison. Its active principle is *tanghinin*.
- Tanghinin** (*tan-gin'-in*). See under *Tanghinia*.
- Tannal** (*tan'-al*) [*tannin; alum*]. Aluminium tannate; it is used in diseases of the nose and throat.
- Tannalbin** (*tan-al'-bin*). A compound of tannin and albumin; a brown, tasteless powder, insoluble in water, and containing 50% of tannin. An intestinal astringent. Dose 15 gr. (1 Gm.) 2 to 4 times daily.
- Tannate** (*tan'-it*) [*tannin*]. A salt of tannic acid.
- Tannic Acid**. See *Acid, Tannic*.
- Tannigen** (*tan'-ij-en*). See *Acetyl Tannin*.
- Tannin** (*tan'-in*). See *Acid, Tannic*. **T.**, formaldehyd, tannoform.
- Tannocasum** (*tan-o-ka'-sum*). A compound of tannin and casein; it is used as an intestinal astringent.
- Tannochloral** (*tan-o-klo'-ral*). See *Capitol*.
- Tannocol** (*tan'-o-kol*). A combination of equal parts of gelatin and tannic acid.
- Tannocreosotform** (*tan-o-kre-o'-so-form*). A compound of tannin, creasote, and formaldehyd.
- Tannoform** (*tan'-o-form*), $\text{CH}_3(\text{C}_6\text{H}_3\text{O}_2)_3$. A condensation-product of tannin and formaldehyd. Used internally in chronic intestinal catarrh. Dose 4-8 gr. (0.25-0.5 Gm.); externally in skin diseases, burns, etc., in 10% ointment, or dusting-powder with 2 to 4 parts of starch. Syn., *Methylene ditannin; Tannin-formaldehyd*.
- Tannone** (*tan'-on*), $(\text{CH}_3)_3\text{N}_2(\text{C}_6\text{H}_3\text{O}_2)_3$. A condensation-product of tannin and urotropin; used in acute catarrh and subacute and chronic enteritis. Dose 15 gr. (1 Gm.) 3 or 4 times daily.
- Tannopin** (*tan'-o-pin*). See *Tannone*.
- Tannopumilin** (*tan-o-pu'-mil-in*). A proprietary remedy for skin diseases, said to consist of tannic acid and oil of *Pinus pumilio*.
- Tannosal** (*tan'-o-sal*). See *Creasol*.
- Tanret's Reagent for Albumin**. Potassium iodid, 3.32 Gm.; mercuric chlorid, 1.35 Gm.; acetic acid, 20 Cc., diluted with distilled water to 60 Cc. This reagent, added to an albumin solution, gives a white precipitate.
- Tansy** (*tan'-ze*) [O. Fr., *tanasie*, from Low L., *tanacetum*, from *deavacia*, immortality]. A perennial herb, *Tanacetum vulgare*, of the order *Compositae*. The leaves and tops contain a bitter principle, *tanacetin*, $\text{C}_{11}\text{H}_{16}\text{O}_4$, tannic acid, and an essential oil (*oleum tana-ceti*). Tansy is an aromatic bitter and irritant narcotic, and has been used in malaria, in hysteria, and as an emmenagog and antihelmintic. In overdoses it produces abdominal pain, vomiting, epileptiform convulsions, and death from failure of respiration. Dose 30 gr.-1 dr. (2-4 Gm.); of the oil 1-4 min. (0.065-0.26 Cc.). Unof.
- Tap.** 1. A sudden slight blow. 2. To empty of fluid, as to tap a hydrocele.
- Tapophobia** (*tap-e-fo'-be-ah*) [*τάφος*, burial; *φοβος*, fear]. Morbid fear of being buried alive.
- Tapetum** (*ta-pe'-tum*) [*τάπης*, a mat or rug]. 1. The layer forming the roof of the posterior and middle cornua of the lateral ventricles of the brain; it is composed of fibers from the corpus callosum. 2. The brilliant greenish layer of the eyes of nocturnal animals, which are by it visible in the dark. Syn., *Tapetum lucidum*.
- Tape-worm**. One of the *Cestoda*, a class of worms parasitic in man and the lower animals. The adult worm (*strobilus*) consists of a head (*scolex*) and numerous segments (*proglottides*), which are capable of leading for some time a separate existence, are hermaphroditic, and contain numerous ova. If the ova are swallowed by the proper host, they develop into embryos (*proscolices*), which are transformed into the *cysticerci*, containing the *scolices*. If the meat of animals containing living scolices is eaten, the latter develop into the mature tape-worm, or strobilus. **T., Beef-** (*Tania mediocanellata* or *saginata*), also termed the *unarmed tape-worm*, the *cysticercus* of which occurs in beef. **T., Dog-** (*Tania echinococcus*), also called *hydatid tape-worm*. The mature parasite lives in the intestine of the dog; the scolices occur in the internal organs of man and give rise to the echinococcus or hydatid cysts. **T., Fish-**, **T., Broad**, **T., Swiss** (*Bothriocephalus latus*), the *cysticercus* of which occurs in fish. **T., Pork-** (*Tania solium*), also known as the *armed tape-worm*, from the presence of several hooklets on the head, is derived from pork which contains the *cysticerci*. Other tape-worms occasionally found in man are: *Tania cucumerina* or *elliptica*, most frequent in the dog and cat; *Tania nana* has been found in man in Italy; *Tania leptcephala*, common in the mouse, has also been observed in man.
- Tapinocephalic** (*tap-in-o-sef'-al'-ik*) [see *Tapinocephaly*]. Affected with tapinocephaly.
- Tapinocephaly** (*tap-in-o-sef'-al'-e*) [*ταπεινός*, low; *κεφαλή*, head]. Flatness of the top of the cranium.
- Tapioca** (*tap-e-o'-kah*) [Sp.]. A variety of starch obtained from the cassava or manioc plant, *Jatropha manihot*. It is used as a food.
- Tapotement** (*tap-ol-mon(g)*) [Fr.]. In massage, the operation of percussing or tapping.
- Tapping** (*tap'-ing*). See *Paracentesis*.
- Tar** (*tahr*) [AS., *teoru*, tar]. An empyreumatic liquid resin obtained by the destructive distillation of the wood of various species of *Pinus*, of the order *Coniferae*. Tar (*Pix liquida*, U. S. P., B. P.) contains a great variety of compounds, among which are pyroligneous acid, toluene, xylene, pseudocumene, cresol, phenol, guaiacol, creasol, paraffin, naphthalene, pyrocatechin, etc. It is employed in chronic bronchitis and in diseases of the urinary tract; externally in tinea capitis, psoriasis, chronic eczema, and other affections of the skin. **T., Juniper**, Oil of (*oleum cadinum*, U. S. P.). See *Code, Oil of*. **T., Oil of** (*oleum picis liquida*, U. S. P.).

- a volatile oil distilled from tar. Dose 3 min. (0.2 Cc.). **T. Ointment** (*unguentum piass liquide*, U. S. P., B. P.), a mixture of tar, yellow wax, and lard. **T., Syrup of** (*syrupus piass liquidus*, U. S. P.). Dose 1-2 dr. (4-8 Cc.).
- Tarantism** (*tar'-an-tizm*). A choreic affection, ascribed to the bite of a tarantula, and supposed to be cured by dancing.
- Taraxacum** (*tar'-aks'-ak-um*). Dandelion; the *T. officinale* (*T. dens-leonis*), a plant of the order Compositae. Its root (*taraxacum*, U. S. P.; *taraxaci radix*, B. P.) contains two crystalline principles, *taraxacin* and *taraxacerin*, and is used in chronic congestion of the liver and spleen. **T., Decoction of** (*decoction taraxaci*, B. P.). Dose 2 oz. (64 Cc.). **T., Extract of** (*extractum taraxaci*, U. S. P., B. P.). Dose 10 gr. (0.65 Gm.). **T., Fluidextract of** (*fluidextractum taraxaci*, U. S. P.). Dose 1 dr. (4 Cc.). **T., Juice of** (*succus taraxaci*, B. P.). Dose 2-4 dr. (8-16 Cc.).
- Tardieu's Spots.** Echymotic spots found beneath the pleura and the pericardium after death from strangling. They have also been observed in death from asphyxia due to other causes.
- Tarinus' Fascia.** The fascia dentata tarini; the gyrus dentatus. See *Fascia dentata*. **T.'s Foramen.** See *Follipium Haversi*. **T.'s Fossa.** **T.'s Pons,** the posterior perforated space which forms part of the floor of the third ventricle. **T.'s Space.** See *T.'s Fossa*. **T.'s Tenia,** tenia semicircularis; a white band lying below the vena corporis striati, and extending from near the anterior extremity of the thalamus, along the inner border of the inferior cornu of the lateral ventricle, into the gray substance of the hippocampus major. **T.'s Valve,** the posterior medullary velum.
- Tarnier's Sign.** Elevation of the angle between the upper and lower segments of the uterus; it is an indication of inevitable abortion.
- Tarsadenitis meibomica** (*tar'-ad-en-itis*) [*tarsus*; *adip.*, a gland; *itis*, inflammation]. Inflammation of the meibomian glands and tarsal cartilage.
- Tarsal** (*tar'-al*) [*tarsus*]. 1. Pertaining to the tarsus of the foot. 2. Pertaining to the tarsus of the eye.
- Tarsale** (*tar'-al-ee*). Any bone of the tarsus, but especially one in the distal row.
- Tarsalgia** (*tar'-al-je-ah*) [*tarsus*; *algia*, a pain]. Pain, especially one of neuralgic character, in the tarsus.
- Tarsalia** (*tar'-al-ee-ah*). The tarsal bones.
- Tarsectomy** (*tar'-sek'-o-mee*) [*tarsus*; *ectomy*, excision]. Excision of tarsal bones.
- Tarsitis** (*tar'-sit-is*) [*tarsus*; *itis*, inflammation]. Inflammation of the tarsus.
- Tarso-** (*tar'-so*) [*talus*, tarsus]. A prefix denoting pertaining to the tarsus.
- Tarsocheiloplasty** (*tar'-so-ke-i-lost-ee*) [*tarsus*; *cheil*, edge; *plasty*, to form]. Plastic surgery of the edge of the eyelid.
- Tarso-malacia** (*tar'-so-mal-a'-she-ah*) [*tarsus*; *malacia*, softening]. Softening of the tarsus of the eyelid.
- Tarsometatarsal** (*tar'-so-met-ah tar'-al-ee*) [*tarsometatarsus*]. Relating to the tarsus and the metatarsus.
- Tarsoorbital** (*tar'-so-or'-bi-tal*) [*tarsus*; *orbital*]. Relating to the framework of the tarsus and the wall of the orbit.
- Tarsophalangeal** (*tar'-so-fal-ang-e-ah*) [*tarsophalanx*]. Pertaining to the tarsus and the phalanges.
- Tarsophyma** (*tar'-so-f'-meh*) [*tarsus*; *fyma*, growth]. Any morbid growth on tarsus of the tarsus.
- Tarsoplasty** (*tar'-so-plast-ee*) [*tarsus*; *plasty*, to form]. Plastic surgery of the tarsus.
- Tarsorrhaphy** (*tar'-so-rap-hee*) [*tarsus*; *raphy*, suture]. The operation of sewing the tarsus together for a part or the whole of its extent.
- Tarsotomy** (*tar'-so-to-mee*) [*tarsus*; *tomia*, a cutting]. 1. The operation of cutting into the tarsus. 2. Tarsorrhaphy.
- Tarsus** (*tar'-us*) [*talus*, tarsus]. 1. The instep, consisting of the cuboid, trapezoid, external cuneiform bones. 2. The tarsus of the eyelid, called the tarsal cartilage; a dense connective tissue forming the support of the lid.
- Tartar** (*tar'-tar*) [*Low L., tartarum*, from *tar*, durd, drops]. 1. A hard crystalline substance on the inside of wine-casks, and consisting mainly of acid potassium tartrate (*potassium tartar*). 2. A hard crystalline substance on the teeth, consisting of mineral and organic matter. **T., Cream of** (*potassium tartaric cream*, U. S. P.). See *Potassium Bicarbonate*. **T. Emetic,** antimony and potassium tartarate. See *Antimony*.
- Tartarated** (*tar'-tar-ee-ted*) [*tartar*]. Containing tartar. **T. Antimony,** tartar emetic.
- Tartaric Acid.** See *Acid, Tartaric*.
- Tartarized** (*tar'-tar-eezd*). See *Tartarated*.
- Tartarilithin** (*tar'-tar-lith'-in*). See *Lithium Bitartrate*.
- Tartarus** (*tar'-tar-us*) [*L.*]. Tartar.
- Tatrate** (*tar'-trah*). A salt of tartaric acid.
- Tartrated** (*tar'-trah-ted*). Containing tartar combined with tartaric acid.
- Tartrophen** (*tar'-tro-fen*). A combination of phenetidin and tartaric acid.
- Tashkend Ulcer** (*tash-keend*). See *Sore*.
- Taste** (*tah*). 1. The sensation produced by stimulation of special organs in the tongue (*taste-organs*) by soluble bodies. 2. The faculty by which these sensations are interpreted. **T., After-**, a secondary taste perceived after the immediate taste has faded. **T.-bud**, an oval, flask-shaped body embedded in the epithelium of the tongue, serving the sense of taste.
- Tattooing** (*tah-too'-ing*) [*Tahitian*]. The production of permanent colors in the skin by the introduction of foreign substances, such as carbon, India ink, etc., a

practice among sailors. **T. of the Cornea**, a method of hiding leukomatous spots. **T.**, **Electrolytic**, the electrolytic treatment of anguina or nevus by means of a negative electrode carrying from 10 to 20 needles.

Taurin (*taw'-rin*) [*taurus*, bull], $C_2H_7NSO_2$. Amidoethylsulfonic acid, a crystalline decomposition-product of bile. See *Lang*.

Taurocholic Acid (*taw-ro-kol'-ik*). See *Acid*, *Taurocholic*.

Tautomeric (*taw-to-mer'-ik*). 1. Exhibiting tautomerism; a qualification applied to compounds to which two different structural formulas may be rightly attributed. 2. Applied to neurons of the cinerea of the spinal cord, the axons of which pass into the white matter of the cord on the same side in which they are located.

Tautomerism (*taw-ton'-er-izm*) [*ta'is*, same; *πίσις*, a share]. The attribution of two different formulas to one compound.

Taxis (*taks'-is*) [*τάξις*, from *τάσσειν*, to arrange]. An arranging; a manipulation, especially manipulation for the reduction of hernia. **T.**, **Bipolar**, the replacement of a retroverted uterus by upward pressure through the rectum and drawing the cervix down in the vagina.

Tay's Choroiditis. Choroidal degeneration, characterized by irregular yellowish spots visible around the macula lutea, and thought to be due to an atheromatous condition of the arteries. Syn., *Choroiditis gullata senilis*.

T-bandage. See under *Bandage*.

Te. Symbol for tellurium.

Tea (*te*) [Chinese]. 1. The dried leaves of *Thea chinensis*, of the order *Ternstroemia*, used for preparing a beverage, also called tea. 2. Any vegetable infusion used as a beverage.

Teale's Amputation. See *Operation*, *Teale's*.

Tears. The secretion of the lacrimal gland.

Tease (*tēz*). To tear a tissue into its component parts with needles.

Teaspoon. A small spoon holding about 4 Cc. or 1 dr.

Teat (*tē*). A nipple.

Technic, Technique (*tek'-nik, tek-nēk'*) [*τέχνη*, art]. The method of procedure in operations.

Technocautis (*tek-no-kaw'-sis*) [*τέχνη*, art; *καύσις*, a burning]. Mechanic cauterization, in counterdistinction to that produced by chemicals.

Technology (*tek-nol'-o-je*) [*τέχνη*, a child; *λόγος*, study]. The study or scientific knowledge of childhood, its hygiene, diseases, etc.

Tectocephaly (*tek-to-se'-ol-e*) [*tectum*, a cover; *κεφαλή*, head]. The state of having a roof-shaped skull.

Tectology (*tek-tol'-o-je*) [*τέκτων*, a builder; *λόγος*, science]. Structural morphology.

Tectorial (*tek-to'-re-al*) [*tectorium*]. Serving as a roof or covering. **T. Membrane**. See *Membrana tectoria*.

Tectorium (*tek-to'-re-sum*) [L.]. 1. A covering. 2. See *Membrana tectoria*.

Teel Oil. See *Sesamum Oil of*.

Teeth (*tēth*). See *Tooth*.

Teething [AS., *tōth*, tooth]. The eruption of the first teeth in an infant; dentition.

Teevan's Law. Fracture of a bone occurs in the line of extension, not in that of compression.

Tegmen (*teg'-men*) [*tegere*, to cover]. A cover. **T. mastoideum**, the roof of the mastoid cells. **T. tympani**, the roof of the tympanic cavity.

Tegmental (*teg-men'-tal*) [*tegmen*]. Pertaining to the tegmentum. **T. Nucleus**, the red nucleus. See *Nucleus*, *Tegmental*.

Tegmentum (*teg-men'-tum*) [*tegmen*]. A covering; specifically, the dorsal portion of the crus cerebri and pons varolii. **T. auris**, the membrana tympani.

Tegmin (*teg'-min*). A white, aseptic substance used as is collodion, in sealing small wounds that do not require drainage; it is said to consist of an emulsion of wax, acacia, water, zinc oxid, and lanolin.

Tegumen (*teg'-u-men*). See *Tegmen*.

Tegument (*teg'-u-ment*) [*tegmen*]. The integument.

Tegumentary (*teg-u-ment'-a-re*) [*tegmen*]. Relating to the skin or tegument.

Teichmann's Crystals. Hemincrystals. **T.'s Test for Hemin**, to the dry residue placed on a slide a small crystal of sodium chlorid is added and a cover-glass laid over it. A few drops of glacial acetic acid are allowed to flow in under the cover-glass, and the whole is heated gently so as not to boil the liquid. On cooling, rhombic crystals of hemin (*Teichmann's crystals*) will be found. If no crystals appear after the first warming, warm again, and, if necessary, add more acetic acid.

Teichopsia (*ti-kop'-se-ah*) [*τεῖχος*, wall; *ὄψις*, vision]. A temporary amblyopia, with subjective visual images like fortification-angles; it is probably due to vasomotor disturbances of the visual center.

Teinodinia (*ti-no-din'-e-ah*). See *Tenodinia*.

Teinophlogosis (*te-in-o-flo-go'-sis* or *tin-o-flo-go'-sis*) [*τεῖνον*, to stretch; *φλόγσις*, inflammation]. Inflammation of the tendons.

Tela (*te'-lah*) [L.]. A web or tissue. **T. choroidea**, the membranous roof of the third and fourth ventricles of the brain. **T. vasculosa**, the choroid plexus.

Telangiectasis (*tel-an-je-ek'-ta-sis*) [*τέλος*, end; *ἀγγεῖον*, a vessel; *ἵκτασις*, a stretching]. Dilation of groups of capillaries or smaller blood-vessels.

Telangiectatic (*tel-an-je-ek'-tat'-ik*). Pertaining to or characterized by telangiectasis.

Telangiectoma (*tel-an-je-ek'-to'-mah*) [see *Telangioma*]. Birthmark; simple nevus.

Telangioma (*tel-an-je-ek'-mah*) [*τέλος*, end; *ἀγγεῖον*, a vessel; *ῥίμα*, tumor]. A tumor composed of dilated capillaries.

Telangiostis (*tel-an-je-ek'-sis*) [*τέλος*, end; *ἀγγεῖον*, a vessel]. Disease of the capillaries or minute blood-vessels.

Teledendrite (*tel-e-den'-drit*). See *Telodendron*.

Telediastolic (*tel-e-di-as-tol'-ik*) [*τελεσις*, end; *diastole*]. Relating to the last phase of a diastole.

Telephony (*tel-eg'-on-e*) [*tele*, end; *phon*, semen].

The influence of the paternal seed upon the offspring of a woman or animal by a later husband or male.

Telegrapher's Cramp. See *Occupation-neurosis*.

Teleelectrotherapeutics (*tel-e-lek'tro-ther-ap-u'-tik*) [*tele*, afar; *electrotherapeutics*]. The treatment of hysterical paralysis by a series of electric discharges near the patient without actual contact.

Teleneurite (*tel-e-nu'-rit*) [*tele*, end; *neur*, nerve]. One of the terminal filaments of the main stem of an axis-cylinder process.

Teleneuron (*tel-e-nu'-ron*) (see *Teleneurite*). The neuron forming the terminus of an impulse in a physiologic act involving the nervous system.

Teleorganic (*tel-e-or-gan'-ik*) [*tele*, complete; *organic*]. Necessary to organic life.

Teleotherapeutics (*tel-e-o-ther-ap-u'-tik*) [*tele*, afar; *therapeutic*]. Suggestive therapeutics.

Telepathy (*telep'-ath-e*) [*tele*, afar; *path*, disease]. The action, real or supposed, of one mind upon another when the two persons are separated by a considerable distance, thought transference.

Telephic (*tel-e'-ik*) Malignant; incurable; relating to a telephium.

Telephium (*tel-e'-um*) [*Telephus*, son of Hercules, whose wound received from Achilles did not heal]. An old inveterate ulcer.

Tellicherry Bark. The bark of *Wrightia zeylanica*; it is used in dysentery.

Telluric (*tel-lu'-rik*) [*tellus*, earth]. Derived from the earth.

Tellurism (*tel-lu'-rizm*) (see *Telluric*). Telluric music, influence of the soil as a cause of disease.

Tellurium (*tel-u'-re-um*) (see *Telluric*). A non-metallic element of bluish-white color, having a specific gravity of 6.25, a melting point of two or six, an atomic weight of 126.6. Symbol Te.

Telodendron (*tel-o-den'-dron*) [*tele*, end; *dendron*, tree]. One of the minute bulbous expansions terminating the arborization of an axon.

Telokinesis (*tel-o-kin'-e-sis*) (see *Telothese*).

Telolecithal (*tel-e-let'-ith-al*) [*tele*, end; *lecithon*, yolk]. Of an ovum, having a relatively large mass of food yolk placed eccentrically.

Telelemma (*tele-len'-ah*) [*tele*, end; *lemma*, husk]. The membrane covering the entrance of Doyere, or the point of entrance of a motor nerve into a muscular fiber.

Telophase (*tel'-ah-se*, *trien*, end; *phase*, an appearance). The final phase of any process, as that of mitosis.

Temperament (*tem'-per-ment*) [L., *temperamentum*]. A term applied to mental disposition and physical constitution of an individual, as the bilious, lymphatic, nervous, and sanguine temperaments.

Temperature (*tem'-per-tyur*) [L., *temperatura*]. The degree of intensity of heat of a body, especially as measured by a scale termed a thermometer. T., Absolute, that reckoned from the absolute zero of temperature, esti-

mated at -273°C . T., Normal, the temperature of the body in a state of health, i.e., 98.6°F . T.-sense, the sense for slight differences in temperature, an impression consisting of a sense for cold or heat, and a heat sense (*thermoesthesia*). These are represented on the surface by different nerve endings, the so-called cold and heat points.

Temple (*tem'-pl*) [*temple*, time]. The portion of the head behind the eyes and above the ear.

Temporal (*tem'-por-al*) [*tempus*]. Pertaining to the temple, as the temporal bone, the temporal artery.

Temporalis (*tem-po-ra'-lis*) [*tempus*]. The temporal muscle.

Temporization (*tem-po-riz-a'-shun*, *tempus*, time). The expectant treatment of disease.

Temporo- (*tem-po-ro*) [*temple*]. A prefix denoting pertaining to the temple.

Temporoauricular (*tem-po-ro-aur'-ik-u-lar*) [*tempus*, auricular]. Pertaining to the temporal and auricular regions of the head.

Temporofacial (*tem-po-ro-fa'-shul*, *tempus*, face). Pertaining to the temple and the face.

Temporomalar (*tem-po-ro-mal'-ar*, *tempus*, malar, cheek). Pertaining to the temple and malar bones.

Temporomastoid (*tem-po-ro-mast'-oid*, *tempus*, mastoid). Pertaining to the temporal and mastoid regions of the skull.

Temporomaxillary (*tem-po-ro-max'-il-lar*, *tempus*, maxilla). Pertaining to the temporal region and the upper jaw.

Temporooccipital (*tem-po-ro-ok'-i-p'-it-al*, *tempus*, occiput). Pertaining to the temple and the occiput.

Temporoparietal (*tem-po-ro-par'-i-et-al*, *tempus*, parietal, wall). Pertaining to the temporal and parietal bones. A part of the temporal and parietal lobes of the brain.

Temporosphenoid (*tem-po-ro-sphen'-oid*, *tempus*, sphenoid). Pertaining to the temporal region and the sphenoid bone.

Temporozygomatic (*tem-po-ro-zy-go-mat'-ik*, *tempus*, zygoma, cheek). Relating to a temple and a zygoma.

Temulence (*tem'-u-lens*, *temulentia*, inebriety). Inebriety, drunkenness.

Temulin (*tem'-u-lin*). The extract principle of *Lathrum temulentum*.

Tenacious (*ten-a'-shus*, *tenax*, tough). That catches.

Tenacity (*ten-a'-s-i-ty*, *tenacitas*). Toughness.

Tenaculum (*ten-a'-ku-lum*, *tenax*, to hold). A hook-shaped instrument for pulling and holding parts.

Tenalgia (*ten-al'-j-ah*). See *Tenodynia*.

Tenax (*ten-a'-shus*) [L.]. Oakum especially prepared for surgeons' use.

Tendinitis (*ten-din'-it-is*). See *Tendonitis*.

Tendinoplasty (*ten-din-o-plas'-te*) [*tenon*, tendon, *plastis*, to form]. Plastic surgery of tendons.

Tendinosuture (*ten-din-o-su'-tur*). See *Tendonosuture*.

Tendinous (*ten-din'-us*, *tendens*). Pertaining to or having the nature of tendon.

Tendo (*ten'-do*) [*L.*]. A tendon. **T. achillis**, the common tendon of the gastrocnemius and soleus muscles inserted into the heel. **T. calcaneus**. See *T. achillis*. **T. oculi**, **T. palpebræ**. See *Ligament, Palpebral Internal*. **Tendomucoid** (*ten-do-mu'-koid*). A mucin found in tendons.

Tendon [*tendere*, to stretch]. A band of dense fibrous tissue forming the termination of a muscle and attaching the latter to a bone. **T.**, **Central**, the aponeurosis in the center of the diaphragm. **T.-reflex**, a reflex produced by stimulating the tendon of a muscle. **T.**, **Reindeer**, tendon from the neck of the reindeer; used as ligatures. **T.-spindles**. See *Corpuscles, Golgi's*.

Tendosynovitis (*ten-do-si-no-vi'-tis*). See *Tenosynovitis*.

Tendovaginal (*ten-do-vaj'-in-al*) [*tendon*; *vagina*, a sheath]. Relating to a tendon and its sheath.

Tenectomy (*ten-ek'-to-me*). See *Tenonectomy*.

Tenesmus (*ten-es'-mus*) [*τείνω*, to strain]. A straining, especially the painful straining to empty the bowels or bladder without the evacuation of feces or urine.

Tenia (*te'-ne-ah*) [*τῆνια*, tape-worm]. A tape-worm. See *Tape-worm*. **T.-toxin**, the toxin produced by tape-worms and to which the pathologic changes wrought in the intestine are partly due.

Teniace (*te'-ne-as-ē*) [*tenia*; *cadere*, to kill]. 1. Destructive of tape-worms. 2. An agent that destroys tape-worms.

Teniafuge (*te'-ne-aj'-ū*) [*tenia*; *fugare*, to drive]. 1. Expelling tape-worms. 2. An agent that expels tape-worms.

Tennesson's Acne. A disseminate variety of acne comæa.

Tennis-arm, **Tennis-elbow**. A strain of the elbow, said to be frequent in tennis-players.

Tennysin (*ten'-is-in*). An alkaloid occurring in brain tissue.

Teno- (*ten-o-*) [*-τεν-*, tendon]. A prefix meaning pertaining to a tendon.

Tenodynia (*ten-o-din'-e-ah*) [*teno-*; *ἄλγος*, pain]. Pain in a tendon.

Tenomyotomy (*ten-o-mi-ot'-o-me*) [*teno-*; *μυοτομή*]. Abadi's operation to enfeeble one of the recti muscles, consisting of incising the lateral parts of its tendon near its sclerotic insertion and removing a small portion of the muscle on each side.

Tenon's Capsule. A fibroelastic membrane surrounding the eyeball. It is covered by a continuous layer of endothelial plates, and corresponds to a synovial sac. **T.'s Fascia**. See *Tenon's Capsule*. **T.'s Space**, the lymph space existing between the sclerotic and Tenon's capsule.

Tenonectomy (*ten-on-ek'-to-me*) [*teno-*; *ἄκρως*, excision]. Excision of a portion of a tendon.

Tenonitis (*ten-on-i'-tis*). Inflammation of Tenon's capsule.

Tenonometer (*ten-on-om'-et-er*) [*teno-*; *μέτρον*, a measure]. An instrument for measuring the tension of the eyeball.

Tenontagra (*ten-on-ta'-grah*) [*teno-*; *ἄγρον*, seizure]. Gout in the tendons.

Tenontitis (*ten-on-ti'-tis*) [*teno-*; *ἔτις*, inflammation]. Inflammation of a tendon.

Tenontography (*ten-on-tog'-ra-fee*) [*teno-*; *γράφω*, to write]. The descriptive anatomy of the tendons.

Tenontolemmitis (*ten-on-to-lem-i'-tis*). See *Tenosynovitis*.

Tenontology (*ten-on-tol'-o-je*). See *Tenontography*.

Tenontothecitis (*ten-on-to-the-si'-tis*). See *Tenosynovitis*. **T. prolifera calcarea**, necrobiosis of the tendons in their sheaths accompanied by calcareous deposit.

Tenophony (*ten-af'-on-e*) [*teno-*; *φωνή*, sound]. A sound elicited by auscultation supposed to be produced by the chordæ tendinæ.

Tenophyte (*ten'-o-fit*) [*teno-*; *φύω*, a growth]. A bony or cartilaginous growth on a tendon.

Tenoplasty (*ten'-o-plast-ē*) [*teno-*; *πλασσω*, to form]. Plastic surgery of a tendon.

Tenorrhaphy (*ten-or'-a-fee*) [*teno-*; *ραφή*, suture]. The uniting of a divided tendon by sutures.

Tenositis (*ten-o-si'-tis*). See *Tenontitis*.

Tenostosis (*ten-os-to'-sis*) [*teno-*; *ὥστος*, a bone]. Ossification of a tendon.

Tenosuture (*ten-o-si'-tur*). Same as *Tenorrhaphy*.

Tenosynovitis (*ten-o-sin-o-vi'-tis*) [*teno-*; *σύνωρις*; *ἔτις*, inflammation]. Inflammation of a tendon and its sheath.

Tenotome (*ten'-o-tōm*) [*teno-*; *τέμνω*, to cut]. A knife for performing tenotomy.

Tenotomy (*ten-ot'-o-me*) [see *Tenotome*]. The operation of cutting a tendon.

Tension (*ten'-shun*) [*tendere*, to stretch]. 1. The act of stretching, the state of being stretched. 2. In electricity, the power of overcoming resistance. **T. of Gases**, the tendency of a gas to expand on account of the mutual repulsion of its molecules. **T.**, **Intraocular**, the pressure of the ocular contents upon the sclerotic coat. It may be estimated by means of an instrument called a tonometer, or by palpation with the fingers, and is recorded by symbols as follows: T_0 = normal tension, $T + 1$, $T + 2$, $T + 3$, indicate various degrees of increased tension, and $T - 1$, $T - 2$, $T - 3$, corresponding degrees of decreased tension.

Tensity (*ten'-sil-e*) [see *Tension*]. Tenseness, the condition of being stretched.

Tensive (*ten'-siv*). Giving the sensation of stretching or contraction.

Tensor (*ten'-sor*) [see *Tension*]. A stretcher; a muscle that serves to make a part tense. See under *Muscle*.

Tensure (*ten'-shur*). Tension, a stretching or straining.

Tent [*L.*, *tentis*]. A plug of soft material, as lint, gauze, or other material that increases in volume by the absorption of water; it is used chiefly for dilating an orifice and for keeping a wound open. **T.**, **Laminaria**, a tent made of sea-tangle. **T.**, **Sponge**, a tent made of compressed sponge, used for dilating the os

- uteri. **T.**, Tupelo, one made of the wood of the root of the water-tupelo.
- Tentative** (*ten'ta-tiv*) [*tentare*, to try; to prove] Empirical; experimental.
- Tenth Cranial Nerve.** The pneumogastric or vagus nerve.
- Tentorium, T. cerebelli** (*ten-to'-re-um*) [L., "a tent"]. The partition between the cerebrum and the cerebellum formed by an extension of the dura mater.
- Tenuate** (*ten'-u-āt*) [*tenuis*, thin]. To make thin.
- Tenuity** (*ten'-u-ē*). Thinness; the condition of being thin.
- Tenuous** (*ten'-u-us*). Thin; minute.
- Tephromyelitis** (*tef-ro-miel-i-tis*). See *Poliomyelitis*.
- Tephrosis** (*tef-ro'-sis*) [*τεφρός*, ashen]. Incineration.
- Tepid** (*tep'-id*) [*tepidus*, warm]. About blood-heat.
- Tepidarium** (*tep-id-a'-re-um*) [*tepid*]. A warm bath.
- Tepopote** (*te-po'-po-te*). The twigs of *Ephedra acanthophyllia*, used in venereal diseases.
- Teramorphous** (*ter-ah-mor'-fus*) [*teras*, monstrous, form]. Of the nature of a monstrosity.
- Teras** (*te'-ras*) [*τερας*, a monster, pl., *terata*]. A monster.
- Teratic** (*ter-at'-ik*) [*teras*]. Monstrous.
- Teratism** (*ter-at'-izm*) [*teras*]. An anomaly of conformation, congenital or acquired.
- Teratogeny** (*ter-at'-en-ē*) [*teras*; *γενεα*, to beget]. The formation or bringing forth of monsters.
- Teratoid** (*ter-at'-oid*) [*teras*; *ειδος*, like]. Resembling a monster. **T.** Tumor, a complex tumor due to the growth of tissue embryologically misplaced.
- Teratology** (*ter-at'-o-je*) [*teras*; *λογος*, science]. The science of malformations and monstrosities.
- Teratoma** (*ter-at'-o-mah*) [*teras*; *μα*, tumor]. A tumor containing teeth, hair, and other material not found in the part wherein it grows, and resulting from an embryonic misplacement of tissue or from the inclusion of parts of a rudimentary fetus.
- Teratosis** (*ter-at'-o-sis*) [*teras*]. A congenital deformity.
- Terchlorid** (*ter-klor'-id*) [*ter*, three, *χλωρος*, green]. Synonym of *Trichlorid*.
- Terebene** (*ter'-e-ben*) [*τερεβινθος*, terebinth-tree]. *Terebinthum* (U. S. P.), $C_{10}H_{16}$. A hydrocarbon obtained by the oxidation of oil of turpentine by means of sulfuric acid. It is soluble in alcohol, and is used in bronchitis, dyspepsia, and diseases of the genitourinary tract. Dose: 5 minims to 12-15 Gm. i.
- T.** Glycerol, a mixture of terebene, 4 parts, glycerol, 7 parts; and water, 1 part, shaken together and exposed until the separated glycerol remains turbid when allowed to stand. It is used as an application to purulent wounds.
- Terebinth** (*ter'-e-binth*) [see *Terebene*]. 1. The turpentine tree, *Ficus terebinthus*, which yields Chian turpentine. 2. Turpentine.
- Terebinthina** (*ter'-e-binth-in-ah*). See *Terepentine*.
- Terebinthinate** (*ter'-e-binth-in-āt*) [see *Terebene*]. 1. Containing terebinthine. 2. A salt, base or derivative of the terebinthine group.
- Terebinthinism** (*ter'-e-binth-in-izm*). Poisoning with oil of turpentine.
- Terebrant, Terebrating** (*ter'-e-brant*, *ter'-e-brat-ing*) [*terebrare*, to bore]. Boring, boring; said of pain.
- Terebration** (*ter'-e-brat-shun*) [see *Terebrant*]. The operation of boring.
- Teremorrhua** (*ter'-e-mor'-u-a*) [*terebrans*, murex, the cod]. A preparation, preparation, of terebene and cod-liver oil.
- Teres** (*ter'-ez*) [*terere*, to rub]. 1. Round in the *ligamentum teres*. 2. A muscle having a cylindrical shape, as *teret major*, *teret minor*. See under *Muscle*.
- Terete** (*ter'-et*) [*terere*]. Cylindrical. **T.** Eminence, a slight thickening of the lamina alba on the floor of the fourth ventricle. **T.** Funicle. See *Funiculus teres*.
- Ter in die** [L.]. Three times daily.
- Term** (*ter'-m*, a limit). A limit, the time during which anything lasts.
- Terma** (*ter'-mah*) [see *Term*]. The layer of gray matter between the corpus callosum and the optic commissure.
- Terminad** (*ter'-min-ad*) [see *Term*]. Situated in or toward the terminus.
- Terminal** (*ter'-min-āl*) [see *Term*]. Pertaining to the end, placed at or forming the end.
- Ternary** (*ter'-n-er-ē*) [*ter*, three times]. Of chemically compounds, made up of three elements or radicals.
- Ternitrate** (*ter'-n-it-rit*). See *Ternitric acid*.
- Teroxid** (*ter'-ok'-id*) [*ter*, three, *oxid*]. A tri-oxid.
- Terpene** (*ter'-pen*) [a modified form of *terebinth*]. One of a number of hydrocarbons having the formula C_nH_{2n} , and containing a high volatile oil. **T.** Hydrochlorate, *terpene camphor*, $C_{10}H_{16}HCl$, obtained from pinene by the action of the action of the cold. It is used as an internal antiseptic in tuberculosis and to check the flow of sweat externally, it is used with phenol in all cases.
- Terpenism** (*ter'-pen-izm*). Poisoning by terpene from internal use or irritation caused by absorption; pain, vomiting, inflammation of bladder and kidneys, hematuria, passage of asphixia, and collapse. The urine is the color of violets.
- Terpin** (*ter'-pin*, $C_{10}H_{16}H_2O$, H_2O). A terpenic alcohol obtained from turpentine in brominal and perbromic solutions in dilute extraction. **T.** Hydrate (*terpin hydrate*) (U. S. P.), $C_{10}H_{16}H_2O + H_2O$, a crystalline substance used as an expectorant and diuretic. Dose: as expectorant, 0.5 (0.3-0.4 Gm.), diuretic, 12-15 gr. i. See *Terpin hydrate* under *Diuretic*.
- Terpinol** (*ter'-pin-ol*) [*terpin*, *alcohol*, H_2O]. A substance formed by heating

and terpin hydrate with aqueous mineral acids; used as is terpin.

Terra (*ter'-ah*) [L.]. Earth. **T. alba**, white clay. **T. japonica**, catechu. **T. ponderosa**, baryta or barium sulfate.

Terrain-cure (*ter-an(g)-kūr*) [Fr.]. A method of treatment consisting in mountain-climbing, dietetics, etc., for plethora, corpulence, neurasthenia, chlorosis, incipient pulmonary tuberculosis, etc.

Terralin (*ter'-al-in*). An ointment-vehicle consisting of calcined magnesia, kaolin, silica, glycerol, and an antiseptic. It can be readily removed from the skin by water.

Terrol (*ter'-ol*). A residue from petroleum; it is used as a substitute for cod-liver oil.

Terroline (*ter'-ol-in*). A variety of petroleum-jelly.

Tersulfate (*ter-sul'-fat*) [*ter*, thrice; *sulfate*]. A salt in which the base is united with three sulfuric acid radicles.

Tersulfid (*ter-sul'-fid*). See *Trisulfid*.

Tertian (*ter'-she-an*) [*tertius*, third]. Recurring every other day, as *tertian fever*, a form of intermittent fever.

Tertiary (*ter'-she-a-ra*) [*tertian*]. Third in order. **T. Syphilis**. See under *Syphilis*.

Tertipara (*ter-tip'-a-rah*) [*ter*, three times; *para-*, to bear]. A woman who has been in labor three times.

Tescalama (*tes-kal-am'-ah*). The milky juice of *Ficus nymphioides*, a tree of Mexico and South America. It is used in plasters.

Tesla Currents (*tes'-lah*) [Nikola Tesla, electrician]. Rapidly alternating electric currents of high tension; they were applied therapeutically by d'Arsonval.

Teslaization (*tes-la-iz-a'-shun*). The therapeutic application of Tesla currents. Syn., *Arsonization*.

Tessellated (*tes'-el-a-ted*) [*tessellatus*, from *tessella*, a small square stone]. Formed into little squares; checkered. **T. Epithelium**, flattened epithelial cells joined at their edges.

Test [*testum*, a crucible]. 1. A trial. In chemistry, a characteristic reaction which distinguishes one body from others. 2. The reagent for producing a special reaction. **T., Bremer's Color-**. See *Bremer's Method* under *Stain*. **T., Kowarski's**, for sugar in the urine. Shake in a test-tube 5 drops of phenylhydrazin with 10 drops of strong acetic acid, add 1 Cc. of saturated sodium chlorid solution and 2 Cc. or 3 Cc. of urine, and heat for 3 minutes; then cool slowly. If the amount of sugar present is as high as 0.2%, characteristic crystals will form in a few minutes, if less, the formation of crystals will require a longer time—5 to 30 minutes. **T., Lebbin's**, for Formaldehyd in Milk. Boil a few Cc. of the suspected milk with 0.05 Gm. resorcinol, to which half, or an equal volume of a 5% solution of sodium hydroxid is added. In the presence of formaldehyd the yellow solution changes to a fine red color, which becomes more apparent on standing. **T., Lipliawsky**, for diacetic acid in the urine.

Two solutions are needed: (a) a 1% solution of paramidoacetophenon with addition of 2 Cc. of concentrated HCl shaken thoroughly; (b) a 1% aqueous solution of potassium nitrite; 6 Cc. of the first is mixed with 3 Cc. of the second, an equal volume of urine added, and a drop of ammonia. To 10 drops to 2 Cc. of this mixture add 15 to 20 Cc. of concentrated HCl, 3 Cc. of chloroform, and 2 to 4 drops of iron chlorid solution. If the test-tube is corked and gently but repeatedly inverted, in the presence of diacetic acid the chloroform will show a characteristic violet color—the deepness of the color depending upon the amount present. **T.-meal**, one given for the purpose of studying the secretory power of the stomach. Those in most common use are *Germain Sée's*: 60 to 80 Gm. of chopped beef, free from fat and fibrous tissue; 100 to 150 Gm. of white bread; a glass of water. The contents of the stomach are removed in two hours. *Ja-worski's*: 1 or 2 hard-boiled eggs and 100 Cc. of distilled water at room-temperature; after 45 minutes of quiet 100 Cc. of distilled water; 5 minutes later the contents of the stomach are aspirated. *Riegel's*: a plate of soup; 150 to 200 Gm. of beefsteak; 50 Gm. of potato-purée; a small roll; or, 300 Cc. of clear broth; 150 Gm. of beefsteak (fillet); 50 Gm. of mashed potatoes; 35 Gm. of white bread. **T., Nothnagel's**. See *Nothnagel's Test*. **T.-paper**, paper impregnated with a chemie reagent, and used for detecting the presence of certain substances or conditions which cause a change in the color of the paper. **T., Reach's**, for testing the secretory functions of the stomach without use of the stomach-tube. It consists in administration of capsules of barium iodid and bismuth subiodid from which iodine is set free only through the action of HCl; then test the sputum for iodine. If the reaction occurs in 80 minutes, the individual is normal; earlier action indicates hyperacidity; late occurrence, hypoacidity. **T. Solution**. See *Standard Solution*. **T.-tube**, a cylinder of thin glass closed at one end, used in various chemie procedures. **T.-types**, letters or figures of different sizes to test acuteness of vision. Those most commonly employed are *Snellen's test-types*, a series of letters which at proper distances subtend an angle of five minutes.

Testa (*tes'-tah*) [L.]. A shell. **T. ovi**, egg-shell. **T. præparata**, crushed and powdered oyster-shell.

Testaden (*tes'-ad-en*). A preparation from the testes of the bull. Used in affections of the spinal cord and in nervous troubles. Dose 92–123 gr. (6–8 Gm.) daily.

Testibrachium (*tes-te-bra'-ke-un*) [*testis*; *brachium*, arm]. The process connecting the cerebellum with the testis of the brain; the superior peduncle of the cerebellum.

Testicle (*tes'-tik-l*) [*testiculus*, dim. of *testis*]. See *Testis* (1). **T., Irritable**, neuralgia of the testicle. **T., Undescended**, the condition

in which a testicle remains either in the pelvis or in the inguinal canal.

Testicular (*tes-tik'u-lar*) [*testicle*]. Pertaining to the testicle. **T. Juice**, a juice extracted from the testicles of animals, and used in the treatment of various nervous conditions.

Testidin (*tes-tid-in*) An alcoholic extract prepared from the testes of the bull.

Testin (*tes'tin*). A sterilized extract of the testes of the ram; used in nervous debility, impairment, etc.

Testis (*tes'tis*) (L.; pl., *testes*). 1. One of the two glandular bodies in the scrotum that secrete the semen. 2. One of the posterior pair of tubercles of the corpora quadrigemina. **T.**, Descent of, the passage of the testes through the inguinal canal into the scrotum. **T. muliebris**, the ovary.

Testitis (*tes-ti'tis*). See *Orchitis*.

Tetanic (*tel-an'ik*) [*tetanus*]. 1. Pertaining to or resembling tetanus. 2. Producing tetanus.

Tetaniform (*tel-an'ic-form*) [*tetanus*, *forma*, form]. Resembling tetanus.

Tetanilla (*tel-an'il'-ah*) [*tetanus*]. Tetany.

Tetanic (*tel'an-in*) [*tetanus*], $C_{14}H_{20}N_2O_4$. A protein obtained from cultures of the bacillus of tetanus in beef-broth and from the tissues of patients suffering from tetanus. It produces symptoms of tetanus in the lower animals.

Tetanization (*tel-an-i-zā'shun*) [*tetanus*]. The production of tetanus or of tetanic spasm.

Tetano- (*tel-an-o-*) [*tetanus*]. A prefix meaning relating to tetanus.

Tetanoid (*tel'an-oid*) [*tetano-*; *eidōs*, resembling]. Resembling tetanus.

Tetanolysin (*tel-an-ol'-i-sin*) [*tetano-*; *lysis*, to loose]. The hemolytic toxin of tetanus.

Tetanomotor (*tel-an-o-mō'tor*) [*tetano-*; *motor*, a mover]. An instrument for stimulating a nerve mechanically and producing tetanus of the supplied muscle.

Tetanospasmin (*tel-an-o-spas'min*). A toxin produced by the tetanus bacillus to which tetanic convulsions are due.

Tetanotoxin (*tel-an-o-tox'in*) [*tetano-*; *toxikon*, poison]. $C_{11}H_{11}N$. A poisonous ptomain obtained from cultures of the bacillus of tetanus. It produces tremor, then paralysis and violent convulsions.

Tetanus (*tel'an-us*) [*tetanos*, from *teino*, to stretch]. 1. An infectious disease characterized by tonic spasm of the voluntary muscles, an intense exaggeration of reflex activity, and muscular convulsions. It is due to the bacillus of tetanus and has a period of incubation of from ten to twelve or more days. The first symptom is usually trismus or lockjaw, which is soon followed by spasms of the other muscles. The poison may enter through a wound (*traumatic tetanus*), at times on point of entrance is discoverable (*idiopathic tetanus*). 2. A tense, contracted state of a muscle, especially when caused experimentally. **T.**, Cephalic, a form which has been observed to follow a wound of the head, especially one near the eyebrow. Tetanus and focal paralysis occur on the side of the injury, there

is dysphagia, and death frequently results. **T.**, Hydrophobic, tetanus characterized by violent spasms of the muscles of the throat. **T.**, Idiopathic. See under *Tetanus*. **T.**, neonatorum, that due to infection of the umbilicus or the circumference around **T.**, Puerperal, that following labor. **T.**, Trasmatic. See under *Tetanus*.

Tetany (*tel'an-e*) [*tetanus*]. A disease characterized by intermittent, bilateral, painful spasms of the muscles, especially of the upper extremities. It is most common in young adults, but may occur in others. The cause appears to be a toxic agent. It occurs in connection with typhoid fever, gastroenteritis, inflammation, in rickets, distention of the stomach, and after extirpation of the thyroid gland.

Tetmil (*tel'-mil*) Ten millimeters.

Tetra- (*tel'-euh-*) [*tētra*, four]. A prefix meaning four.

Tetraallylammonium-alum (*tel'-euh-ā-lū-mō-ni-um-ol'-ūm*), $N(C_4H_7)_4Al_2(SO_4)_3 \cdot 6H_2O$. A uric-acid solvent.

Tetrabasic (*tel'-euh-bā'sic*) [*tetras*; *basikos*, basic]. Having four atoms of replaceable hydrogen.

Tetrahenthium (*tel'-euh-ten'thē-ūm*) [*tetra*; *enthion*, a monster having four arms]. A monster having four arms.

Tetracate (*tel'-euh-kā'tē*) [*tetra*; *katē*, a base with four male sides of a cube and].

Tetracheirus (*tel'-euh-kē'-ū-s*) [*tetra*; *cheiro*, hand]. A monster with four hands.

Tetrachlorid (*tel'-euh-klor'id*) [*tetra*; *chlōros*, green]. A binary compound consisting of an element or radicle and four chlorine atoms.

Tetracid (*tel'-euh-sid*) [*tetra*; *acid*]. Having four atoms of hydrogen that are replaceable by acid radicals.

Tetracoccus (*tel'-euh-kok'-us*) [*tetra*; *coccus*, berry]. A micrococcus occurring in groups of four.

Tetrad (*tel'-rad*) [*tētra*, four]. An element having an atomivity of four.

Tetraethylene iodid (*tel'-euh-ēthē-ēl'id*) [*tetra*; *ēthē*, four]. *Diodoform*.

Tetragon, **Tetragonum** (*tel'-euh-gō-n*, *tel'-euh-gō-nūm*). A four-sided figure.

Tetragonum lumbale, an irregular, diamond-shaped space in the lumbar region beneath the spine, bounded externally by the dorsal margin of each of the oblique externus muscle, internally by the margin of the sacrospinalis above to the serratus pectus inferior and below to the upper margin of the oblique internus.

Tetraiodoethylene (*tel'-euh-ēthē-ēl'id*) [*tetra*; *ēthē*, four]. See *Diodoform*.

Tetraiodophenolphthalein (*tel'-euh-ēthē-ēl'id*) [*tetra*; *ēthē*, four]. Nonaphen.

Tetraiodopyrrol (*tel'-euh-ēthē-ēl'id*) [*tetra*; *ēthē*, four]. See *Diodoform*.

Tetramazia (*tel'-euh-mā'-zē-ah*) [*tetra*; *māzē*, breast]. The presence of four breasts.

Tetramethylenediamin (*tel'-euh-meth-ē-ēl'id*) [*tetra*; *methē*, four]. $C_4H_{12}N_2$. Putrescine.

Tetramethyl-putrescin (*tel'-euh-meth-ē-ēl'id*) [*tetra*; *methē*, four]. Putrescine.

(*tes'-in*), $C_8H_{10}N_4$. A crystalline base derived from putrescin, having very poisonous properties.

Tetranitrin, Tetranitrol (*tel'-rah-ni'-trin, tel'-rah-ni'-trol*). See *Erythrol Tetranitrate*.

Tetranopsia (*tel'-ran-op'-se-ah*) [*tetra-*; $\delta\psi\alpha$, vision]. A contraction of the field of vision limited to one quadrant.

Tetrapus (*tel'-rah-pus*) [*tetra-*; $\pi\omicron\delta\varsigma$, foot]. 1. Having four feet. 2. A monster having four feet.

Tetrascelus (*tel'-ras'-el-us*) [*tetra-*; $\sigma\kappa\epsilon\lambda\omicron\varsigma$, leg]. A monster having four legs.

Tetraster (*tel'-ras'-ler*) [*tetra-*; $\sigma\tau\epsilon\rho$, a star]. A karyokinetic figure characterized by an arrangement of four stars, due to a fourfold division of the nucleus.

Tetratomic (*tel'-rat-om'-ik*) [*tetra-*; *atom*]. 1. Containing four atoms. 2. Having four atoms of replaceable hydrogen.

Tetravalent (*tel'-rav'-al-ent*). See *Quadrivalent*.

Tetronal (*tel'-ron-al*) [*tetra-*, four], $C_8H_{10}S_2O_4$. Diethylsulfondethylmethane, a hypnotic resembling sulfonal. Dose 10-20 gr. (0.65-1.13 Gm.).

Tetroxid (*tel'-roks'-id*) [*tetra-*; *oxid*]. A binary compound composed of a base and four atoms of oxygen.

Tetryl (*tel'-ril*). See *Butyl*.

Tetter (*tel'-er*) [AS., *teler*]. A name for various skin eruptions, particularly herpes, eczema, and psoriasis.

Teucrin (*tu'-krin*), 1. $C_{21}H_{34}O_{11}$ or $C_{21}H_{32}O_{11}$. A crystalline glucosid from *Teucrium fruticosum*. 2. A purified, sterilized aqueous extract of *Teucrium scordium*; a pungent brown liquid used in the treatment of tuberculous abscesses to arrest development. Hypodermatic dose 50 min. (3 Cc.); locally 10 gr. (0.65 Gm.) with lanolin once daily.

Teucrium (*tu'-kre-um*) [$\tau\epsilon\upsilon\kappa\rho\iota\sigma\omicron\nu$, germander]. A genus of labiate plants, germander or spleenwort. *T. scordium*, water-germander, is tonic, diaphoretic, and anthelmintic.

Texas Fever. An infectious disease of cattle characterized by high fever, hemoglobinuria, and enlargement of the spleen. The disease is due to the parasite *Pyrosoma bigeminum*, which invades the red blood-corpuscle and is transmitted by the cattle-tick, *Boophilus bovis*.

Textiform (*teks'-te-form*) [*textum*, a web, *forma*, form]. Reticular, forming a mesh.

Textural (*teks'-tu-ral*) [*texum*]. Pertaining to the tissues.

Thalamencephalon (*thal'-am-en-sej'-al-on*) [*thalamus*; *encephalon*]. The posterior portion of the anterior brain-vesicle; the interbrain. Syn., *Diencephalon*.

Thalami (*thal'-am-i*). Plural of *Thalamus*.

Thalamic (*thal'-am'-ik*) [*thalamus*]. Pertaining to the thalamus.

Thalamo- (*thal'-am-o-*) [*thalamus*]. A prefix denoting relation to the thalamus.

Thalamocele (*thal'-am-o-sel*) [*thalamo-*; $\kappa\omicron\epsilon\lambda\omicron\varsigma$, a hollow]. The third ventricle.

Thalamocortical (*thal'-am-o-kor'-tik-al*) [*thal-*

amo-; *cortex*]. Pertaining to the thalamus and the cortex of the brain.

Thalamolenticular (*thal'-am-o-len-tik'-u-lar*) [*thalamo-*; *lenticular*]. Pertaining to the thalamus and the lenticular nucleus.

Thalamotegmental (*thal'-am-o-teg-ment'-al*). Relating to the thalamus and tegmentum.

Thalamus (*thal'-am-us*) [$\theta\acute{\alpha}\lambda\alpha\mu\omicron\varsigma$, couch; pl., *thalami*]. A mass of gray matter at the base of the brain, developed from the wall of the vesicle of the third ventricle, and forming part of the wall of the latter cavity. The posterior part is called the *pulvinar*. The thalamus receives fibers from all parts of the cortex, and is also connected with the tegmentum and with fibers of the optic tract. T., *Optic*, T. *opticus*. The same as *Thalamus*.

Thalassophobia (*thal'-as-o-'fo'-be-ah*) [$\theta\acute{\alpha}\lambda\alpha\sigma\sigma\alpha$, sea; $\phi\acute{o}\beta\omicron\varsigma$, fear]. A morbid fear of the sea.

Thalassotherapy (*thal'-as-o-ther'-ap-e*) [$\theta\acute{\alpha}\lambda\alpha\sigma\sigma\alpha$, sea; $\theta\epsilon\rho\alpha\pi\epsilon\iota\alpha$, treatment]. Treatment of disease by sea-voyages, sea-bathing, etc.

Thallin (*thal'-in*) [$\theta\alpha\lambda\lambda\omicron\varsigma$, a green shoot], $C_{11}H_{11}ON$. A liquid basic substance, tetrahydroparamethyloxichinolin. The sulfate and tartrate are used as germicides and antipyretics, and have been employed in typhoid fever and the fever of phthisis. Dose 1-4 gr. (0.065-0.26 Gm.). In gonorrhea the sulfate is employed as an injection in the strength of a 1.5% solution.

Thallium (*thal'-e-um*) [see *Thallin*]. A metallic element having an atomic weight of 202.6, a specific gravity of 11.19, symbol, Tl. The salts are poisonous. See *Elements, Table of Chemie*.

Thallophyte (*thal'-o-fit*) [$\theta\alpha\lambda\lambda\omicron\varsigma$, a green shoot; $\phi\acute{\upsilon\tau\iota\varsigma}$, a plant]. One of a class of very low cryptogams.

Thanato- (*than-at-o-*) [$\theta\acute{\alpha}\nu\alpha\tau\omicron\varsigma$, death]. A prefix denoting pertaining to death.

Thanatognomonic (*than-at-og-na-mont'-ik*) [*thanato-*; $\gamma\acute{\nu}\omicron\mu\omicron\nu$, sign]. Indicative of death.

Thanatoid (*than'-at-oid*) [$\theta\acute{\alpha}\nu\alpha\tau\omicron\varsigma$, death; $\epsilon\iota\delta\omicron\varsigma$, like]. Resembling death.

Thanatol (*than'-at-al*). Same as *Gunethol*.

Thanatomania (*than-at-o-ma'-ne-ah*) [*thanato-*; $\mu\alpha\varsigma\iota\alpha$, madness]. Suicidal mania.

Thermometer (*than-at-om'-et-er*) [*thanato-*; $\mu\acute{\epsilon\tau\rho\nu$, a measure]. A thermometer introduced into a body-cavity to determine if the depression of temperature is so great as to be a sign of death.

Thanatophobia (*than-at-o-'fo'-be-ah*) [*thanato-*; $\phi\acute{o}\beta\omicron\varsigma$, fear]. A morbid fear of death.

Thane's Method. To find the fissure of Rolando in operations upon the brain, the middle point of a line passing from the root of the nose to the occipital protuberance is determined. The upper extremity of the fissure lies half an inch behind this point.

Thaumatrope (*tha-'mah-tröp*) [$\tau\alpha\upsilon\mu\alpha$, wonder; $\tau\pi\acute{\omicron}\nu\omicron\varsigma$, a turning]. A device containing figures, on opposite sides of a rotating wheel, which blend when in motion. It shows the duration of visual impressions.

Thea (*the'-ah*). Tea; the dried leaves of *Thea sinensis*, a shrub of the order *Ericaceae*, containing the alkaloid *thein*, $C_8H_{10}N_2O_2$, identical with caffeine. *Thea* is astringent and gently stimulant to the nervous system; its infusion is used as a beverage.

Theatrin (*the'-at-rin*). An ointment-vehicle consisting of wax, oil, and water.

Thebain (*the'-ba-in*) [*Θηβαίον*, Thebes], $C_{18}H_{21}N-O_2$. An alkaloid found in opium, analogous to strychnin in its physiologic effects.

Thebesian Foramen, T. Valve, T. Veins. See under *Thebesius*.

Thebesius' Foramen. The orifices of Thebesius' veins. **T.'s Valve**, an endocardial fold at the orifice of the coronary vein in the right auricle. **T.'s Veins**, *venae minime cordis*, the venules which convey the blood directly from the myocardium into the auricles.

Thebolactic Acid (*theb'-o-lak'-tik*). A variety of lactic acid occurring in opium.

Theca (*the'-kah*) [*θήκη*, a sheath]. A sheath, especially one of a tendon. **T. cerebri**, the cranium. **T. cordis**, the pericardium. **T. folliculi**, a membranous formation around a gradian vesicle caused by fibrillation of a layer of young connective tissue subsequent to the increased vascularity accompanying the process of maturation. **T. vertebralis**, the membranes of the spinal cord.

Thecal (*the'-kal*) [*theca*]. Pertaining to a sheath.

Thecate (*the'-kat*) [*theca*]. Contained within a sheath.

Thecitis (*the'-sit-is*) [*theca*; *itis*, inflammation]. Inflammation of the sheath of a tendon.

Thein (*the'-in*). See under *Thea*.

Theism (*the'-izm*) [*theos*]. The morbid condition due to the excessive use of tea; it is characterized by headache, palpitation, tremor, insomnia, cachexia, etc.

Thelalgia (*the'-lal'-je-ah*) [*θήλη*, a nipple, *ἀλγος*, pain]. Pain in the nipples.

Thele (*the'-le*) [*θήλη*, a nipple]. The nipple of the female breast.

Thelitis (*the'-li'-tis*) [*thele*, *itis*, inflammation]. Inflammation of the nipples.

Thelium (*the'-le-um*) [*thele*]. A papilla; also, a layer of cells.

Theloncus (*the-long'-kus*) [*thele*; *ὄγκος*, a tumor]. Tumor of the nipple.

Thelorrhagia (*the-lor-aj'-e-ah*) [*thele*; *ῥεῖν*, to flow]. Hemorrhage from the nipple.

Thelothism (*the'-lo-thlem*) [*thele*; *θῆλον*, to push]. Projection of the nipple, caused by contraction of the transverse muscular fibers.

Thelyblast (*the'-e-blást*) [*θήλη*, female, *βλάστης*, a germ]. The female element of the bisexual nucleus, the ovum after the polar globules have been extruded.

Thenad (*the'-nad*) [*thenein*; *ad*, toward]. Toward the thenar eminence.

Thenal (*the'-nal*) [*thenar*]. Pertaining to the palm, or the thenar eminence.

Thenar (*the'-nar*) [*θήναρ*, palm]. 1. The palm of the hand. 2. The fleshy prominence of the palm corresponding to the base of the thumb. **T. Eminence.** See *Thenar* (2).

Theobroma (*the-o-bro'-mah*) [*θεός*, a god; *βρομα*, food]. A genus of trees of the *Simarubaceae*. The seeds of *T. cacao* yield a fixed oil called *theobromin*, U. S. P., and contain the alkaloid *theobromin*, $C_8H_9N_4O_2$, which is closely related to caffeine and xanthin. The seeds are used in the preparation of chocolate and cocoa; the oil (cacao-butter) is employed as an ingredient of emetic, cathartic and the making pills and suppositories. *Theobroma* acts similarly to caffeine.

Theobromin (*the-o-bro'-min*). See under *Theobroma*. **T. Sodiosalicylate.** See *Therapeutics*.

Theocin (*the'-o-sin*). Synthetically prepared theophyllin, isomeric with theobromin, and used as a diuretic. Dose 4 gr. (0.26 Gm.) 3 or 4 times daily.

Theomania (*the-o-ma'-ne-ah*) [*θεός*, a god; *μανία*, madness]. 1. Religious mania. 2. Insanity in which the individual believes himself to be a divine being.

Theophyllin (*the-o-phil'-in*) [*θεός*, a god; *φυλλον*, leaf], $C_8H_9N_4O_2$. An alkaloid occurring in tea and isomeric with theobromin and with paraxanthin.

Theotherapy (*the-o-ther'-ap-ee*) [*θεός*, a god; *θεραπεία*]. The treatment of disease by prayer and religious exercises.

Therapeutics (*ther-ap-u'-sis*). See *Therapeutics*.

Therapeutic (*ther-ap-u'-tik*) [see *Therapeutics*]. Pertaining to therapeutics; curative. **T. Test**, a method of diagnosis by administering certain remedies known to influence a given disease, e. g., quinin in malaria, potassium iodid and mercury in syphilis.

Therapeutics (*ther-ap-u'-sis*) [*θεραπεία*, the art of medicine]. The branch of medical science dealing with the treatment of disease.

Therapeutist (*ther-ap-u'-tis*) [see *Therapeutics*]. One skilled in therapeutics.

Therapy (*ther'-ap-ee*). See *Therapeutics*. **T. Psychic**, treatment of disease by influence of the mind.

Theriaca (*the'-ri'-ah-ah*) [*θηρίον*, from *θεός*, a wild beast, because believed to be a antidote against the poison of animals]. Toxic medicines. **T. andromachi**, Venice treacle, a compound containing nearly 70 ingredients and used as an antidote against poison.

Theriodic (*the-re-od'-ik*) [*θηρίον*, a wild beast; *δική*, malignant].

Theriomimicry (*ther-e-o-mim'-ik-ree*) [*θηρίον*, a wild beast; *μιμνήσκω*, an imitator]. Imitation of the wild animals.

Theriotherapy (*ther-e-o-ther'-ap-ee*) [*θηρίον*, a wild beast; *θεραπεία*]. Veterinary therapy.

Therm [*θερμός*, heat]. The amount of heat required to raise the temperature of one gram of water from 0° C. to 1° C.; it is equal to 4.18 calories.

Thermaerotherapy (*ther-mah-e-ro-ther'-ap-ee*). The therapeutic application of heat.

Thermal (*ther'-mah*) [see *Therm*]. 1. Pertaining to heat. 2. Heat as thermal energy.

Thermalgesia (*ther-mal'-je-ah*) [*θερμός*, heat; *αἰσθησις*, sensation].

- pain]. The condition in which heat causes pain.
- Thermanalgesia** (*ther-man-al-je'-ze-ah*). See *Thermanalgesia*.
- Thermanesthesia** (*ther-man-es-the'-ze-ah*). See *Thermanesthesia*.
- Thermesthesia** (*ther-mes-the'-ze-ah*) [*therm*; *αἰσθησις*, sensation]. 1. The heat-sense. 2. Sensitiveness to heat.
- Thermic** (*ther'-mik*) [*ἰσθησις*, heat]. Pertaining to heat. **T. Fever**, sunstroke; heat-fever.
- Thermin** (*ther'-min*). $C_{10}H_{11}NH_2HCl$. A colorless liquid obtained from a solution of β -naphthylamin in amyl-alcohol by action of metallic sodium. Syn., *Tetrahydro- β -naphthylamin*. **T. Hydrochlorate**, $C_{10}H_{11}NH_2 \cdot HCl$, used to increase body-temperature.
- Thermo-** (*ther-mo-*) [*ἰσθησις*, heat]. A prefix meaning heat.
- Thermoerophore** (*ther-mo-a-e'-ro-för*) [*ther-mo*; *αἰσθησις*, air; *φέρω*, to bear]. An apparatus for the therapeutic local application of hot air.
- Thermoanalgesia** (*ther-mo-an-al-je'-ze-ah*) [*thermo*; *analgesia*]. Insensibility to heat or to contact with heated objects; due to cerebral lesion.
- Thermoanesthesia** (*ther-mo-an-es-the'-ze-ah*) [*thermo*; *anesthesia*]. Loss of the perception of thermal impressions, a condition sometimes present in syringomyelia.
- Thermocauterectomy** (*ther-mo-kaw-ter-ek'-to-me*). See *Igniextirpation*.
- Thermocautery** (*ther-mo-kaw'-ter-e*). See *Cautery*, *Paguelin's*.
- Thermochemistry** (*ther-mo-kem'-is-tree*) [*thermo*; *chemistry*]. That branch of chemie science embracing the mutual relations of heat and chemie changes.
- Thermochroic** (*ther-mo-kro'-ik*) [*thermo*; *χρῶμα*, color]. Transmitting some thermal rays and absorbing others.
- Thermodin** (*ther'-mo-din*) [*ἰσθησις*, heat]. $C_{12}H_{17}NO_2$. An antipyretic derivative of ethyl carbamate.
- Thermoelectricity** (*ther-mo-e-lek-tris'-it-e*) [*thermo*; *electricity*]. Electricity generated by heat.
- Thermofuge** (*ther'-mo-füf*). An external antiseptic, emollient, and detergent, said to be a compound of aluminium silicate, glycerol, boric acid, menthol, thymol, oil of eucalyptus, and ammonium iodid.
- Thermogen** (*ther'-mo-jen*) [see *Thermogenesis*]. An appliance for keeping up the temperature of patients during an operation. It consists of a quilted cushion through which pass wires the temperature of which can be raised by the passage of an electric current.
- Thermogenesis** (*ther-mo-jen'-es-is*) [*thermo*; *γενᾶν*, to produce]. The production of heat.
- Thermogenetic, Thermogenic, Thermogenous** (*ther-mo-jen-et'-ik*, *ther-mo-jen'-ik*, *ther-moj'-en-us*) [see *Thermogenesis*]. Pertaining to thermogenesis; producing heat.
- Thermograph** (*ther'-mo-graf*) [*thermo*; *γράφω*, to write]. A device for registering variations of temperature automatically.
- Thermohyperalgesia** (*ther-mo-hi-per-al-je'-ze-ah*) [*thermo*; *hyperalgesia*]. Painful sensation felt on contact with a hot or cold body.
- Thermohyperesthesia** (*ther-mo-hi-per-es-the'-ze-ah*) [*thermo*; *hyperesthesia*]. Abnormal sensitiveness to the application of hot bodies.
- Thermohypesthesia** (*ther-mo-hi-pes-the'-ze-ah*) [*thermo*; *hypesthesia*]. Abnormal indifference or insensibility to heat or to contact with heated objects.
- Thermohypoesthesia** (*ther-mo-hi-po-es-the'-ze-ah*). See *Thermohypesthesia*.
- Thermoinhibitory** (*ther-mo-in-hib'-it-a-re*) [*thermo*; *inhibitory*]. Inhibiting the production of heat.
- Thermol** (*ther'-mol*). $C_{11}H_9NO_2$. A coal-tar derivative forming as white crystals, soluble in water and alcohol. It is analgesic, antipyretic, and antiseptic. Dose 3 gr. (0.2 Gm.) every 3 hours.
- Thermolabile** (*ther-mo-la'-bil*) [*thermo*; *lapis*, a gliding or falling]. Destroyed or changed by heat.
- Thermolusia** (*ther-mo-lu'-se-ah*) [*thermo*; *λύω*, to wash]. A hot bath.
- Thermolysis** (*ther-mol'-is-is*) [*thermo*; *λύω*, a loosening]. 1. Dissipation of animal heat. 2. Chemie decomposition by means of heat.
- Thermolytic** (*ther-mo-li'-ik*) [see *Thermolysis*]. Pertaining to thermolysis.
- Thermomassage** (*ther-mo-mas-ahzh'*). Massage with application of heat.
- Thermometer** (*ther-mom'-et-er*) [*thermo*; *μέτρον*, a measure]. An instrument for measuring the intensity of heat, consisting of a substance capable of expanding and contracting, and a graduated scale by means of which variations in the volume of the substance can be determined. In the ordinary thermometer the expansive substance is mercury (*mercurial thermometer*), expanding into a vacuum capillary tube, the degree of heat being measured by the length of the column of mercury. **T., Centigrade**, **T., Celsius**, one in which the freezing-point is at 0° and the boiling-point at 100°. **T., Clinical**, a self-registering thermometer for ascertaining the bodily temperature. **T., Fahrenheit**, one in which the interval between the freezing-point and the boiling-point is divided into 180 equal parts, each called a degree, the zero-point being 32° or divisions below the freezing-point of water. **T., Réaumur**, one in which the freezing-point of water is 0° and the boiling-point 80°. **T., Self-registering**, one that by means of an index shows the highest (*maximum*) or lowest (*minimum*) temperature to which it has been exposed. **T., Surface**, one for registering the surface-temperature of any portion of the body.
- Thermometric** (*ther-mo-met'-rik*) [*thermometer*]. Pertaining to a thermometer.
- Thermometry** (*ther-mom'-et-re*) [*thermometer*]. The measuring of temperature by means of the thermometer.
- Thermoneurosis** (*ther-mo-nu-ro'-sis*) [*thermo*; *neurosis*]. Pyrexia of vasomotor origin.

Thermonosus (*ther-mon-o'-sus*) [*thermo-*; *νόσος*, disease]. Disease caused by heat.

Thermophilic (*ther-mo-fil'-ik*) [*thermo-*; *φίλιος*, to love]. Applied to microorganisms which develop best at relatively high temperatures—50°–55° C. or above.

Thermopile (*ther'-mo-pil*) [*thermo-*; *pile*]. A contrivance consisting of a series of connected metallic plates, in which, under the influence of heat, a current of electricity is produced which acts upon a registering index. By means of it very minute amounts of heat can be measured.

Thermoplegia (*ther-mo-ple'-je-ah*). Heat-stroke.

Thermopolypnea (*ther-mo-pol-ip-ne'-ah*) [*thermo-*; *πολύς*, many; *πνέω*, to breathe]. Rapid respiration due to high temperature.

Thermostable (*ther-mo-sta'-bil*) [*thermo-*; *σταβίλις*, firm; *στάσις*, standstill]. Not destroyed nor changed by heat.

Thermostat (*ther'-mo-staf*) [*thermo-*; *στατός*, standing]. A device for automatically regulating and maintaining a constant temperature.

Thermosystaltic (*ther-mo-sis-tal'-tik*) [*thermo-*; *συστάσις*, to contract]. Contracting under the influence of heat, pertaining to muscular contraction due to heat.

Thermotactic, Thermotaxis (*ther-mo-tak'-tik*, *ther-mo-taks'-is*) [see *Thermotaxis*]. Regulating the heat of the body, as a *thermotactic* center.

Thermotaxis (*ther-mo-taks'-is*) [*thermo-*; *τάξις*, from *τάσσω*, to arrange]. The regulation of the body heat.

Thermotherapy (*ther-mo-ther'-ap-e*) [*thermo-*; *θεραπεία*, cure]. Treatment of disease by heat.

Thermotonometer (*ther-mo-ton-om'-et-er*) [*thermo-*; *μέτρον*, a stretching; *νόμος*, a measure]. An apparatus for determining the amount of muscular contraction induced by thermic stimuli.

Thermotracheotomy (*ther-mo-tra-ke-ot'-o-me*). Tracheotomy by means of the actual cautery.

Theromorph (*ther'-o-morf*) [*θηρ*, a wild beast; *μορφή*, form]. A monstrosity resembling an animal.

Thialdin (*thi-al'-din*), $C_8H_8NS_2$, a crystalline substance obtained by the action of sulfated hydrogen on alcohol ammonium; it is used as a heart stimulant.

Thiersch's Method of Skin-grafting. Long, broad strips of skin are removed from the arm or leg and placed on a wound previously deprived of its granulations by means of a sharp curet. T.'s Solution, a valuable antiseptic wash for the nose, throat, or stomach, containing of glycolic acid, 2 parts; boric acid, 12 parts; water, 1000 parts.

Thigenol (*thi-gen-ol*). The alkali salt of a sulfur acid extracted from sweet almond oil. It is used in the treatment of skin diseases in the form of pomades containing 25 parts in 100.

Thigh skin (*NS., them*). The part of the lower limb extending from pelvis to knee.

Thilanin (*thi'-lan-in*) [*thio-*; *lan*, lard]. A brownish yellow substance derived from and resembling lanolin. It contains 1% of sulfur and is used in the treatment of eczema and other diseases of the skin.

Thio- (*thio-*) [*thio-*, sulfur]. A prefix denoting containing sulfur.

Thioacetaldehyd (*thi-o-asetal'-de-hid*). See *Sulfoxaldehyd*.

Thioacid (*thi-o-asi'-d*). One of a group of acids produced by the substitution of sulfur for the oxygen in an oxygen acid.

Thioalcohol (*thi-o-al'-kol*). See *Mercuriothioalcohol*.

Thiocarbamid (*thi-o-kar'-bam-id*). See *Thiourea*.

Thiochromogen (*thi-o-kro'-mo-jen*). See *Acrocin*.

Thiocol (*thi'-o-kol*). See *Potassium guaiac Sulfonate*.

Thiocyanic Acid (*thi-o-si-an'-ik*). $CNHS$. Sulfocyanic acid, a monobasic acid forming the thiocyanates or sultocyanates. It is a colorless liquid, $CNKS$, is very poisonous.

Thiodinaphthoxyd (*thi-o-din-af-thi-ox'id*). An orange-colored powder used in the treatment of skin diseases.

Thioether (*thi-o-eth-er*). See *Alkyl thioether*.

Thioform (*thi'-o-form*). See *Bromine thioformate*.

Thiogenic (*thi-o-jen'-ik*) [*thio-*; *γεννέω*, to produce]. Applied to bacteria able to convert sulfured hydrogen into higher sulfur compounds.

Thiol (*thi'-ol*) [*thio-*; *σουλφ*, sulfur]. A substance prepared from glycol by heating with sulfur and occurring in a dry and a liquid form. It has been used as an application to burns and in diseases of the skin.

Thiolin (*thi'-ol-in*). See *Acid Thiolin*.

Thionin (*thi'-on-in*) [*thio-*; *νιν*, color]. $C_{12}H_8N_2$. A color compound of the aromatic group used as a stain in microscopy. Its solutions are of a dark blue color.

Thiophene (*thi'-o-fen*) [*thio-*; *φένω*, to burn]. C_4H_4S . A hydrocarbon of the aromatic series, colorless, only liquid, miscible with water. The solid, $C_4H_4S_2$, has been used as a substitute for iodine. I. Sodium Sulfonate, $C_4H_4SNaSO_3$, a white powder used in microscopy.

Thiophil (*thi'-o-fil*). One who loves sulfur. Lovers sulfur; applied to microorganisms.

Thiopyrin (*thi-o-pi-rin*). A derivative of aspirin.

Thioresorcinol (*thi-o-resor'-sin-ol*). See *Thioresorcinol*. $C_{12}H_8SO_2$. A compound of sulfur and resorcinol used as a preservative or as a substitute for iodine.

Thiosapol (*thi-o-sa'-pal*). A sulfated soap containing 15% of sulfur.

Thiosavonals (*thi-o-sa-von-als*). Potash sulfur soaps that contain sulfur in a chemically combined state.

Thiosinamin (*thi-o-sin'-a-min*). $C_8H_{10}N_2S$. A crystalline substance prepared from guanidine and ammonia. It is used in the treatment of eczema and night-sweats.

Thiosulfuric Acid (*thi-o-sul-fu-rik*) [*thio-*; *sul-furic*], $\text{H}_2\text{S}_2\text{O}_3$. An acid derived from sulfuric acid by the substitution of sulfur for part of the oxygen.

Thiourea (*thi-o-u-re-ah*) [*thio-*; *urea*], $\text{CS}(\text{NH})_2$. Sulfocarbamid; a derivative of urea in which sulfur replaces the oxygen of the latter.

Third Cranial Nerve. The oculomotor nerve. See *Motor oculi* under *Nerve*.

Thirst (*thurst*) [*AS.*, *thurst*]. A desire for drink.

Thiry's Fistula (*the'-ric*). A fistula for obtaining the intestinal juice. A piece of intestine about four inches long is separated from the bowel without dividing the mesentery and its blood-vessels. One end of the tube is closed, and the other is stitched to the abdominal wound. The two ends of intestine from which the piece was cut out are then united by sutures. From the excised piece a pure intestinal juice is obtained.

Thiuret (*thi'-u-ret*) [*thion*, sulfur], $\text{C}_2\text{H}_5\text{N}_2\text{S}_2$. A crystalline antiseptic which readily yields its sulfur in a nascent condition. On this property depends its antiseptic action.

Thlipsencephalus (*thlip-sen-sell'-al-us*) [*thlip-sen*, pressure; *thlipsis*, brain]. A monster in which there is extensive exposure of the base of the brain from nondevelopment of the occipital bone and even of the upper vertebrae.

Thliptol (*thlip'-tol*). A proprietary antiseptic and deodorant liquid, said to consist of benzoic acid combined with oil of eucalyptus, thyme, etc.

Thompson's Line. A red line along the border of the gums, frequently seen in pulmonary tuberculosis. **T's Test**, the collection of the morning urine in two glasses to determine whether a gonorrheal process is localized in the anterior portion of the urethra or whether it has extended into the posterior portion.

Thomsen's Disease [after J. Thomsen, a German physician]. Myotonia congenita, a disease commonly congenital and occurring in families, and characterized by tonic spasm or rigidity of the muscles, coming on when they are first put in action after a period of rest. As the muscles are used the stiffness gradually wears off.

Thomsonianism (*tom-so'-ne-an-izm*). A system of medicine introduced by Samuel Thomson (1769-1843), of Massachusetts. It insisted on the use of vegetable remedies only.

Thoracalgia (*tho-rak-al'-je-ah*) [*thorax*; *algos*, pain]. Pain in the thorax.

Thoracentesis (*tho-ras-en-te'-sis*) [*thorax*; *kentesis*, a piercing]. Puncture of the thorax for the removal of fluid.

Thoracic (*tho-ras'-ik*) [*thorax*]. Pertaining to or situated in the chest or thorax, as the *thoracic aorta*. **T. Duct.** See *Duct, Thoracic*. **T. Index.** See *Index, Thoracic*.

Thoracoacromialis (*tho-ras-ik-o-ak-ro-mi-s'-lis*). See *Artery, Acromiothoracic*.

Thoracohumeral (*tho-ras-ik-o-hu'-mer-af*). Relating to the chest and upper arm.

Thoraco- (*tho-rak-o-*) [*thorax*]. A prefix denoting pertaining to the thorax.

Thoracoacromial (*tho-rak-o-ak-ro'-me-af*). Acromiothoracic, relating to the chest and the shoulder; applied to a group of muscles.

Thoracoceloschisis (*tho-rak-o-se-los'-kis-is*) [*thoraco-*; *kolia*, belly; *schisis*, a cleaving]. Congenital fissure of the chest and abdomen.

Thoracocentesis (*tho-rak-o-sen-te'-sis*). See *Thoracentesis*.

Thoracocyrstosis (*tho-rak-o-sur-to'-sis*) [*thoraco-*; *kyrtos*, curved]. Excessive curvature of the thorax.

Thoracodidymus (*tho-rak-o-did'-im-us*) [*thoraco-*; *didymos*, double]. A double monster joined at the thorax.

Thoracodynia (*tho-rak-o-din'-e-ah*) [*thoraco-*; *dynon*, pain]. Pain in the chest.

Thoracogastrodidymus (*tho-rak-o-gas-tro-did'-im-us*) [*thoraco-*; *gaster*, belly; *didymos*, double]. A twin monstrosity united by the thorax and abdomen.

Thoracogastroschisis (*tho-rak-o-gas-tros'-his-is*). See *Thoracoceloschisis*.

Thoracometer (*tho-rak-am-et-er*) [*thoraco-*; *metron*, a measure]. A stethometer.

Thoracometry (*tho-rak-am-et-er*) [see *Thoracometer*]. Measurement of the movement of the walls of the chest.

Thoracopagus (*tho-rak-op'-ag-us*) [*thoraco-*; *pagos*, that which is firmly set]. A double monster with portions of the thoraxes coalescent.

Thoracoplasty (*tho-rak-o-plas-te*) [*thoraco-*; *plastica*, to form]. Plastic operation upon the thorax.

Thoracoschisis (*tho-rak-os'-kis-is*) [*thoraco-*; *schisis*, a cleaving]. Congenital fissure of the thorax.

Thoracoscope (*tho-rak-o-skop*) [*thoraco-*; *skopein*, to view]. A stethoscope.

Thoracoscopy (*tho-rak-os'-ka-pe*) [see *Thoracoscope*]. Examination of the chest, especially by the stethoscope.

Thoracostenosis (*tho-rak-o-sten-o'-sis*) [*thoraco-*; *stenosis*]. Contraction or compression of the walls of the chest.

Thoracotomy (*tho-rak-o'-o-me*) [*thoraco-*; *tomon*, to cut]. Incision of the thorax or chest-wall.

Thoradelphus (*tho-rad-el'-fus*) [*thorax*; *adelphos*, brother]. A double monster united above the umbilicus, with one head, four lower and two upper extremities.

Thorax (*tho'-raks*) [*thorax*, a breastplate]. The chest; the framework of bones and soft tissues bounded by the diaphragm below, the ribs and sternum in front, the ribs and dorsal portion of the vertebral column behind, and above by the structures in the lower part of the neck, and containing the heart inclosed in the pericardium, the lungs invested by the pleura, and the mediastinal structures. **T., Region of.** See *Region, Thoracic*.

Thorium (*tho'-re-um*) [Ircl., *Thorr*]. A rare metal related chemically to tin. Symbol Th.

Thormaeahlen's Test for Melanin in Urine.

To the urine to be tested add sodium nitroprussid, caustic potash, and acetic acid, and

CONTENTS OF THE THORAX, SHOWING THE DIAPHRAGM IN ITS RELATIONS TO THE HEART AND LUNGS.—Figs.

1. Left ventricle. 2. Right ventricle. 3. Anterior coronary artery. 4. Left auricle. 5. Right auricle. 6. Superior vena cava. 7. Pulmonary artery. 8. Origin of aorta. 9. Arch of aorta. 10. Innominate artery. 11. Common carotid. 12, 12. Subclavian arteries. 13. Scalenus anticus. 14. First rib. 15. Larynx. 16. Trachea. 17. Pneumogastrics. 18, 18. Phrenics. 19. Right lung. 20. Left lung. 21, 21. Diaphragm. 22, 22. Seventh ribs.

THORAX (ANTERIOR VIEW)

1. Manubrium sterni. 2. Gladiolus. 3. Ensisiform cartilage of xiphoid appendix. 4. Circumference of thorax. 5. Circumference of base. 6. First rib. 7. Second rib. 8. Third. Fourth. Fifth. Sixth. Seventh ribs. 9. Eighth, ninth, and tenth ribs. 10. Eleventh and twelfth ribs. 11, 11. Costal cartilages.

in the presence of melanin a deep-blue coloration will be produced.

Thorn-apple. See *Stramonium*.

Thornton's Sign. Violent pain in the flanks in nephrolithiasis.

Thornwaldt's Disease. Nasolaryngeal stenosis associated with the formation of a cyst-like cavity in the midst of the racemose glands in the pharyngeal mucosa, and containing pus or mucopus.

Thoroughwort. See *Eupatorium*.

Thought-transference. See *Telepathy*.

Threadworm. See *Oxyuris*.

Three-day Fever. Synonym of *Dengue*.

Threpsology (*threp-sol'-o-jé*) [*θρεψις*, nutrition; *logos*, treatise]. The science of nutrition.

Threshold (*thresh'-old*). The lower limit of stimulus capable of producing an impression upon consciousness.

Thrill. A fine vibration felt by the hand. A thrill may be felt on palpation over an aneurysm, over a heart the seat of valvular disease, and over hydatid cysts. **T., Presystolic,** a thrill which can sometimes be felt before the systole when the hand is placed over the apex-beat. **T., Purring,** a thrill resembling that felt when the hand is placed on the back of a cat.

Throat (*thrōt*) [*AS., throte*, throat]. 1. The anterior part of the neck. 2. The pharynx and larynx; the fauces. **T., Sore,** pharyngitis. **T., Sore, Clergyman's,** laryngitis caused by overuse through public speaking.

Throb. A pulsation or beating.

Throbbing (*throb'-ing*). A rhythmic beating. **T. Aorta,** exaggerated pulsation of the abdominal aorta perceptible to the patient.

Thromballosis (*throm-bal-o'-sis*) [*thrombus*; *allos*, a change]. The changed condition caused by coagulation of the venous blood.

Thrombase (*throm'-bāz*). Same as *Thrombin*.

Thrombin (*throm'-bin*) [*thrombus*]. The fibrin-ferment, the animal enzyme that causes coagulation of shed blood.

Thrombo- (*throm-bo-*) [*θρομβος*, a thrombus]. A prefix denoting pertaining to a thrombus.

Thromboarteritis (*throm-bo-ar-ter-i'-tis*) [*thrombo-*; *arteritis*]. Inflammation of an artery associated with thrombosis.

Thrombocystis (*throm-bo-sis'-tis*) [*thrombo-*; *cystis*, a bladder]. The sac sometimes enveloping a thrombus.

Thrombogen (*throm'-bo-jen*) [*thrombo-*; *γεννᾶν*, to produce]. In biology, producing or giving rise to clots.

Thromboid (*throm'-hoid*) [*thrombo-*; *ειδός*, like]. Resembling a thrombus.

Thrombophlebitis (*throm-bo-phleb-i'-tis*) [*thrombo-*; *phlebitis*]. Inflammation of a vein associated with thrombosis.

Thrombosin (*throm'-bo-sin*). One of the products of the cleavage of fibrinogen by acetic acid; it is a proteid body which passes into fibrin in the presence of soluble calcium salts.

Thrombosis (*throm-bo'-sis*) [*thrombus*]. The formation of a thrombus. **T., Dilation,**

that which results from a slowing of the blood-current next to the vessel-walls, as the result of dilation of a vessel (as in aneurysms, varices) or of the heart.

Thrombotic (*throm-bot'-ik*) [*thrombosis*]. Pertaining to or produced by thrombosis.

Thrombus (*throm'-bus*) [*θρομβος*, a clot]. A clot of blood formed within the heart or blood-vessels, due usually to a slowing of the circulation or to alteration of the blood or vessel-walls.

Through-drainage. A method of drainage in which a perforated tube is carried through the cavity to be drained, so that the latter can be flushed through and through by the injection of fluid into one end of the tube.

Through-illumination. Transillumination.

Thrush. A form of stomatitis due to a specific fungus, *Oidium albicans* or *Saccharomyces albicans*, and characterized by the presence of diffuse white patches. It occurs especially in weakly children, but may affect adults depressed by wasting diseases.

Thrypsis (*thrip'-sis*) [*θριψις*, a crushing]. A comminuted fracture.

Thuja (*hu'-jah*). A genus of trees of the order *Coniferae*. *T. occidentalis* or arbor vitae has been used in intermittent fever, rheumatism, scurvy, and as an emmenagogue.

Thumb (*thum*). The digit on the extreme radial side of the hand, differing from the other digits in having but two phalanges, and in that its metacarpal bone is separately movable.

Thus [*L., "incense"*]. True frankincense or olibanum.

Thuya (*thu'-yah*). See *Thuja*.

Thylacitis, Thylacitis (*thi-las-i'-tis*, *thi-las-i'-tis*) [*θυλάκιον*, a little bag]. Acne rosacea.

Thyma (*thi'-mah*). A corruption of ecthyma and also of thymion.

Thymacetin (*thi-mas'-et-in*) [*thyme*; *acetum*, vinegar]. $C_6H_5(CH_2)(C_2H_5)(OC_2H_5)NH(C_2H_5O)$. A derivative of thymol used as an antineuralgic. Dose 3-15 gr. (0.2-1.0 Gm.).

Thyme (*tim*) [*θύμα*, thyme]. The genus *Thymus* of the order *Labiata*. *Thymus vulgaris* yields a volatile oil in which are found *cymene*, *thymene*, and *thymol*. **T., Oil of** (*oleum thymi*, U. S. P.), a volatile oil distilled from the leaves and tops of *Thymus vulgaris*. Dose 3 min. (0.2 Cc.).

Thymectomy (*thi-mek'-to-me*) [*thymus*; *εκτομή*, excision]. Excision of the thymus.

Thymelcosis (*thi-mel-ko'-sis*) [*thymus*; *ύλκος*, ulceration]. Ulceration of the thymus gland.

Thymene (*ti'-mēn* or *thi'-mēn*) [*thyme*]. An eleopten existing in oil of thyme.

Thymic (*thi'-mik*, also for first definition, *ti'-mik*) [*thyme*; *thymus*]. 1. Pertaining to or contained in thyme. 2. Pertaining to the thymus gland. **T. Asthma**, a form of laryngismus stridulus consisting in a temporary suspension of respiration, attributed to enlargement of the thymus.

Thymin (*thi'-min*), $C_8H_9N_2O_7$. A crystalline body obtained by boiling nucleic acid from

- the thymus gland of the calf with dilute sulfuric acid.
- Thyminol** (*thi'-min-ol*). An antiseptic liquid said to be a solution of thymol, eucalyptol, menthol, *Baptisia*, benzoic, boric, and salicylic acids.
- Thymion** (*thi'-me-on*) [*thimov*]. A wart; a condyloma.
- Thymitis** (*thi-mi'-tis*) [*thymus; itis*, inflammation]. Inflammation of the thymus gland.
- Thymoform** (*thi'-mo-form*). A reaction-product of thymol and formaldehyd; used as are iodoform and dermatol.
- Thymol** (*thi'-mol* or *thi'-mol'*) [*thyme; oleum, oil*], $C_{10}H_{14}O$. A phenol derived from the volatile oils of *Thymus vulgaris*, *Monarda punctata*, and *Carum ajowan*. It is a crystalline solid, melting at $41^{\circ}C$, very slightly soluble in water, and is used as a local antiseptic and deodorant in ulcers, leukorrhea, and stomatitis, as an intestinal antiseptic, and as an anthelmintic. Dose 1-2 gr. (6.065-13 Gm.). **T. Carbonate**, recommended as preferable to thymol in uncinariasis. Dose 30 gr. (2 Gm.). **See, Thymotol. T. Salicylate**, $C_{10}H_{13}O \cdot C_7H_5O_2$, an intestinal antiseptic.
- Thymotol** (*thi'-mo-tol*). See *Thymol Carbonate*.
- Thymoxalme** (*thi-mok'-al-me*) [*thyme, δξαλ, sharp; αλς, salt*]. A mixture of thyme, vinegar, and salt.
- Thymozone** (*thi'-mo-zon*). A combination of *Eucalyptus globulus*, *Thymus vulgaris*, and *Pinus sylvestris*, with benzoic, boric, and salicylic acids. A nonirritating compound used as an internal antiseptic and externally as a phenol.
- Thymus** (*thi'-mus*) [*thymos, the sweetbread*]. 1. An organ situated in the anterior superior media sternum. It continues to develop until the second year of life, afterward remains stationary until about the fourteenth, and then undergoes fatty metamorphosis and atrophy. The thymus consists of lobules largely composed of lymphadenoid tissue in which minute concentric bodies, the corpuscles of Hassall, are found. The latter are remnants of epithelial structures. 2. A genus of labiate plants. See *Thyme. T. Gland*. Same as *Thymus* (1).
- Thyraden** (*thi'-er-den*). See *Thyroidin*.
- Thyrein** (*thi'-er-in*). See *Iodothylin*.
- Thyro-** (*thi'-ro-*). See *Thyro-*.
- Thyro-** (*thi'-ro-*) [*thyron, a shield, and hence, from similarity of shape and function, the thyroid gland or cartilage*]. A prefix signifying relationship to the thyroid gland.
- Thyroantitoxin** (*thi-ro-ant-i-tox-in*) [*thyro; antitoxin*]. 1. $CH_3N_2O_4$. A protein component of the thyroid gland. 2. A preparation of the thyroid gland used in exophthalmic goiter, bronchiectasis, etc. Dose 2 gr. or 11 Gm. daily.
- Thyroarytenoid** (*thi-ro-ai'-en-oid*) [*thyro; ar-tenoid*]. Pertaining to the thyroid and arytenoid cartilages, as the *thyroarytenoid ligaments*, *thyroarytenoid muscle*, *thyroarytenoid tenoidus*.
- Thyrocele** (*thi'-ro-sel*) [*thymos, cyst, a tumor*]. A tumor affecting the thyroid gland, *see*.
- Thyrochondrotomy** (*thi-ro-khon-dro'-to-mi*) [*thyro-, chondr-, cartilage; totem, to cut*]. Incision of the thyroid cartilage.
- Thyrocollloid** (*thi-ro-kol-loid*). A proprietary preparation of the thyroid gland in collodion.
- Thyroepiglottic** (*thi-ro-ep-i-glott-i-*) [*thyro; epiglottis*]. Pertaining to the thyroid cartilage and the epiglottis, as the *thyroepiglottic muscle* (*thyroepiglotticus*).
- Thyrogeous** (*thi-ro-ge-us*) [*thyro; gein, to produce*]. Originating in the thyroid gland.
- Thyroglandin** (*thi-ro-glan-din*). A compound of thyroglobulin and thyroxine in the gland and preparation in which they occur in the thyroid gland. Dose 1-4 gr. or 10-20 Gm. for thyrotoxicosis and exophthalmos.
- Thyroglobulin** (*thi-ro-glob'-u-lin*). The chief product of the thyroid secreted by it and contained in the colloid substance.
- Thyroglossal** (*thi-ro-glos'-al*) [*thyro; glos, tongue*]. Pertaining to the thyroid and to tongue.
- Thyrohyal** (*thi-ro-hi'-al*). See *Thymotol*.
- Thyrohyoid** (*thi-ro-hi'-oid*) [*thyro; hyo, hyoid bone*]. Pertaining to the thyroid cartilage and hyoid bone, as the *thyrohyoid membrane*.
- Thyroid** (*thi'-roid*) [*thyron, shield, and hence, 1. Shield-shaped. 2. Pertaining to the thyroid gland. 3. Pertaining to the thyroid cartilage. 4. Pertaining to the thyroarytenoid muscle. 5. The thyroid gland. T. Cartilage*, the largest of the laryngeal cartilages, is in an angle in front called the *promontory of Adam*. **T. Extract**. See under *T. Gland. T. Ferment*. See *Ferment, Thyroid. T. Gland*. One of the so-called ductless glands, situated in front of the trachea, and consisting of two lateral lobes, connected centrally by an isthmus. The organ is composed of follicles lined by cuboidal epithelium, producing a peculiar colloid material. The function of the organ is not definitely known, but it is supposed to be the production of some substance necessary to the body—an internal secretion that not counteract poisons produced in the system. Hypertrophy of the gland, goiter, is sometimes associated with a peculiar disease known as exophthalmic goiter, absence of the gland leads to cretinism or myxedema. An extract prepared from the thyroid gland of animals, *thyroid extract*, and other preparations of the gland are used medicinally. See *Ophthalmopathy*.
- Thyroidectomy** (*thi-roi-dek'-to-mi*) [*thyro; totem, excision*]. Excision of the thyroid gland.
- Thyroidin** (*thi-roi'-din*) [*thyroid; idin, the*]. A proprietary lactose preparation of an extract of thyroid gland, one part extracted from two parts of fresh gland. It is excreted with in uric acid, urea, and creatinine. Dose 15-25 gr. (1.5-1.5 Gm.) daily.

ism (*thi'-roid-izm*). 1. Disturbances caused by hypertrophy of the thyroid gland. 2. A series of phenomena due to the use of thyroid preparations. 3. Diseases due to removal of the thyroid gland.

itis (*thi-roi-di'-tis*) [*thyroid*; *itis*, inflammation]. Inflammation of the thyroid gland.

otomy (*thi-roi-doi'-o-me*) [*thyroid*; *tomē*, incision]. Incision of the thyroid gland.

toxin (*thi-roid-o-toks'-in*). A substance specifically toxic for the cells of the thyroid gland.

tracheus (*thi-roi'-jen-us*). Originating in the trachea of the thyroid gland.

lin (*thi-ro-i'-od-in*). A substance principally combined with a proteid, to free in the thyroid gland. Syn., *trichin*.

gual (*thi-ro-lin'-gual*). Relating to the thyroid and the tongue; thyroglossal.

yma (*thi-ro-fi'-mah*) [*thyro*; *φύμα*, a swelling]. Enlargement of the thyroid gland.

privat (*thi-ro-pri'-at*) [*thyro*; *privatus*, private]. Due to loss of function or removal of the thyroid gland.

privatus (*thi-ro-pri'-atus*) [*thyroprivatus*]. 1. Affected of the thyroid gland. 2. A morbid condition due to loss of the thyroid gland.

protein (*thi-ro-pro'-te-id*). An albumin present in the thyroid gland.

displacement (*thi-ro-lé'-sis*) [*thyro*; *πλάσις*, a displacement]. Displacement of a goitrous thyroid gland so as to be concealed in the thorax.

incision (*thi-roi'-o-me*) [*thyro*; *τομή*, a cutting]. Incision or splitting of the thyroid gland.

shin (*ti'-e-ah*) [L., "shin"]. The larger of the two bones of the leg, commonly called the tibia, articulating with the femur, and astragalus.

tibial (*tib'-e-al*) [*tibia*]. Pertaining to or in connection with the tibia, as the *tibial muscle*, *tibial artery*, *tibial nerve*.

tibi- (*ti'-e-o-*) [*tibia*]. A prefix meaning pertaining to the tibia.

femoral (*tib-e-o-fem'-or-al*) [*tibia*; *femur*]. Relating to the tibia and the femur.

fibular (*tib-e-o-fib'-u-lar*) [*tibia*; *fibula*]. Relating to the tibia and the fibula.

fibular (*tib-e-o-nar-ik'-u-lar*) [*tibia*; *fibula*, a boat]. Relating to the tibia and the fibula bone.

tarsal (*tib-e-o-tar'-sal*) [*tibia*; *tarsus*]. Relating to the tibia and the tarsus.

twitching [Fr.]. A twitching, especially of the muscles. **T. convulsif**, **T. Convulsif**, **T. Convulsif** of the facial muscles. **T. double**, neuralgia of the trifacial nerve. **T. double**, the occurrence, at intervals, of rapid involuntary contraction in a group of muscles.

T. name applied to several species of **T. Fever**, Texas fever.

T. To touch so as to cause a sensation (tickling or titillation),

usually associated with laughing and reflex muscular movements.

T. i. d. An abbreviation for *ter in die*, three times a day.

Tidal Air. See under *Respiration*. **T. Wave**. See *Wave*, *Tidal*.

Tiedemann's Glands. See *Bartholin's Glands*. **T.'s Nerve**, a plexus of delicate nerve-fibers derived from the ciliary nerves, and surrounding the central artery of the retina.

Tiglic Aldehyd (*tig'-dik al'-de-hid*). See *Croton Aldehyd*.

Tigilium (*tig'-le-um*). A plant, *Croton tigilium*, of the order *Euphorbiaceae*. It contains a fixed oil. **Tigilii, Oleum** (U. S. P.), croton oil (*oleum crotonis*, B. P.); a powerful local irritant, and used, locally, as a counterirritant in gout, rheumatism, neuralgia, glandular swellings, etc. It is an active purgative, especially useful when a prompt effect is desired, as in mania, coma, etc. Dose 1 or 2 drops (0.065-0.13 Cc.).

Tigroid (*ti'-groid*) [*τρυγώδης*, spotted]. A term applied to chromophil corpuscles. **T. Masses**. See *Neiss's Bodies*.

Tilia (*ti'-e-ah*) [L.]. A genus of exogenous trees—the linden or basswood.

Tillaux-Phocas' Disease. See *Phocas' Disease*.

Tilmus (*til'-mus*) [*τρίμυς*, a pulling]. Carphology.

Timbre (*tam'-br*) [Fr.]. The peculiar quality of a tone, other than pitch and intensity, that makes it distinctive. It depends upon the overtones of the vibrating body.

Tin. A silvery-white, metallic, malleable element, having a specific gravity of 7.25, an atomic weight of 118.1, an atomicity of two or four. Symbol Sn, from the Latin *stannum*. **T. Chlorid**, stannous chlorid, $\text{SnCl}_2 + 2\text{H}_2\text{O}$, is used as a reagent. **T., Precipitated** (galvanically), recommended as a vermifuge against tape-worm. Dose 9 gr. (0.5 Gm.) every fifteen minutes until five or six doses have been taken.

Tinctable (*ting'-tab-ol*). Tingible.

Tincture (*ting'-tūr*) [*tinctura*, from *tingere*, to tinge]. 1. A solution of the medicinal principles of a substance in a fluid other than water or glycerol. 2. Specifically, an alcoholic solution of a medicinal substance. **T., Ammoniated**, one made with ammoniated alcohol. **T., Ethereal**, one made with ether. **T.s of Fresh Herbs** (*tinctura herbarum recentium*, U. S. P.), prepared by macerating fresh herbs with alcohol.

Tinea (*tin'-e-ah*) [L., "a moth; a worm"]. Ringworm; a generic term applied to a class of skin diseases caused by parasitic fungi, formerly applied to many spreading cutaneous diseases. **T. amiantacea**, **T. asbestina**, seborrhea of the scalp in which the crusts resemble asbestos. **T. capitis**, ringworm of the scalp. **T. circinata**. See under *Trichophytina*. **T. cruris**. See under *Trichophytina*. **T. decalvans**, alopecia areata. **T. favosa**, favus. **T. furfuracea**, seborrhea

sleeca. **T. imbricata**, a disease occurring in the East Indies, and characterized by the formation of concentric scaly patches and intense itching. Syn., *Bouditch Island ringworm*; *Tokelau ringworm*. **T. kerion**, a markedly inflammatory form of ringworm of the scalp (*linea tonsurans*), giving rise to the formation of an edematous, boggy swelling discharging a mucoid secretion. **T. lupinosa**, Same as *T. javosa*. **T. nodosa**, a nodose condition of the hair of the mustache, accompanied by thickening, roughness, and fragility. **T. sycosis**. See under *T. trichophytina*. **T. tarsi**, blepharitis ulcerosa. **T. tonsurans**. See under *T. trichophytina*. **T. trichophytina**, ringworm, a spreading, contagious disease of the skin due to a vegetable fungus, the *Trichophyton*. On the nonhairy parts of the body (*linea trichophytina corporis*, *linea circinata*) it presents itself by spreading, scaly patches, tending to clear in the center. On the thighs and scrotum (*linea trichophytina cruris*) it is apt to assume the appearance of eczema, hence it is also called *eczema marginatum*. The nails may be affected (*linea trichophytina unguium*), becoming grayish, opaque, and brittle. On the scalp (*linea trichophytina capitis*, *linea tonsurans*) it forms rounded, grayish, slightly elevated, scaly patches, with brittleness and loss of the hair. Ringworm of the bearded region (*linea trichophytina barbae*, *linea sycosis*, parasitic sycosis, barber's itch) forms at first rounded, scaly patches, which soon become nodular and lumpy and tend to break down. **T. versicolor**, a disease of the skin due to a vegetable parasite, *Microsporon furfur*. It is characterized by brownish-yellow macules that coalesce to form extensive areas of eruption. There is usually slight itching. C. W. Allen's iodine test is of value for the recognition of suspected areas; it consists in the application of iodine solution, preferably Lugol's (iodine, 5, potassium iodide 10, water, 100). The diseased portion will stain deep brown or mahogany color, in contrast to the light-yellow coloration of healthy tissue.

Tingible (ting'ib-l) [tingere, to tinge]. Capable of being stained, stainable.

Tinkling (tink'ling). A chinking sound, heard over a pneumothorax or a large pulmonary cavity. Syn., *Metallic tinkling*.

Tinnitus (tin'it-us or tin'it-us) [tinnere, to tinkle]. A subjective ringing, roaring, or humming sound heard in the ears. Syn., *Tinnitus aurium*.

Tisane (te-zan'ee). See *Phisan*.

Tissue (dish'ee) [Fr., *tissu*, from L., *texere*, to weave]. An aggregation of similar cells and fibers, forming a distinct structure, and entering as such into the formation of an organ or organism. **T., Adenoid**. See *T., Lymphadenoid*. **T., Adipose**, fatty tissue, a form of connective tissue consisting of fat cells lodged in the meshes of areolar tissue. **T., Areolar**, a form of connective tissue consisting of cells and delicate, elastic fibers interlacing

in every direction. **T., Cancellous**, the spongy tissue of bones. **T., Cartilaginous**. See *Cartilage*. **T., Connective**, a general term for all those tissues of the body that support the essential elements of parenchyma. The most important varieties are areolar tissue, areolar tissue, connective tissue, mucous tissue, elastic tissue, fibrous tissue, lymphoid tissue. **T., Epithelial**. See *Epithelium*. **T., Erectile**, a spongy tissue that becomes expanded and hard when filled with blood. **T., Lymphadenoid**. **T., Lymphoid**, a form of connective tissue in which the meshes contain lymphoid cells; it comprises the greater part of the lymphatic glands and is found in the spleen, tonsils, and the lymphatic mucosa. **T., Mucous**, a connective tissue such as is present in the umbilical cord of the fetus. **T., Muscular**. See *Muscle Tissue*. **T., Nervous**, the material substance of a nerve or nerve fiber. **T., Osseous**. See *Bone*. **T., White Fibrous**, a form of connective tissue consisting of exceedingly fine, inelastic, transparent filaments. This tissue forms the greater part of ligaments, tendons, fascia, sheaths of muscles, pericardium, etc. **T., Yellow Elastic**, a very elastic yellowish tissue predominating in the subclavian ligament, vocal bands, inner coats of blood vessels, and the longitudinal coats of the trachea and bronchi.

Titanium (tit-ee-um) [Fr., *Titane*]. A metal having a certain relationship to vanadium, chromium, and tin. It is extremely hard and will scratch glass. Its mechanical properties are little understood. See *Farmer's Table of Chemicals*.

Titer, Titre (te'ter) [Fr.] A standard of fineness or strength.

Titillation (tit-il-ee-shun) [titillare, to tickle]. The act of tickling, the sensation produced by tickling.

Titration (tit-ro-shun) [Fr., *titre*, standard of fineness]. Volumetric analysis in the use of standard solutions.

Titubation (tit-u-be-shun) [titubare, to stagger]. A staggering gait seen especially in disease of the cerebellum.

Tl. Symbol of thallium.

Tobacco (to-ba'co) [Sp., *tobaco*, *tobacco*]. A plant, *Nicotiana glauca*, of the order Solanaceae, the dried leaves of which (cigar *folio*, B. P.) contain a highly acrid alkaloid, $C_{10}H_{14}N_2$, which is also present in the stem and root. Nicotin is one of the most active poisons known. Tobacco can be converted into a series of bases, among which are nicotine, lutidin, pavinin, and others. Tobacco is used as a sedative in several parts of the world, being smoked, chewed, or used as an snuff. Its pharmacologic action is that of a nauseant, antispasmodic, and soporific; it is also a local anesthetic. Inasmuch as it has been employed as a relaxant in intestinal obstruction, being given in the form of an emulsion, but it is now rarely used except in asthma and locally in hemorrhoids.

- T.-amblyopia**, amblyopia produced by the prolonged and excessive use of tobacco.
- T.-heart**, an irritable state of the heart, characterized by irregular action and palpitation, produced by excessive indulgence in tobacco. **T., Indian**. See *Lobelia*.
- Todd's Ascending Process**. See *Scarpa's Fascia*. **T.'s Cirrhosis**, hypertrophic cirrhosis of the liver.
- Toe** [AS., *td*]. A digit of the foot. **T.-brace**, an appliance for correction of flat-foot and deformed toes. **T.-clonus**, contraction of the great toe on sudden extension of the first phalanx. **T., Flexed, T., Hammer-**, a claw-like permanent distortion of a toe in which it is abnormally flexed at the last joint, allowing the tip to rest on the ground while the first joint is raised above the proper level. **T. Reflex**. See *Reflex, Toe*.
- Toilet** (*toi'-let*) [OF., *toilette*, a cloth]. In surgery, the cleansing, washing, and dressing of an operative wound.
- Tokelau Ringworm**. See *Tinea imbricata*.
- Tokodynamometer** (*tok-a-di-nam-on'-et-er*) [*tdnac*, birth; *dynamometer*]. An instrument for measuring the force of the expulsive efforts of the uterus in childbirth.
- Tokology** (*tok-al'-o-je*) [*tdnac*, birth; *logos*, science]. The science of obstetrics.
- Tokomania** (*to-ko-ma'-ne-ah*) [*tdnac*, birth; *manla*, madness]. Puerperal insanity.
- Tolerance** (*tol'-er-ans*) [*tolerare*, to bear]. The ability of enduring the influence of a drug or poison, particularly when acquired by a continued use of the substance.
- Tollen's Reagent for Glucose**. An ammoniacal silver solution obtained by precipitating silver nitrate solution with caustic potash and adding just enough ammonia to dissolve the precipitate yielded. This solution is reduced by glucose.
- Tolokno** (*to-lak'-no*). A food prepared chiefly from oats. Used in Russia for superalimentation in tuberculosis.
- Tolu** (*to-lu'*) [Santiago de Tolu, in the United States of Colombia, where it was first obtained]. Short for *balsam of tolu*. **T., Balsam of** (*balsamum tolutanum*, U. S. P., B. P.), a balsam obtained from *Toluijera balsamum*, an evergreen tree of the order *Leguminosae*. It is used as a stimulant expectorant. Dose 10-30 gr. (0.65-2.0 Gm.). **T., Syrup of** (*syrupus tolutanus*, U. S. P., B. P.). Dose 4 dr. (16 Cc.). **T., Tincture of** (*tinctura tolutana*, U. S. P., B. P.). Dose 30 min. (2 Cc.).
- Toluene** (*tol'-u-en*) [*tolu*], C_6H_5 . Methylbenzene; a hydrocarbon obtained from coal-tar and also produced in the dry distillation of tolu balsam and many resins.
- Toluidin** (*tol-u'-id-in*) [*tolu*], $C_6H_7NH_2$. A homolog of anilin, prepared from toluene. **T. Blue**, $C_{12}H_{14}N_2O_2Cl_2ZnCl$, the double salt of zinc chlorid and dimethyltoluthionin. It occurs as a black powder dissolving in water and alcohol with a fine blue coloration. It acts upon lower organisms as a powerful poison and may be employed as is methylene-blue in infectious conjunctivitis, and also as a substitute for fluorescein in fixing the limits of corneal lesion.
- Toluol** (*tol'-u-ol*). Same as *Toluene*.
- Tolylacetamid** (*tol-il-as-et-am'-id*), $C_6H_5(CH_2)_2NH(C_2H_5O)$. A derivative of coal-tar; used as an antiseptic. Dose 2-10 gr. (0.32-0.65 Gm.).
- Tolylantipyrin**. See *Tolpyrin*.
- Tolpyrin** (*tol-e-pi'-rin*), $C_{12}H_{14}N_2O$. Colorless crystals of an intensely bitter taste, soluble in water and alcohol; used as is antipyrin.
- T. Salicylate**, $C_{12}H_{14}N_2O_2C_2H_3O_2$. Dose, in rheumatism, etc., 15-30 gr. (1-2 Gm.).
- Tolysal** (*tol'-is-al*). Tolpyrin salicylate.
- Tomaselli's Disease**. Quinin fever, produced by large doses of quinin; it is attended with hematuria, dysuria, dyspnea, threatened collapse.
- Tomentum** (*to-men'-tum*) [L.]. A flock of wool. **T. cerebri**, the network of small blood-vessels of the pia penetrating the cortex of the brain.
- Tomes' Fibers**. Elongate, branched processes of the odontoblasts of the pulp filling the dentinal tubules of teeth.
- Tomomania** (*tom-o-ma'-ne-ah*) [*tonai*, a cutting; *manla*, madness]. An excessive desire to perform operations.
- Tone** (*ton*) [*tdnac*, from *tebaia*, to stretch]. 1. A distinct sound. 2. The normal state of tension of a part or of the body.
- Tonga** (*tong'-ah*). A mixture of various barks, probably of *Premna latensis* and *Raphidophora villosa*, brought from the Fiji islands, and used in neuralgia. Dose of a fluidextract $\frac{1}{2}$ dr. (2 Cc.).
- Tongaline** (*ton'-gal-en*). A proprietary preparation said to contain tonga (bark of *Premna latensis*), extract of *Cimicifuga racemosa*, sodium salicylate, pilocarpin salicylate, and colchicin salicylate. It is recommended in gouty diathesis.
- Tongue** (*tung*). The movable muscular organ attached to the floor of the mouth, and concerned in tasting, masticating, swallowing, and speaking. It consists of a number of muscles, and is covered by mucous membrane from which project numerous papillae, and in which are placed the terminal organs of taste. **T., Black**, a condition in which the dorsal surface of the tongue is covered with a black coating. **T.-depressor**, a spatula for pushing down the tongue during the examination of the mouth and throat. **T., Fern-leaf Pattern**, a name given to a tongue presenting a well-marked central furrow (mid-rib) with lateral branches. **T., Filmy**, one with whitish, symmetric patches on both sides. **T., Furred**, a coated tongue the papillae of which are prominent, giving the mucous membrane the appearance of a whitish fur. **T., Geographic**, one with localized thickening of the epithelium, giving to the surface the appearance of a geographic chart. **T., Hairy**, one with a hyperplasia of the papillae, giving rise to hair-like projections. **T., Strawberry**,

a hypertonic tongue, the fungiform papillas of which are very prominent, it is seen especially in scarlatina. **T.-swallowing**, a condition in which there is an abnormal mobility of the organ, so that it falls backward, giving rise to danger of suffocation. **T.-tie**, a congenital shortening of the frenum of the tongue, interfering with its mobility. Syn., *Ankyloglossia*. **T., Wooden**, one the seat of actinomycosis.

Tonic (*ton'ik*) [*tone*]. 1. Pertaining to tone; producing normal tone or tension. 2. Characterized by continuous tension or contraction, as a tonic spasm, tonic convulsion. 3. An agent or drug producing normal tone of an organ or part. **T., Cardiac**, strengthening the heart-muscle. **T., Intestinal**, one strengthening the tone of the intestine. **T., Nervine**, one increasing the tone of the nervous system. **T., Stomachic**, one increasing the tone of the stomach. **T., Vascular**, one increasing the tone or tension of the blood vessels.

Tonicity (*ton'is'ee*) [*tone*]. The condition of normal tone or tension of organs, a state of tone.

Tonicize (*ton'is'ee*) [*tone*]. To give tone or tension to anything.

Toninervin (*ton'e-ner'-vin*). A water-soluble salt of quinin said to contain 1.5% of iron. Dose as antipyrin: 2-3 gr. (0.1-0.3 Gm.) every three hours, as tonic: 2 gr. (0.05 Gm.) twice daily.

Tonitrophobia (*ton-it'-ru-'ph'-be-ah*) [*tonitru*, thunder; *phobos*, fear]. Morbid dread of thunder.

Tonka-bean (*tonk'-kah-bean*). The seed of *Dipteris odorata*, a tree of South America, it contains coumarin, and is used as a flavoring agent.

Tonograph (*ton'og-raf*) [*tonos*, tension, *graphein*, to write]. A device for recording the tension of the arterial blood current.

Tonometer (*ton-on'-et-er*) [*tonos*, tone, tension; *metron*, a measure]. An instrument to measure tension, as that of the eyeball. **T., Gartner's**, one for estimating blood-pressure. **T., Musken's**, one for measuring the tonicity of the achilles tendon.

Tonometry (*ton-on'-et-ee*). The measurement of tonicity.

Tonoplasts (*ton'op-lasts*) [*tonic*, tension, *plasma*, a thing molded]. Small intracellular bodies which build up strongly osmotic substances within themselves and in this way swell to small vacuoles.

Tonoscope (*ton'oskops*) [*tonos*, tone; *skopein*, to view]. An instrument for examination of the interior of the cranium by means of sound.

Tonsil (*ton'sil*) [*tonilla*]. 1. A small, almond-shaped body, situated on each side of the fauces, between the anterior and posterior pillars of the soft palate. It consists of an aggregation of from 12 to 18 lymph-follicles, and is covered by mucous membrane, which dips into certain depressions called crypts. 2. A small lobe of the sublingual hemisphere, situated on the inferior buccal aspect. **T., Faucial**. See *Tonsil* (1). **T., Lingual**, an accumulation of lymphadenoid tissue at

the base of the tongue. **T., Pharyngeal**, a mass of lymphadenoid tissue in the pharynx, between the eustachian tubes.

Tonsillar (*ton'sil-ar*) [*tonilla*]. Pertaining to the tonsil, as the *tonsillar* artery. 2. Affecting the tonsil, as *tonsillar* abscess.

Tonsillitis (*ton'sil'-it-is*) [*tonilla*, inflammation]. Inflammation of the tonsil. **T., Follicular**, a form in which the follicles are especially involved and present as small points from the surface of the tonsil. **T., Herpetic**, a form characterized by a eruption of herpetic vesicles, which soon rupture, leaving small, circular ulcers that crust and become covered with a fibrinous exudation. The disease has an acute and a continuous form, and a certain degree affects those subject to herpes exanthematicus, tends to recur. **T., Lacunar**, *lacunar tonsillitis*.

T., Mycotic, tonsillitis due to fungi. **T., Pustular**, a form characterized by the formation of pustules, as in *tonsillar pustular tonsillitis*.

T., Suppurative. Synonym of *tonsillar abscess*.

Tonsillolith (*ton'sil'-o-lith*) [*tonilla*, stone]. A concretion within the tonsil.

Tonsillotome (*ton'sil'-o-tome*) [*tonilla*, stone; *tomos*, cutting]. An instrument for removing or cutting off the tonsil.

Tonsillotomy (*ton'sil'-o-tomy*) [*tonilla*, stone; *tomos*, cutting]. The operation of cutting out the tonsil.

T., Rach. See *Rach.*, *Amputatio tonsillae*.

Tonsillectomy (*ton'sil'-ek-tomy*) [*tonilla*, stone; *ektomē*, removal]. The operation of cutting out the tonsil.

Torus (*to'-rus*). See *Torus*. **T., Chemic**, the condition of the mucous when at rest and undisturbed by mechanical causes.

Tooth (*tooth*) [*AS*, *tooth*]. One of the small, bony-like organs occupying the alveolar processes of the upper and lower jaws, and serving for tearing and comminuting the food.

The teeth begin to appear in the human being about the sixth month; by the end of the third year, the eruption of the so-called temporary, deciduous, or milk-teeth, numbering 20, is completed. The permanent teeth begin to replace the deciduous teeth about the fourth year. In the adult the permanent teeth number 32 in each jaw, and are divided as follows: 2 incisors, 1 canine, 1 bicuspid, and 3 molars in each lateral half of the jaw. Each tooth is composed of a crown, the exposed part, a constriction, called the neck, and a part within the alveolar socket.

TONSILLOMETER

MUSCLES OF THE TONGUE, VIEWED FROM THE RIGHT SIDE. — (Gerrish, after Testud.)

SURFACE OF TONGUE AND THE SUBLINGUAL SPACE, SHOWING OPENINGS OF SALIVARY DUCTS. — (Gerrish, after Testud.)

the *fang* or *root*. In structure a tooth consists of an outer hard substance, the *enamel*, incasing the crown, the *dentin*, within the enamel; and the *pulp*, a soft, vascular tissue filling the pulp-cavity. The dentin of the root is surrounded by the *cement* or *crusta petrosa*. **T., Eye-**, the upper canine tooth. **Teeth, Hutchinson's.** See *Hutchinson's Teeth*. **T., Stomach-**, the lower canine tooth. **T., Wisdom-**, the third molar tooth.

Tooth's Type of Progressive Muscular Atrophy. See *Charcot-Marie's Type*.

Topesthesia (*top ex the'-ze-si-ah* [*-ōz*, place, ability, sensation]). Local tactile sensibility.

Tophaceous (*to-fa'-shus*) [*tophus*]. Of the nature of tophi, sandy, or gritty.

Tophi (*to'-fi*). Plural of *tophus*.

Tophus (*to'-fus*) [*tōpos*, stone]. 1. The hard, stone-like deposits occurring in gout, especially about the knuckles and the cartilages of the ear, and consisting of sodium urate. 2. The tartar of the teeth.

Topic, Topical (*top'-ik*, *top'-ik-al*) [*tōpos*, place]. Local.

Topo- (*to-po-*) [*tōpos*, place]. A prefix meaning relating to a locality; localized.

Topoalgia (*top o al' je-ah*) [*topo-*; *ālgos*, pain]. Localized pain, common in neurasthenia, and often appearing suddenly after emotional disturbances.

Topographic (*top-o-graf'-ik*) [see *Topography*]. Pertaining to a locality. **T. Anatomy**, the study of the regions occupied by a part, or in which anything occurs.

Topography (*top-og'-ra-fee*) [*topo-*; *graphein*, to write]. A study of the regions of the body or its parts, as *cerebral topography*.

Topology (*top-al'-o-je*) [*topo-*; *logos*, science]. Topographic anatomy.

Toponarcosis (*top-o-nar'-ko'-sis*) [*topo-*; *narcosis*, a benumbing]. Local insensibility or anesthesia.

Toponeurosis (*top-o-nuro'-sis*) [*topo-*; *neurosis*]. A local neurosis.

Torcular herophili (*tor'-ku-lar her-ōf'-il-i*) [L., "the wine-press of Herophilus"]. The expanded extremity of the superior longitudinal sinus, placed in a depression on the inner surface of the occipital bone. It receives the blood from the occipital sinus, and from it is derived the lateral sinus of the side to which it is directed.

Toril (*tor'-il*). An extract of meat containing its albumoids, prepared with the addition of savory herbs.

Tormen (*tor'-men*). See *Termina*.

Termina (*tor'-man-ah*) [plural of *tormen*, a racking pain]. Gripping pains in the bowel. **T. ventriculi nervosa.** See *Hyperperistalsis*.

Torosity (*to-rōs'-it-ē*) [*torosus*, brawny; muscular]. Muscular strength.

Torpid (*tor'-pid*) [*torpor*]. 1. Incapable of the active performance of a function. 2. A medicine or agent that reduces or subdues irritative action.

Torpescence (*tor-pes'-ens*) [*torpor*]. Sluggishness, torpidity.

Torpid (*tor'-pid*) [*torpor*]. Affected with torpor.

Torpidity (*tor-pid'-it-ē*). See *Torpor*.

Torpidy (*tor'-pe-ā*). To make numb or to stupefy.

Torpidude (*tor'-pe-tud*). Torpidity, numbness.

Torpor (*tor'-por*) [L.]. Sluggishness, torpor.

T. retinae, dulled perceptive power of the retina.

Torrefaction, Torrefication (*tor-re-fak'-shun* [*torre-factio*, to burn, to roast]). Roasting, drying by means of heat and

Torricellian Vacuum (*tor-re-chen'-ee-um*, *torricelli*, an Italian physicist). The space above the mercury column of a barometer.

Torsiometer (*tor-se-om'-et-er*) [*torsion*, *metron*, a measure]. An instrument for measuring ocular torsion.

Torsion (*tor'-shun*) [*torquere*, to twist]. 1. Twisting, also, the rotation of the eyeball, the visual axis. 2. The tilting of the sensory meridian of the eye.

Torsoclusion (*tor-nk-lu'-shun*) [*torsion*, *occlusion*]. A form of anisometropia in which the point of the pin is pushed through a point of the tissue parallel with the course of the vessel to be secured, then carried over the anterior surface, and at the same time rotated around until brought to a right angle to the artery, when the point is thrust into the soft parts beyond.

Tort [*torquere*, to turn]. To tilt the sensory meridian of the eye. **Extrort**, to tilt the sensory meridian outward. **Intort**, to tilt the vertical meridian inward. **Intortio**, the tilting of the vertical meridian of the eye inward.

Torticollis (*tor-te-ko'll-is*) [*tort*, *collum*, neck, Wry-neck, a contraction of one or more of the cervical muscles, usually of one side, resulting in an abnormal position of the head.

T., Rheumatic, wry-neck, a form of rheumatism of the Sternocleidomastoid muscle of the neck. **T., Spasmodic**, spasmodic contraction of the muscles of the neck of one side, especially the Sternocleidomastoid, causing a drawing of the head toward the opposite side.

Torula (*tor'-u-lu*) [*torulus*, a small tower]. A genus of fungi reproducing by spores, many species of which are a plant disease.

2. A chain of spheric bacteria. **T. cervicis.** See *Syngnathus cervicis*.

Torulose (*tor'-u-lus*) [*torulus*]. Beaded.

Torus (*tor'-us*) [L.]. 1. A convex or protuberant curvature, with two points of contact of dissimilar curvature at right angles to each other. 2. An excrescence or protuberance. 3. The tuber incognitum of the larynx. **T. innatalis**, a protuberance in the brain between the frontal sinuses, at the root of the nose. **T. palatinus**, a protuberance on the palate of the hard palate, marking the junction of the of the intermaxillary and paranasal sinuses.

Touch (*tuch*, [*tē*, touching]). 1. The sense. 2. The act of touching or feeling.

sense; palpation, especially palpation of a part with the finger, as rectal *touch*, vaginal *touch*. **T.-corpuscle**, a tactile corpuscle.

Tour de Maître (*toor-d'-mâtr*) [Fr., "the master's turn"]. A method of passing a catheter into the bladder in which it is introduced into the urethra with the convexity upward, the shaft lying obliquely across the left thigh of the patient, and as the point enters the bulb, the handle is swept around toward the abdomen, when the beak passes into the membranous urethra, and is carried into the bladder by depressing the shaft between the patient's thighs. A sound may be introduced into the uterus in an analogous manner, by entering the instrument with the convexity upward, and then sweeping the shaft around.

Tourette's Disease [Gilles de la *Tourette*, a French physician]. A convulsive form of tic characterized by motor incoordination with echolalia and coprolalia. **T.'s Sign**, inversion of the ratio existing normally between the earthy phosphates and alkaline phosphates of the urine; it is found in paroxysms of hysteria.

Tourniquet (*toor-nik-et*) [Fr., from *tourner*, to turn]. An instrument for controlling the circulation by means of compression, usually consisting of two metallic plates united by a thumb-screw, and a strap provided with a pad. The strap is fastened about the part, the pad being made to lie over the artery to be occluded. The screw is placed diametrically opposite the pad, and the strap tightened by separating the metallic plates of the screw. **T., Dupuytren's**, one for compressing the abdominal aorta, consisting of a semicircle of metal with a pad at one extremity. **T., Esmarch's**, one consisting of a stout, elastic rubber band applied above the proximal turn of an elastic bandage passing around the part to be rendered bloodless. **T., Field's**, one consisting of a strap and buckle with a pad to be placed over the artery. **T., Horseshoe**, one shaped like a horseshoe, to compress only two points, and thus permit venous return. **T., Provisional**, one applied loosely, so that it may be tightened at once upon the recurrence of hemorrhage. **T., Signorini's**. See *T., Horseshoe*.

Tow. The coarse part of flax or hemp, used as an absorbent.

Tox-, Toxico-, Toxo- (*toks-, toks-ik-o-, toks-o-*) [*τοξικός*, poison]. Prefixes signifying poisonous or caused by a poison.

Toxalbumin (*toks-al-bu'-min*) [*tox-*; *albumin*]. A poisonous proteid. Toxalbumins have been obtained from cultures of bacteria and from certain plants. See *Toxin* (2).

Toxalbumose (*toks-al'-bu-môz*). A toxic albumose.

Toxanemia (*toks-an-e'-me-ah*) [*tox-*; *anemia*]. Anemia produced by poison.

Toxemia (*toks-e'-me-ah*) [*tox-*; *aima*, blood]. Blood-poisoning, a condition in which the

blood contains poisonous products, either those produced by the body-cells or those due to the growth of microorganisms.

Toxemic (*toks-em'-ik, toks-e'-mik*) [see *Toxemia*]. Pertaining to, affected with, or caused by toxemia.

Toxenzym (*toks'-en-zim*). A toxic enzym.

Toxic (*toks'-ik*) [*toxin*]. Poisonous; produced by a poison.

Toxicant (*toks'-ik-ant*) [*toxic*]. 1. Poisonous or toxic. 2. A poisonous agent.

Toxichemistosis (*toks-ik-em-it-o'-sis*) [*toxic*; *aima*, blood]. Blood-poisoning.

Toxicity (*toks-is'-it-e*) [*toxic*]. The quality of being toxic.

Toxicodendron (*toks-ik-o-den'-dron*). See *Rhus*.

Toxicoderma (*toks-ik-o-der'-mah*) [*toxico-*; *derma*, skin]. Disease of the skin due to poison.

Toxicogenic (*toks-ik-o-jen'-ik*) [*toxico-*; *γεννάν*, to produce]. Producing poisons.

Toxicohemia (*toks-ik-o-he'-me-ah*). See *Toxemia*.

Toxicology (*toks-ik-ol'-o-je*) [*toxico-*; *λόγος*, science]. The science of the nature and effects of poisons, their detection, and the treatment of their effects.

Toxicomania (*toks-ik-o-ma'-ne-ah*) [*toxico-*; *μανία*, madness]. 1. Morbid desire to consume poison. 2. Toxiphobia.

Toxicomucin (*toks-ik-o-mu'-sin*). See *Toxomucin*.

Toxicopathy (*toks-ik-op'-a-the*) [*toxico-*; *πάθος*, disease]. Disease of toxic origin.

Toxicosis (*toks-ik-o'-sis*) [*toxin*]. A state of poisoning.

Toxidermitis (*toks-e-der-mi'-tis*). See *Toxicoderma*.

Toxiferous (*toks-ij'-er-us*) [*toxin*; *ferre*, to bear]. Producing or conveying poison.

Toxin [*τοξίνη*, poison]. 1. Any poisonous nitrogenous compound produced by animal or vegetable cells. 2. Any poisonous substance, proteid in nature, produced by animal or vegetable cells, by immunization with which specific antitoxins may be obtained. Syn., *Toxalbumin*. **T., Animal**, one produced by the metabolic activity of animal cells, as snake-venom. **T., Bacterial**, one produced by the metabolic activity of bacteria, as diphtheria toxin. **T., Extracellular**, a bacterial toxin elaborated by a microorganism and thrown off into the surrounding medium. The majority of the best known toxins are extracellular. **T., Intracellular**, a bacterial toxin contained in the bodies of the bacteria themselves. **T.s., Ponogenic**, toxins such as are characteristic of nerve-tissue waste. **T.-unit**, consists of two parts, a haptophore complex which unites it with the cell receptor (or lateral chain), and the toxophore complex, which is the poisonous element. **T., Vegetable**. 1. Any toxin produced by vegetable cells. 2. Specifically, one produced by higher plants, as ricin (produced by the castor oil plant), abrin (produced by the jequirity plant).

Toxinemia (*toks-in-e'-me-ah*). See *Toxemia*.

Toxinicide (*toks-in'-is-id*) [*toxin*; *cadere*, to kill]. Any substance that destroys a toxin.

Toxiphobia (*toks-e-fō'-he-oh*) [*toxin*; *phōbos*, fear]. Morbid dread of being poisoned.

Toxiphoric (*toks-i-fōr'-ik*). See *Toxiferous*.

T. Side-chain, applied by Ehrlich to atom groups which combine with the toxin of any particular disease-germ.

Toxis (*toks'-is*). See *Toxicosis*.

Toxitherapy (*toks-e-ther'-ap-e*). The therapeutic use of antitoxins.

Toxoid (*toks'-oid*) [*toxin*; *eidos*, likeness]. A toxin transformation-product destitute of toxic effect.

Toxomucin (*toks-o-mū'-sin*) [*toxo-*; *mucus*]. A toxic substance obtained from cultures of tubercle bacilli.

Toxon (*toks'-on*) [*toxin*]. Ehrlich's name for any one of several substances which appear in fresh toxins; they neutralize antitoxin and are feebly poisonous.

Toxonosis (*toks-on-o'-sis*) [*toxo-*; *nosos*, disease]. An affection resulting from the action of a poison.

Toxopeptone (*toks-o-pep'-tōn*). A poisonous proteid, resembling peptone in its behavior to heat and reagents, produced in peptone cultures by the comma bacillus.

Toxophore (*toks'-o-fōr*) [*toxo-*; *phēro*, to bear]. That complex of atoms of a toxin-unit which is the poisonous element of a toxin.

Toxophylaxin (*tox-o-fil-aks'-in*). See under *Physiolum*.

Toxozoin (*toks-o-zō'-zōn*). See under *Sozin*.

Toynbee's Corpuscles [*Toynbee*, an English otologist]. The corneal corpuscles. **T.'s Experiment**, rarefaction of the air contained in the tympanic cavity by swallowing while the mouth and nose are closed. **T.'s Law**. See *Gull-Toynbee's Law*. **T.'s Ligament**, the tensor ligament, the fibrous sheath of the tendon of the tensor tympani.

Trabecula (*tra-bek'-u-lah*) [L., "a small beam"]. Any one of the fibrous bands extending from the capsule into the interior of an organ.

Trabs cerebri (*trabs ser'-e-br-i*) [L.]. The corpus callosum.

Trace (*trās*). A mark. **T.**, Primitive. See *Primitive Streak*.

Trachea (*trā'-ke-ah*) [*tracheia*, a windpipe]. The windpipe; the cartilaginous and membranous tube extending from the lower part of the larynx to its division into the two bronchi.

Tracheal (*trā'-ke-āl*) [*trachea*]. Pertaining to or produced in the trachea. **T. Tugging**, the downward tugging movement of the larynx, sometimes observed in aneurysm of the aortic arch.

Trachealis Muscle (*trāk-e-āl'-is*) [*trachea*]. The intrinsic transverse muscle-fibers found in the trachea.

Tracheitis (*trā'-ke-i'-tis*) [*trachea*; *itis*, inflammation]. Inflammation of the trachea.

Trachelalis (*trāk-el-āl'-is*) [*trachelos*, neck]. The trachelomastoid muscle. See under *Muscle*.

Trachelectomopexia (*trā'-kel-eh-le-mō-pe-ks-i-ah*) [*trachelos*, neck, *ektomē*, excision, *pēgē*, a fixing]. Partial excision with fixation of the neck of the uterus.

Trachelectomy (*trā'-kel-eh-le-mōs*) [*trachelos*, neck, *ektomē*, excision]. Excision of the neck of the uterus.

Trachelian (*trā'-kel-le-ian*) [*trachelos*, neck]. Pertaining to the neck, particularly its dorsal part.

Trachelismus (*trā'-kel-ak'-mūs*) [*trachelos*, neck, *ismos*, spasm]. Spasmodic contraction of the muscles of the neck.

Trachelitis (*trā'-kel-i'-tis*) [*trachelos*, neck, *itis*, inflammation]. Inflammation of the neck of the uterus.

Trachelo- (*trāk-el-o-*) [*trachelos*, neck]. A prefix denoting pertaining to the neck.

Trachelobregmatic (*trā'-lē-o-breg-mat'*) [*trachelos*, neck, *bregma*]. Relating to the neck and the bregma.

Tracheloclavicular (*trāk-el-o-klav'-ik'-ul-er*). Relating to the neck and the clavicle.

Trachelomastoid (*trāk-el-o-mas'-toid*) [*trachelos*, neck, *mastoid*]. Pertaining to the neck and the mastoid process.

Trachelooccipital (*trāk-el-o-ok'-ip'-it-āl*). Relating to the neck of the neck and the occiput.

Trachelopexia (*trā'-kel-o-peks'-i-ah*) [*trachelos*, neck, *pēgē*, a fixing]. Fixation of the neck of the uterus.

Tracheloplasty (*trāk-el-o-plas'-tē*) [*trachelos*, neck, *plastē*, to mold]. Plastic operation on the neck of the uterus.

Trachelorrhaphy (*trāk-el-o-rā'-fē*) [*trachelos*, neck, *rhaphe*, suture]. Repair of a laceration of the cervix uteri.

Trachelotomy (*trāk-el-o-mē*) [*trachelos*, neck, *tomē*, a cutting]. Incision into the cervix uteri.

Tracheo- (*trā'-ke-o-*) [*tracheia*, trachea]. A prefix denoting connecting with or relation to the trachea.

Tracheoanecoele (*trā'-ke-o-ā-ne-ō-sē*) [*trā'-ke-o-ānē*, air, *anē*, tumor]. A diverticulum of the trachea.

Tracheobronchitis (*trā'-ke-o-brōng'-kai-tis*) [*tracheo-*, *bronchitis*]. Inflammation of the trachea and bronchi.

Tracheocele (*trā'-ke-o-sē*) [*tracheo-*, *celē*, tumor]. 1. Protrusion of the mucous membrane of the trachea. 2. Cyst.

Tracheoesophageal (*trā'-ke-o-es-ō-fā'-āl*) [*tracheo-*, *esophagus*]. Pertaining to the trachea and the esophagus.

Tracheolaryngeal (*trā'-ke-o-lar-i-jē'-āl*) [*tracheo-*, *larynx*]. Pertaining to the trachea and the larynx.

Tracheoplasty (*trā'-ke-o-plas'-tē*). Plastic surgery of the trachea.

Tracheoschisis (*trā'-ke-ō-sch'-is*) [*tracheo-*, *schisis*, to split]. Fissure of the trachea.

Tracheoscopy (*trā'-ke-ōr'-kē-pe-*) [*tracheo-*, *skopos*, to inspect]. Inspection of the interior of the trachea by means of a laryngoscope and reflected light.

Tracheostenosis (*trā'-ke-ō-stē-nō-sis*) [*tracheo-*, *stenosis*]. Stenosis of the trachea.

Tracheotome (*tra'-ke-o-tōm*) [*tracheo-*; *τομή*, a cutting]. A cutting instrument used in tracheotomy.

Tracheotomist (*tra-ke-ot'-om-ist*). One skilled in tracheotomy.

Tracheotomize (*tra-ke-ot'-om-iz*). To perform tracheotomy upon.

Tracheotomy (*tra-ke-ot'-o-mie*) [see *Tracheotome*]. The operation of cutting into the trachea through the cricothyroid membrane, or through the cricoid cartilage and the upper part of the trachea. **T., Inferior**, one performed below the isthmus of the thyroid gland. **T., Superior**, one performed above the isthmus of the thyroid gland. **T.-tube**, a metal tube placed in the opening made in tracheotomy, and through which breathing is carried on.

Trachelectosis (*tra-ke-el-ko'-sis*) [*tracheo-*; *ἕλκος*, an ulcer]. Ulceration of the trachea.

Tracheleclus (*tra-ke-el'-kus*). An ulcer of the trachea.

Trachitis (*tra-ki'-tis*). See *Tracheitis*.

Trachoma (*tra-ko'-mah*) [*τραχός*, rough]. A contagious disease of the eyelids characterized by small, sago-like elevations on the conjunctiva, and later by cicatricial contraction and deformity of the lids. The friction of the elevations (*trachoma-granulations*) against the cornea often produces ulcer or pannus. **Syn.**, *Granular conjunctivitis*; *Granular lids*. **T. deformans**, a name given to a form of vulvitis at the stage when it results in diffuse scar-tissue. **T., Türk's**. See *Türk's Trachoma*.

Trachomatous (*tra-ko'-mat-us*) [*trachoma*]. Affected with or pertaining to trachoma.

Trachyphonia (*trak-if-o'-ne-ah*) [*τραχός*, rough; *φωνή*, voice]. Roughness or hoarseness of the voice.

Tract [*tractus*]. 1. A distinct, more or less defined region having considerable length. 2. Any one of the columns of white matter of the spinal cord. 3. A track or course. **T., Alimentary**, the alimentary canal, extending from the mouth to the anus. **T., Cerebellar**, an ascending tract of fibers at the periphery of the posterior portion of the lateral column of the spinal cord. **T., Descending Anterolateral**, a few long fibers scattered in the anterior and lateral ground-bundles of the spinal cord. **T., Digestive**, the alimentary tract. **T., Direct Cerebellar**. See *T., Cerebellar*. **T., Genitourinary**, the genitourinary organs in continuity. **T., Intermediolateral**, a tract of nerve-fibers in the lateral column of the spinal cord, midway between the anterior and posterior gray horns. **T., Motor**, the path for motor impulses from the brain to a muscle. **T., Olfactory**. See *Olfactory Tract*. **T., Optic**. See *Optic Tract*. **T., Pyramidal**, the continuation in the spinal cord of the ventral pyramids of the oblongata. **T., Respiratory**, the respiratory organs in continuity. **T., Sensory**, any tract of fibers conducting sensation to the brain. **T., Septomarginal**, a narrow strip of fibers in the posterior column

close to the septum as high as the eleventh dorsal segment.

Traction (*trak'-shun*) [*trahere*, to draw]. The act of drawing or pulling. **T.-aneurysm**, an aneurysm due to traction on the aorta by an incompletely atrophied ductus arteriosus. **T., Axis-**, traction in the axis or direction of a channel, as of the pelvis, through which a body is to be drawn. **T., Axis-, Forceps**, an obstetric forceps for performing axis-traction in the delivery of the fetus. **T.-diverticulum**, a circumscribed sacculation of the esophagus from the traction of adhesions. **T., Elastic**, traction by an elastic force.

Tractor (*trak'-tor*) [*traction*]. 1. An instrument for making traction. 2. See *Perkinism*.

Tractoration (*trak-tor-a'-shun*) [*tractor*]. Treatment by metallic tractors. See *Perkinism*.

Tractus (*trak'-tus*). See *Tract*.

Tragacanth (*trag'-a-kanth*) [*τραγάκανθα*, "goat-thorn"]. A gummy exudation from various species of *Astragalus*, of the order *Leguminosae*, constituting the *tragacantha* of the U. S. P. and B. P. It resembles gum-arabic, and is used as a demulcent, and is added to water to suspend insoluble powders and for making troches. **T., Glycerin of** (*glycerinum tragacantha*, B. P.). **T., Mucilage of** (*mucilago tragacantha*, U. S. P.). Dose 4 dr. (16 Cc.). **T., Powder of, Compound** (*pulvis tragacantha composuit*, B. P.). Dose 30 gr.-1 dr. (2-4 Gm.).

Tragal (*tra'-gal*) [*tragus*]. Pertaining to the tragus.

Tragicus (*traj'-ik-us*). See under *Muscle*.

Tragus (*tra'-gus*) [*τράγος*, goat]. The small prominence of cartilage projecting over the meatus of the external ear.

Trajector (*tra-jek'-tor*) [L., "a piercer"]. An instrument used to determine the approximate location of a bullet in the cranium.

Trance (*trans*) [*transire*, to pass over]. A form of abnormal sleep from which the patient ordinarily cannot be aroused, and which is dependent upon hysteria (*hysteria trance*) or hypnotism.

Trans- [*trans*, across]. A prefix denoting through or across.

Transaudient (*trans-aw'-de-ent*) [*trans-*; *audire*, to hear]. Allowing the transmission of sound.

Transcortical (*trans-kor'-tik-ul*) [*trans-*; *cortex*]. Across the cortex.

Transection (*trans-ek'-shun*) [*trans-*; *section*]. A section made across the long axis of a part.

Transfer (*trans'-jer*) [*trans-*; *ferre*, to carry]. The change of anesthesia or hyperesthesia from one part of the body to another, a phenomenon present in some cases of hysteria.

Transference (*trans-jer'-ens*). 1. See *Transfer*. 2. See *Telepathy*.

Transfix (*trans-fiks'*) [*trans-*; *figere*, to fix]. To pierce through and through.

Transfixion (*trans-fik'-shun*) [*transfix*]. The act of piercing through and through.

Transformation (*trans-jor-a'-shun*) [*trans-*; *forare*,

- to pierce]. The act of perforating, as *transformation* of the fetal skull.
- Transformation** (*trans-for-ma'-shun*) [*trans-; formare, to form*]. A change of form or constitution, degeneration.
- Transfusion** (*trans-fu'-shun*) [*trans-; fundere, to pour*]. The pouring of liquid from one vessel into another; especially the introduction into a vessel of the body of blood or other liquid. **T., Arterial**, transfusion of blood into an artery. **T., Direct, T., Immediate**, the transfusion of blood from one person to another without exposure of the blood to the air. **T., Indirect, T., Mediate**, the introduction of blood that was first drawn into a vessel. **T., Venous**, transfusion into a vein.
- Transic** (*trans'-ik*) [*trance*]. Relating to a trance.
- Transillumination** (*trans-il-u-min-a'-shun*) [*trans-; illuminati-o*]. Illumination of the walls of a cavity by a light passed through them.
- Translation** (*trans-la'-shun*) [*L., translatus*]. A change of location.
- Translucent** (*trans-lu'-sent*) [*trans-; lucere, to shine*]. Permitting a partial transmission of light, somewhat transparent.
- Transmigration** (*trans-mi-gra'-shun*) [*trans-; migrare, to wander*]. A wandering across or through; as *transmigration* of the ovum, *transmigration* of the white corpuscles. **T., External**, the passage of an ovum from one ovary to the opposite oviduct without traversing the uterus. **T., Internal**, the passage of the ovum through its proper oviduct into the uterus and across to the opposite oviduct.
- Transmission** (*trans-mis'-sion*) [*trans-; mittere, to send*]. The communication or transfer of anything, especially disease, from one person or place to another.
- Transonance** (*trans'-o-nans*) [*trans-; sonare, to sound*]. Transmitted resonance, the transmission of sound through an organ, as of the cardiac sounds through the lungs and chest-wall.
- Transparent** (*trans-pa'-rent*) [*trans-; parere, to appear*]. Having the property of permitting the passage of light-rays without material obstruction, so that objects beyond the body can be seen.
- Transperitoneal** (*trans-per-it-on-e'-al*). Across the peritoneal cavity.
- Transpiration** (*trans-pir-a'-shun*) [*trans-; spirare, to breathe*]. 1. The act of exhaling fluid or gas through the skin. 2. The material exhaled.
- Transplantation** (*trans-plan-ta'-shun*) [*trans-; plantare, to plant*]. The operation of transplanting or of applying to a part of the body tissues taken from another body or from another part of the same body. See *Graft*.
- Transposition** (*trans-po-si-ti'-on*) [*trans-; ponere*]. A change of position. **T. of the Viscera**, a change in the position of the viscera whereby they are placed on the side opposite to that normally occupied.
- Transthalmic** (*trans-thal'-am-ik*). Across the thalamus.
- Transthoracic** (*trans-tho-ras'-ik*) [*trans-; thorax*]. Extending across the thorax.
- Transthoracotomy** (*trans-tho-ras'-o-mi*) [*trans-; thorax, to cut, a cutting*]. The operation of cutting across the thorax.
- Transudate** (*trans'-u-dat*) [*trans-; sudare, to perspire*]. A liquid or other substance produced by transudation.
- Transudation** (*trans'-u-da'-shun*) [*trans-; sudare*]. 1. The passing of fluid through a membrane, especially of blood-serum through the vessel walls. 2. Transudate.
- Transversalis** (*trans-ver-sa'-lis*) [*trans-; vertere, to turn*]. Transverse at certain points (e.g., *transversalis colli*) or a muscle *transversalis abdominis* running transversely. See under *Artery* and under *Muscle*. **T. Fascia**, the fascia on the inner surface of the transversalis abdominis between the latter and the peritoneum.
- Transverse** (*trans-ver-s'*) [*trans-; vertere, to turn*]. Crosswise, at right angles to the longitudinal axis of the body. **T. Presentation**, a presentation of the fetus at right angles to the longitudinal axis of the uterus.
- Transversectomy** (*trans-ver-sak'-to-mi*) [*trans-; vertere, to turn, excision*]. Removal of the transverse process of a vertebra.
- Transversus** (*trans-ver'-sus*) [*L.*]. Transverse as *transversus* muscle. See under *Muscle*.
- Trapeziometacarpal** (*tra-pe-zio-met-ak'-ar-pal*) [*trapezium, metacarpal*]. Pertaining to the trapezium and the meta-carpus.
- Trapezium** (*tra-pe'-zi-um*) [*trapeza, a table*]. 1. The multangulum majus, the first bone of the second row of carpal bones. 2. A tract of transverse fibers situated in the lower part of the pons, including the superior olivary nucleus, and connected with the accessory auditory nucleus.
- Trapezius** (*tra-pe'-ze-us*). See under *Muscle*.
- Trapezoid** (*tra-pe'-zoid*) [*trapeza, a table, oblique*]. A geometric four-sided figure having two parallel and two diverging sides. **T. Bone**, or simply *trapezoid*, the multangular minus, the second bone of the second row of the carpus. **T. Ligament**. See *Ligament*.
- Trapezoid**.
- Trapp's Formula**. The product obtained by doubling the last two figures of the specific gravity of the urine roughly indicates the number of grams of solids per 1000 Cc. of urine.
- Traube's Corpuscles**. Normal red blood corpuscles appearing as pale yellowish rings. Syn., *Phantom corpuscles*. **T.'s Curves**, large rhythmic undulations seen in a sphygmographic tracing soon after inspiration has ceased, they are attributed to stimulation of the vasomotor center in the *chemopnea*. **T.'s Dyspnea**, dyspnea with slow inspiratory movements, marked expansion of the thorax during inspiration, and collapse during expiration, it is noted in diabetes mellitus. **T.'s Phenomenon**, a double sound, systolic and diastolic, heard over peripheral arteries, especially the femoral, in aortic aneurysm, occasionally also in mitral stenosis, and in aortic

ing, etc. **T.'s Plugs**. See *Dittich's Plugs*. **T.'s Semilunar Space**, the space in which the tympanic sound of the stomach can be heard within the thorax under normal conditions; it is bounded by the liver, the lower border of the left lung, the spleen, and the arch of the free ribs.

Traube-Hering's Curves. See *Traube's Curves*.

Trauma (*traw'-mah*) [*τραῦμα*, a wound]. A wound; an injury.

Traumatic (*traw'-mat'-ik*) [*trauma*]. Pertaining to or caused by a wound or injury.

Traumaticin (*traw'-mat'-is-in*) [*trauma*]. A solution of gutta-percha in chloroform used for closing superficial wounds.

Traumatism (*traw'-mat-izm*) [*trauma*]. 1. The condition produced by trauma. 2. Improperly, trauma.

Traumatol (*traw'-mat-ol*) [*trauma*]. Iodocresol, C_7H_7IO , obtained by the action of iodine on cresol. It is an odorless, reddish-violet precipitate containing 54% of iodine, soluble in chloroform and carbon tetrachloride, insoluble in water, acid, and alcohol. It is a surgical antiseptic, used pure as a dusting-powder and in 5-10% pastes and ointments.

Traumatology (*traw'-mat-ol'-o-jē*) [*trauma*; *λόγος*, science]. The science of wounds.

Traumatopnea (*traw'-mat-op-ne'-ah*) [*trauma*; *πνοή*, breath]. The passage of respiratory air through a wound in the chest-wall.

Traumatosis (*traw'-mat-o'-sis*) [*trauma*]. Traumatism.

Treacle (*tre'-kl*). The uncrystallized residue remaining after the refining of cane-sugar.

Treatment (*trei'-ment*) [*tractare*, to treat]. The means employed in effecting the cure of disease; the management of disease or of diseased patients. **T.**, **Calot's**, a method of forcible reduction of angular deformity of the spine.

Trefusis (*tre'-fu'-ze-ah*). A red-brown, soluble powder, obtained by drying defibrinated blood. It is used in chlorosis.

Trehalose (*tre-hall'-ōs*), $C_{12}H_{22}O_{11}$. A carbohydrate resembling sugar, derived from ergot and from trehala manna.

Treitz's Hernia. Retroperitoneal hernia; duodenojejunal hernia. **T.'s Muscle**, the suspensory muscle of the duodenum; a thin, triangular muscle that arises from the left crus of the diaphragm and the connective tissue surrounding the celiac axis, and is inserted into the duodenojejunal flexure.

Trematode (*trem'-at-ōd*) [*τρεῖς*, hole; *εἶδος*, like]. A member of the *Trematoda*, a class of worms, some of which are parasitic in man and the lower animals.

Tremograph (*trem'-ō-graf*) [*tremor*; *γραφῆς*, a writing]. A device for recording tremor.

Tremolo (*trem'-o-lō*). An apparatus for performing massage; a vibrator.

Tremor (*trem'-ar*) [*tremere*, to shake]. A trembling of the voluntary muscles. **T.**, **Fibrillary**, tremor caused by consecutive contractions of separate muscle-fibrils. **T.**,

Intention-, one appearing on voluntary movement. **T. potatorum**, delirium tremens.

T., **Purring**. Synonym of *Thrill*, *Purring*.

Tremulous (*trem'-u-lus*) [*tremor*]. Trembling, quivering, as *tremulous iris*.

Trendelenburg Posture. See *Position*, *Trendelenburg's*.

Trepan (*tre-pan'*) [*τροπῶν*, bore]. An old form of the word trephine.

Trephination (*trej'-in-a'-shun*). See *Trephining*.

Trephine (*tre-jin'*) [*Fr.*, *tréphine*]. 1. An instrument for cutting out a circular piece of bone, usually from the skull. 2. To operate with the trephine.

Trephining (*tre-jin'-ing*) [*trephine*]. The operation of cutting bone with a trephine.

Trepidation (*trej'-id-a'-shun*) [*trepidare*, to tremble]. 1. Trembling. 2. A peculiar oscillatory movement at times seen in the muscles after hemiplegia.

Treponema pallidum (*tre-po-ne'-mah pal'-id-um*). A parasite found in syphilis. Syn., *Spirochete pallida*.

Tretop's Test for Albumin in Urine. Four or 5 Cc. of fresh urine are heated in a test-tube nearly to boiling-point, and a few drops of 40% formalin added after it is removed from the flame. Any albumin in the urine is coagulated like the white of an egg, and accumulates on the surface and walls of the tube.

Treves' Bloodless Fold. The ileoappendicular fold. A quadrilateral fold of the peritoneum attached by its upper border to the ileum, opposite the mesenteric attachment, and by its lower border to the mesoappendix or to the appendix itself. The outer or right border is attached to the inner aspect of the cecum as far down as the appendix, the left or inner concave margin being free.

Tri- [*τρεῖς*, or *tres*, three]. A prefix denoting three.

Triacid (*tri-as'-id*) [*tri-*; *acidum*, acid]. Of an alcohol, containing three atoms of hydrogen replaceable by a base.

Triad (*tri'-ad*). See under *Quantivalence*.

Triakadekaphobia (*tri-a-ks dek-aj-o'-he-ah*) [*τρεκαδεκά*, thirteen; *φόβος*, fear]. Insane fear of the number thirteen.

Trial-glasses, T.-lenses. A graduated set of concave, convex, cylindric, and prismatic lenses used in testing vision.

Triallylamin (*tri-al-il-am'-in*). A volatile base having the formula $(C_3H_5)_3N$.

Triamin (*tri-am'-in*). A compound derived from three molecules of ammonia in which the hydrogen has in part or wholly been replaced by bases.

Triangle (*tri'-ang-gl*) [*tri-*; *angulus*, an angle]. A figure having three sides and three angles.

T. of Bryant. See *T.*, *Iliofemoral*.

T., **Carotid, Inferior**, a triangle located in the neck; it is bounded in front by the median line of the neck, behind by the anterior margin of the sternomastoid, and above by the anterior belly of the omohyoid. Its floor is formed by the longus colli below and the scalenus anticus above. The common

carotid artery, internal jugular vein, vagus nerve, superficialis colli nerve, a branch of the communications neri, the inferior thyroid artery, the recurrent laryngeal nerve, the sympathetic nerve, the trachea, thyroid gland, and larynx are the important structures within it. *Syn.*, *Triangle of necessity*. **T., Carotid, Superior**, a triangle located in the neck, it is bounded behind by the sternomastoid, in front by the anterior belly of the omohyoid, and above by the posterior belly of the digastric. Its floor is formed by the thyrohyoid hyoglossus, and inferior and middle constrictors of the pharynx. The most important structures contained within it are the common carotid artery and its bifurcation into the external and internal carotids, the superior thyroid artery, the lingual artery, the facial artery, the occipital and ascending laryngeal arteries, the internal jugular vein, and the veins corresponding to the arteries mentioned, the descendens noni, hypoglossal, pneumogastric, sympathetic, spinal accessory, superior laryngeal, and external laryngeal nerves. *Syn.*, *Triangle of election*. **T., Cephalic**, a triangle on the anteroposterior plane of the skull, bounded by lines joining the occiput with the forehead and with the chin and a line joining the latter two. **T., Digastric**. See *T., Submaxillary*. **T. of Elbow**, a triangle lying in front of the elbow with the base directed upward toward the humerus, and bounded externally by the supinator longus and internally by the pronator radii teres. Its floor is formed by the brachialis anticus and supinator brevis. Its contents are the brachial artery and veins, the radial and ulnar arteries, the median and musculospiral nerves, and the tendon of the biceps. **T. of Election**. See *T., Carotid, Superior*. **T., Fascial**, a triangle formed by lines uniting the basion with the alveolar and nasal points and a line joining the latter two. **T., Frontal**, a triangle bounded by the maximum frontal diameter and lines joining its extremities and the glabella. **T. of Hesselbach**. See *Hesselbach's Triangle*. **T., Hypoglossohyoid**, a triangular space in the lateral subhyoid region, limited above by the hypoglossal nerve, in front by the posterior border of the mylohyoid muscle, behind and below by the tendon of the digastric muscle. The area is occupied by the hyoglossal muscle, which covers the lingual artery. **T., Iliofemoral**, a triangle located at the hip. Its hypotenuse is formed by Nelaton's line, a second side by the continuation outward of a line drawn through the two superior iliac spines, and the third by a line drawn at right angles to this from the summit of the greater trochanter. **T., Inferior Occipital**, a triangle having the basistoid diameter for its base and the mastoid for its apex. **T., Infraclavicular**, a triangle situated below the clavicle, it is bounded above by the clavicle, below and to the inner side by the upper border of the great pectoral muscle, and to

the outer side by the anterior border of the deltoid. It contains the axillary artery. **T., Inguinal**. Same as *T., Scarpa's*. **T. of Lesser**, a triangle located in the neck. Its boundaries are as follows: at its upper border the hypoglossal nerve, the two angles are formed by the anterior and posterior bellies of the digastric muscle. It is covered by the skin, superficial and deep fascia, and part of the submaxillary gland. The floor is formed by the hyoglossus muscle. It contains the ranine vein and sympathetic nerve. **T., Lumbocostoadominal**, a triangle bounded anteriorly by the external oblique superiorly by the lower border of the external psoctic inferior and the point of the tenth rib, posteriorly by the outer edge of the twelfth spin, and inferiorly by the anterior border. **T., Maligne's**. See *T., Carotid, Superior*. **T., Mylohyoid**, the space bounded by the mylohyoid and the two bellies of the digastric. **T. of Necessity**. Same as *T., Carotid, Superior*. **T. of the Neck, Anterior**, a triangle bounded anteriorly by a line extending from the chin to the sternum, posteriorly by the anterior margin of the sternocleid, its base being formed by the lower border of the body of the inferior maxilla and a continuation of this line to the mastoid process of the temporal bone. It is subdivided into three smaller triangles by the digastric muscle above and the anterior belly of the omohyoid below. These are named from below upward the *inferior carotid*, the *superior carotid*, and the *submaxillary*. **T. of the Neck, Posterior**, a triangle bounded anteriorly by the sternomastoid muscle, posteriorly by the anterior margin of the trapezius, the base is formed by the upper border of the clavicle, the apex corresponds to the occiput. It is divided by the posterior belly of the omohyoid muscle into two triangles, the *occipital or upper*, and the *subclavian or lower*. **T., Occipital**, a triangle with the following boundaries: anteriorly, the sternomastoid muscle, posteriorly the trapezius, and laterally the omohyoid muscle. Its important contents are the spinal accessory nerve, the ascending and descending branches of the external carotid and the transverse subclavian artery and vein. **T. of Petit**. See *Petit's Triangle*. **T., Scarpa's**, a triangle located in the proximal end of the thigh. The boundaries are, externally the sartorius muscle, internally, the adductor longus muscle, and above, Ponsart's ligament. Its important contents are the femoral artery and vein, the anterior crural nerve, and the crucial branch of the genitofemoral nerve. **T., Subclavian**, a triangle bounded above by the posterior belly of the omohyoid muscle, below by the upper border of the clavicle. Its base is formed by the sternomastoid muscle. It contains the subclavian artery and occasionally the vein, the brachial plexus of nerves, the subscapular vessels, the transverse subclavian artery and vein, and the internal jugular vein. **T., Submaxillary**, a triangle

formed above by the lower border of the body of the inferior maxilla and a continuation of this line to the mastoid process of the temporal bone, below by the posterior belly of the digastric and the stylohyoid muscle, and anteriorly by the middle line of the neck. It contains the submaxillary gland, the facial artery and vein, the submental artery, the mylohyoid artery and nerve, and the stylomaxillary ligament, behind which is the external carotid artery. **T.**, **Suboccipital**, a triangle in the posterior part of the neck, formed by the rectus capitis posterior major and superior and inferior oblique muscles, and containing the vertebral artery. **T.**, **Suprameatal**. See *Macewen's Triangle*.

Triangular (*tri-ang'-gu-lar*) [*triangle*]. Having three sides or angles, as the *triangular* ligament.

Triangularis (*tri-ang-gu-la'-ris*). A triangular muscle. See under *Muscle*.

Triatomic (*tri-at-om'-ik*) [*tri-; atom*]. 1. Consisting of three atoms. 2. Having three atoms of replaceable hydrogen.

Tribadism (*trib'-ad-izm*) [*tribadon*, to rub]. Sexual intercourse between women produced by friction of the genitals.

Tribasic (*tri-ba'-sik*) [*tri-; basis*, a base]. Having three hydrogen atoms replaceable by bases.

Tribromid (*tri-bröm'-id*) [*tri-; bromid*]. A compound of bromin containing three atoms of bromin to one of the base.

Tribrommethane (*tri-bröm-meth'-än*) [*tri-; bromin*; *methane*]. Bromoform.

Tribromosalol, **Tribromsalol** (*tri-bro-mo-sa'-lol*, *tri-brom-sa'-lol*), $C_6H_5C_7H_7Br_3O_3$. A crystalline substance used as an intestinal antiseptic and hypnotic.

Tribromphenol (*tri-brom-fe'-nol*) [*tri-; βρωμος*, stench; *phenol*], $C_6H_5Br_3OH$. A substance produced by the reaction of phenol with bromin. It is antiseptic, especially for the intestinal tract. Dose 1-4 gr. (0.06-0.26 Gm.).

Tricalcic (*tri-kal'-sik*) [*tri-; calcium*]. Containing three atoms of calcium.

Tricaudalis (*tri-kau-da'-lis*) [*tri-; cauda*, a tail]. The retrahens aurem muscle; so called because it is composed of three slips.

Triceps (*tri-seps*) [*tri-; caput*, head]. Three-headed; a muscle having three heads. See under *Muscle*.

Trich-, **Tricho-** (*trik-*, *trik-o-*) [*tripē*, a hair]. A prefix signifying pertaining to a hair.

Trichangeia (*trik-an-je'-ah*) [*trich-*; *ἀγγεῖον*, a vessel]. The capillary blood-vessels.

Trichangeiectasis (*trik-an-je-ek-ta'-sis*) [*trich-angeia*; *ἐκτασις*, extension]. Dilation of the capillaries.

Trichauxis (*trik-auks'-is*) [*trich-*; *αὐχμός*, increase]. Hypertrichiasis.

Trichesthesia (*trik-es-the'-ze-ah*) [*trich-*; *αἰσθησις*, sensibility]. 1. A peculiar form of tactile sensibility in regions covered with hairs. 2. See *Trichoesthesia*.

Trichiasis (*trik-i'-as-is*) [*tripē*, a hair]. A state of abnormal position of the eyelashes,

so that they produce irritation by friction upon the globe. **T. of the Anus**, an incurvation of the hairs about the anus, so that they irritate the mucous membrane.

Trichina (*trik-i'-nah*) [*tripē*, a hair]. A genus of nematode worms, of which one species, *T. spiralis*, is parasitic in the hog and at times in man. See *Trichinosis*.

Trichiniasis (*trik-in-i'-as-is*). See *Trichinosis*.

Trichinoscope (*trik-i'-na-skōp*). A microscope for the detection of *Trichina spiralis*.

Trichinosis (*trik-in-o'-sis*) [*trichina*]. A disease produced by the ingestion of pork containing *Trichina spiralis*. It is characterized by nausea, vertigo, fever, diarrhea, prostration, stiffness and painful swelling of the muscles, edema of the face, and in some cases perspiration, insomnia, and delirium.

Trichinous (*trik'-in-us*) [*trichina*]. Infested with or containing trichine.

Trichismus (*trik-is'-mus*) [*tripē*, a hair]. 1. A scarcely perceptible fracture. 2. A capillary fissure or crack.

Trichitis (*trik-i'-tis*) [*trich-*; *τις*, inflammation]. Inflammation of the hair-bulbs.

Trichloracetic Acid (*tri-klor-as-e'-tik*). See *Acid*, *Trichloracetic*.

Trichlorhydrin (*tri-klor-hi'-drin*), $C_3H_5Cl_3$. A colorless oily liquid with odor of alcohol.

Trichlorid (*tri-klor'-id*) [*tri-; chlorid*]. A compound containing chlorin in the proportion of three atoms to one of the base.

Trichloroquinone (*tri-klo-ro-kin'-on*), $C_6HCl_3O_2$. A crystalline substance obtained from a sulfuric-acid solution of phenol by action of potassium chlorate with HCl.

Trichlorophenol (*tri-klor-fe'-nol*) [*tri-; χλωρος*, green; *phenol*], $C_6H_2Cl_3(OH)$. A derivative of phenol used as a disinfectant.

Trichobacteria (*trik-o-bak-te'-re-ah*). 1. Flagellate bacteria. 2. Filamentous bacteria.

Trichobezoar (*trik-o-be'-zo-ar*) [*tricho-*; *bezoar*]. See *Egagropilus*.

Trichocardia (*trik-o-kar'-de-ah*) [*tricho-*; *καρδία*, heart]. Inflammation of the pericardium with pseudomembranous elevations.

Trichocephaliasis (*trik-o-sef-al-i'-as-is*) [*trichocephalus*]. The diseased condition produced by threadworms.

Trichocephalus (*trik-o-sef'-al-us*) [*tricho-*; *κεφαλή*, head]. A genus of nematode worms, the threadworms. **T. dispar**, a variety parasitic in the intestine, especially the large intestine.

Trichocircus (*trik-o-sir'-sus*) [*tricho-*; *κύκλος*, a varix]. Abnormal capillary dilation.

Trichoclasia (*trik-o-klu'-ze-ah*). See *Trichorrhexis nodosa*.

Trichoepithelioma (*trik-o-ep-e-the-le-o'-mah*) [*tricho-*; *epithelion*]. A skin-tumor originating in the hair-follicles.

Trichoesthesia (*trik-es-the'-ze-ah*) [*tricho-*; *αἰσθησις*, sensibility]. The sensation perceived when a hair is touched.

Trichoglossia (*trik-o-glos'-e-ah*) [*tricho-*; *γλῶσσα*, tongue]. Hairy tongue, a thickening of the papillae, producing an appearance as if the tongue were covered with hair.

Trichoid (*trik'-oid*) [*tricho-*; *είδος*, like] Resembling hair.

Trichology (*trik-ol'-o-je*) [*tricho-*; *λόγος*, science]. The science of the hair.

Trichomatose (*trik-ō'-mat-ōs*) [*trichōma*, a growth of hair]. Matted together.

Trichomatosis (*trik-ō'-mat-ō'-sis*) [see *Trichomatose*]. An affection of the hair characterized by a matted condition due to fungoid growths. See *Plica polonica*.

Trichomonas (*trik-om'-ō-nas*) [*tricho-*; *μονός*, a monad]. A genus of infusorians. *T. vaginalis*, a species occasionally found in the vagina.

Trichomycosis (*trik-ō'-mi-kō'-sis*) [*tricho-*; *μύκωσις*, mycosis]. A disease of the hair produced by a vegetable parasite.

Trichonosis, Trichonosis (*trik-on-ō'-sis*, -*sis*). See *Trichopathy*.

Trichopathy (*trik-ōp'-ath-ē*) [*tricho-*; *πάθος*, disease]. Any disease of the hair.

Trichophagy, Trichophagia (*trik-ōf'-aj-ē*, *trik-ō-fā'-jē-ah*). The eating of hair.

Trichophytic (*trik-ōf'-it-ik*). 1. Relating to the genus *Trichophyton*. 2. [*φύειν*, to grow.] Promoting the growth of hair. 3. An agent promoting the growth of hair.

Trichophyton (*trik-ōf'-it-on*) [*tricho-*; *φύειν*, a plant]. A fungus parasitic upon the hair, and causing tinea trichophytina, or ring-worm.

Trichorrhexis (*trik-ōr'-kēs'-is*) [*tricho-*; *ρήγναι*, a breaking]. Brittleness of the hair. *T. nodosa*, an atrophic condition of the hair, affecting more often the male beard, and characterized by irregular thickenings resembling nodes on the hair shaft, the hairs often breaking with a "green-stick fracture" immediately through a node.

Trichosis (*trik-ō'-sis*). See *Trichonosis*.

Trichotillomania (*trik-ō'-tīl-ō'-mā'-ne-ah*) [*tricho-*; *τίλλω*, to pluck out; *μανία*, madness]. An uncontrollable impulse to pull out one's hair.

Trichotoxin (*trik-ō'-toks'-i-kon*) [*tricho-*; *τοξίν*, a poison]. A supposed toxin, existing in red air, which, when introduced into the blood, exerts a poisonous action upon the hair, thus causing alopecia.

Trichotoxin (*trik-ō'-toks'-in*). A cytotoxin obtained by E. Metchnikoff from the capillary epithelia.

Trichroic (*trik-krō'-ik*) [*trichroism*]. Possessing trichromism.

Trichroism (*trik'-kro-izm*) [*trich-*; *χρῶμα*, color]. The property of exhibiting three different colors when viewed under three different aspects.

Trichromat (*tri-krō'-mat*) [*trich-*; *χρῶμα*, color]. Persons for whom the end regions of the spectrum are of constant hue and differ only in intensity. Just inside of each end region there is an intermediate region in which any color can be produced by 31. stores of the end color with the color of the intermediate region. Between these intermediate regions lies the middle region, which requires the presence of some third color in addition

to colors from the end regions. Most of women and about 96% of men belong to this class. Cf. *Dichromat*, *Monochromat*.

Tricipital (*tri-sip'-it-al*) [*triceps*, three-headed]. 1. Three-headed. 2. Pertaining to the triceps.

Tricornis (*tri-kor'-nis*) [*tri-*, cornu, horn]. Having three horns.

Tricresol (*tri-krē'-sol*). A mixture of meta-cresol, 46%, para-cresol, 34%, and ortho-cresol, 20%, soluble in 45 parts of water. It has three times the germicidal value of phenol.

Tricresolamin (*tri-krē'-dōm'-in*). A mixture containing 25% each of ortho-cresol, meta-cresol, and para-cresol. It is a clear, colorless liquid turning yellow on exposure. It is stronger, less irritating than tricresol.

Tricrotic (*tri-krot'-ik*) [*tri-*; *κροτός*, knock]. Having three waves corresponding to a pulse-beat.

Tricrotism (*tri-krot'-izm*) [see *Tricrotic*]. The quality of being tricrotic.

Tricuspid (*tri-kus'-pid*) [*tri-*; *cuspid*, a point]. 1. Having three cusps, as the tricuspid valve. 2. Affecting or produced at the tricuspid valve.

Triethylamin (*tri-ēth'-lām'-in*) [*tri-*; *αιθυλ*, ethyl]. $C_6H_{15}N$. A poisonous, colorless, putrid haddock. See *Triamine*, *Triethylamine*.

Tri-facial Nerve (*tri-fā'-shl*) [*tri-*; *face*, face]. The fifth cranial nerve, so called because it divides into three main branches that innervate the face.

Triferrin (*tri-fēr'-in*). See *Iron Pyruvate*.

Trifolium (*tri-fō'-lē-um*) [*tri-*; *folium*, leaf]. Clover.

Triformal (*tri-fōrm'-al*). See *Formalin*.

Trigemin (*tri-jem'-in*). A substance obtained from pyramidal in action of hydrochloric hydrate, forming white needles soluble in water, antineuralgic. Dose 8-32 gr. (0.25-1 gm.).

Trigeminal (*tri-jem'-in-āl*) [*tri-*; *geminat*, twinned]. 1. Triple, dividing into three, as the trigeminal nerve. 2. Pertaining to the trigeminal nerve. See *Trigeminal*.

Trigeminus (*tri-jem'-in-us*) [see *Trigeminus*]. The trigeminal nerve.

Trigger-finger. A condition in which flexion or extension of a finger is at first resisted, but finally accomplished with a snap.

Trigone, Trigonum (*tri-jōn*, *tri-jōn'-ūm*) [*tri-*; *γωνία*, angle]. 1. Triangle. *T. of the Bladder*, a smooth triangular space on the inside of the bladder, immediately behind the ureters and urethra. *Trigonum lumbale*. See *Triangle*. *T., Olfactory*, the gray matter of origin of the olfactory tract. *Trigoni vesicæ*. See *T. of the Bladder*.

Trihydrate (*tri-hī'-drāt*) [*tri-*; *hydrat*]. A compound containing the hydrate radical in the proportion of three to one atom of base.

Trihydric (*tri-hī'-drik*) [*tri-*; *hydrat*]. Containing three atoms of hydrogen replaceable by bases.

Trihydroxid (*tri-hi-droks'-id*). See *Trihydrate*.
Triiodid (*tri-i'-o-did*) [*tri-; ioidid*]. A compound containing iodine in the proportion of three atoms to one of the base.

Triiodocresol (*tri-i-o-do-kre'-sol*). See *Losophan*.

Trikresol (*tri-kre'-sol*). See *Tricresol*.

Trilabe (*tri-láb*) [*tri-; λαβάνειν, to grasp*]. A three-pronged instrument for withdrawing small calculi through the urethral passage.

Trilateral (*tri-lat'-er-al*) [*tri-; latus, a side*]. Having three sides.

Trimethylamin (*tri-meth-il-am'-in*) [*tri-; methyl; amin*]. A colorless liquid ptomain obtained from herring-brine and various animal and vegetable substances. See *Ptomains*, *Table of*.

Trimethylenediamin (*tri-meth-il-én-di-am'-in*) [*tri-; methylene; diamin*]. A ptomain obtained from cultures of the comma bacillus on beef-broth. It causes convulsions and muscle-tremor. See *Ptomains*, *Table of*.

Trimethylxanthin (*tri-meth-il-zan'-thin*). See *Caffein*.

Trineuric (*tri-nu'-rik*) [*tri-; νήρον, nerve*]. Applied to a nerve-cell provided with three neurites.

Trinitrate (*tri-ni'-trát*) [*tri-; nitrate*]. A nitrate containing three nitric-acid radicles.

Trinitrin (*tri-ni'-trin*). See *Nitroglycerin*.

Trinitrocellulose (*tri-ni-tro-sel'-u-lós*). See *Pyroxylin*.

Trinitrocresol (*tri-ni-tro-kre'-sol*), $C_6H_3N_3O_7$. Antiseptic crystals, obtained from nitration of coal-tar cresol; antiseptic.

Trinitrophenol (*tri-ni-tro-je'-nol*). Picric acid.

Trinophenon (*tri-no-je'-non*). A remedy for burns said to be an aqueous solution of picric acid.

Triocephalus (*tri-o-sel'-al-us*) [*tri-; κεφαλή, head*]. A monster characterized by an absence of the ocular, nasal, and buccal apparatus, the head being merely a small spheroid mass.

Triolein (*tri-o'-le-in*). See *Olein*.

Trional (*tri'-on-al*) [*tripis, three*], $C_6H_5CH_2-C-(SO_2C_2H_5)_2$. Diethylsulfonylmethylmethane, a hypnotic. Dose 15 gr. (1 Gm.).

Triorchid (*tri-or'-kid*) [*tri-; ὄρχις, a testicle*]. 1. Having three testicles. 2. An individual having three testicles.

Trioxid (*tri-oks'-id*) [*tri-; oxid*]. A compound containing oxygen in the proportion of three atoms to one of the base.

Tripalmitin (*tri-pul'-mit-in*). See *Palmitin*.

Tripasa (*trip'-ar-ah*) [*tri-; parere, to bear*]. A woman who has borne three children.

Triphasic (*tri-ja'-sik*). Having three phases or variations.

Triphenamin (*tri-jen'-am-in*). A mixture of phenocoll, phenocoll salicylate, and phenocoll acetate; recommended in rheumatic complaints.

Triphenetolguanidin Hydrochlorate (*tri-jen-et-al-guan'-id-in*). A local anesthetic in 0.1% solution in treatment of eyes.

Triphenin (*tri-jen'-in*). Propionyl-phenetidin, $C_6H_5OC_2H_4NHC_2H_5CO$, obtained by boiling parphenetidin with propionic acid. It is

used as an antipyretic and sedative. Daily dose 46 gr. (3 Gm.); single dose 8-15 gr. (0.5-1.0 Gm). Syn., *Methyphenacetin*.

Triphenyl Albumin (*tri-jen'-il*). A culture-medium made by heating dry egg-albumen with phenol. It is odorless, tasteless, insoluble in water, alcohol, and potassa solution, but soluble in phenol.

Tripier's Amputation. One differing from Chopart's only in that the portion of the os calcis below the sustentaculum tali is removed.

Triple (*trip'-l*) [*L., triplus*]. Threefold. **T. Phosphate**, ammoniomagnesium phosphate, a phosphate occurring in urine and in phosphatic calculi.

Triplet (*trip'-let*) [*triple*]. 1. One of three children born at one birth. 2. In optics, a system consisting of three lenses.

Triplex (*trip'-leks*) [*L.*]. **Triple. T. Pills**, *pillule triplexes*, pills containing three principal ingredients.

Triploblastic (*trip-lo-blas'-tik*) [*triple; βλαστος, a germ*]. Possessing three blastodermic membranes.

Triplopia (*trip-lo'-pe-ah*) [*triple; ὥψ, eye*]. A disturbance of vision in which three images of a single object are seen.

Triquetrous (*tri-kwel'-rus*) [*triquetrum*]. Three-cornered, as the triquetrous bone (os triquetrum), a wormian bone. See *Triquetrum*.

Triquetrum (*tri-kwel'-rum*) [*triquetrus, three-cornered*]. 1. Any one of the wormian bones. 2. The cuneiform bone of the carpus.

Triradial, Triradial (*tri-ra'-de-al, tri-ra'-de-ál*) [see *Triradius*]. Radiating in three directions.

Triradius (*tri-ra'-de-us*) [*tres, three; radius, ray, pl., triradii*]. In the impression of the palmar surface in the Galton system a triangular area composed of transverse ridges at the base of each of the four fingers; used in the classification of palmar impressions.

Trismoid (*tri'-moid*) [*trismus*]. A form of trismus neonatorum thought to be due to pressure on the occipital bone during labor.

Trismus (*tri'-mus*) [*τραπισμός, from τριζεν, to gnash*]. Lockjaw, a tonic spasm of the muscles of mastication. **T. nascentium**, **T. neonatorum**, a form of trismus occurring in newborn infants, and supposed to be due to septic infection of the umbilical stump.

Trisplanchnic (*tri-splangk'-nik*) [*tri-; σπλάνχνον, viscus*]. Distributed to the viscera of the three largest cavities of the body, as the trisplanchnic nerve (the sympathetic nerve).

Tristearin (*tri-ste'-ar-in*) [*tri-; στεαρ, fat*], $C_{57}H_{113}O_6$. See *Stearin*.

Trisubstituted (*tri-sub'-sti-tu-ted*) [*tri-, substitue, to substitute*]. Having three atoms or radicles substituted by other atoms or radicles.

Trisulfid (*tri-sul'-fid*) [*tri-; sulfur*]. A compound containing sulfur in the proportion of three atoms to one of the base.

Triticeoglossus (*trit-is-e-o-glos'-us*) [*triticum; γλῶσσα, tongue*]. An anomalous muscle having its origin from the arytenoid cartilage and its insertion in the side of the tongue.

Triticeous (*trī-tish'-us*) [*tritici*]. Having the shape of a grain of wheat. **T. Nodule**, corpus triticeum, a small cartilaginous nodule in the thyrohyoid ligament.

Triticum (*trī-tik'-um*) [*l.*]. A genus of the Gramineae. *T. sativum* (*T. vulgare*) is wheat. Triticum is official in the U. S. P. in the form of the rhizome of *Agropyron repens*, and is used in cystitis and irritable bladder. **T., Fluidextract of** (*Fluidextractum tritici*, U. S. P.). Dose 1-6 dr. (12-24 Cc.).

Tritipalm (*trī-tē-palm*). A proprietary genitourinary tonic said to consist of the fluid-extract of saw palmetto, *Serenoa serrulata*, and couch-grass, *Agropyron repens*.

Tritol (*trī-tol*). Any emulsion of oil, 4 parts, and diastase extract of malt, 1 part.

Tritopin (*trī-to-pin*), $C_{12}H_{15}NO_7$. An alkaloid from opium.

Tritorium, Triturium (*trī-to-re-um, trī-tu-re-um*) [*tritius*, a rubbing]. A vessel used in separating liquids of different density.

Tritotoxin (*trī-to-tok'-sin*) [*tritog*, third, *toxikos*, poison]. One of the third group into which Ehrlich classifies toxins, according to the avidity with which they combine with antitoxins, tritotoxin combining least readily.

Tritoxid (*trī-toik'-id*) [*tritog*, third, *ōxig*, acid]. Same as *Trioxid*.

Triturate (*trī-tū-rāt*) [*triturare*, from *tereere*, to rub]. 1. To reduce to a fine powder. 2. A finely divided powder. In the U. S. P. a medicinal substance rubbed up with milk-sugar. **T., Tablet-**, a triturate compressed into tablet form.

Trituration (*trī-tū-rā'-shun*) [*triturate*]. The process of reducing a solid substance to a powder by rubbing.

Trivalent (*trī-vā-lent*) [*tri*, *valere*, to be worth]. Combining with or equivalent to three atoms of hydrogen.

Trivalve (*trī-vālv*) [*tri*, *valva*, door]. Having three valves.

Trocar (*trō-kar*) [*Fr. trois-quarts*, from its triangular point]. An instrument for piercing the wall of a cavity in paracentesis.

Trochanter (*trō-kān'-ter*) [*trochanter*, from *trochos*, a wheel or pulley]. One of two processes on the upper extremity of the femur below the neck. The greater trochanter is situated on the outer, and the lesser trochanter on the inner, side of the bone.

Trochanteric (*trō-kān-ter'-ik*) [*trochanter*]. Pertaining to a trochanter.

Trochantin (*trō-kān'-tin*) [*trochanter*]. The lesser trochanter.

Troche (*trō-kē*) [*trochos*, a wheel]. A lozenge. **T.s, Tannic Acid** (*troches acidi tannici*, U. S. P.), each contains 1 gr. (0.06 Gm.) of tannic acid.

Trochin, Trochinus (*trō'-kin, trōk'-in-us*) [*trochos*, a wheel]. The lesser tuberosity of the head of the humerus.

Trochiscus (*trōk'-is-kus*). See *Troche*.

Trochlea (*trōk'-lē-ah*) [*trochleia*, pulley]. A part having the nature of a pulley. **T. of the Humerus**, a surface acting as a pulley

at the lower extremity of the humerus. **T. of the Orbit**, **T. of the Superior Oblique**, the ligamentous ring or pulley attached to the upper margin of the orbit, which transmits the tendon of the superior oblique muscle of the eye.

Trochlear (*trōk'-lē-ar*) [see *Trochlea*]. 1. Pertaining to or of the nature of a pulley. 2. Pertaining to the trochlear muscle. 3. Pertaining to the trochlear nerve.

Trochlearis (*trōk'-lē-ar'-is*) [see *Trochlea*]. Pulley-shaped, as the trochlearis muscle is simply trochlearis, the superior oblique muscle of the eye.

Trochoides (*trōk'-ōid'-ēs*) [*trochos*, a wheel]. A pivot-joint or pulley joint, such as the atlaxoid joint.

(von) Troeltsch's Corpuscles. Spindle-shaped condensation bodies occurring in the ependymal layer of the brain, formed between the ependymal and outer granular layers of the cerebral cortex. **v. T.'s Spaces**, two small pockets formed in the upper part of the wall of the middle ear by folds of mucous membrane.

Troisier's Ganglion, T.'s Sign. Enlargement of the left supraclavicular lymph glands, an indication of malignant disease of the intra-abdominal region.

Trolard's Vein. The anastomotic vein that extends from the superior longitudinal sinus to the superior petrosal or the cavernous sinus.

Trommer's Test for Glucose. To the acid rendered alkaline by caustic soda a strong solution of cupric sulfate is added drop by drop until a little of the cuprous hydrate formed remains undissolved on stirring. On warming in the presence of glucose a yellow reduction of hydrated cuprous oxide of copper is first formed, and then red suboxide separates, even below the boiling point. If not enough cupric salt has been used, the reaction will be incomplete, and the red suboxide separates even below the boiling point. If the reaction salt is an excess, the cuprous hydrate is changed by heating into a brown hydrate, which interferes with the test.

Tropacocain (*trō-pā-kō'-in*) [*tropacocaine*]. An alkaloid obtained from a mixture of coca-plant of Java. **T. Hydrochlorid**, $C_{17}H_{19}NO_4 \cdot HCl$, in 2 to 4 : 1 solution, is preferred to certain hydrochlorides as a local anesthetic, as being less toxic and more reliable.

Tropæolin. See *Tropæolin*.

Tropein (*trō-pe-in*) A salt of tropin and an organic acid.

Tropeinism (*trō-pe-in-izm*). Poisoning by any of the tropisms or by plants containing tropisms. It is characterized in some cases by dryness of the mouth, dyspnea, and acceleration of the pulse, in others, and by dilation of the pupils, ataxia, convulsions, psychic disturbances with excessive excitement, the severest cases are marked by loss of consciousness, anesthesia, paralysis of the sphincters, and cardiac and respiratory paralysis.

Tropeolin (*tro-pe'-o-lin*). One of a group of orange anilin dyes, so called from the resemblance of their colors to those of the flowers of *Tropaeolum*, the garden nasturtium. Its solutions are turned brown by free acids, and are used as a test for such acids.

Tropesis (*tro-pe'-sis*) [*τροπή*, a turn]. Inclination.

Trophesy (*trof'-es-e*) [*τροφή*, nourishment]. Same as *Trophoneurosis*.

Trophic (*trof'-ik*) [*τροφή*, nourishment]. Pertaining to nutrition. **T. Center**, a collection of ganglion-cells regulating the nutrition of a nerve and through it that of the part supplied.

Tropho- (*trof'-o-*) [*τροφή*, nourishment]. A prefix denoting relation to nutrition or to nourishment.

Trophoedema (*trof'-o-e-de'-mah*) [*tropho-*; *edema*]. A condition marked by localized permanent edemas. **T., Chronic**, frequently hereditary, marked by hard, white, painless swellings on the legs, lasting through life without material injury to health.

Trophology (*trof'-ol'-o-je*) [*tropho-*; *λόγος*, science]. The science of nutrition.

Trophoneurosis (*trof'-o-nu-ro'-sis*) [*tropho-*; *neurosis*]. Any disease of a part due to disturbance of the nerves or nerve-centers with which it is connected.

Trophoneurotic (*trof'-o-nu-ro'-ik*). Pertaining to or caused by a trophoneurosis.

Trophonine (*trof'-on-en*). A proprietary food said to consist of beef, nuclealalbumin, gluten of wheat, and enzymes of the digestive gland.

Trophopathy (*trof'-op'-ath-e*) [*tropho-*; *πάθος*, disease]. A disorder of nutrition.

Trophoplasm (*trof'-o-plazm*) [*tropho-*; *πλάσμα*, to mold]. The vital substance of the cell; the formative plasma.

Trophoplast (*trof'-o-plast*) [see *Trophoplasm*]. A mass of formative plasma.

Trophotonos (*trof'-o-ton-os*) [*tropho-*; *τονός*, tension]. Rigidity of contractile tissue due to trophic disturbances.

Trophotropism (*trof'-ot'-ro-pizm*) [*tropho-*; *τροπή*, to turn]. The attraction and repulsion exhibited by certain organic cells to various nutritive solutions.

Tropic (*trof'-ik*) [*τροπή*, I turn]. An affix used by Ehrlich and Wright. See *Bacteriotropic*. **T. Acid** [*atropin*], $C_8H_{16}O_5$. An acid produced by treating atropin with baryta-water, alkalis, or acids.

Tropidin (*trof'-id-in*) [*atropin*], $C_8H_{15}N$. A substance resulting from the decomposition of atropin in the presence of hydrochloric and glacial acetic acids; it is an oily fluid having an odor like that of conin.

Tropin (*trof'-in*) [*atropin*], $C_8H_{15}NO$. A crystalline base obtained in the decomposition of atropin.

Tropism (*trof'-izm*) [*τροπή*, a turn]. The striving of living cells after light and darkness, heat or cold, etc.

Tropococain. See *Tropacocain*.

Tropometer (*trof'-om'-et-er*) [*τροπή*, turn; *μέτρον*, a measure]. 1. An instrument for measuring

the various rotations of the eyeball. 2. An apparatus for estimating the amount of torsion in long bones.

Tropon (*trof'-pon*) [*τροφή*, nourishment]. An albuminous substance obtained from animal and vegetable sources, containing 90% of albumin. It is a light brown, nonhygroscopic powder, intended as a nutrient for convalescents. One teaspoonful to one tablespoonful is given with each meal in cocoa, soup, etc.

Trousseau's Disease. Stomachal vertigo. **T.'s Marks**, "taches cérébrales," circumscribed spots produced by mechanic irritation in tuberculous meningitis and other diseases seriously affecting the nutrition of the nervous system. **T.'s Points apophysaires**, points sensitive to pressure over the dorsal and lumbar vertebrae in intercostal and lumboabdominal neuralgias. See *Valleix's Points douloureux*. **T.'s Roseola**, rubella; röteln. **T.'s Symptom**, the production of paroxysms of tetany by pressure upon the principal nerve-trunks or blood-vessels of the parts affected; it is observed in tetany. **T.'s Test for Bile-pigments**. See *Smith's Reaction*.

Troy Ounce. A unit in troy weight, equal to 480 grains. **T. Weight**. See *Weights and Measures*.

True. Real; not false. **T. Aneurysm**. See *Aneurysm*, *True*. **T. Corpus luteum**, the corpus luteum of pregnancy. **T. Pelvis**, that part of the pelvic cavity situated below the iliopectineal line. **T. Rib**. See *Rib*, *True*. **T. Skin**, the corium. **T. Vocal Bands**, the inferior bands, or those concerned in the production of the voice.

Truncal (*trung'-kal*) [*trunk*]. Pertaining to a trunk.

Truncated (*trung'-ka-led*) [*trunk*]. Deprived of limbs or accessory parts.

Trunccek's Method. See under *Serum*, *Trunccek's*.

Trunk [*truncus*, a trunk]. 1. The body except the head and limbs. 2. The main stem of a nerve or artery.

Truss (*trus*) [*Fr.*, *trousse*]. An apparatus for maintaining a hernia in place after reduction.

Trypanosoma (*tri-pan-o-so'-mah*) [*trypanon*, a borer; *sōma*, body]. A genus of *Hematozoa*. **T. brucei**, the cause of tsetse-fly disease. **T. evansi**, the cause of the infectious disease called surra, a grave pernicious anemia occurring among horses, camels, etc., in tropical countries.

Trypanosme (*tri'-pan-o-sōm*). One of any species of *Trypanosoma*.

Trypanosomiasis (*tri-pan-o-so-mi'-a-sis*) [*Trypanosoma*]. Any of the several diseases due to infection with the various species of *Trypanosoma*.

Trypesis (*trip'-e'-sis*) [*τρύπαν*, to bore]. The operation of trephining.

Trypsase (*trip'-sāz*). See *Trypsin*.

Trypsin (*trip'-sin*) [*τρίψις*, a rubbing]. The proteolytic ferment of the pancreatic juice, which in an alkaline medium converts pro-

teids into peptones. It has lately been advocated for curative use in cancer.

Trypsinogen (*tripsin'-o-jen*) [*trypsin*, *trypsin*, to produce]. The zymogen from which trypsin is formed.

Tryptic (*trip'-tik*) [*trypsin*]. Pertaining to or caused by trypsin.

Tryptolytic (*trip-tol'-ik*) [*trypsin*; *lytic*, to loose]. Of or pertaining to the peculiar cleavage properties of trypsin.

Tryptone (*trip'-lon*) [*trypsin*]. Peptone formed by the action of trypsin.

Tryptonemia (*trip-to-ne'-me-ah*). See *Peptonemia*.

Tsetse-fly (*tset'-se*). *Glossina morsitans*, a dipterous insect of South Africa, which carries the parasite of tsetse-fly disease. **T. Disease.** See *Disease*, *Tsetse-fly*.

Teuga (*tsu'-gah*). A genus of *Conifera*, a species of which, *T. canadensis*, yields Canada pitch.

Tubal (*tu'-bal*) [*tube*]. Pertaining to a tube, especially the fallopian tube or the renal tubules.

Tube (*tub*) [*tubo*, a tube]. A hollow, cylindrical structure, especially the fallopian tube or the eustachian tube. **T.-casts**, casts of the renal tubules, they indicate disease of the kidneys. **T., Crookes', T., Geissler's, T., Hittorff's.** See under *Reys*, *Röntgen*. **T., Drainage-**, a hollow tube of glass, rubber, or other material inserted into a wound or cavity to allow of the escape of fluids. **T., Sediment**, a glass cylinder constricted to a fine point at one end and both ends open; it is used in precipitating urine. **T., Vacuum-**, a sealed glass tube out of which the air has been pumped and which has at each end a piece of platinum wire passed through the glass and entering the tube.

Tuber (*tu'-ber*) [*1.*, "a bump or swelling"]. **1.** A thickened portion of an underground stem. **2.** Any rounded swelling. **T. cinereum**, a tract of gray matter extending from the optic chiasm to the corpora albicantia, and forming part of the floor of the third ventricle.

Tubercle (*tu'-ber-kle*) [*tuberculum*, a tubercle]. **1.** A small nodule. **2.** A rounded prominence on a bone. **3.** The specific lesion produced by the tubercle bacillus, consisting of a collection of round-cells and epithelioid cells, with at times giant-cells. **T., Acoustic**, the nucleus of the dorsal cochlear nerve, a bean-like mass of cinerea swamped about the dorsolateral surface of the roots. **T., Adductor**, a slight protuberance at the lower end of the internal supra-orbital line of the femur, giving attachment to the tendon of the adductor magnus. **T., Amygdaloid**, a prominence on the roof of the descending cornu of the lateral ventricle. **T., Anatomic**, a wart-like tuberculous growth sometimes appearing on the hands of dissectors. **T., Anterior**, a tubercle at the anterior part of the extremity of the transverse process of certain vertebrae. **T. Bacillus.** See under

Bacteria. **T., Carotid**, a prominence of the sixth cervical vertebra on the anterior part of its transverse process. **T., Conoid**, a broad projection of the clavicle on its posterior border at the union of its middle and outer thirds to which the conoid ligament is attached. **T., Deltoid**, a projection on the anterior border of the clavicle, giving origin to some of the deltoid muscle. **T., Dissection**, a tubercle. **T., Fibrous**, a tubercle which has been modified by the formation of connective tissue within its structure. **T., Genial**, one of the tubercles on each side of the middle line on the inner surface of the lower maxilla. **T., Genital**, the rudimentary penis or clitoris in the ungulate region in front of the embryo. **T., Gray**. See *Tubercle* (3). **T. of Lower**, a small eminence on the wall of the right ventricle between the orifices of the ventricle. **T., Lymphoid**, a tubercle consisting of a mass of round or lymphoid cells. **T., Mammary**. See *Corpora albicantia*. **T., Mammary**. See *Tubercle* (1). **T., Olfactory**. See *T. Olfactory*. **T., Painful**, a tubercle in the subcutaneous tissue in the region of the joints. **T., Posterior**, a tubercle at the posterior end of the humerus and base of the thoracic vertebrae. **T., Pterygoid**, a tubercle on the lower surface of the inferior maxilla, it gives attachment to the internal pterygoid muscle. **T. of Roland**, one of the rounded masses close under the surface of the lateral column of the cerebral cortex, formed by the enlarged dendrites of the gray matter. **T., Scalene**, a tubercle on the first rib, giving attachment to the anterior scalene muscle. **T. of the Vagina**, a prominence on the anterior wall of the vagina.

Tubercular (*tu'-ber'-ku-lar*) [*tubercle*]. **1.** Representing the appearance of a tubercle. **2.** Provided with tubercles.

Tubercullid (*tu'-ber'-ku-lid*). Any cutaneous manifestation due to the toxins of the tubercle bacilli.

Tuberculin (*tu'-ber'-ku-lin*) [*tubercle*]. A filtered extract of cultures of the bacillus tuberculosis. It is a brownish, slightly viscous liquid, soluble in water and is used as a means of diagnosing tuberculosis, especially in the diagnosis of bovine tuberculosis. When injected into tuberculous individuals, a reaction is produced which differs from that given by healthy individuals. See *Paraffin*. **T. A**, the result of extracting the bacilli with 10% normal saline with shaking and filtering and neutralizing the product. **T., See** an unsterilized, unfiltered, glycerine-water emulsion of living, dried, powdered, and washed bacilli. **T., Purified**, the product obtained by centrifuging of the tuberculin emulsion with 60% alcohol.

Tuberculitis (*tu-ber-ku-li'-tis*) [*tubercle*; *itis*, inflammation]. Inflammation in the tissues surrounding a tuberculous node.

Tuberculocidin (*tu-ber-ku-lo-si'-din*) [*tubercle*; *cidere*, to kill]. An albumose obtained from tuberculin by precipitation with platinum chlorid. It is said to possess the beneficial effects of tuberculin without producing an injurious reaction.

Tuberculoderma (*tu-ber-ku-lo-der'-mah*). A cutaneous manifestation of the action of tubercle bacilli, a tuberculid.

Tuberculofibroid (*tu-ber-ku-lo-fi'-broid*). Relating to a tubercle that has undergone fibroid degeneration.

Tuberculoma (*tu-ber-ku-lo'-mah*). A tuberculous tumor.

Tuberculoplasmin (*tu-ber-ku-lo-plas'-min*). The filtered watery solution of the protoplasm of moist living bacilli, extracted by crushing with hydraulic pressure.

Tuberculosis (*tu-ber-ku-lo'-sis*) [*tubercle*]. An infectious disease due to *Bacillus tuberculosis*, discovered by Koch. The lesion produced by the growth of the bacillus is the tubercle (miliary or gray tubercle or nodule), a small, grayish, translucent nodule, from $\frac{1}{16}$ to 2 mm. in diameter, firmly embedded in the surrounding tissues. By the coalescence of neighboring tubercles larger masses, the so-called tuberculous infiltrations, are produced. The tendency of tuberculous lesions is to undergo cheesy necrosis. For this degeneration two factors are responsible: the absence of blood-vessels and the action of peculiar poisons elaborated by the bacillus. The breaking down of tuberculous areas in the interior of organs gives rise to cavities, which may be seen in muscles, bones, brain, lymphatic glands, and elsewhere, but are most pronounced in the lungs. On surfaces—skin and mucous membranes—tuberculosis often leads to the formation of ulcers. The most frequent seats of tuberculosis are the lung, the intestinal tract, the lymphatic glands, the serous membranes, the bones, the skin, the testicle, the epididymis, the brain, the fallopian tubes, the uterus, the spleen. The symptoms of tuberculosis vary with the localization of the disease. A few general phenomena are common to nearly all forms, viz., emaciation, loss of strength, anemia, fever, and sweats. **T.**, **Acute Miliary**, an acute febrile disease, characterized by the formation of minute tubercles in great numbers in various parts of the body. It is due to the discharge into the circulatory stream of tubercle bacilli. Three forms are usually described: (1) a general or typhoid form; (2) one with marked pulmonary symptoms; (3) one in which cerebral symptoms predominate. **T.**, **Avian**, tuberculosis affecting birds. **T.**, **Bovine**, tuberculosis occurring in cattle. **Syn.** *Pearl disease*. **T.**, **General Miliary**. See **T.**, **Acute Miliary**. **T.**, **Laryngeal**, tuberculosis of the larynx, usually secondary to tuberculosis of the lungs, but in

rare cases primary. **T.**, **Miliary**, tuberculosis characterized by the formation deposit of miliary tubercles. **T.**, **Surgical**, tuberculosis of parts amenable to surgical treatment, as the bones and joints.

Tuberculo toxin (*tu-ber-ku-lo-tox'-in*). A toxin generated by the tubercle bacillus.

Tuberculous (*tu-ber-ku-lus*) [*tubercle*]. Affected with or caused by tuberculosis.

Tuberculum (*tu-ber'-ku-lum*) [*L.*]. See *Tubercle*.

Tuberoso (*tu'-ber-os*) [*tuber*]. Resembling a tuber.

Tuberosity (*tu-ber-os'-it-e*) [*tuber*]. A protuberance on a bone. **T.**, **Greater**, a rough projection on the outer side of the head of the humerus. **T. of the Ischium**, a thick, downward projection of the ischium, on which the body rests in sitting. **T.**, **Lesser**, a small tuberosity in front of the head and on the inner side of the bicipital groove of the humerus.

Tuberous (*tu'-ber-us*) [*tuber*]. Like a tuber, as *tuberous angioma*.

Tübingen Heart. A disease of the heart, first observed at Tübingen, marked by cardiac dilation and hypertrophy and believed to be due to overindulgence in alcoholic drinks.

Tubo- (*tu-bo-*) [*tube*]. A prefix meaning relating to a tube.

Tuboabdominal (*tu-bo-ab-dom'-in-al*) [*tubo-*; *abdomen*]. Pertaining to a fallopian tube and to the abdomen.

Tuboadnexopexy, **Tuboadnexopexie** (*tu-bo-ad-nex'-o-peks'-e*). Surgical fixation of the uterine adnexa.

Tuboligamentous (*tu-bo-lig-ah-men'-us*). Relating to the oviduct and the broad ligament.

Tuboovarian (*tu-bo-o-va'-ri-an*) [*tubo-*; *ovary*]. Pertaining to the fallopian tube and the ovary.

Tuboperitoneal (*tu-bo-per-it-on'-e-al*). Relating to the oviduct and the peritoneum.

Tubouterine (*tubo-*; *uterus*). Pertaining to the fallopian tube and the uterus.

Tubular (*tu'-bu-lar*) [*tubulus*, a small tube].

1. Shaped like a tube. 2. Pertaining to or affecting tubules, as *tubular nephritis*. 3. Produced in a tube, as *tubular breathing*. **T. Breathing**. See *Breath-sounds*, *Table of*. **T. Membrane**. See *Neurilemma*.

Tubulature (*tu'-bu-lat-ür*) [*tubule*]. The short tube of a retort or receiver.

Tubule (*tu'-bül*) [*tubulus*, dim. of *tubus*, a tube]. A small tube. **T.**, **Seminiferous**, any one of the tubules of the testicles. **T.**, **Uriniferous**, one of the numerous winding tubules of the kidney.

Tubulus (*tu' bu-lus*) [*L.*]. A tubule.

Tuerck. See *Turck*.

Tuffier's Inferior Ligament. Mesentericoparietal fold, that portion of the enteric mesentery which is inserted into the iliac fossa. **T.'s Syndrome**, a congenital state of general tissue debility, resulting in relaxation and displacement of various organs, such

as splanchnoptosis, varicocele, uterine displacements, etc.

Tuffnell's, Method T.'s Treatment. A treatment for aneurysm, consisting in absolute rest, dry diet, and the administration of potassium iodid.

Tuft, Malpighian. See *Malpighian Body*

Tugging, Tracheal. See *Tracheal Tugging*

Tully's Powder. A powder containing morphin sulfate, 1 part, camphor, licorice, and calcium carbonate, each, 20 parts.

Tulpius' Valve. The deeseeval valve.

Tumefacient (*tu-me-fa'-shent*) [*tume*/action] Swelling; swollen.

Tumefaction (*tu-me-fak'-shun*) [*tumere*, to swell; *facere*, to make] A swelling.

Tumenol (*tu'-men-ol*) [*bitumen*; *oleum*, oil]. A thick, dark-brown liquid prepared from certain bituminous oils; it is used in skin-diseases.

Tumescence (*tu-mes'-ens*) [*tumescere*, to swell] The condition of growing tumid; a swelling.

Tumid (*tu'-mid*) [see *Tumescence*]. Swollen.

Tumor (*tu'-mor*) [*tumere*, to swell]. 1. A swelling. 2. A newgrowth not the result of inflammation. The appended classification is based, at least as regards classes A and B, on the blastodermic origin of the dominant tissue of the tumor. A. A mass of cells, tissues, or organs, resembling those normally present in the body, but arranged atypically, growing at the expense of the body, but subserving no useful purpose therein. **T., albus**, white swelling, tuberculous enlargement of a joint. **T., Benign**, one which does not give rise to metastasis nor recur after removal. **T., Gubler's**, a prominence on the back of the wrist seen in wrist-drop. **T., Gummy**, a syphilitic gumma. **T., Heterologous**, one composed of tissue differing from that in which it grows. **T., Homologous**, one composed of tissue resembling that from which it grows. **T., Malignant**, one which gives metastasis or recurs, or does both, and eventually destroys life. **T., Phantom**. See *Phantom-tumor*. **T., Splenic**, a term sometimes applied to an enlarged spleen.

A MESODERMIC TUMORS

1. Sarcoma.	Round cell.	Large
		Small
	Spindle-cell.	Lympho-sarcoma.
		Large
	Giant-cell.	Small
	Myosarcoma.	
	Angiosarcoma.	
	Cystosarcoma.	
	Phosphosarcoma.	
2. Fibroma.	Hard.	
		Soft.
3. Myxoma.	Hyaline.	
		Fibrous.
4. Lipoma.	Fibrous.	

6. Osteoma.	O. durum or O. durum-lare.	
7. Hemangioma.	Telangioma.	
8. Lymphangioma.	Lymphoma.	
9. Myxoma.	Myxoma.	

B ECTODERMIC AND ECTODERMIC TUMORS

1. Glioma.	N. meningioma.	
2. Neuroma.	N. schwannoma.	
3. Epithelioma.	Epithelioma.	

C TERATOM TUMORS OR TERATOMATA

1. Dermoid cyst.	
2. Cholesteatoma.	

Tumultus (*tu-mul'-tus*) [L.]. Tumultus. T. cordis, irregular heart action. T. sermone, a stuttering manner of reading, from pathos cause.

Tungstate (*tung'-stat*) See under *Tungsten*

Tungsten (*tung'-sten*) [Swed., 'hard' + 'stone']. A metallic element having a melting point of 1936, an atomic weight of 183.6. W (from the German name Wolfram). It forms tungstic acid, H₂WO₄, the salts combining with bases to form tungstates, which are used as reagents. See *Elements*, 120 a) *Chemie*.

Tungstic Acid (*tung'-stik*) See under *Tungsten*.

Tunic (*tu'-nik*) [tunica]. A coat or membrane.

Tunica (*tu'-nik-ah*) [L.]. A tunic. T. adventitia, the outer coat of an artery. T. albuginea oculi, the sclerotic coat of the eye. T. albuginea ovarii, the tunica albuginea of the ovary. T. albuginea testis, the tunica albuginea of the testis. T. intima, the inner coat of an artery. T. media, the middle coat of an artery. T. ruyschiana, the layer of capillary vessels of the choroid coat of the eye. T. vaginalis, the serous covering of the penis derived from the peritoneum. T. vasculosa, the vascular layer of the tunica, called also the pia mater of the brain.

Tunicin (*tu'-nik-in*) (C₁₂H₂₁O₅) A compound obtained from the tunics of certain plants, considered by some as identical with crystalline cellulose, by some as identical with normal cellulose, and by others as a distinct compound convertible into sugar.

Tunnel-anemia. See *Anemia*.

Tunnel-disease. See *Cornelia*.

Tupelo (*tu'-pel-o*) The name given to the tree of the order Cornaceae. Its wood has been used for making water barrels.

Turbinal (*tu'-bin-al*) [*turbo*, 'swirl'; *nasus*, 'nose']. 1. A turbinate bone.

stupor, muttering delirium, carphology, subsultus tendinum, and coma vigil. Complications are frequent, the most important being intestinal hemorrhage, perforation of the bowel, peritonitis, pneumonia, and nephritis. Relapses are fairly common, although second attacks are rare. *Abortive typhoid* is characterized by an abrupt onset of symptoms, which subside quickly, convalescence following in a few days. *Walking typhoid* is a variety in which the symptoms are so mild that the patient disregards them and walks about. Grave accidents may in such a case develop suddenly. **T. State**, the condition of stupor and hebétude, with dry, brown tongue, sordes on the teeth, rapid, feeble pulse, incontinence of feces and urine, and rapid wasting, seen in typhoid fever and other continued fevers.

Typhoin (*ti'-fo-in*). A preparation of dead typhoid bacilli used by injection in the treatment of typhoid fever.

Typhomalarial (*ti'-fo-mal-a'-re-al*) [*typho-; malaria*]. Exhibiting symptoms of both typhoid and malarial fevers. **T. Fever**, a fever exhibiting symptoms both of typhoid and of malarial fever, but probably malarial in nature.

Typhomania (*ti'-fo-ma'-ne-ah*) [*typho-; mania*, madness]. The lethargic state, with delirium, sometimes observed in typhus, typhoid, and other low fevers.

Typhopaludism (*ti'-fo-pal'-u-dism*) [*typho-; paluda*, a marsh]. Fever of malarial origin accompanied by symptoms of typhoid.

Typhopneumonia (*ti'-fo-nu-mo'-ne-ah*) [*typho-; pneumonia*]. Pneumonia occurring in the course of typhoid fever.

Typhosepsis (*ti'-fo-sep'-sis*). See *Typhemia*.

Typhosis (*ti'-fo'-sis*). See *Typhoid State*. **T., Syphilitic**, a form of intestinal neuralgia associated with secondary syphilis.

Typhotoxin (*ti'-fo-toks'-in*) [*typho-; toxi-; toxu*, poison]. A ptomain produced by the typhoid bacillus. It is isomeric with the base $C_7H_{12}NO_2$, obtained from putrefying horseflesh, and induces lethargy, paralysis, and death.

Typhous (*ti'-fus*) [*typhus*]. Pertaining to or having the nature of typhus.

Typhus (*ti'-fus*) [*typhos*, stupor]. An acute contagious disease chiefly characterized by a petechial rash, marked nervous symptoms, and a high fever, ending by crisis in from 10 to 14 days. The only peculiar lesions noted postmortem are a dark fluid state of the blood and a staining of the endocardium and intima of the blood-vessels. After a period of incubation of from a few hours to two weeks, the disease sets in abruptly with pains in the head, back, and limbs, the fever rising rapidly to 104° or 105° F. The

nervous symptoms resemble those of typhoid fever. The eruption appears on the fourth or fifth day as rose-colored spots scattered over all the body, and quickly becoming hemorrhagic. It does not disappear on pressure. The chief complications are hyperpyrexia, pneumonia, and nephritis. Syn., *Jail-fever*; *Ship-fever*. **T. icterodes**. Synonym of *Yellow fever*.

Typoscope (*ti'-po-skop*) [*typos*, a stamp; *skopein*, to look]. A small device to exclude extraneous light, for the use of cataract patients and amblyopes in reading.

Tyree's Antiseptic Powder. A proprietary preparation said to contain alum, sodium bicarbonate, eucalyptus, phenol, thymol, wintergreen, and peppermint; it is recommended for leukorrheal and purulent discharges.

Tyreine (*ti'-ro-in*) [*tyros*, cheese]. Coagulated casein.

Tyremesis (*ti'-rem'-es-is*) [*tyros*, cheese; *ijunai*, a vomiting]. The vomiting of caseous matter; an ailment common among nursing infants.

Tyro- (*ti'-ro-*) [*tyros*, cheese]. A prefix meaning cheese or cheese-like.

Tyroid (*ti'-roid*) [*tyro-*; *eidōs*, like]. Cheese-like.

Tyroma (*ti'-ro'-mah*) [*tyro-*; *hūa*, tumor]. 1. A caseous mass. 2. A tuberculous tumor.

Tyrosal (*ti'-ro-sal*). See *Salipyrin*.

Tyrosin (*ti'-ro-sin*) [*tyros*, cheese]. $C_9H_9NO_2$. A crystalline amidic acid, a decomposition product of proteids. **T., Tests for**. See *Hoffmann*, *Piria*, *Scherer*, (*von*) *Udransky*, *Wurster*.

Tyrosinase (*ti'-ro'-sin-az*) [*tyrosin*]. An oxidizing enzyme found in many fungi, and in dahlia and beet-root. It acts upon all the cresols.

Tyrosis (*ti'-ro'-sis*) [*tyros*, cheese]. Caseation.

Tyrotaxon (*ti'-ro-toks'-ik-on*) [*tyro-*; *toxi-; toxu*, a poison]. A ptomain obtained from poisonous cheese, milk, ice-cream, etc. It induces vertigo, nausea, vomiting, chills, rigors, severe pains in the epigastric region, dilation of the pupils, griping and purging, a sensation of numbness or of pins and needles, especially in the limbs, and marked prostration or even death. The poison is thought to be the cause of many cases of summer diarrhea of infants. See *Ptomains*, *Table of*.

Tyrotaxin (*ti'-ro-toks'-in*) [see *Tyrotaxon*]. A curara-like poison from poisonous cheese; it is not identical with tyrotaxon.

Tyrotaxism (*ti'-ro-toks'-izm*). Cheese-poisoning.

Tyrrell's Fascia. See *Dénouvillier's Fascia*.

Tyson's Glands. The sebaceous glands of the corona glandis and the inner layer of the prepuce, secreting the smegma.

U

Uarthrosis (*u-ar-thrō-tis*). See *Arthritis urica*.
Uber (*u'-ber-te*) [*uber*, udder] Fertility; productiveness.

Ucambin, Ukambin (*u-kam'-bin*). An African arrow-poison with the effects of strophanthin, but more powerful.

(von) Udransky's Test for Bile Acids. To 1 Cc. of a watery or alcoholic solution of the substance add one drop of a 0.1% watery solution of furfural, and underlay with 1 Cc. of concentrated sulfuric acid, then cool. In the presence of bile acids a red color with a shade of blue will be produced. **U's Test for Tyrosin**, to 1 Cc. of a solution of the substance add one drop of a 0.5% watery solution of furfural, and underlay with 1 Cc. of concentrated sulfuric acid. The mixture becomes pink. The mixture should not rise above 50° C.

Uffelmann's Test for Hydrochloric Acid in the Contents of the Stomach. Strips of filter-paper saturated in an extract of bilberries in amylc alcohol and dried, when dipped into the contents of a stomach containing HCl, will be turned pink. **U's Test for Lactic Acid in the Contents of the Stomach**, make a mixture of 10 Cc. of a 4% solution of phenol, 20 Cc. of water, and a few drops of ferric chlorid solution; this will have a blue coloration. Add the liquid to be tested, and in the presence of lactic acid a yellow coloration will result.

Uhthoff's Sign. The nystagmus of multiple cerebrospinal sclerosis.

Ulatrophia (*uol-ut-rō'-je-ah*) [*ulōn*, gum; *atrophia*, atrophy] A shrinkage of the gums.

Ulcer (*ul'-ser*) [*ulcus*, ulcer]. A loss of substance occurring on the skin or mucous membranes, and due to a gradual necrosis of the tissues.

U., Atheromatous, a loss of substance in the wall of an artery or the endocardium, due to the breaking down of an atheromatous patch. **U., Catarrhal**, a form of intestinal ulcer due to a superficial loss of epithelial cells. **U., Chancroidal**. See *Chancre*.

U., Curling's, an ulcer of the duodenum observed after severe burns of the body. **U., Follicular**, a small ulcer on a mucous membrane having its origin in a lymph-follicle.

U., Fungous, one covered by fungous granulations. **U., Gastric**, perforating ulcer of the lining membrane of the stomach. **U., Indolent**, one with an indurated, elevated edge and a nongranulating floor usually occurring on the leg. **U., Inflamed**, one surrounded by marked inflammation. **U., Jacob's**. See *U.*, *Rodent*. **U., Marjolin's**, an ulcer having for its seat an old cicatrix. **U., Peptic**. See *Peptic Ulcer*. **U., Perforating**, an ulcer that perforates the tissues of a part, particularly the foot or the stomach. **U., Phagedenic**, one which rapidly eats away the tissues. **U., Phlegmonous**. Synonym of *U.*

Inflamed U., *Rodent*, a form of ulcer seat-ably epitheliomatous, which gradually enlarges and eats away soft tissues and bones. **U., Round**, the peptic ulcer of the stomach. **U., Serpiginous**, one healing in one place and spreading in another. **U., Tuberculous**, one due to the tubercle bacillus. **U., Varicose**, an ulcer due to varicose veins.

Ulcerate (*ul'-ser-ē*) [*ulcer*]. To become converted into or affected with an ulcer.

Ulceration (*ul'-ser-ē-shun*) [*ulcer*]. The formation of an ulcer, a process of liquefactive necrosis or molecular death of a tissue or face.

Ulcerative (*ul'-ser-ē-tiv*) [*ulcer*]. Pertaining to ulceration; characterized by ulceration.

Ulcerous (*ul'-ser-ūs*) [*ulcer*]. Relating to ulceration, having the character of an ulcer.

Ulcus (*ul'-kus*) [*L.*] An ulcer.

Ule (*u'-le*) [*ulā*, a seal]. A scab.

Ulegyria (*u-le-jē'-re-ah*) [*ule*, *gyria*, a tumor]. Convulsions in the cortex of the brain made irregular by scar-formation.

Ulemorrhagia (*u-lem-er-ē'-e-ah*) [*ule*, *bleh*, blood; *hēn*, to flow]. 1. Hemorrhage from a cicatrix. 2. (*ulōn*, the gum) Bleeding of the gums.

Ulerythema (*u-ler-ith-ē'-mah*) [*ule*, *erythema*]. An erythematous disease marked by the formation of cicatrices.

Uletic (*u-let'-ik*) [*ulion*]. Pertaining to the ulcers.

Ulexin (*u-lex'-in*) [*ulex*, a shrub, $C_{10}H_{15}NO$]. An alkaloid from the seed of *Ulex europaeus*, the common gorse of Europe. It is a weak anesthetic and powerful diuretic.

Ulitis (*u-lit'-tis*) [*ulon*, *itis*, inflammation]. Inflammation of the gums.

Ulmarene (*ul'-mar-ēn*). A mixture of large quantities of salicylic ether and aliphatic alcohols, recommended as an external application in gout, rheumatism, etc.

Ulmus (*ul'-mus*) [*L.*] *Shoppers' elm*. The *ulmus* of the U. S. P. is the *Ulmus americana*, *Ulmus fulva*, or *elm*, of the order *Ulmaceae*. It is used as a demulcent in dysphagia, dysentery, and diseases of the urinary tract as a poultice in inflammations, and in the form of tents for dilating the os uteri. **Ulmus**, **Mucilago** (U. S. P.), mucilage of elm.

Ulna (*ul'-nah*) [*L.*, "a cubit"]. The bone on the inner side of the forearm, articulating with the humerus and the head of the radius above and with the radius below.

Ulnad (*ul'-nad*) [*ulna*]. Toward the ulnar aspect.

Ulnar (*ul'-nar*) [*ulna*]. 1. Pertaining to or in relation with the ulna, as the *ulnar artery*, *ulnar nerve*. 2. Pertaining to the ulnar artery or ulnar nerve.

Ulnaris (*ul'-nā-ris*) [*L.*]. 1. *Ulnar*. 2. The ulnar muscle, a muscle on the ulnar side of the forearm.

Ulnocarpal (ul-no-kar'-pal) [ulna; carpus]. Pertaining to the ulna and the carpus.

Ulnoradial (ul-no-ra'-de-al) [ulna; radius]. Pertaining to the ulna and the radius.

Ulocarcinoma (u-lo-kar-sin-o'-mah) [ulon; carcinoma]. Carcinoma of the gums.

Ulodermitis (u-lo-der-mi'-tis) [ule; dermatitis]. Inflammation of the skin with formation of cicatrices.

Uloid (u'-loid) [ule; εἶδος, like]. Scar-like.

Ulon (u'-lon) [ulōn, gum]. The gums.

Uloncus (u-long'-kus) [ulon; ὄγκος, a tumor]. A tumor or swelling of the gums.

Ulorrhagia (ul-or-u'-je-ah) [ulon; ῥήγναι, to burst forth]. Bleeding from the gums.

Ulosis (u-lo'-sis) [ule]. Cicatrization.

Ulotic (u-lot'-ik) [ulosis]. Pertaining to or tending toward cicatrization.

Ulotrichous (u-lot'-rik-us) [ulōs, woolly; θρίξ, hair]. Having woolly hair.

Ultimate (ul'-tim-at) [ultimus, superl. of ultra, beyond]. Farthest; most remote; last; final.

U. Principle. See *Principle, U. Ultimate.*

Ultimum (ul'-tim-um) [L.]. Last. **U. moriens.** 1. The right auricle; so called from the belief that it is the last part of the heart to cease its contractions. 2. The upper part of the trapezius muscle which usually escapes in progressive muscular atrophy.

Ultramicroscope (ul-truh-mi'-kro-skōp) [ultra, beyond; microscope]. A microscope whereby it is possible to recognize objects measuring but the millionth part of a millimeter in diameter.

Ultratoxon (ul-trah-toks'-on) [ultra; toxon]. A toxin of a low degree of avidity.

Ultraviolet Rays. See *Rays, Ultraviolet.*

Ultramann's Reaction for Bile-pigments. To 10 Cc. of the liquid add 3 or 4 Cc. of a caustic potash solution (1:3) and then an excess of hydrochloric acid. In the presence of bile-pigments the solution will become emerald green.

Ulyptol (u-lip'-tol). See *Eulyptol.*

Umbelliferon (um-bel-if'-er-on) [umbella, umbel; ferre, to bear], C₁₀H₈O₄. Oxycoumarin. Fine needles, sparingly soluble in hot water and ether. Found in the bark of *Daphne mezereum*; it is obtained by distilling different resins, such as galbanum, asafetida, etc.

Umbellularia (um-bel-u-lu'-re-ah) [umbellula, a little umbel]. A genus of the *Laurineæ*. The principal species, *U. californica*, California laurel or spice tree, contains in its seeds a pungent volatile oil recommended for inhalation in nasal catarrh; the leaves are used in neuralgic headache, colic, and atonic diarrhea. Dose of fluidextract 10-30 min. (0.65-2 Cc.).

Umbilical (um-bil'-ik-al) [umbilicus]. 1. Pertaining to the umbilicus, as the *umbilical cord, umbilical vessels*. 2. Pertaining to the umbilical cord or umbilical vessels. **U. Cord.** See *Cord* (2). **U. Region,** the central of the regions into which the abdomen is divided for purposes of physical diagnosis. **U. Ring,** the aperture, closed in the adult, through

which the umbilical vessels pass in fetal life.

U. Souffle, the peculiar sound heard occasionally over the umbilical cord of the fetus. **U.**

Vesicle, the part of the yolk-sac remaining outside of the embryo and supplying nutriment to it through the omphalomesaraic duct.

U. Vessels, the umbilical arteries and veins.

Umbilicated (um-bil'-ik-a-ted) [umbilicus]. Having a depression like that of the navel.

Umbilication (um-bil'-ik-a'-shun) [umbilicus]. 1. A depression like that of the navel. 2. The state of being umbilicated.

Umbilicus (um-bil'-i'-kus) [L.]. The navel; the round, depressed cicatrix in the median line of the abdomen, marking the site of the aperture which in fetal life gave passage to the umbilical vessels.

Umbo (um'-bo) [L.]. A boss or bosselation; any central convex eminence, as, the *umbo* of the membrana tympani.

Umbonation (um-bon-u'-shun) [umbo]. The formation of a low, rounded projection.

Umbrascopy (um-bras'-ko-pe). See *Retinoscopy*.

Unavoidable Hemorrhage. See *Hemorrhage, Unavoidable*.

Unazotized (un-az'-o-tized) [un, not; azotum, nitrogen]. Deprived of nitrogen.

Uncia (un'-se-ah) [L.]. An ounce.

Unciform (un'-se-form) [uncus; forma, form]. Hook-shaped. **U. Bone,** a hook-shaped bone in the second row of the carpus. **U. Process,** a hook-shaped process on the ethmoid and other bones.

Unciforme (un'-se-form'-e). The unciform bone.

Uncinal (un'-sin-al). 1. Uncinate. 2. Furnished with hooks.

Uncinaria (un-sin-a'-re-ah) [uncinus, a hook]. A genus of parasitic nematode worms.

Uncinariasis (un-sin-a'-ri'-a-sis). Disease produced by parasites of the genus *Uncinaria*. Syn., *Ankylostomiasis; Dochmiasis; Hook-worm Disease*.

Uncinate (un'-sin-at) [uncus]. Hooked. **U. Convolution, U. Gyrus,** the continuation of the hippocampal convolution, or fornicate convolution, ending in a hook-like process near the end of the temporal lobe.

Uncinatum (un-sin-a'-tum) [uncinatus, hooked]. The unciform bone.

Uncipressure (un'-sip-resh-ur) [uncus; pressure]. A method of arresting hemorrhage by the use of two hooks dug into the sides of the wound so as to compress the vessel.

Uction (unk'-shun) [uncture]. 1. The act of anointing. 2. An ointment.

Unctuous (unk'-tu-us) [uncture]. Greasy; oily.

Uncture (unk'-tūr) [unguent]. An unguent.

Uncus (ung'-kus) [L.]. 1. A hook. 2. The hook-like anterior extremity of the uncinate gyrus of the brain.

Undulant (un'-du-lant) [unda, a wave]. Characterized by fluctuations. **U. Fever.** See *Fever, Mediterranean*.

Undulation (un-du-lu'-shun) [see *Undulant*]. A wave-like motion.

Undulatory (un'-du-lat-or-e) [see *Undulant*]. Moving like waves; vibratory.

Ungual (un'-gwail) [unguis]. 1. Pertaining to a nail. 2. Resembling a nail in size, as the *ungual bone* (the lacrimal bone).

Unguent (un'-gwent). See *Unguentum*.

Unguentine (un'-gwen-tin). An alum and petroleum ointment containing 2% of phenol and 5% of ichthyol.

Unguentum (un'-gwen'-tum) [L.]. 1. An ointment. 2. See *U. simplex*. **U. acidi tannici**, ointment of tannic acid; tannic acid, 20 Gm.; glycerol, 20 Gm.; unguentum, 60 Gm. **U. Cr  d  **, soluble silver 15%, incorporated in lard and 5% of wax added. It is scented with benzoinated ether; used in treatment of septic diseases. **U. durum**, an ointment base consisting of paraffin (solid), 4 parts; wool-fat, 1 part; liquid paraffin, 5 parts; used for ointments containing liquid antiseptics. **U. hydrargyri**. See *Mercurial Ointment*. **U. hydrargyri dilutum**, blue ointment; mercurial ointment, 675 Gm., with petrolatum, 330 Gm. **U. iodi**, iodine ointment; iodine, 4 Gm.; potassium iodide, 4 Gm.; glycerol, 12 Gm.; benzoinated lard, 80 Gm. **U. molle**, an ointment base consisting of solid paraffin, 11 parts; lanolin, 5 parts; and liquid paraffin, 34 parts. **U. potassii iodidi**, ointment of potassium iodide, potassium iodide, 10 Gm.; potassium carbonate, 5.6 Gm.; water, 10 Gm.; benzoinated lard, 80 Gm. **U. simplex** (unguentum, U. S. P.) consists of lard, 80 parts, and wax 20 parts. **U. stramonii**. See *Stramonium Ointment*.

Unguiculate (un'-gwik'-u-lat) [unguis]. Having nails or claws.

Unguinal (un'-gw  n-al) [unguis]. Pertaining to a nail or to the nails.

Unguis (un'-guis) [L.]. 1. A nail. 2. The lacrimal bone.

Ungula (un'-gu-lah) [L., "a claw"]. An instrument for extracting a dead fetus from the uterus.

Uni- (u-ne-) [unus, one]. A prefix denoting one. **Uniaxial** (u-ne-aks'-e-al) [uni; axis]. Having but one axis.

Unicamerate (u-ne-kam'-er-at) [uni-, camera, chamber]. Having but one cavity, unilocular.

Unicellular (u-ne-sel'-u-lar) [uni-, cellula, dim. of cella, a cell]. Composed of but one cell.

Uniceptor (u'-ne-sep-tor) [uni-, capere, to receive]. An antitoxin or receptor which has only one uniting arm (viz., the haptophore group).

Unicorn (u'-ne-korn) [uni-, cornu, horn]. Having a single horn.

Unifilar (u-ne-jel'-lar) [uni-, filum-, a thread]. Connected by one thread, furnished with one filament.

Uniforate (u-ni'-o-rat) [uni-, foratus, pierced]. Having one opening.

Unilaminar, Unilaminate (u-ne-lam'-in-ar, -in) [uni-, lamina, a layer]. Occurring in a single layer.

Unilateral (u-ne-lat'-er-al) [uni-, latus, side]. Pertaining to or affecting but one side.

Unilobar, Unilobed (u-ne-lol'-bar, u'-ne-lol-b). Furnished with one lobe.

Unilocular (u-ne-lol'-u-lar) [uni-, loculus, dim. of locus, a place]. Having but one locus or cavity.

Uninuclear, Uninucleated (u-ne-n  -kly  r, u-ne-n  -kle-  t) [uni-, nucleus]. Having but a single nucleus.

Uniocular (u-ne-ol'-u-lar) [uni-, ocula, eye]. Pertaining to or performed with one eye.

Union (  n'-yun). See under *Heading*.

Unipara (u-ni-pl'-ar-a) [uni-, parere, to bear]. A woman who has borne but one child.

Uniparous (u-ni-pl'-ar-us) [unipara]. Having borne but one child.

Unipolar (u-ne-pol'-ar) [uni-, polus, a pole]. 1. Having but one pole or process. 2. Pertaining to one pole.

Unisexual (u-ne-seks'-u-al) [uni-, sexus, sex]. Provided with the sexual organs of one sex only.

Unit (u'-nit) [unus, one]. 1. A single thing; a group considered as a whole or as being one of many similar groups constituting a more complex body. 2. A quantity with which others are compared. **U. of Electricity**, the farad, **unit of current**, the ampere; and of electromotive force, the volt. **unit of power**, the watt. **unit of quantity**, the coulomb, **unit of resistance**, the ohm. **U. of Force**, the dyne. **U. of Heat**, the calorie. **U. of Length**, **U. of Volume**, **U. of Weight**. See under *Weights and Measures*. **U. of Light**, the light of a standard candle, i. e., a spermaceti candle burning 100 grains an hour. **U., Physiologic**, a term used by Herbert Spencer to express a unit between the chemical and the morphological units in complexity, and of an aggregate of which units the body is composed, and which represents the character of the species. **U., Serum-, U., Immunizing**, according to Behring, 1 Cc. of an antitoxic horse serum, of which 0.1 Cc. protects a guinea pig of 500 grams against ten times the fatal dose of diphtheria toxin. **U. of Work**, the erg.

Unitary (u'-nit-  -er) [unit]. 1. Pertaining to or having the qualities of a unit. 2. Pertaining to monsters having the organs of a single individual.

Univalent (u-ni'-al-ent) [uni-, valere, to be worth]. Having a valence of one, capable of replacing a single hydrogen atom in combination.

Unna's Dermatitis, Schorrhea. **U. s. Layer**. See *Langerhans' Granular Layer*. **U. s. Papillary Hair**, a complete hair and hair root. **U. s. Plasma-cells**. See *Cells, Plasma*.

Unorganized (un-or'-gan-ized). Without organs, not arranged in the form of an organ or organs.

Unpolarized (un-pol'-ar-ized). Not polarized.

Unschuld's Sign. A tendency to contract the calf of the leg. It is an early sign in diphtheria.

Unsex (un-seks'). To spay or castrate.

Unstriated (un-str  t-  t). Not striated, as unstriated muscle.

Ununited (*un-u-ni'ted*). Not united, as an *ununited* fracture.

Unwell. 1. Ill, sick. 2. Menstruating.

Urachus (*u'-ra-kus*) [*ὀρχος*, urine; *ἔχω*, to hold]. The allantoic stalk connecting in the fetus the bladder with the allantois, in after-life represented by a fibrous cord passing from the apex of the bladder to the umbilicus. **U.**, Patent, a condition in which the urachus of the embryo does not become obliterated, but persists to adult life.

Uracrasia (*u-rah-kra'-ze-ah*). See *Enuresis*.

Ural, **Uralium** (*u'-ral*, *u-ra'-ic-um*) [*ὀρῶν*, urine]. Chloral-urethane, $\text{CCl}_3\text{CH.OH.NH.CO}_2\text{C}_2\text{H}_5$, a hypnotic. Dose 10-20 gr. (0.65-1.3 Gm.).

Uranalysis (*u-ran-al'-is-is*). See *Urinalysis*.

Urane (*u'-ran*). Uranium oxid; it is used to give a yellow fluorescence to glass.

Uranic (*u-ran'-ik*). Containing uranium as a hexad radicle. **U.** Acid, uranium trioxid.

Uranin (*u'-ran-in*). See *Fluorescein-sodium*.

Uraninite (*u-ran'-in-it*). Pitch-blende.

Uranisconitis (*u-ran-is-ko-ni'-tis*) [*uraniscus*; *itis*, inflammation]. Inflammation of the uraniscus, or palate.

Uraniscoplasty (*u-ran-is'-ko-plas-te*) [*uraniscus*; *plastēō*, to form]. A plastic operation for the repair of cleft palate.

Uraniscorrhaphy (*u-ran-is-kor'-a-fe*) [*uraniscus*; *raphē*, suture]. Suture of a palatal cleft; staphylorrhaphy.

Uraniscus (*u-ran-is'-kus*) [*ὀρῶν*, the roof of the mouth]. The palate.

Uranism (*u'-ran-izm*) [*ὀρανισμός*, the Greek personification of heaven]. Sexual perversion in which the desire is for individuals of the same sex.

Uranium (*u-ra'-ne-um*) [*Uranus*]. A heavy white metal. See *Elements, Table of Chem.*. Its phosphate and nitrate are used as tests for phosphoric acid. The salts are very poisonous. **U.** Acetate, $(\text{UO}_2)(\text{C}_2\text{H}_3\text{O}_2)_2 + 2\text{H}_2\text{O}$; recommended in coryza in solution as nasal douche. **U.** Ammonium Fluorid, $\text{UO}_2\text{F}_2 \cdot 4\text{NH}_3 \cdot \text{H}_2\text{O}$, a greenish-yellow, crystalline powder, used for the detection of roentgen-rays. **U.** Nitrate, $(\text{HNO}_3)_2\text{UO}_2 \cdot 6\text{H}_2\text{O}$, used in diabetes. Dose $\frac{1}{2}$ -1 gr. to 0.24-0.026 Gm.) twice daily in aqueous solution with saccharin. **U.** Oxid, Red, **U.** Trioxid, UO_3 , a reddish powder. Syn., *Uranic acid*. **U.** X, a radioactive precipitate obtained from uranium nitrate by means of ammonium carbonate.

Uranoplasty (*u'-ran-o-plas-te*). Same as *Uraniscoplasty*.

Uranoschism (*u'-ran-o-schizm*) [*uraniscus*; *schisma*, a cleft]. Cleft palate.

Uranostaphyloplasty (*u-ran-o-staf'-il-o-plas-te*). See *Uraniscoplasty*.

Uranyl (*u'-ran-il*). See *Uranium*. **U.** Ammonium Fluorid. See *Uranium-ammonium Fluorid*.

Urare, **Urari** (*u-rah'-re*). See *Curare*.

Urarize (*u'-ra-rit*). To bring under the influence of *curare*; *curarize*.

Urase (*u'-rds*). An insoluble enzym associated with the bacteria which ferment urica; it is very plentiful in the urine in catarrh of the bladder.

Urasol (*u'-rah-sol*). Acetylmethylene-disalicylic acid; an antiseptic, diaphoretic, and uric-acid solvent.

Urate (*u'-rat*) [*ὀρῶν*, urine]. A salt of uric acid.

Uratie (*u-rat'-ik*) [*urate*]. Pertaining to or characterized by urates. **U.** Diathesis, a condition in which there is a tendency to the deposition of urates in the joints and elsewhere; a tendency to gout.

Uratolytic (*u-rat-o-lit'-ik*) [*urate*; *λύω*, to loose]. Capable of dissolving urates.

Uratoma (*u-ra-to'-mah*) [*urate*; *δύω*, tumor]. A concretion composed of urates, and occurring chiefly about the joints, a tophus.

Uratosis (*u-rat-o'-sis*) [*urate*]. A morbid condition marked by the deposit of urates.

Uraturia (*u-rat-u'-re-ah*) [*urate*; *ὀρῶν*, urine]. A condition marked by an excess of urates in the urine.

Urea (*u-re'-ah*) [*ὀρῶν*, urine], $\text{CO}(\text{NH}_2)_2$. The chief nitrogenous constituent of urine, and principal end-product of tissue metamorphosis, it occurs also in the blood, the lymph, and the liver. See *Biuret*, *Schiff*, *Schroeder*.

U. Quinate, a combination of urea and quinic acid; used in the treatment of gout and uric concretions in the kidneys. Daily dose 30-80 gr. (2-5 Gm.) in 400 Cc. of hot water. **U.** Salicylate, recommended as a substitute for sodium salicylate. Dose 7 gr. (0.45 Gm.) one to four times daily.

Ureal (*u'-re-al*) [*urea*]. Pertaining to or containing urea.

Ureameter (*u-re-am'-et-er*) [*urea*; *μέτρον*, a measure]. An apparatus for determining the amount of urea contained in a liquid.

Ureametry (*u-re-am'-et-er*) [*ureameter*]. The determination of the amount of urea in a liquid.

Urease (*u'-re-ās*). See *Urase*.

Urechysis (*u-rek'-is-is*) [*ὀρῶν*, urine; *ἔκχυσις*, an effusion]. An effusion of urine into areolar tissue.

Urecidin (*u-re-si'-din*). A proprietary preparation of lemon-juice and lithia citrate for use in gout and uric-acid diathesis.

Uredema (*u-re-dé'-mah*) [*ὀρῶν*, urine, *edema*]. Distention of tissues from extravasation of urine.

Uredo (*u-re'-do*) [*ureda*, a blight]. 1. A genus of fungi. 2. Urticaria.

Uroid (*u'-re-id*) [*urea*]. A compound of urea and an acid radicle.

Urelcosis (*u-rel-ko'-sis*) [*ὀρῶν*, urine; *ἔλκος*, ulceration]. Ulceration of the urethra or urinary organs.

Uremia (*u-re'-me-ah*) [*ὀρῶν*, urine; *αἷμα*, blood]. The symptoms due to the retention in the blood of excrementitious substances normally excreted by the kidneys; it is characterized by headache, vertigo, vomiting, amaurosis, convulsions, coma, sometimes hemiplegia, and a urinous odor of the breath.

- Uremic** (*u-rem'-ik*, *u-re'-mik*) [*uremia*]. Due to or characterized by uremia.
- Ureometer** (*u-re-om'-et-er*). See *Ureameter*.
- Ureometry** (*u-re-om'-et-er*). See *Ureametry*.
- Uroerythrin**. See *Uroerythrin*.
- Uresiesthesis** (*u-res'-e-es'-the-sis*) [*uresis*; *αἰσθησις*, sensation]. Constant desire to urinate.
- Uresin** (*u'-re-sin*). A citrourotropin dilithic salt, useful as a uric-acid solvent.
- Uresis** (*u-re'-sis*) [*οὐρησις*]. Same as *Uritation*.
- uret** (*u-ret*). A suffix denoting a binary compound of carbon, sulfur, etc., with another element, in modern chemistry the suffix *-id* is used.
- Ureter** (*u-re'-ter*) [*οὐρητήρ*, *ureter*]. The long, narrow tube conveying the urine from the pelvis of the kidney to the bladder.
- Ureteral** (*u-re'-ter-al*) [*ureter*]. Pertaining to the ureter.
- Ureteralgia** (*u-re-ter-al'-je-ah*) [*ureter*; *ἀλγος*, pain]. Neuralgia pain in the ureter.
- Ureterectomy** (*u-re-ter-ek'-to-me*) [*ureter*; *ἐκτομή*, excision]. Excision of a ureter.
- Ureteric** (*u-re-ter'-ik*) [*ureter*]. Pertaining to the ureter.
- Ureteritis** (*u-re-ter'-it-is*) [*ureter*; *ῖτις*, inflammation]. Inflammation of a ureter.
- Uretero-** (*u-re-ter-o-*) [*ureter*]. A prefix denoting relating to the ureter.
- Ureterocervical** (*u-re-ter-o-ser'-vik-al*). Relating to or connecting the ureter and the cervix uteri.
- Ureterocystoneostomy** (*u-re-ter-o-sist-o-ne-ost'-to-me*). See *Ureterocystostomy*.
- Ureterocystoscope** (*u-re-ter-o-sist'-o-skop*). An electric cystoscope holding in its grooved wall a catheter for insertion into the ureter.
- Ureterocystostomy** (*u-re-ter-o-sis-tost'-to-me*) [*uretero*; *κυστις*, bladder; *στόμα*, mouth]. The surgical formation of a communication between a ureter and the bladder.
- Ureteroenterostomy** (*u-re-ter-o-en-ter-ost'-to-me*) [*uretero*; *ἐντερον*, bowel; *στόμα*, mouth]. Surgical formation of a passage from a ureter to the intestine.
- Ureterolith** (*u-re'-ter-o-lith*) [*uretero*; *λίθος*, stone]. Calculus in the ureter.
- Ureterolithotomy** (*u-re-ter-o-lith-ot'-o-me*). Incision of the ureter for removal of a calculus.
- Ureteroneocystostomy** (*u-re-ter-o-ne-o-sist-ost'-to-me*). See *Ureterocystostomy*.
- Ureteroneopyelostomy** (*u-re-ter-o-ne-o-pi-el-ost'-to-me*) [*uretero*; *πύλος*, new, making, trough; *στόμα*, mouth]. Excision of part of a ureter and implantation into a new aperture made into the pelvis of the kidney, of the corresponding orifice of the ureteral end.
- Ureteronephrectomy** (*u-re-ter-o-nel-ek'-to-me*) [*uretero*; *νεφρός*, kidney; *εκτομή*, cutting]. Removal of the kidney and its ureter.
- Ureteroproctostomy** (*u-re-ter-o-prok-tost'-to-me*) [*uretero*; *πρόστος*, anus; *στόμα*, mouth]. The surgical formation of a passage from the ureter to the anus.
- Ureteropyelitis** (*u-re-ter-o-pi-el'-it-is*) [*uretero*; *πυελίτις*]. Inflammation of a ureter and the pelvis of a kidney.
- Ureteropyeloneostomy** (*u-re-ter-o-pi-el-ost'-to-me*). See *Ureteroneopyelostomy*.
- Ureteropyelonephritis** (*u-re-ter-o-pi-el-o-nel-itis*). Inflammation of the ureter and of the kidney and its pelvis.
- Ureteropyosis** (*u-re-ter-o-pi-osis*) [*uretero*; *πυώσις*]. Purulent inflammation of the ureter.
- Ureterorrhagia** (*u-re-ter-er-o'-je-ah*) [*uretero*; *ῥήγναι*, to burst forth]. Hemorrhage from the ureter.
- Ureterorrhaphy** (*u-re-ter-er'-al-e*) [*uretero*; *ῥάπτω*, suture]. Suture of the ureter.
- Ureterostegnosis** (*u-re-ter-o-steg-no'-sis*) [*uretero*; *στεγνός*, stenosis]. Stricture or constriction of the ureter.
- Ureterostenosis** (*u-re-ter-o-sten-o'-sis*). See *Ureterostegnosis*.
- Ureterostoma** (*u-re-ter-o-sto'-mah*) [*uretero*; *στόμα*, a mouth]. The renal or the cystic opening or mouth of the ureter.
- Ureterostomatic** (*u-re-ter-o-sto-mat'-ik*). Relating to the ureteral orifice.
- Ureterostomy** (*u-re-ter-ost'-to-me*) [see *Ureterostoma*]. The formation of a ureteral fistula.
- Ureterotomy** (*u-re-ter-ot'-o-me*) [*uretero*; *τομή*, cutting]. Incision of the ureter.
- Ureteroureteral** (*u-re-ter-o-u-re'-ter-al*) [*ureter*]. Pertaining to both ureters, or to two parts of one ureter. **U. Anastomosis**. See *Ureteroureterostomy*.
- Ureteroureterostomy** (*u-re-ter-o-u-re-ter-ost'-to-me*) [*uretero*; *ureterostoma*]. Surgical formation of a passage between the ureters or between different parts of the same ureter.
- Ureterouterine** (*u-re-ter-o-ut'-er-in*) [*uretero*; *uterus*]. Pertaining to the ureter and the uterus.
- Ureterovaginal** (*u-re-ter-o-va'-jal*) [*uretero*; *vagina*]. Pertaining to the ureter and the vagina.
- Urethane** (*u'-rith-an*) [*urea*; *ethere*]. $C_2H_5CH_2NO_2$, ethyl carbamate. A white solid. Dose 20-40 gr. (1 3/4 to 1 dram). **U.** In a wider sense, any ester of carbamic acid is called a urethane. **U.**, Ethyl. See *Urethane*.
- Urethra** (*u-re'-thrah*) [*οὐρήτηρ*, *urethra*]. The canal through which the urine is discharged, extending from the neck of the bladder to the meatus urinarius. It is divided in the man into the prostatic portion, the membranous portion, and the spongy or penile portion, and is from 8 to 9 inches long. In the woman it is about 1 1/2 inches in length.
- Urethral** (*u-re'-thral*) [*urethra*]. Pertaining to the urethra, produced in or arising from the urethra, as *urethral fever*. **U. Arthritis**, gonorrheal rheumatism.
- Urethralgia** (*u-re-thral'-je-ah*) [*urethra*; *ἀλγος*, pain]. Neuralgia pain in the urethra.
- Urethrectomy** (*u-re-threk'-to-me*) [*urethra*; *ἐκτομή*, excision]. Excision of a urethra or a portion of it.
- Urethromphaxis** (*u-re-throm-fak'-sis*) [see *Urethrophaxis*].

Urethreurynter (u-re-thru-rin'-ter) [urethra; *e'ph'ey*, to dilate]. An appliance for dilating the urethra.

Urethrisms (u'-re-thrizm) [urethra]. Urethral irritability.

Urethritis (u-re-thri'-tis) [urethra; *itis*, inflammation]. Inflammation of the urethra. **U., Anterior**, inflammation of the part situated anterior to the anterior layer of the triangular ligament. **U., Posterior**, inflammation of the prostatic and membranous portions. **U., Simple**, a nonspecific inflammation of the urethra. **U., Specific**, that due to the gonococcus; gonorrhea.

Urethro- (u-re-thro-) [*urēthra*, urethra]. A prefix denoting pertaining to the urethra.

Urethrobular (u-re-thro-bul'-bar). Relating to the urethra and the bulb of the corpus spongiosum.

Urethrocele (u-re'-thro-sēl') [urethra; *celē*, a hernia]. A protrusion of the wall of the female urethra.

Urethrocystitis (u-re-thro-sis-ti'-tis) [urethra; *cystitis*]. Inflammation of the urethra and bladder.

Urethrometer (u-re-throm'-et-er) [urethra; *metron*, a measure]. An instrument for determining the caliber of the urethra or for measuring the lumen of a stricture.

Urethropenile (u-re-thro-pe'-nil). Relating to the urethra and the penis.

Urethroperineal (u-re-thro-per-in-e'-al). Relating to the urethra and the perineum.

Urethroperineoscrotal (u-re-thro-per-in-e-a-skro'-tal). Relating to the urethra, perineum, and scrotum.

Urethrophraxis (u-re-thro-fraks'-is) [urethra; *phraxis*, a blocking]. Urethral obstruction.

Urethroplasty (u-re'-thro-plas-te) [urethra; *plastēō*, to form]. Plastic operation upon the urethra.

Urethrorrectal (u-re-thro-rek'-tal). Relating to the urethra and the rectum.

Urethrorrhagia (u-re-thror-a'-je-ah) [urethra; *rhagē*, to burst forth]. Hemorrhage from the urethra.

Urethrorrhaphy (u-re-thror-a'-e) [urethra; *rhaphē*, suture]. Suturing of an abnormal opening into the urethra.

Urethrorrhea (u-re-thror-e'-ah) [urethra; *rhē*, a flow]. A morbid discharge from the urethra.

Urethroscope (u-re'-thro-skōp) [urethra; *skopēō*, to view]. An instrument for inspecting the interior of the urethra.

Urethroscopy (u-re-thros'-kō-pe) [see *Urethroscope*]. Inspection of the urethra.

Urethrospasm (u-re'-thro-spasm) [urethra; *spasmos*, spasm]. A spasmodic stricture of the urethra.

Urethrostenosis (u-re-thro-slen-o'-sis) [urethra; *stenosis*, a constriction]. Stricture of the urethra.

Urethrostomy (u-re-thros'-to-me) [urethra; *stoma*, a mouth]. Perineal section with permanent fixation of the membranous urethra in the perineum.

Urethrotome (u-re'-thro-tōm) [urethra; *tome*, a cutting]. An instrument used for performing urethrotomy.

Urethrotomy (u-re-throt'-o-me) [see *Urethrotome*]. The operation of cutting a stricture of the urethra. **U., External**, division of a stricture by an incision from without. **U., Internal**, division of a urethral stricture from within the urethra.

Urethroureteral (u-re-thro-u-re'-ter-al) [urethra; *ureter*]. Relating to the urethra and the ureter.

Urethrovaginal (u-re-thro-vaj'-in-al) [urethra; *vagina*]. Pertaining to the urethra and the vagina.

Urethrovésical (u-re-thro-ves'-ik-al) [urethra; *vesica*, bladder]. Pertaining to the urethra and the bladder.

Uretic (u-ret'-ik) [*urētēō*]. 1. Pertaining to urine; stimulating the flow of urine. 2. An agent or medicine that stimulates the flow of urine.

Urgens' Reaction for Sulfocyanates in Saliva. Add to the saliva a saturated solution of hydriodic acid 1 part and starch-paste 5 parts; if sulfocyanates are present, a blue tint appears. The sulfocyanates of potassium and sodium normally present in saliva are usually absent in chronic suppurative conditions of the middle ear, and the progress of the disease can be estimated by the presence and extent of the reaction.

Uric Acid (u'-rik) [*urika*, urine], $C_5H_4N_2O_6$. A dibasic acid; one of the nitrogenous end-products of metabolism. It is found in the urine and in the spleen. Its accumulation in the blood (lithemia, uricacidemia) is associated with marked disturbances, and, according to some writers, produces the phenomena of gout. It may also form urinary calculi. See *Denigé, Dietrich, Garrod, v. Jaksch, Murexid, Schiff*.

Uricacidemia (u-rik-as-id-e'-me-ah) [uric acid; *aima*, blood]. The presence of an excess of uric acid in the blood, also the condition associated with an excess of uric acid in the blood, and characterized by various nervous symptoms, and perhaps also responsible for the phenomena of gout.

Uricedin (u-ris-e'-dīm) [uric acid]. A proprietary remedy for gout, consisting of sodium sulfate, sodium chloride, sodium citrate, and small quantities of the citrates and phosphates of potassium and calcium.

Uricemia (u-re-se'-me-ah). See *Uricacidemia*.

Uricometer (u-rik-om'-et-er) [uric acid; *metron*, a measure]. An apparatus for the quick quantitative estimation of uric acid in urine.

Uridrosis (u-rid-ro'-sis) [urine; *rhōsis*, sweat]. The secretion of a sweat containing uric acid, uric acid, or other urinary constituents which may be deposited in crystalline form upon the skin (*uridrosis crystallina*).

Urina (u-rī'-nah) [L.]. Urine.

Urinaccelerator (u-rin-ak-sel'-er-a-tor) [urine; *accelerare*, to accelerate]. The accelerator urine. See under *Muscle*.

Blood.

Cystin.

Calcium Carbonate.

Hippuric Acid.

Calcium Oxalate.

Indigo.

Calcium Phosphate.

Leucin and Tyrosin.

Calcium Sulfate.

Magnesium Phosphate.

Phosphates, Triple. Ammonio-magnesium Phosphate.

Pus.

Cholesterol.

Urates of Sodium, Ammonium, and Potassium.

Acid Fermentation.

Uric Acid.

Urea.

Blood-cast.

Epithelium.

Hyaline Casts.

URINARY SEDIMENTS. — (After Tyson, Holland, Casselman, Landois, Beale, and v. Jaksch.)

Urinal (u'-rin-ul) [*urine*]. A vessel for receiving urine.

Urinalysis (u-rin-əl'-is-is) [urine; *lōsis*, a loosening]. Analysis of the urine.

Urinary (*u'-rin-a-ree*) [*urine*]. Pertaining to the urine. **U. Organs**, the organs concerned in the secretion and excretion of the urine, including the kidneys, ureters, bladder, and urethra. **U. Sediment**, the deposit formed after urine has been allowed to stand for some hours in a vessel.

Urinate (u'-rin-*dt*) [*urine*]. To discharge urine from the bladder.

Urination (*u-rin-u'-shun*) [*urine*]. The act of voiding urine.

Urine (*u'-rin*) [*urina*, urine]. The fluid excreted by the kidneys. In health urine has an amber color, a slightly acid reaction, a faint odor, a saline taste, and a specific gravity of about 1.018. The average quantity excreted in 24 hours is about 1200 Cc. or 40 oz., of which about 62.5 Gm. are solids. Among the solids, urea is the most important, of which 35 Gm. are excreted in the day. Other solid constituents are uric acid (0.75 Gm. in the day), hippuric acid, creatinin, and other extractives, sodium chloride, phosphates and sulfates of calcium, magnesium, potassium, and sodium. The most important abnormal constituents present in disease are albumin, sugar, blood, pus, acetone, diacetic acid, fat, chyle, tube-casts, various cells, and bacteria.

Urinemia (u-rin-e'-me-ah) [*urine*; *alpha*, blood].
The presence of urinary constituents in the blood, uremia.

Uriferous (u-rin-i-f' -er-us) [*urine*; *ferre*, to bear]. Carrying or conveying urine, as *uriferous* tubule.

Uriniparous (u-rin-ĭp'-ar-us) [*urine; parere, to produce*] Secreting urine.

Urino- (*u rin o*) [*urine*]. A prefix denoting relation to the urine.

Urinoscopy (*u-rin-o-skō-pē*) [*urino-*; *skōpeō*, to examine, to examine]. Cryoscopy applied to urine.

Urinogenital (u-ri-nō-jen'-it-əl) [urino.; yōvīn, to produce] Urogenital

Urinoglucosometer (*u rin-o-glu-to-som'-et-er*).
An apparatus for quantitative estimation of glucose in the urine.

Urinology (u-rin-ol-ô-jî) See Urology

Urinometer (ur-in-om'-et-er) [*urino*, *ur*-po, a measure] A hydrometer for ascertaining the specific gravity of urine.

Urinometry (ur-in-om'et-ri) [see *Urinometer*].
The determination of the specific gravity of the urine by means of the urinometer.

Urinoscopy (*ur'inos'kōp'ē*) See *Uroscopy*.

Urinose, Urinous (u' rin-*ä*, u' rin-*uä*) [*urine*]
Having the characters of urine, as a *urinous*
color.

Urisolvin (u-ree-sol'-vin). A compound of uric acid and lithium citrate, a uric-acid solvent and diuretic.

Uranium (yur' eem) See Uranium

Uro- *urō-* [urō, URŪ] A prefix denoting pertaining to urine or urinary.

Uroammoniac (u-ro-*am* o' ne-*ak*) Relating to
or containing urine and ammonia

Uroazotometer *ur-o-az-ot-om-eter* An apparatus for quantitative estimation of the nitrogenous substances in urine.

Urobacillus (u-ro-ba-si-us) (Ger., *Urobacillus*).
A bacillus occurring in urine. See *Urobacillus*.

Urobilin (*u-ro-bil'in*) [*uro-*: *Sale*], $C_{43}H_{58}N_4O_6$. A yellowish-brown, amorphous powder derived from bilirubin. It is the principal pigment of the urine, and is increased in febrile and other conditions. See *Greenhouse* on best. **U.-jaundice**, a jaundice supposed to be due to the presence of urobilin in the urine.

Urobilinogen (*uro bil in' o jen*). The substance from which urobilin is formed by oxidation when urine is exposed to air.

Urobilinuria (u-ro-bil-in-u'-ee-shi-ah) [in urine] The presence of an excess of urobilin in the urine.

Urobromohematin (*u-ro-bro-ma-hem'-at-in*) is $C_{56}H_{34}N_8Fe_2O_{12}$. A coloring matter from the urine of leprous patients; it is closely allied to the coloring matter of the blood.

Urocanin (u-ro-kan' in). See *Urocan*. (1 ro-cane)

Urocanic Acid */'yoo-kæn-ə-'sɪ/* [yoo-, -kən-, a dog]. $C_6H_8N_2O_2 + 2H_2O$. An acid found in the urine of dogs when there is a disturbance in the amount of urea. By heating it is broken down into carbonic acid, water, and ammonia, *urocanin*, $C_{10}H_{16}N_4O$.

Urocele (u'ro-sel) (uro, u'ri, a (urine); cele, swelling of the scrotum from extravasation of urine.

Urocheras (u-rok'-er-as) [uro-, *γρῦν*, *urōn*, *urine*.]
The sandy substance deposited from stasimon urine.

Urochesia (u-ro-ke'-ze-shi) (uro-, yŭ'ro-, &
deleat) Discharge of urine through the ure-

Urochrome (u'ro-krom) (ura.; *gros.* *u.* *chrom.*)
A yellow coloring matter found in urine.

Uroclepsia (u-ro klep' se sh) [uen. *u-ro* (them) Unpleasant discharge of urine

Urocrisis (*uro'-e-sis*) [*uro-* + *-crisis*] a disease crisis attended with excessive urination.

Urocriticism (*uro-krit'ee-shun*)—In dogs by inspection of urine the indication as to determines the diagnosis.

Proscarpin (H-20-11' or 12) See Prochlorperazine

Urocyanogen (*uro-si-an'-o-jen*) [*u-ro*, *o*—
blue]. A blue compound found in urine.

Urocyanose (u-ro-sā' an-sē) See *Urocyano-*

Urocyanosis (u-ro-sā-nō-sis) See *Urocyano-*

Procyanosis (pro-si-an-oh-sis) (adj., n.)
Blue. Blue discoloration of the urine from
the presence of urobilin.

Urodialysis *u-ro-dial'i-sis* (uro-, dialysis) (n.)

Prodochium (*pro-dok'ee-um*). [L. *pro-*, before, and *doche-*, to secrete.] Partial and temporary cessation of the secretion of urine.

Urodynia (u-ro-din'-e-ah) (uro-: dyn-)
 A urinal.

Uroerythrin (*u-ro-er'-ith-rin*) [*uro-*; *ὑρροῖς*, red]. An amorphous, reddish pigment with an acid reaction, occurring in the urine in rheumatic and other diseases.

Urofuscobematin (*u-ro-fus-ko-hem'-at-in*) [*uro-*; *fuscus*, dark, *hematin*]. A red pigment derived from hematin, occurring in the urine.

Urogaster (*u'-ro-gas'-ter*) [*uro-*; *γαστήρ*, stomach]. The urinary intestine or urinary passages collectively.

Urogenital (*u-ro-jen'-it-al*) [*uro-*; *γενίται*]. Pertaining to the urinary and genital organs.
U. Ducts. See *Ducts of Müller*. **U. Sinus**, the anterior part of the cloaca, into which the urogenital ducts open.

Urogenous (*u-roj'-en-us*) [*uro-*; *γεννάν*, to produce]. Producing urine.

Uroglauin (*u-ro-glau'-sin*) [*uro-*; *γλαυκός*, green]. A blue pigment, at times occurring in urine, as in scarlatina, and supposed to result from the oxidation of a chromogen.

Uroglycosis (*u-ro-gli-ko'-sis*) [*uro-*; *γλυκός*, sweet]. Diabetes mellitus.

Urogravimeter (*u-ro-grav'-im'-el-er*). See *Urinometer*.

Urohematin (*u-ro-hem'-at-in*) [*uro-*; *hematin*]. Altered hematin in the urine.

Urohematoporphyrin (*u-ro-hem-at-o-por'-fir-in*) [*urohematin*; *πρῶφυρος*, purple]. Urohematin; a urinary pigment occasionally occurring in the urine in certain pathologic states.

Urol (*u'-rol*). See *Urea Quinate*.

Urolith (*u'-ro-lith*) [*uro-*; *λίθος*, a stone]. A calculus occurring in the urine.

Urolithiasis (*u-ro-lith-i'-a-sis*) [*uro-*; *lithiasis*]. The presence of or a condition associated with urinary calculi.

Urolithology (*u-ro-lith-ol'-o-je*) [*urolith*; *λόγος*, science]. The science of urinary calculi.

Urology (*u-rol'-o-je*) [*uro-*; *λόγος*, science]. The study of the urine.

Urolutein (*u-ro-lu'-te-in*) [*uro-*; *lutens*, yellow]. A yellow pigment sometimes found in urine.

Urolytic (*u-ro-lit'-ik*) [*uro-*; *λύειν*, to loose]. Capable of dissolving urinary calculi.

Uromelanin (*u-ro-mel'-an-in*) [*uro-*; *melanin*]. A black pigment sometimes found in the urine, derived from the decomposition of urochrome.

Uromelus (*u-rom'-e-lus*) [*ὑπό*, tail; *πίλος*, a limb]. A monster in which there is more or less complete fusion of the limbs, with but a single foot.

Urometer (*u-rom'-el-er*). See *Urinometer*.

Uromphalus (*u-rom'-fal-us*) [*urachus*; *ὀμφαλός*, navel]. Protrusion of the navel caused by infiltration of urine due to a patent urachus.

Uroncus (*u-rong'-kus*) [*uro-*; *ὄγκος*, tumor]. A tumor containing urine.

Urophan (*u'-ro-fan*) [*uro-*; *φαίνεσθαι*, to appear]. A generic name for substances which, taken into the body, appear again unchanged chemically in the urine.

Urophanic (*u-ro-fan'-ik*) [see *Urophan*]. Appearing in the urine.

Urophelin (*u-ro-fe'-in*) [*uro-*; *φαιός*, gray]. A

pigment body to which the characteristic odor of the urine has been ascribed.

Uropherin (*u-rof'-er-in*). Lithiotheobromin salicylate; a white powder, soluble in water, used as a diuretic. Dose 15 gr. (1 Gm.)
Syn., *Lithium diuretin*. **U. Benzoate**, $\text{Li} \cdot \text{C}_6\text{H}_5\text{N}_4\text{O}_2 + \text{Li} \cdot \text{C}_6\text{H}_5\text{CO}_2$, theobromin and lithium benzoate, a fine white powder containing 50% of theobromin; it is a diuretic and nerve stimulant. **U. Salicylate**, $\text{Li} \cdot \text{C}_6\text{H}_5\text{N}_4\text{O}_2 + \text{Li} \cdot \text{C}_6\text{H}_5\text{O}_2$, theobromin and lithium salicylate, a white powder used as the benzoate.

Uropittin (*u-ro-pit'-in*) [*uro-*; *πίττα*, pitch]. $\text{C}_6\text{H}_5\text{N}_4\text{O}_2$. A nitrogenous derivative of urochrome.

Uroplania (*u-ro-pla'-ne-ah*) [*uro-*; *πλάνη*, a wandering]. The presence of urine in other localities than the urinary organs; the discharge of urine from an abnormal orifice.

Uropoiesis (*u-ro-poi-e'-sis*) [*uro-*; *ποιέειν*, to make]. Secretion of the urine by the kidneys.

Uropoietic (*u-ro-poi-et'-ik*) [see *Uropoiesis*]. Concerned in uropoiesis.

Uropsammus (*u-rop-sam'-us*) [*uro-*; *ψάμμος*, sand]. Urinary gravel.

Uropyoureter (*u-ro-pi-o-u-re'-ter*). An infected ureter.

Urorhodin (*u-ro-ro'-din*) [*uro-*; *ῥόδον*, rose]. A red pigment found in urine and derived from uroxanthin.

Uroroselin (*u-ro-ro'-es-in*) [*uro-*; *ροσα*, rose]. A rose-colored pigment found in the urine in various diseases.

Urorrhagia (*u-ror-a'-je-ah*) [*uro-*; *ῥήγναι*, to burst forth]. Excessive secretion and discharge of urine.

Urorrhea (*u-ror-e'-ah*) [*uro-*; *ῥοα*, a flow]. 1. The normal flow of urine. 2. Involuntary passage of urine.

Urorubin (*u-ro-ru'-bin*) [*uro-*; *ruber*, red]. A red pigment obtained by treating urine with hydrochloric acid, and also in the preparation of uropittin.

Urorubrohematin (*u-ro-ru-bro-hem'-at-in*). See *Urobromohematin*.

Urosacin (*u-ro'-sas-in*). See *Urorhodin*.

Uroschecele (*u-ros'-ke-o-sil*). See *Urocele*.

Uroschesia (*u-ros'-kes-is*) [*uro-*; *αἴλειν*, retention]. Suppression of urine.

Uroscopist (*u-ros'-ko-pist*) [see *Uroscopy*]. One who makes a specialty of urinary examinations.

Uroscopy (*u-ros'-ko-pe*) [*uro-*; *σκοπεῖν*, to view]. Examination of the urine.

Urosepsis (*u-ro-sep'-sis*) [*uro-*; *αἴψης*, sepsis]. The condition of intoxication due to the extravasation of urine.

Uroseptic (*u-ro-sep'-tik*) [see *Urosepsis*]. Relating to or characterized by urosepsis.

Urosin (*u'-ro-sin*). Lithium quinate, a uric-acid solvent. Dose 7½ gr. 6 to 10 times daily.

Urosis (*u-ro'-sis*) [*uro-*; *νόσος*, disease]. Any disease of the urinary organs.

Urospasm (*u-ro-spazm*) [*uro-*; *σπασμός*, spasm]. Spasm of some part of the urinary tract.

Urospectrin (*u-ro-spek'-trin*). A pigment similar to hematoporphyrin obtained from normal urine by shaking the urine with acetic ether

Urostealith (*u-ro-ste'al-ith*) [*uro-*; *stēap*, fat; *lithos*, stone]. A fat-like substance occurring in some urinary calculi.

Urosteatoma (*u-ro-ste-at-o'-mah*). See *Urostealith*.

Urotheobromin (*u-ro-the-o-bro'-min*). See *Paraxanthin*.

Urotoxic (*u-ro-toks'-ik*) [*uro-*; *toxikos*, poison]. 1. Pertaining to poisonous substances eliminated in the urine. 2. Pertaining to poisoning by urine or some of its constituents. **U. Coefficient**, the number of urotoxics formed in 24 hours by one kilogram of an individual. The normal urotoxic coefficient in man is about 0.4, i. e., a man produces for each kilogram of body-weight 0.4 urotoxics, or sufficient poison to kill 400 Gm. of animal.

Urotoxicity (*u-ro-toks-is'-it-e*). The toxic quality of urine.

Urotoxy (*u'-ro-toks-e*) [see *Urotoxic*; pl., *urotoxies*]. The unit of toxicity of urine the amount necessary to kill a kilogram of living substance.

Urotropin (*u-rot'-ro-pin*), $(\text{CH}_2)_6\text{N}_4$, hexamethylentetramine; obtained by action of formaldehyde on ammonia. A uric-acid solvent. Daily dose 8-30 gr. (0.5-2.0 Gm.). **U. Quinate**, used in gout and as a uric-acid solvent.

Urourer (*u-ro-u-re'-ler*). A partial or complete non-evacuation of the urine from the uriter.

Urozanthin (*u-ro-zan'-thin*) [*uro-*; *zanthos*, yellow]. A yellow pigment occurring in human urine and yielding indigo-blue on oxidation.

Uroxin (*u-roks'-in*). Same as *Alloxantin*.

Uroemia (*u-ro-se'-me-ah*) [*uro-*; *haima*, less]. Diabetes. **U. albuminosa**, Bright's disease. **U. mellita**, diabetes mellitus.

Urrhodin (*u'-rod-in*). See *Urrhodin*.

Ursal (*ur'-sal*). See *Urea Subglycolate*.

Ursin (*ur'-sin*). See *Arbutin*.

Urtica (*ur'-tik-ah*) [L.]. Nettle. 1. A genus of plants of the order *Urticales*. *U. dioica*, the common nettle, and *U. urens*, the dwarf nettle, are used as diuretics, local irritants, and hemostatics. 2. A wheal.

Urticaria (*ur-tik-a'-re-ah*) [*urtica*]. A disease of the skin characterized by the development of wheals, which give rise to sensations of burning and itching. They appear suddenly in large or small numbers, remain for from a few minutes to several hours, and disappear suddenly. The disease may be acute or chronic, and is due to agencies acting upon the vasomotor system, such as gastrointestinal disorders, the ingestion of certain foods, as shell-fish, strawberries, etc. Syn., *Hives*; *Nettlerash*. **U. bullosa**, a form characterized by the formation of bullae. **U. evanida**, a form marked by sudden vanishing and reappearance of the symptoms. **U. factitia**, **U. Facititious**, the form produced in individuals with an irritable skin by any slight external irritation. Syn., *Dermatographia*, *Dermatographism*. **U. Giant**, **U. gigans**. See *U. oedematosa*. **U. hæmorrhagica**, purpura urticaria, a variety characterized by hemorrhage into the wheals from rupture of extremely congested capillaries; it is a variety of erythema multiforme. **U. mentosa**, a variety due to the use of drugs. **U. oedematosa**, giant urticaria, a variety characterized by the sudden appearance of large, soft, edematous swelling of skin and subcutaneous tissue, which measure several inches in diameter. **U. papulosa**, a form occurring in children, in which the result of the inflammatory reaction of solid papule remains after the subsidence of the wheal. Syn., *Lichen urticarius*. **U. mentosa**, a rare type which begins in the first few months of life and consists of reddish, wheal-like tubercles that change to a brownish-red or yellow. **U. tuberosa**, a form in which the wheals assume a tuberosus form and become as big as a walnut, hen's egg, or egg. **U. vesiculosa**, urticaria characterized by the presence of vesicles.

Urticarial, **Urticarious** (*ur-tik-a'-re-us*). Pertaining to urticaria. **Urtication** (*ur-tik-a'-shun*) [*urtica*]. Irritation with nettles, a method of treatment formerly employed in paralysis and local irritation. 2. A sensation as if one has been stung by nettles.

Urkow's Pillars. In the embryo, two ridges which grow from the dorsal region of the body-wall and fuse by the septum transversum to form the diaphragm. **Ustilago** (*us-til-a'-go*) [L.]. A genus of smut fungi—the smuts. **U. maydis**, smut, is a fungus parasitic upon Indian corn. In properties it is an ergot of rye.

Ustion (*us'-chun*) [*ustio*; *urere*, to burn]. In chemistry, incineration, charring, cauterization.

Ustulation (*us-tu-la'-shun*) [L.]. The act of roasting, drying or parching. **Ustus** (*us'-tus*) [*urere*, to burn]. Burned.

Usure (*u'-shur*) [*uti*, to use]. Circulation of a part or organ through the use of neoplasms which have developed of aneurysms, or through primary generation.

Utend (*u'-lend*). Abbreviation of uterus. **Uteralgia** (*u-ter-al'-je-ah*) [*uterus*; *algos*, pain in the uterus].

Uterine (*u'-ter-in*) [*uterus*]. Pertaining to the uterus.

Uterism (*u'-ter-izm*). Uterine contraction. **Uteritis** (*u-ter-i'-tis*). See *Metritis*.

Utero- (*u-ter-o-*) [*uterus*]. A prefix pertaining to the uterus.

Uteroabdominal (*u-ter-o-ab-dom'-in-al*). Pertaining to the uterus and abdomen.

Uterocervical (*u-ter-o-ser'-vik-ul*). Pertaining to the uterus and the cervix of the uterus.

Uterocolic (*u-ter-o-kol'-ik*). Relating to the uterus and the colon.

fixation (*u-ter-o-fiks-a'-shun*). See *Hysteropexy*.

gastric (*u-ter-o-gas'-trik*). Relating to uterus and the stomach.

gestation (*u-ter-o-jes-to'-shun*) [*utero-; -tio*, gestation]. Gestation within the cavity of the uterus.

intestinal (*u-ter-o-in-tes'-tin-al*). Relating to the uterus and the intestine.

ovarian (*u-ter-o-o-va'-re-an*) [*utero-; -y*]. Pertaining to the uterus and the ovaries.

pexia, Uteropexy (*u-ter-o-peks'-e-ah*, *u-o-peks'-e*). See *Hysteropexy*.

placental (*u-ter-o-pla-sen'-tal*) [*utero-; -nta*]. Pertaining to the uterus and the placenta.

rectal (*u-ter-o-pek'-tal*). Relating to the uterus and the rectum.

sacral (*u-ter-o-sa'-kral*) [*utero-; sacrum*]. Relating to the uterus and the sacrum.

tomy (*u-ter-o'-o-me*). See *Hysterotomy*.

tonic (*u-ter-o-ton'-ik*). Supplying muscle tone to the uterus.

tractor (*u-ter-o-trak'-tor*) [*utero-; trahere*, draw]. A variety of forceps having several blades on each blade employed in making traction on the cervix uteri.

vaginal (*u-ter-o-va'-in-al*). Relating to uterus and vagina.

ventral (*u-ter-o-ven'-ral*) [*utero-; venter*, belly]. Relating to the uterus and the vagina.

vesical (*u-ter-o-ves'-ik-al*). Relating to uterus and the bladder.

uterus (*u'-ter-us*) [L.]. The womb; the organ of gestation, receiving the ovum in its cavity, and supporting it during the development of the fetus, and becoming the principal agent in its expulsion during parturition.

It is a pear-shaped, muscular organ, 3 inches long, two inches wide, and one inch thick, and is divided into three portions—*fundus*, the body, and the *cervix*. The *fundus* is the upper and broad portion; the *cervix* gradually narrows to the neck, which is the contracted portion. The orifice, *os uteri*, communicates with the vagina. The inner surface is covered with mucous membrane continuous with that of the vagina. The outer surface of the fundus and body is covered with peritoneum. The whole organ is suspended in the pelvis by means of the broad ligaments. Fallopian tubes enter, one on each side of the fundus, at the cornua of the organ. **Uterus**, a uterus divided into two horns or compartments on account of an arrest of development. **U.**, *Bifid*. See *U. septus*. **U.**, *Septus*, one in which the external os is divided into two by a septum. **U. bilocularis**, **U.**, *Bipartite*. See *U. septus*. **U. cordatus**, a heart-shaped uterus, a form due to faulty development. **U. didelphys**. See *U. duplex*. **U. duplex**, a uterus that is due from failure of the müllerian ducts to unite. **U.**, *Fetal*, one of defective development, in which the length of the cervical

canal exceeds the length of the cavity of the body. **U.**, *Gravid*, a pregnant uterus. **U. masculinus**, a small cul-de-sac situated at the middle of the highest portion of the crest of the urethra. It is the analog of the uterus of the female. Syn. *Prostatic vesicle*; *Sinus peculiaris*; *Utricle*. **U. septus**, a uterus divided internally by a septum into two halves, more or less complete, anteroposteriorly. **U. unicornis**, a uterus having but a single lateral half with usually only one fallopian tube; it is the result of faulty development.

Utricle (*u'-trik'-l*) [*utriculus*, dim. of *uter*, a small bag]. 1. A delicate membranous sac communicating with the semicircular canals of the ear. 2. The uterus masculinus.

Utricular (*u'-trik'-u-lar*) [*utriculus*]. 1. Pertaining to the utricle. 2. Shaped like a bladder.

Utriculitis (*u'-trik-u-li'-tis*). Inflammation of the utricle.

Utriculus (*u'-trik'-u-lus*). See *Utricle*. **U. hominis**. See *Uterus masculinus*.

Utriform (*u'-tre-form*) [*uter*, bag; *forme*, form]. Bladder-shaped.

Uva (*u'-vah*) [L.]. A grape. **U. ursi**, the *Arctostaphylos uva-ursi*, or bearberry, of the order *Ericaceae*. Its leaves (*uva ursi*, U. S. P.; *uva ursi folia*, B. P.) contain a bitter, crystalline glucoside, arbutin, $C_{12}H_{16}O_6$, splitting up into glucose and hydroquinone, $C_6H_4O_2$. *Uva ursi* is astringent and tonic, and is used in chronic nephritis, pyelitis, cystitis, incontinence of urine, gleet, leukorrhea, etc. Dose 20 gr.—1 dr. (1.3-4.0 Gm.). **U. ursi, Extract of**. Unof. Dose 15-30 gr. (1-2 Gm.). **U. ursi, Fluidextract of** (*fluidextractum uva ursi*, U. S. P.). Dose 1 dr. (4 Cc.). **U. ursi, Infusion of** (*infusum uva ursi*, B. P.). Dose 1-2 oz. (32-64 Cc.).

Uvea (*u'-ve-ah*) [*uva*]. The pigmented layer of the eye, comprising the iris, ciliary body, and choroid.

Uveal (*u'-ve-al*) [*uvea*]. Pertaining to the uvea.

Uveitis (*u'-ve-i'-tis*) [*uvea*; *itis*, inflammation]. Inflammation of the uvea.

Uvula (*u'-u-lah*) [L.]. The conic appendix hanging from the free edge of the soft palate and formed by muscles (azygos uvulae, levator and tensor palati), mucous membrane, and connective tissue. **U.**, *of the Cerebellum*, a small lobule of the inferior vermis of the cerebellum, forming the posterior boundary of the fourth ventricle. **U.**, *Vesical*, a prominence at the internal orifice of the urethra.

Uvulaptonsis, Uvuloptosis (*uv-u-la-to'-sis*, *uv-u-lo-to'-sis*) [*uvula*; *ptosis*, falling]. A relaxed and pendulous condition of the uvula.

Uvular (*uv'-u-lar*) [*uvula*]. Pertaining to the uvula.

Uvularis (*uv-u-la'-ris*) [*uvula*]. The azygos uvulae muscle. See under *Muscle*.

Uvulatore (*uv'-u-lat-äm*) [see *Uvulotomy*]. An instrument used in performing uvulotomy.

Uvulotomy (*uv-u-lat'-o-me*) [*uvula*, *tomē*, a cutting]. The operation of cutting off the uvula.

Uvulitis (*uv-u-li'-tis*) [*uvula*; *itis*, inflammation]. Inflammation of the uvula.

V

V. 1. Abbreviation of *vision* or *acuity of vision*.
2. The symbol of *vanadium*.

Vaccigenous (vak-si'-en-us) [vaccine; *vac*, to produce]. Producing or cultivating vaccine virus.

Vaccina (vak-si'-nah). See *Vaccinia*.

Vaccinal (vak-si'-al) [vaccine]. Pertaining to vaccination or to vaccine.

Vaccinate (vak-si'-at) [vaccine]. 1. To inoculate with the virus of vaccinia. 2. To inoculate with any virus in order to produce immunity against an infectious disease.

Vaccination (vak-si'-a-shun) [vaccine]. 1. Inoculation with the virus of cowpox in order to protect against smallpox. 2. Inoculation with any virus to produce immunity against an infectious disease.

Vaccinator (vak-si'-a-tor) [vaccine]. One who vaccinates.

Vaccine (vak'-sin) [vacca, a cow]. 1. The virus used in performing vaccination. 2. Any substance used for preventive inoculation. **V.**, Bovine, that derived from the cow. **V.**, Humanized, that from vaccinal vesicles of man. **V. Lymph**, **V. Virus**. See *Vaccine*.

Vaccinella (vak-sin-ell-ah) [vaccinia]. Spurious vaccinia.

Vaccinia (vak-sin'-e-sh) [vacca, a cow]. Cowpox, a contagious disease of cows transmissible to man by vaccination and conferring immunity against smallpox. In the human subject inoculated with cowpox a small papule appears at the site of inoculation in from one to three days, which becomes a vesicle about the fifth day, and at the end of the first week is pustular, umbilicated, and surrounded by a red areola. Desiccation begins in the second week and a scab forms, which soon falls off, leaving a white, pitted cicatrix.

Vacciniola (vak-sin'-o-lah) [dim. of *vaccinia*]. A secondary eruption sometimes following vaccinia, and resembling the eruption of smallpox.

Vaccinism (vak-sin-izm). The theory of the efficacy of vaccination.

Vaccinium (vak-sin'-e-am) [L., "blueberry"]. A genus of plants to which belong the cranberry, blueberry, hollyberry, etc., of many species. *V. corymbosum* is used in catarrhal inflammations of the urinary tract. *V. myrtillus*, the hollyberry, is indigenous to Europe, and yields fruits which are dried for use in decoction for diarrhea and leukoplakia, the leaves are used in diabetes. An extract, *extractum myrtilli winteranii*, is a specific for stomatitis and a prominent remedy for affections of the mouth and tongue. Paint the affected parts every hour.

Vaccinophobia (vak-sin-o'-fo-be-ah) [vaccine; *phob*, fear]. Morbid dread of vaccination.

Vaccinophyllis (vak-sin-o-sil'-il-is) [vaccine;

syphilis]. Syphilis contracted by vaccination with contaminated virus.

Vacuolar (vak'-u-ol-er) [vacuole]. Pertaining to or of the nature of a vacuole.

Vacuolated (vak'-u-ol-ated). Of a cell containing one or more vacuoles.

Vacuolation (vak'-u-ol-ah-shun) [vacuole]. The formation of vacuoles, the state of being vacuolated.

Vacuole (vak'-u-ol) [vacuus, empty]. A dry space filled with air or fluid in the interior of a cell.

Vacuum (vak'-u-am) [L.]. A space from which the air has been exhausted.

Vagabond's Disease. Parasitic infection of a pigmentation of the skin from chronic irritation by pediculi.

Vagal (vag'-gal) [vagus, to wander]. Pertaining to the vagus nerve.

Vagina (vag'-i-nah) [L.]. 1. A sheath. 2. The musculomembranous canal extending from the vulvar opening to the cervix and encasing the latter and the prostatic urethra. **V. cordis**, the pericardium. **V. femoris**, the femoral sheath.

Vaginal (vag'-i-nal) [vagina]. 1. Pertaining to or of the nature of a sheath, as the vaginal tunic (tunica vaginalis of the testis). 2. Pertaining to the vagina.

Vaginalectomy (vag-in-ah-ek'-to-me) [vagina; *ectomy*, (2)].

Vaginalis (vag-in-d'-lis) [vagina]. Vaginal.

Vaginitis (vag-in-ah'-tis) [vagina; *itis*, inflammation]. Inflammation of the tunica vaginalis of the testis.

Vaginant (vag'-i-nant) [vagina; *ant*, to surround]. Sheathing, vaginal.

Vaginate (vag'-i-nat) [vagina]. Sheathed.

Vaginectomy (vag-in-ek'-to-me) [vagina; *ectomy*, excision]. 1. Division of the vagina. 2. Division of the tunica vaginalis.

Vaginiglutens (vag-in-ig-lu'-ens) [vagina; *glutens*]. The tenuous vagina tennosa, or under Muscle.

Vaginismus (vag-in-ah'-mizm) [vagina]. Functional spasm of the vagina.

Vaginitis (vag-in-ah'-tis) [vagina; *itis*, inflammation]. Inflammation of the vagina.

Vagino- (vaj-in-o-) [vagina]. A prefix denoting pertaining to the vagina.

Vaginodynia (vag-in-oh'-din-ah) [vagina; *dynia*, pain]. Pain in the vagina.

Vaginofixation (vag-in-oh'-fik'-shun) [vagina; *fixation*]. An operation whereby the vagina is rendered immovable.

Vaginomycosis (vag-in-oh'-mi-koh'-sis) [vagina; *mycosis*, affecting the vagina].

Vaginoperitoneal (vag-in-oh'-per-ih'-e-ah) [vagina; *peritoneum*]. Relating to the vagina and the peritoneum.

Vaginopepy (vaj-in-oh'-pe-pee) [vagina; *pepy*, a sacculi]. The protrusion of the tunica vaginalis which results from anoma-

- transplantation of the testicle in cases of varicocele.
- Vaginoscope** (*vaj'-in-o-skōp*) [*vagina-*; *σκοπεῖν*, to view]. A vaginal speculum.
- Vaginoscopy** (*vaj-in-ōs'-kō-pe*). Inspection of the vagina.
- Vaginotomy** (*vaj-in-ōt'-ō-mē*) [*vagina-*; *τομή*, section]. Incision of the vagina.
- Vagino-vesical** (*vaj-in-ō-ves'-ik-ul*). See *Vesico-vaginal*.
- Vagino-vulvar** (*vaj-in-ō-vul'-var*). See *Vulvo-vaginal*.
- Vagitus** (*va-jit'-tus*) [*vagire*, to cry]. The cry of an infant. **V. uterinus**, the cry of a child while still in the uterus.
- Vago-accessorius** (*va-gō-ak-ses-ō'-re-us*). The vagus and accessorius nerves considered as one.
- Vagotomized** (*va-gōt'-om-īz-d*). Applied to an animal in which the vagi nerves have been severed intentionally.
- Vagotomy** (*va-gōt'-ō-mē*) [*vagus*; *τομή*, a cutting]. Division of the vagus nerve.
- Vagus** (*val'-gus*) [*vagare*, to wander]. The pneumogastric nerve. See under *Nerve*.
- V.-pneumonia**, pneumonia following section of the vagi in the lower animals, and due to the aspiration of food into the air-passages.
- Valence, Valency** (*val'-dens*, *val'-len-se*) [*valere*, to be worth]. The relative combining capacity of an atom compared with that of the atom of hydrogen.
- Valentin's Ganglion**. See *Ganglion, Valentin's*.
- V.'s Limiting Membrane**. See *Schwann, Sheath of*.
- Valentine's Reaction for Fuchsin**. Upon shaking ether with a solution containing fuchsin the ether does not dissolve the coloring-matter, but upon adding ferrous iodid the ether is colored violet.
- Valerian** (*val'-ē-re-an*). A plant of the genus *Valeriana*. The root of *Valeriana officinalis* (*valeriana*, U. S. P.; *valeriana rhizoma*, B. P.) contains a volatile oil, from which valeric acid is obtained. Valerian is employed as a mild nervous stimulant in hysteria, migraine, low fevers, etc. Dose 30 gr. (2 Gm.). **V., Fluidextract of** (*fluidextractum valerianæ*, U. S. P.). Dose 1 dr. (4 Cc.). **V., Infusion of** (*infusum valerianæ*, B. P.). Dose 1-2 oz. (32-64 Cc.). **V., Oil of** (*oleum valerianæ*, B. P.). Dose 4-5 min. (0.26-0.32 Cc.). **V., Tincture of** (*tinctura valerianæ*, U. S. P., B. P.). Dose 1-3 dr. (4-12 Cc.). **V., Tincture of, Ammoniated** (*tinctura valerianæ ammoniata*, U. S. P., B. P.). Dose 1-3 dr. (4-12 Cc.).
- Valerianate** (*val'-ē-re-an-āt*). A salt of valeric acid; those of ammonium, iron, quinin, and zinc are official.
- Valeric Acid, Valerianic Acid** (*va-le'-rik*, *val'-ē-re-an'-ik*). See *Acid, Valeric*.
- Valeridin** (*val'-er'-id-in*). See *Valeryl-phenelidin*.
- Valeryl** (*val'-er-il*). The compound C_2H_5O .
- V.-phenetidin**, $C_6H_5(OC_2H_5)NH.C_6H_5O$; it is sedative and antineuralgic. Dose 8-15 gr. (0.5-1.0 Gm.).
- Valetudinarian** (*val-et-u-din-a'-re-an*) [*valetudinarius*, *valetudo*, health]. An invalid.
- Valgoid** (*val'-goid*) [*valgus*; *εἶδος*, likeness]. Resembling valgus.
- Valgus** (*val'-gus*) [L., "bow-legged"]. 1. Bow-legged. 2. A condition in which the arch of the foot is depressed so that the inner side of the sole rests upon the ground. Syn., *Genu varum*; *Splay-foot*; *Talipes valgus*.
- Validol** (*val'-id-ol*) [*valerian*; *menthol*]. The chemically pure combination of menthol and valeric acid with the addition of 30% free menthol. It is a colorless, somewhat viscous fluid, with a pleasant odor and cooling taste. It is claimed to have powerful analeptic and carminative properties, and is an excellent solvent and vehicle for menthol. It is also employed as an antispasmodic; in migraine; as a specific in alcoholic intoxication; as a prophylactic against sea-sickness, etc. Dose 10-15 drops daily on sugar. **V., Camphorated**, validol containing 10% of camphor, used in scotoma scintillans. Dose 10-15 drops.
- Vallate** (*val'-āt*) [*vallum*, rampart]. Surrounded with a walled depression; cupped.
- Vallecula** (*val-ek'-u-lah*) [*vallis*, a valley]. A shallow groove or depression. **V. cerebelli**, the depression between the cerebellar hemispheres.
- Valleix's Aphthæ**. See *Aphthæ, Bednar's*, under *Aphthæ*.
- V.'s Points douloureux**, painful points found in peripheral neuralgias where the nerves pass through openings in fascia or issue from bony canals.
- Vallet's Mass.** Ferrous sulfate, 100; sodium carbonate, 110; honey, 38; sugar, 25; syrup and distilled water, of each, enough to make 100 parts.
- Valley of the Cerebellum**. See *Vallecula cerebelli*.
- Valli-Ritter's Law**. See *Ritter-Valli's Law*.
- Vallis** (*val'-is*). See *Vallecula cerebelli*.
- Vallum** (*val'-um*) [L.]. The supercilium or eyebrow.
- Valsalva's Experiment**. Strong expiratory efforts made while the mouth and nose are closed cause at first an increase, and when continued, finally a diminution, of blood-pressure. The phenomenon is due to reflex actions of the vasomotor center through the pulmonary nerves. **V.'s Ligaments**, the extrinsic ligaments of the pinna of the ear. **V.'s Liquor**. See *Scarpa's Liquor*.
- V.'s Sinus**, the aortic sinus. **V.'s Test**, inflation of the tympanic cavity with air by means of forcible expiratory efforts made while the nose and mouth are tightly closed. Perforation of the tympanic membrane may be detected by this test.
- Valsol** (*val'-sol*). An ointment-vehicle consisting of a mixture of oxygenized hydrocarbons, which forms an emulsified mass with water and readily dissolves iodine, iodoform, ichthol, etc.
- Valsuani's Disease**. Pernicious progressive anemia occurring in pregnancy.

Value, Globular. A fraction of which the numerator is the percentage of hemoglobin and the denominator the percentage of red corpuscles. It indicates the percentage of hemoglobin in a corpuscle. Syn., *Value globulaire*.

Valve (*valv*) [*valva*, a door]. 1. A device placed in a tube or canal so as to permit free passage one way, but not in the opposite direction. 2. A fold of membrane acting as a valve, as *valve* of the heart. **V., Aortic**, the valve consisting of three semilunar segments, situated at the junction of the aorta with the heart. **V.s, Auriculoventricular**, the mitral and tricuspid valves. **V., Bauhin's**, the ileocecal valve. **V., Bicuspid**. See *V., Mitral*. **V., Coronary**, the valve protecting the orifice of the coronary sinus and preventing regurgitation of blood during the contraction of the right auricle. **V., Eustachian**, that between the inferior vena cava and the right auricle of the fetus. **V. of Hasner**, an imperfect valve at the inferior meatus of the nose. **V., Heister's**, a fold of mucous membrane at the neck of the gall-bladder. **V., Ileocecal**, the folds of mucous membrane at the junction of the ileum and cecum. **V. of Kerkring**, any one of the valvule conniventes (q. v.). **V.s, Laryngeal**, a term applied to the superior or false vocal bands because of their supposed use in holding the breath. **V., Mitral**, the valve that controls the opening from the left auricle to the left ventricle; it is constituted of two leaflets. **V., Pulmonary**, **V., Pulmonic**, the valve composed of three semilunar leaflets, and situated at the junction of the pulmonary artery and the right ventricle. **V.s, Rectal**, semilunar folds fixed to the rectum by their convex borders, occupying in their attachments from one-third to one-half the circumference of the gut. They are composed of a duplication of the mucous membrane including some cellular tissue and a few circular muscular fibers. The margins and diameters of these pass each other when the rectum is empty and present an additional barrier to the involuntary evacuation of the feces, retarding downward movement. **V.s, Semilunar**, the three valves guarding the orifice of the pulmonary artery and aorta. **V.s, Sigmoid**. See *V.s, Semilunar*. **V.-test**, **Azoulay's**, auscultation of the heart while the patient is lying with the arms raised perpendicularly and the legs lifted abductively. **V. of Thebesius**, the coronary valve or fold of the endocardium of the right auricle which protects the coronary sinus. **V., Tricuspid**, that which controls the opening from the right auricle to the right ventricle; it consists of three segments. **V. of Varolius**, the ileocecal valve. **V. of Vieussens**, a thin leaf of medullary substance forming the roof of the anterior portion of the fourth ventricle of the brain.

Valvula (*val'-vuh*) [dim. of *valva*, a valve].

A small valve. **Valvule conniventes**, the transverse folds of mucous membrane of the small intestine. Syn., *Valves of Kerkring*.

Valvule cuspidales, the mitral and tricuspid valves.

Valvular (*val'-vuh-lar*) [*valv*]. Pertaining to or originating at a valve.

Valvulitis (*val'-vuh-luh*) [*valv*, *itis*, inflammation]. Inflammation of a valve, especially of a cardiac valve.

Valyl (*val'-ul*) [$\text{CH}_3 \cdot \text{CH}_2 \cdot \text{N}(\text{C}_2\text{H}_5) \cdot \text{CO}$], valerianic-acid diethylamide, a colorless, oily fluid, used in nervous diseases. Dose: 1 g. (0.125 gr.) in capsule three times daily.

Vanadin (*van'-ad-in*). A remedy recommended in pulmonary tuberculosis, said to consist of a solution of a vanadium salt with sodium iodide.

Vanadium (*van'-ad-ium*) [*vanad*, a genus of Scandinavian mythology]. A rare metallic element. See *Elements*, Table of Elements.

Van Buren's Disease. Chronic, unrescribed infiltration of the corpus cavernosum, one of the erectile bodies of the penis.

Van Deen's Test for Blood in the Urine. The addition of a Cc. of tincture of guaiac and a Cc. of old oil of turpentine produces a blue color in the presence of blood or hemoglobin.

Van der Kolk's Law. See *Acute Laryngitis*.

Vanilla (*van-il'-ah*) [L.]. A genus of plants of the order *Orchidaceae*. The fruit of *Vanilla planifolia* is the vanilla of the L. S. P. It is used from 1 to 4% of vanilla (q. v.). Vanilla is used as a flavoring agent, and as an ingredient of a test solution for hydrocyanic acid.

V., Tincture of (*tinctura vanille*), U. S. P., vanilla, sugar, alcohol, and water.

Vanillin (*van-il'-in*) [*Vanillinum*] (U. S. P.) [$\text{C}_8\text{H}_8\text{O}_2$], an aromatic crystalline principle, the methyl ether of protocatechuic acid. Dose: $\frac{1}{2}$ gr. (0.03 gm.). **V.-paraphenetol**, a crystalline condensation-product of vanillin with paraphenetol; it is hypodermic, antineuralgic, and anesthetic. Dose: 20-30 C. (1.5-2.0 gm.).

Vanillism (*van-il'-ism*) [*vanilla*]. A form of dermatitis characterized by cracked itching occurring among vanilla workers.

Van Swieten's Liquor, Van S.'s Solution. A solution of mercuric chloride 2 gr., anhydrous, distilled water sufficient to make 4 oz.

Vapocauterization (*va-po-aw'-ter-iz-ash-n*). See *Almoducutis*.

Vapor (*va'-por*) [L.]. A gas, especially the gaseous form of a substance which at ordinary temperatures is liquid or solid.

Vaporarium (*va-po-er'-arium*) [L.]. A vapor bath, an establishment for giving vapors.

Vapores uterini. Synonym of *Fluxus*.

Vaporization (*va-po-er'-iz-ash-n*). The conversion of a solid or liquid into a vapor.

Vaporize (*va'-por-iz*) [*vapor*]. To convert into vapor.

Vaporole (*va'-por-ol*) [*vapor*]. A flexible glass capsule containing a drug for inhalation.

Varicella (*var-ih'-el'-ah*) [dim. of *varius*, various]. Chickenpox, an acute contagious disease of childhood, characterized by eruption of transparent vesicles which appear in successive crops on different parts of the body. The incubation period is about

two weeks. The disease is usually mild, and runs its course in two or three days. In rare cases complications, such as nephritis, develop.

Varicelliform (*var-is-ell'-e-form*). Characterized by vesicles resembling those of varicella.

Variceloid (*var-is-ell'-oid*) [*varicella*; *elidos*, like]. Resembling varicella.

Varices (*var'-is-es*) [L.]. Plural of *varix*.

Variciform (*var-is-i'-form*) [*varix*; *forma*, a form]. Having the form of a varix.

Varicocele (*var'-ik-o-sel*) [*varix*; *κῆλη*, a tumor]. Dilatation of the veins of the spermatic cord, forming a soft, elastic swelling.

Varicoectomy (*var-ik-o-sel'-ek-to-me*) [*varicocele*; *τετμή*, excision]. Excision of a varicocele.

Varicomphalus (*var-ik-om'-fal-us*) [*varix*; *ἀμφαλός*, navel]. A varicosity at the navel.

Varicose (*var'-ik-ös*) [*varix*]. 1. Of blood-vessels, swollen, knotted, and tortuous.

2. Due to varicose veins, as *varicose ulcer*. **V. Aneurysm**. See under *Aneurysm*. **Arteriovenous**.

Varicosis (*var-ik-o'-sis*) [*varicose*]. An abnormal dilatation of the veins.

Varicosity (*var-ik-ös'-it-e*) [*varicose*]. The condition of being varicose; a varicose portion of a vein.

Varicotomy (*var-ik-o'-me*). See *Circotomy*.

Varicula (*var'-ik'-u-lah*) [dim. of *varix*]. A varix of the conjunctiva.

Variform (*var'-e-form*) [*varius*, various; *forma*, form]. Having diversity of form.

Variola (*var'-i'-o-lah*) [*varius*, variegated; spotted]. Smallpox, a contagious infectious disease ushered

VARICOSE VEINS.—
(Moulton)

in with severe febrile symptoms, which, in the course of two or three days, are followed by a papular eruption spreading over all parts of the body. During the succeeding two weeks the eruption passes through the stage of vesicles and pustules, the latter going on to the formation of crusts. The falling off of the crusts leaves a pitted appearance of the skin (pock-marks). The period of incubation is about thirteen days.

V., Confluent, **V. confuens**, a severe form in which the pustules spread and run together.

V., Discrete, a form in which the pustules preserve their distinct individuality.

V., Hemorrhagic, smallpox in which hemorrhage occurs into the vesicles, which gives them a blackish appearance.

V., Malignant, black smallpox, a severe and very fatal form of the hemorrhagic type.

V., Mitigated, **V., Modified**. See *Varioloid*.

Variolate (*var'-e-o-lät*) [*variola*]. 1. Having small pustules like those of variola. 2. To inoculate with smallpox.

Variolation, **Variolization** (*var-e-o-lä'-shun*,

var-e-o-lä'-za'-shun) [*variola*]. The inoculation of smallpox.

Varioliform (*var-i'-o-lä'-orm*) [*variola*; *forma*, form]. Resembling variola.

Varioloid (*var'-e-o-löid*) [*variola*; *elidos*, like]. A mild form of variola occurring in persons that have been vaccinated or inoculated with smallpox virus.

Variolus (*var-i'-o-lus*) [*variola*]. Pertaining to or having the nature of variola.

Varix (*va'-riks*) [*varus*, crooked, pl., *varices*]. A dilated and tortuous vein. **V., Aneurysmal**. See *Aneurysmal Varix* under *Aneurysm*. **Arteriovenous**. **V. lymphaticus**, dilation of the lymphatic vessels, especially that due to the *Filaria sanguinis-hominis*.

Varolian (*var-o'-le-an*) [*Varioli*, Italian anatomist, 1542-1575]. Relating to the pons varolii.

Varolii, Pons. The mesencephalon; that part of the brain which connects the oblongata with the cerebral peduncles and the cerebellum. See under *Pons*.

Varus (*va'-rus*). A condition in which the foot is turned inward. See *Talipes varus*.

Vas (*vas*) [L.; pl., *vasa*]. A vessel. **V. aberrans**, a blind tube projecting from the lower part of the epididymis. **Vasa afferentia**, the branches of a lymphatic or lacteal vessel entering a lymphatic gland. **Vasa brevia**, the gastric branches of the splenic artery.

Vasa centralia retinae, the central artery and veins of the retina. **Vasa ciliaria**, the ciliary arteries and veins.

V. deferens, the excretory duct of the testis. **Vasa efferentia**.

1. The terminal ducts of the rete testis.

2. The efferent vessels of lymphatic glands.

Vasa intestini tenuis, small vessels arising from the superior mesenteric artery and distributed to the jejunum and ileum.

Vasa recta, the tubules of the rete testis. **Vasa vasorum**, the vessels supplying the arteries and veins with blood.

Vasa vorticosa. See *Vena vorticosa*.

Vasal (*va'-sal*) [*vas*, a vessel]. Pertaining to a vessel or to vessels; vascular.

Vasalium (*vas-a'-le-um*) [*vas*; pl., *vasalia*]. Tissue peculiar to vascular or closed cavities.

Vascular (*vas'-ku-lar*) [*vasculum*]. Consisting of, pertaining to, or provided with vessels.

Vascularity (*vas-ku-lar'-it-e*) [*vascular*]. The quality of being vascular.

Vascularization (*vas-ku-lar-i-zä'-shun*) [*vascular*]. The process of becoming vascular.

Vasculitis (*vas-ku-lit'-tis*). See *Angitis*.

Vasculum (*vas'-ku-lum*) [L.]. A small vessel.

V. aberrans. See *Vas aberrans*.

Vasectomy (*vas-ek'-to-me*) [*vas*; *τετμή*, a cutting out]. Resection of the vas deferens.

Vaselin (*vas'-elin*). See *Petrolatum*.

Vaselon (*vas'-el-on*). An ointment-base consisting of a mixture of palmitone and stearone dissolved in mineral oil.

Vasicin (*vas'-is-in*). An alkaloid from *Adhatoda vasica*; it is used in bronchial affections and as an insecticide.

Vasifactive (*vas-ij-ak'-tiv*) [*vas*; *facere*, to make]. Giving rise to new blood-vessels.

Vasiform (vas'-i/-orm) [vas-, forma, form]. Resembling a vessel or duct.

Vaso- (va-zo-) [vas-, a vessel]. A prefix denoting pertaining to a vessel.

Vasoconstriction (va-zo-kon-strik'-shun) [vaso-, constringere, to bind]. The constriction of blood-vessels.

Vasoconstrictive (va-zo-kon-strik'-tiv) [see Vasoconstriction]. Promoting or stimulating constriction of blood-vessels.

Vasoconstrictor (va-zo-kon-strik'-tor). 1. Causing a constriction of the blood-vessels. 2. A nerve or a drug that causes constriction of blood-vessels.

Vasocorona (va-zo-ko-ro'-nah) [vaso-, corona, crown]. The system of arterioles that supply the periphery of the spinal cord.

Vasodentin (va-zo-den'-tin) [vaso-, dentin]. Dentin possessing blood-vessels.

Vasodilator (va-zo-di-la'-tor). 1. Pertaining to the dilating motility of the nonstriated muscles of the vascular system. 2. A nerve element or a drug that causes dilation of blood-vessels.

Vasofactive (va-zo-fak'-tiv). See Vasifactive.

Vasoformative (va-zo-for'-mat-iv) [vaso-, formare, to form]. Forming or producing vessels.

Vasoganglion (va-zo-gang'-le-on) [vaso-, ganglion, ganglion]. A knot or rete of blood-vessels.

Vasogen (va-zo-jen) [vaselin; γ-ωων, to produce]. Oxygenated vaselin.

Vasohypertonic (va-zo-hi-per-ton'-ik). See Vasomultactor.

Vasohypotonic (va-zo-hi-po-ton'-ik). See Vasodilator (1).

Vasoinhibitor (va-zo-in-hib'-it-or) [vaso-, inhibere, to inhibit]. A drug or agent tending to inhibit the action of the vasomotor nerves.

Vasoinhibitory (va-zo-in-hib'-it-o-ri) [see Vasoinhibitor]. Inhibiting vasomotor action, especially vasoconstrictor action.

Vasol (val-zol). A mixture of liquid petrolatum with ammonium oleate. V., Iodized, vasol containing 7% of iodine.

Vasomotion (va-zo-mot'-shun) [vaso-, motio, motion]. Increase or decrease of the caliber of a blood-vessel.

Vasomotor (va-zo-mot'-tor) [vaso-, motor, from movere, to move]. Regulating the tension of blood-vessels. V. Ataxia, instability of the circulatory mechanism characterized by abnormal readiness of disturbance of the equilibrium of the cardiovascular apparatus, with tardiness of restoration. Dermographia is an essential feature and in most cases fastidious urticaria can be induced, mothlings of the skin and stigmata are common, there are cardiac disturbances and usually a hemorrhagic tendency. V. Centra, centers situated in the medulla oblongata and spinal cord, and governing the caliber of the blood-vessels. V. Nerves, the nerves passing to the blood-vessels, they are of two kinds, the vasoconstrictor (vasohypertonic) nerves, or those stimulation of which causes contraction of

the blood-vessels, and the vasodilator (vasohypotonic) nerves, stimulation of which causes dilation of the vessels.

Vasoparesis (va-zo-pa'-e-sis) [vaso-, paresis, paresis affecting the vasomotor nerves].

Vasosection (va-zo-tek'-shun) [vaso-, secare, cutting]. Severing of the vasobulb.

Vasosensory (va-zo-sen'-sory) [vaso-, sensus, serving as a sensory apparatus for the vessels].

Vasospastic (va-zo-spas'-tik) [vaso-, spasm, spasm].

Vasothion (va-zo-thi'-on) [vaso-, thion, vasogen and sulfur, to be, it is used in treating skin diseases].

Vasotonic (va-zo-ton'-ik) [vaso-, tonus, pertaining to the normal tone or tension of blood vessels].

Vasotribe (va-zo-tri'-be) [vaso-, tribere, to grind]. An instrument for controlling hemorrhages; an angiotribe.

Vasotrophic (va-zo-tro'-fik) [vaso-, trophos, nourishment]. Concerned in the nutrition of vessels.

Vastus (vor'-tus) [L.]. 1. Large extremity. 2. A large muscle of the thigh. See Vastus Muscle.

Vater's Ampulla. See Ampulla of Vater. V's Corpuscles. See Pacinian Corpuscles. V's Fold, a vertical fold of mucous membrane at the lower angle of Vater's ampulla.

Vater-Pacini's Corpuscles. See Corpuscles Pacinian.

Vectis (vek'-tis) [vehere, to carry]. An instrument similar to the single blade of a forceps, used in hastening the delivery of the head in labor.

Vegetable (veg'-et-ah-bul) [vegetare, to quicken]. 1. A plant, especially one used as food. 2. See Vegetal. V. Albumin. See Albuminose. V. Proteids. See under Protein. V. Sulfur. See Lycopodium.

Vegetal (veg'-et-ah-bul) [see Vegetable]. Of or pertaining to plants; characteristic of plants.

Vegetarian (veg'-et-ah-ri-an) [see Vegetable]. One who lives on vegetable food alone.

Vegetarianism (veg'-et-ah-ri-an-izm) [see Vegetable]. 1. The doctrine that vegetable food is the only kind proper for man. 2. The practice of living only on vegetable food.

Vegetation (veg'-et-ah-shun) [see Vegetable]. An outgrowth resembling a plant in nature, as the fibrous projections on the valves, valves in endocardium, papillaries, polypoid growths, etc. V.s. Adenoid, growths of lymphoid tissue in the nasopharyngeal cavity.

Vegetative (veg'-et-ah-tiv) [see Vegetable]. Having the power of growth like a plant.

Vehicle (veh'-ik-ul) [vehiculum, from vehere, to carry]. An exipient or substance serving as a medium of administration of medicine.

Vein (vayn) [vena]. A blood vessel carrying blood from the tissues to the heart. Veins, like arteries, have three coats, but less well developed, many also possess valves. V., Angular, a continuation of the frontal vein downward to become the facial at the lower margin of the orbit. V., Anterior Internal Maxillary. Same as V., Facial. V., Vag.

Auricular (*anterior and posterior*). 1. The vein of the ear. 2. A vein from the cardiac auricles. **V., Axillary**, a large vein formed by the junction of the brachial veins. **V.s, Azygos**, three veins situated in front of the bodies of the thoracic vertebrae; they are a means of communication between the superior and inferior vena cava. **V., Basilar**, a large vein passing back over the crus cerebri to unite with the veins of Galen. **V., Basilic**, a vein on the inner side of the arm. **V.s, Brachial**, the veins accompanying the brachial artery. **V., Brachiocephalic**. See *V.s, Innominate*. **V.s of Breschet**, the veins of the diploe. **V., Cardiac, Great**. See *V., Coronary* (1). **V., Cephalic**, a large vein of the arm, formed by the union of the median cephalic and superficial radial, and opening into the axillary vein. **V.s, Cerebral**, veins coming from the cerebrum; they are cortical and central. **V., Coronary**. 1. The great cardiac vein, a vein opening into the coronary sinus of the heart. 2. See *V., Gastric*. **V.s, Emissary**, small veins passing through the cranial foramina and connecting the cerebral sinuses with external veins. **V., Facial**, a continuation of the angular vein; it joins the internal jugular at the level of the hyoid bone. **V., Facial, Deep**, one joining the facial vein below the malar bone; it receives the blood from the pterygoid plexus. **V., Femoral, Common**, a short thick trunk, corresponding to the femoral artery, it becomes the external iliac at Poupart's ligament. **V., Femoral, Deep**, a vein accompanying the femoral artery; it empties into the superficial femoral. **V., Femoral, Superficial**, a name given to the femoral vein before it is joined by the deep femoral vein to form the common femoral vein. **V., Frontal**, the anterior vein of the scalp as it crosses the frontal bone. **V.s of Galen**, two large veins of the brain, continuations of the internal cerebral veins, and opening into the straight sinus. **V., Gastric**, a vein accompanying the artery of the same name. **V.s, Hemiazygos**, small, accessory veins of the azygos veins. **V.s, Hemorrhoidal**, a plexus of veins surrounding the rectum. **V., Iliac, Common**, a vein formed opposite the sacroiliac synchondrosis by the confluence of the external and internal iliac veins. **V., Iliac, External**, a continuation upward of the common femoral; it extends from the lower border of Poupart's ligament to the lower border of the sacroiliac synchondrosis. **V., Iliac, Internal**, a short trunk extending from the great sacroiliac synchondrosis. **V.s, Innominate**, two large valveless veins returning the blood from the head, neck, and upper extremity. **V., Jugular, Anterior**, a vein beginning at the level of the chin and ending at the clavicle in the external jugular vein. **V., Jugular, External**, a vein formed at the angle of the lower jaw by the union of the posterior auricular and temporo-maxillary veins; it empties into the subclavian. **V., Jugular,**

Internal, a continuation of the lateral sinus, beginning at the jugular fossa, accompanying the internal and common carotid arteries, and joining the subclavian vein to form the innominate. **V. of Marshall**. See *V., Oblique*. **V., Maxillary Anterior**, a small vein of the anterior portion of the face. **V., Maxillary, Internal**, one accompanying the first part of the internal maxillary artery. **V., Median Basilic**, a vein uniting with the ulnar to form the basilic. **V., Median Cephalic**, a vein uniting with the superficial radial to form the cephalic. **V., Median, Deep**, a vein formed by the union of the outer vena comites of the ulnar artery and the muscular and radial recurrent veins. **V., Median, Superficial**, one starting at the anterior plexus of the wrist and uniting with the deep median to form the median. **V., Mesenteric, Inferior**, one that accompanies the inferior mesenteric artery and joins the splenic vein behind the pancreas. **V., Mesenteric, Superior**, one that accompanies the superior mesenteric artery and joins the splenic vein to form the portal. **V., Oblique, of Marshall**, a vein crossing the dorsal portion of the left auricle of the heart. It is the remnant of the left duct of Cuvier. **V.s, Omphalomesenteric**, several venous trunks of the primitive embryonic circulation which carry the blood from the terminal sinus to the meatus venosus, a short vitelline vein. **V., Ophthalmic**, a short trunk carrying the blood from the eye and emptying into the cavernous sinus. **V.s, Plantar**, veins accompanying the plantar arteries. **V., Popliteal**, one formed by the union of the vena comites of the anterior and posterior tibial arteries; it accompanies the popliteal artery, and becomes the femoral vein at the junction of the lower with the middle third of the thigh. **V., Portal**, a short trunk entering the liver at the transverse fissure and formed by the junction of the superior mesenteric and splenic veins. **V.s, Pulmonary**, four veins, two from each lung, returning the aerated blood from the lungs to the heart. **V., Radial, Superficial**, a vein accompanying the musculocutaneous nerve up the radial side of the forearm. **V., Ranine**, the chief vein conveying blood from the tongue. It originates near the tip beneath the mucosa, accompanies the hypoglossal nerve across the hypoglossus muscle, and empties into the internal jugular vein. **V., Renal**, a vein accompanying the renal artery. **V., Saphenous, Long or Internal**, a long superficial vein running up the inner aspect of the leg and thigh, terminating in the femoral vein below Poupart's ligament. **V., Saphenous, Short or External**, a superficial vein running up the outer aspect of the foot, leg, and back of the calf, and emptying into the popliteal vein. **V., Spermatic**, one returning the blood from the testicle, on the right side it terminates in the inferior vena cava and on the left in the left renal vein. **V., Splenic**, one returning the blood from the

spleen, and forming the portal vein by its union with the superior mesenteric vein. **V.**, **Subclavian**, a continuation of the axillary vein, uniting with the internal jugular vein to form the innominate vein at the sternoclavicular articulation. **V.s**, **Temporal**, veins returning the blood from the temporomaxillary region of the head, they join the internal maxillary vein to form the temporomaxillary vein. **V.**, **Temporomaxillary**, one formed by the union of the temporal and internal maxillary veins in the parotid gland; it terminates in the external jugular. **V. of Trolard**, a vein of the cerebrum passing along the posterior branch of the fissure of Sylvius, and emptying into the superior petrosal sinus. **V.**, **Ulnar**, one running from the wrist up the anterior and inner surface of the forearm. **V.**, **Umbilical**, a vein conveying the blood from the placenta to the fetus. **V.**, **Vesalius'**. See *Vesalius's Vein*. **V.s**, **Vitelline**. See *Vitelline Veins*. **Velamen** (vel'-am-en) [L.]. A veil or envelop. **Velamentous** (vel-am-en'-tus) [velamen]. Resembling a veil. **Velar** (vel'-lar) [velum]. Pertaining to a velum, especially the velum palati. **Veld Sore**. A lesion common among troops during the Boer war; a running sore probably due to the sting of a fly. **Vella's Fistula**. An intestinal fistula for obtaining gastric juice. **Vellication** (vel'-ik-a'-shun) [vellicare, to twitch]. Spasmodic twitching of muscular fibers. **Vellolin** (vel'-o-lin). A purified wool-fat. **Vellosin** (vel'-o-sin), $C_{22}H_{38}N_2O_4$. An alkaloid contained in *Passerina* bark, *Geissospermum velum*, it resembles brucin in physiologic action. **Velosynthesis** (ve-lo-sin'-thes-is). See *Staphylinaphy*. **Velpeau's Bandage** (vel'-poe) [Velpeau, a French surgeon]. A bandage for the shoulder. **V.'s Hernia**, femoral hernia anterior to the blood vessels. **Velum** (vel'-um) [L., "a veil; a sail"]. A veil or veil-like structure. **V.**, **Anterior Medullary**. See *Value of Ventrals*. **V. interpositum**, the membranous roof of the third ventricle. **V. palati**, the soft palate. **V.**, **Posterior Medullary**, the commissure of the flocculus of the cerebellum. **Vena** (ve'-nah) [L.]. A vein. See *Vein*. **V. cava inferior**, a vein formed by the junction of the two common iliac veins and emptying into the right auricle of the heart. It receives the lumbar, right spermatic, renal, suprarenal, phrenic, and hepatic veins. **V. cava superior**, a vein formed by the union of the innominate veins, and conveying the blood from the upper half of the body to the right auricle. **V. comes**, **Venæ comites**, a vein or veins accompanying an artery in its course. **V. corpora striati**, a vein which helps to form the internal cerebral vein and returns the blood from the

corpus striatum. **Venæ galeni**, the two trunks formed by the union of the two of the corpus striatum and that of the choroid plexus, they empty into the straight sinus. **Venæ minime cordis**, the branches of the cardiac veins emptying into the auricle of the heart. **Venæ thibææ**. See *Venæ minime cordis*. **Venæ vorticose**, the venous network and trunks of the choroid coat of the eye.

Venation (ven-en-a'-shun) [venenum, a poison]. The condition of a poisoning.

Venenatus (ven-en-a'-tus) [see Venenatum, Poisonous].

Venenosalivary (ven-en-o-sal'-iv-a-ri) See *Venomosalivary*.

Venenose, Venenous (ven-en-oh, ven'-o-us) [venenosus]. Toxic, poisonous.

Venosity (ven-en-oh'-i-ty) The condition of being toxic.

Veneræal (ven-e'-real) [Venus, the goddess of love]. Pertaining to or produced by sexual intercourse. **V. Diseases**, gonorrhea, syphilis, and chancre.

Venerismus pyorrhoeus. Gonorrhea.

Venery (ven'-er-ee) [see Veneræal]. Venereal course.

Venesection (ven-e'-sek'-shun) See *Blood letting*.

Venesuture (ven-e'-ro'-shun) [vena, vessel; suture]. The suturing of a vein.

Veniplex (ven'-ip-lex) [vena, plexus]. A plexus of veins.

Venipuncture (ven'-o-punk'-chur) Puncturing a vein.

Venisuture (ven-i'-ru'-shun) See *Venesuture*.

Venom (ven'-om) [venenum, poison]. A toxin, especially a poison secreted by certain reptiles and insects.

Venomosalivary (ven-en-o-sal'-iv-a-ri) Secreting a toxin saliva.

Venomotor (ven-en-o-mo'-tor) [venen, to move; motor, causing]. Causing the veins to contract or move.

Venomous (ven'-om-us) [venen]. Poisonous; secreting venom.

Venosclerosis (ven-o-skle-ro'-sis) [venen, vessel; sclerosis, hard]. Induration of the veins.

Venosity (ven-ar'-i-ty) [venen]. A condition in which the arterial blood shows venous qualities.

Venous (ve'-nus) [venen]. Pertaining to or produced in a vein. **V. Hum**, the murmur or rushing sound heard in stimulation of a vein.

Venter (ven'-ter) [L.]. 1. The belly or abdomen. 2. The belly of a missile. 3. The cavity of the abdomen. 4. The concavity of any expanded part, as the venter of the scapula, *venter of the thumb*.

Ventilation (ven-til-a'-shun) [ventilare, to fan]. The act or process of supplying fresh air; the act or process of purifying the air of a place.

Ventose (ven'-tose) [ventosa, a cupping glass; v. A cupping glass. 2. (ventosus, much). Flabby.

Ventosity (ven-tos'-i-ty). Flabbiness.

ventrad (ven'-trād) [*venter*; *ad*, toward]. **Ventricle** (ven'-trik-l) [*ventriculus*, dim. of *venter*, a belly]. A small cavity or pouch.

SCHEME OF VEINS—(Howson.)

ventral (ven'-trāl) [*venter*]. Pertaining to the belly.

V. of Arantius, a culdesac at the lower end of the fourth ventricle. **V.s of the Brain**,

cavities in the interior of the brain, comprising the two lateral ventricles, the third, fourth, and fifth ventricles. **V. of Cord**, the central canal of the spinal cord. **V.**, **Fifth**, the cavity between the laminae of the septum lucidum. **V.**, **Fourth**, the space between the oblongata and pons in front, and the cerebellum behind. **V. of Larynx**, a depression between the true and false vocal bands. **V.s**, **Lateral**, serous cavities, one in each cerebral hemisphere, and communicating with the third ventricle through the foramen of Monro. Each ventricle consists of a triangular central cavity or body and three smaller cavities or cornua. The corpus callosum forms the roof of the body, the septum lucidum the mesal boundary and the floor is formed by the corpus striatum, tania semicircularis, thalamus, choroid plexus, corpus fimbriatum, and fornix. **V.**, **Left, of Heart**, that upon the dorsal and left side of the heart, and which, through the aorta, forces the blood throughout the body. **V.**, **Right, of Heart**, that forcing the blood through the pulmonary artery into the lungs. **V.**, **Third**, an open space between the optic thalami and extending to the base of the brain.

Ventricornu (ven-tri-kor'-nu) [venter; cornu]. The anterior horn of the gray matter of the myelon.

Ventricular (ven-trik'-u-lar) [ventricle]. Pertaining to a ventricle. **V. Aqueduct**. See *Aqueductus cerebri*.

Ventricularis (ven-trik'-u-lar'-is). The thyroepiglotticus muscle. See under *Muscle*.

Ventricumbent (ven-tri-kum'-bent) [venter; cubere, to lie]. Lying with the ventral surface down.

Ventriduction (ven-tre-duk'-shun) [venter; ducere, to lead]. The act of drawing a part toward the belly.

Ventrimeson (ven-trim'-e-sun) [venter; meson, middle]. The mesial line on the ventral aspect of the body.

Ventripyramid (ven-trip'-ir'-am-id) [venter; pyramid]. An anterior pyramid of the oblongata.

Ventro- (ven-tro-) [venter, the belly]. A prefix signifying relation to the belly.

Ventrocystorrhaphy (ven-tro-sis-to-r'ra-fa) [venter; cyst, cyst; rha, suture]. Suture of an opened cyst-wall to the wall of the abdomen so as to provide a free discharge of its contents.

Ventriofixation (ven-tro-fik'-a-shun) [venter; fixatio]. The suturing of a displaced uterus to the abdominal wall.

Ventrihysteropexy (ven-tro-his-to-r'ro-pe-k'e) [venter; hystera, uterus; pexis, a fixing]. Ventriofixation.

Ventroinguinal (ven-tro-in'-gu-in-al) [venter; inguinis]. Pertaining to the abdomen and the groin.

Ventrolateral (ven-tro-lat'-er-al). Relating to the ventral and lateral aspects of a part.

Ventropptosis (ven-tro-'lo'-sis). See *Gastroptosis*.

Ventroscopy (ven-tros'-ko-pe) [venter; omoscopy,

to view]. Direct examination of the abdominal and pelvic cavities by means of an apparatus resembling the cystoscope.

Ventrosuspension (ven-tro-sus-pen'-shun) [venter; suspensio, suspension]. See *Ventropexy*.

Ventrotomy (ven-tro-'to-me) [venter; tomos, cut]. Celiotomy.

Ventrovessicofixation (ven-tro-ves-i-ko-fik'-a-shun) [venter; vesica, bladder; fixatio]. The suturing of the uterus to the bladder or abdominal wall.

Venule, Venula (ven'-ul, ven'-u-lu) [vena; dimin. of vena a vein]. A small vein.

Veratrin (ver-at'-rin) [Veratrum L. S. 7]. A mixture of alkaloids obtained from the root of *Lobelia inflata* or *Lobelia*, of the order *Liliaceae*. It is a local irritant and produces tetanic convulsions followed by paralysis. It first stimulates, then paralyzes the vasomotor center. It is used externally in the form of an ointment in rheumatism, gout, or neuralgia. **V. Ointment** (unguentum veratrinum, U. S. P.), an ointment composed of veratrin, expressed oil of almond, and lanolin. **V.**, **Oleate of veratrin** (oleum veratrinum, U. S. P.), veratrin, olea and olive oil.

Veratroidin (ver-at-roi'-din). See under *Veratrum*.

Veratrol (ver-at'-rol), $C_8H_8O_2$. A colorless oil with aromatic odor obtained from veratrin acid by action of barite with heat. It is used as an antiseptic by inhalation and by injection in 1% solution, less poisonous than guaiacol but more caustic.

Veratrum (ver-at'-trum). A genus of plants of the order *Liliaceae*. The rhizome consists of V. *viride*, American belladonna, or *L. officinale*, white belladonna, *Veratrum* U. S. P., *Veratrum viridifolium*, B. P., contains the alkaloids jervin and veratridin. The former is present to the vasomotor centers and the motor centers of the spinal cord. In too doses it produces slowing of the pulse, fall in blood pressure, relaxation of peripheral convulsions, paralysis, and death from failure of the respiration. *Veratridin* is bitter and produces vomiting and purging, it is also a depressant to the motor centers of the spinal cord and to the pulse. When veratrin is administered the combined effect is to depress the pulse, and a fall in blood pressure is obtained, and convulsions, in slowing of the pulse and lowering of blood pressure, with vomiting in the early stages. It is employed in certain conditions, as pneumonia, peritonitis, postoperative eclampsia, and in excessive cerebral hyper trophy. **V.**, **Fluidextract of** (extractum veratrum, U. S. P.). Dose: 1-2 cc. (15-30 minims). **V.**, **Tincture of** (tinctura veratrum, U. S. P.). Dose: 1-2 cc. (15-30 minims).

Verbascum (ver-bas'-kum) [L.]. Mallow, a genus of plants of the order *Scrophulariaceae*. The leaves and flowers of *V. thapsus* have been used as demulcent in catarrhal inflammation of mucous membranes and as an application to hemorrhoids.

Verbigeration (*ver-bij-er-a'-shun*) [*verbigere*, to talk]. The frequent and uncontrollable repetition of the same word, sentence, or sound without reference to its meaning.

Verdigris (*ver'-dig-ris*) [Fr., *verd de gris*, probably from L., *viridis*, green; *as*, copper]. Copper acetate.

Verga's Lacrimal Groove. A more or less pronounced groove extending downward from the lower orifice of the nasal duct. **V.'s Ventricle**, the fifth ventricle.

Vergences (*ver'-jen-siz*) [*vergere*, to bend]. A term applied to associated disjunctive movements of the eyes, e. g., convergence, divergence.

Vergens (*ver'-jens*) [L.]. Inclining. **V. deorsum**, inclining downward, as of the axis of vision in one eye in strabismus. **V. sursum**, upward inclination.

Verheij's Stars. See *Verheyen, Stars of*.

Verheyen, Stars of. Venous plexuses of stellate form situated on the surface of the kidney, beneath its capsule.

Vermiceous (*ver'-mish'-us*) [*vermis*]. Relating to worms.

Vermicide (*ver'-mis-id*) [*vermis*; *cadere*, to kill]. An agent that destroys intestinal worms.

Vermicular (*ver'-mik'-u-lar*) [*vermis*]. Worm-like.

Vermiculation (*ver'-mik'-u-la'-shun*) [*vermis*]. A worm-like motion, peristaltic motion.

Vermicule (*ver'-mik'-ul*) [*vermis*]. The sexually produced embryo of the malarial parasite.

Vermiform (*ver'-mif'-orm*) [*vermis*; *forma*, a form]. Worm-shaped. **V. Appendix.** See *Appendix, Vermiform*. **V. Process, Inferior and Superior**, the inferior and superior surfaces of the middle lobe of the cerebellum.

Vermifugal (*ver'-mif'-u-gal*) [*vermifuge*]. Having the qualities of a vermifuge; expelling worms.

Vermifuge (*ver'-mif'-uf*) [*vermis*; *jugare*, to expel]. An agent that expels intestinal worms.

Vermilingual, Vermilingual (*ver'-me-lin'-gwah, -gwe-ul*) [*vermis*; *lingua*, tongue]. Having a worm-shaped tongue.

Vermilion (*ver'-mil'-yun*). Red mercury sulfid.

Verminal (*ver'-min'-al*). Relating to or due to worms.

Vermination (*ver'-min-a'-shun*) [*vermis*]. Infestation with worms.

Verminous (*ver'-min-us*) [*vermis*]. Infested with worms.

Vermis (*ver'-mis*) [L.]. 1. A worm. 2. The middle lobe of the cerebellum. **V., Inferior**, of the cerebellum. See *Process, Superior Vermiform*. **V., Superior**, of the cerebellum. See *Process, Superior Vermiform*.

Vernal (*ver'-nal*) [*vernalis*, of the spring]. Pertaining to the spring. **V. Conjunctivitis**, a form of conjunctivitis recurring each spring or summer, and disappearing with frost.

Vernin (*ver'-nin*), $C_{10}H_{12}N_4O_2$. A leukomycin base found in young vetch, clover, ergot, etc., and yielding guanin on heating with hydrochloric acid.

Vernix caseosa [L., "cheesy varnish"]. A sebaceous deposit covering the surface of the fetus.

Veronal (*ver'-on-al*). Diethylmalonylurea, a white, crystalline substance used as a hypnotic. Dose 7-20 gr. (0.5-1.3 Gm.).

Verruca (*ver'-u'-kah*) [L.]. Wart. **V. necrogenica**, a warty excrescence found on the fingers of those who frequently handle the tissues of tuberculous subjects. Syn., *Anatomic tubercle*. *Dissection tubercle*.

Verrucose, Verrucous (*ver'-u-kös, ver'-u-kus*) [*verruca*]. Warty, covered with or having warts.

Verruga (*ver'-u'-gah*) [Sp.]. 1. See *Verruca*. 2. *Verruga peruana*. **V. peruana**, an endemic specific disease of the skin, occurring in the western Andes in Peru. It is characterized by the development of small raised spots which become conic, cylindric, or hemispheric tumors, in size from a pea to an orange. There may be hundreds of the tumors, which ulcerate and fungate. Severe febrile symptoms precede the eruption and death usually results from profound anemia. Syn., *Carrión's Disease*; *Peruvian Wart*.

Verruges (*ver'-u'-gahs*). See *Verruga peruana*.

Version (*ver'-zhun*) [*vertere*, to turn]. Turning; an operation whereby one part of the fetus is made to replace another at the mouth of the uterus. **V., Bipolar**, version by acting upon both poles of the fetus. **V., Cephalic**, turning of the fetus so as to bring the head to present. **V., Combined**, bipolar version consisting of a combination of external and internal version. **V., External**, that effected by external manipulation. **V., Internal**, that performed by entering the hand within the uterus. **V., Podalic**, that in which one or both feet are brought to the mouth of the uterus. **V., Spontaneous**, the process whereby without external influence, a transverse position is changed into a longitudinal one.

Verstraeten's Bruit. See *Bruit, Verstraeten's*.

Vertebra (*ver'-teb-rah*) [L., "a joint; a bone of the spine"]. One of the bones forming the spinal or vertebral column. There are 33 vertebrae, divided into 7 cervical, 12 thoracic or dorsal, 5 lumbar, 5 sacral (the sacrum), 4 coccygeal (the coccyx). A typical vertebra consists of a body and an arch, the latter being formed by 2 pedicles and 2 laminae. The arch supports 7 processes: 4 articular, 2 transverse, and 1 spinous. **V., Basilar**, the last lumbar vertebra. **V. dentata**, the axis. **V. prominens**, the seventh cervical vertebra.

Vertebral (*ver'-teb-rah*) [*vertebra*]. 1. Pertaining to or characteristic of a vertebra, made up of or possessing vertebrae. 2. Pertaining to the vertebral artery. **V. Artery.** See *Artery, Vertebral*.

Vertebral (*ver'-teb-rah*) [*vertebra*]. 1. Pertaining to or characteristic of a vertebra, made up of or possessing vertebrae. 2. Pertaining to the vertebral artery. **V. Artery.** See *Artery, Vertebral*.

Vertebral (*ver'-teb-rah*) [*vertebra*]. 1. Pertaining to or characteristic of a vertebra, made up of or possessing vertebrae. 2. Pertaining to the vertebral artery. **V. Artery.** See *Artery, Vertebral*.

Vertebral (*ver'-teb-rah*) [*vertebra*]. 1. Pertaining to or characteristic of a vertebra, made up of or possessing vertebrae. 2. Pertaining to the vertebral artery. **V. Artery.** See *Artery, Vertebral*.

Vertebral (*ver'-teb-rah*) [*vertebra*]. 1. Pertaining to or characteristic of a vertebra, made up of or possessing vertebrae. 2. Pertaining to the vertebral artery. **V. Artery.** See *Artery, Vertebral*.

tery, as the *vertebrarterial* foramina in the transverse processes of the cervical vertebrae.

Vertebrate, Vertebrated (*ver'-teb-rah, ver'-teb-ra-ted*) [*vertebra*]. 1. Having a vertebral column. 2. Resembling a vertebral column in flexibility, as a *vertebrate* catheter.

Vertebrectomy (*ver-te-brekt'-to-me*) [*vertebra; -ectomy, excision*]. Excision of a portion of a vertebra.

Vertebro- (*ver-teb-ro-*) [*vertebra*]. A prefix denoting pertaining to a vertebra.

Vertebrochondral (*ver-teb-ro-kon'-dral*) [*vertebra; -chondral, cartilage*]. Connecting the costal cartilages with the vertebrae.

Vertebrocostal (*ver-teb-ro-kos'-tal*) [*vertebra; -costal, a rib*]. Pertaining to the vertebrae and the ribs.

Vertebroiliac (*ver-teb-ro-il'-e-ak*) [*vertebra; -iliac*]. Pertaining to the vertebrae and the ilium.

Vertebrosacral (*ver-teb-ro-sak'-ral*) [*vertebra; -sacrum*]. Pertaining to the vertebrae and the sacrum.

Vertebrosternal (*ver-teb-ro-ster'-nal*) [*vertebra; -sternum*]. Extending from the spinal column to the sternum. **V. Ribs**, the true ribs.

Vertex (*ver'-teks*) [*l.*]. The crown or top of the head. **V. Presentation**, a presentation of the vertex of the fetal skull.

Vertical (*ver'-tik-al*) [*vertex*]. 1. Pertaining to the vertex. 2. Perpendicular.

Verticomenal (*ver-tik-o-men'-tal*) [*vertex; mentum, the chin*]. Pertaining to the vertex and the chin.

Vertiginous (*ver-tij'-in-us*) [*vertigo*]. Resembling or affected with vertigo.

Vertigo (*ver'-tig-o*) [*l., from vertere, to turn*]. Giddiness, dizziness; a sensation of lack of equilibrium. It may be due to disease of the ears (*auditory or aural vertigo*), the eyes (*ocular vertigo*), the brain (*cerebral vertigo*), the stomach (*gastric vertigo*), the blood, etc. **V., Aural**. See *Ménière's Disease*. **V., Epileptic**, vertigo associated with or preceding an attack of epilepsy. **V., Essential**, one not due to any discoverable cause. **V., Intestinal**. 1. That caused by intestinal disorder. 2. That caused by pressure on the terminal portions of the intestine by gas or feces, or even when the finger is introduced into the rectum and irritates the intestinal wall. It is thought to be due to pressure on the hemorrhoidal plexus of the sympathetic system. **V., Labyrinthine**. See *Ménière's Disease*. **V., Objective**, one in which objects seem to the patient to move. **V., Paralyzing**. See *Gerley's Disease*. **V., Stomachal**, gastric vertigo caused by disorder of the stomach. **V., Subjective**, one in which the patient has a sensation as if he himself were moving.

Verumontanum (*ver-u-mon-ta'-num*) [*vern, a spit, mons, a mountain*]. The caput galimargis, a longitudinal ridge on the floor of the prostatic urethra.

Vesalius' Foramen. An inconstant foramen in the base of the skull, anteroventral to the foramen ovale; it transmits an emissary vein

V.'s Glands, the bronchial and pulmonary glands. **V.'s Ligament**. See *Ligament*.

Vespa's V.'s Sesamoid Bones, the cartilaginous or osseous bodies often found in the tendons of the gastrocnemius. **V.'s Vein**, a small vein through which the plexus communicans with the cavernous sinus.

Vesanic (*ves'-an-ik*) [*vesania, unsoundness of mind*]. Relating to insanity.

Vesica (*ves'-i-ka*) [*l.*]. The bladder.

Vesical (*ves'-i-kal*) [*vesica*]. Pertaining to the bladder. **V. Calculus**, a stone in the bladder. **V. Crista**, the crista parietalis, a small ridge in the bladder occurring in vesical stricture.

Vesicant (*ves'-i-ant*) [*vesicare, to blister*]. 1. Blistering. 2. A blistering agent.

Vesication (*ves'-i-ka-shun*) [*vesicare, to blister*]. The formation of a blister. **A Vesicle**.

Vesicatory (*ves'-i-ka-tor-i-*) [*vesicare, to blister*]. 1. Blistering. 2. A blistering agent.

Vesicle (*ves'-i-kul*) [*vesicle, cap, of a small bladder*]. 1. A small bladder, especially a small sac containing fluid. 2. A small blister on the skin, as a *vesicle* on a mucous membrane. **V., Allantole**, the internal part of the position of the allantoid. **V., Auditory**, an endodermic sac, a part of the external ear, from which the internal ear is formed. **V., Blastodermic**. See *Blastoderm*. **V., Cerebral**, d. massa of the anterior commissure of the neural tube of the embryo, which forms the segments of the brain. **V., Germinal**, the nucleus of the ovum. **V., Graafian**. See *Follicle, Graafian*. **V., Optic**, a hollow process of the cerebral tissue forming the essential part of the eye. **V., Otic**. See *V., Auditory*. **V., Prostatic**. See *Uterus masculinus*. **V., Seminal**, one of the two little sacs situated at the base of the bladder and opening into it, one on the right and one on the left. **V., Umbilical**. See *Fetus*.

Vesico- (*ves'-i-ko*) [*vesica*]. A prefix denoting pertaining to the bladder.

Vesicoabdominal (*ves-i-ko-ab-dom-i-nal*) [*vesica; -abdominal*]. Pertaining to the abdomen and the urinary bladder.

Vesicocele (*ves-i-ko-sel*) [*vesica; -cele, hernia*]. Hernia of the bladder.

Vesicocervical (*ves-i-ko-sel*) [*vesica; -cervix*]. Pertaining to the cervix uteri and the urinary bladder.

Vesicofixation (*ves-i-ko-fik'-shun*) [*vesica; -fixation*]. 1. The operation of suturing the bladder to the abdominal wall. 2. The surgical attachment of the uterus to the bladder.

Vesicoprostatic (*ves-i-ko-prostat-ik*) [*vesica; -prostate*]. Pertaining to the prostate gland and the urinary bladder.

Vesicopubic (*ves-i-ko-pub-ik*) [*vesica; -pubis*]. Pertaining to the urinary bladder and the pubes.

Vesicorectal (*ves-i-ko-pek'-tal*) [*vesica; -rectum*]. Pertaining to the bladder and the rectum.

Vesicospinal (*ves-i-ko-spi-nal*) [*vesica; -spinal*].

- spine]. Pertaining to the urinary bladder and the spinal cord.
- Vesicotomy** (*ves-ik-ot'-o-me*) [*vesico-*; *τέμνω*, to cut]. Incision of the bladder.
- Vesicoumbilical** (*ves-ik-o-um-bil'-ik-al*) [*vesico-*; *umbilicus*]. Pertaining to the umbilicus and the urinary bladder.
- Vesicourachal** (*ves-ik-o-u'-rak-al*). Relating to the bladder and the urachus.
- Vesicouterine** (*ves-ik-o-u'-ter-in*) [*vesico-*; *uterus*]. Pertaining to the urinary bladder and the uterus.
- Vesicouterovaginal** (*ves-ik-o-u-ter-o-vaj'-in-al*). Relating to the bladder, uterus, and vagina.
- Vesicovaginal** (*ves-ik-o-vaj'-in-al*) [*vesico-*; *vagina*]. Pertaining to the bladder and the vagina.
- Vesicula** (*ves-ik'-u-lah*) [dim. of *vesica*, a bladder]. A vesicle. **V. graafiana**. See *Follicle*, *Graafian*. **Vesiculæ nabothi**. See *Ovule* (2). **V. prostatica**, the sinus prostaticus. **Vesiculæ seminales**. See *Vesicle*, *Seminal*.
- Vesicular** (*ves-ik'-u-lar*) [*vesicle*]. 1. Pertaining to or composed of vesicles. 2. Produced in vesicles, as *vesicular* breathing, *vesicular* murmur. **V. Column**, a column of ganglion-cells at the base of the posterior horn of the spinal cord. **V. Column, Posterior**. See *Column of Clarke*. **V. Eczema**, eczema attended with the formation of vesicles. **V. Rale**, the crepitant rale.
- Vesiculated** (*ves-ik'-u-la-ted*) [*vesicle*]. Composed of vesicles.
- Vesiculation** (*ves-ik-u-la'-shun*) [*vesicle*]. The formation of vesicles; the state of becoming vesiculated.
- Vesiculiferous** (*ves-ik-u-lif'-er-us*) [*vesicle*; *ferre*, to bear]. Bearing or having vesicles.
- Vesiculitis** (*ves-ik-u-lit'-tis*) [*vesicle*; *itis*, inflammation]. Inflammation of the seminal vesicles.
- Vesiculobronchial** (*ves-ik-u-la-brong'-ke-al*) [*vesicle*; *bronchus*]. Both vesicular and bronchial.
- Vesiculocavernous** (*ves-ik-u-lo-kav'-er-nus*) [*vesicle*; *cavernous*]. Both vesicular and cavernous.
- Vesiculotympanic** (*ves-ik-u-lo-tim-pan-it'-ik*) [*vesicle*; *tympanum*]. Both vesicular and tympanic.
- Vespa** (*ves'-pa*) [*vespa*, a wasp]. A follicular, suppurative inflammation of the hairy part of the scalp.
- Vessel** (*ves'-el*) [Fr., from *vasculum*, a vessel]. A receptacle for fluids, especially a tube or canal for conveying blood or lymph.
- Vestibular** (*ves-tib'-u-lar*) [*vestibule*]. Pertaining to a vestibule.
- Vestibule** (*ves'-tib-ul*) [*vestibulum*, a porch]. An approach; an antechamber. **V. of the Ear**, the oval cavity of the internal ear, which forms the entrance to the cochlea. **V. of the Nose**, the anterior part of the nostrils. **V. of the Vagina**, **V. of the Vulva**, a triangular space below the clitoris and between the nymphæ.
- Vestibulourethral** (*ves-tib-u-lo-u-re'-thral*). Relating to the bulbi vestibuli and to the urethra.
- Vestibulum** (*ves-tib'-u-lum*). See *Vestibule*. Generally applied to the vestibule of the ear.
- Vestige** (*ves'-tij*) [*vestigium*, footprint]. A trace or remnant of something formerly present or more fully developed.
- Vestigial** (*ves-tij'-e-al*) [*vestige*]. Of the nature of a vestige or trace; rudimentary. **V. Fold**, a fibrous band of the pericardium representing the obliterated left innominate vein.
- Vesuvius** (*ves-u'-vin*) [*Vesuvius*, a volcano near Naples]. Bismarck-brown, triamidobenzol; a stain used in microscopy.
- Veterinarian** (*vet-er-in-a'-re-an*) [see *Veterinary*]. One who practises veterinary medicine.
- Veterinary** (*vet'-er-in-a-re*) [*veterinarius*, from *veterina*, a beast of burden]. Pertaining to domestic animals. **V. Medicine**, medicine as applied to the domestic animals.
- Via** (*vi'-ah*) [L.]. A way. **Vie naturales**, the natural passages. See *Prima via*.
- Viability** (*vi-ab-il'-it-é*) [*viable*]. The state of being viable.
- Viable** (*vi'-ab-il*) [*viabilis*, viable]. Capable of living; likely to live; applied to a fetus capable of living outside of the uterus.
- Vial** (*vi'-al*) [*φιάλη*, a shallow cup]. A small bottle.
- Vibex** (*vi'-beks*) [L.; pl., *vibices*]. A linear ecchymosis.
- Vibrate** (*vi'-brät*) [*vibrare*, to shake]. To move to and fro.
- Vibratile** (*vi'-bra-til*) [see *Vibrate*]. Moving to and fro; vibrating.
- Vibration** (*vi-bra'-shun*) [see *Vibrate*]. The act of moving to and fro.
- Vibrator** (*vi'-bra-tor*) [see *Vibrate*]. A device for conveying mechanic vibration to a part.
- Vibrio** (*vib'-re-o*) [see *Vibrate*]. A genus of *Schizomycetes*. See under *Bacteria*.
- Vibrissa** (*vib-ris'-ah*) [L.]. One of the hairs near the opening of the anterior nares.
- Vibromassage** (*vi-bro-mas-saj'-zh'*). 1. See *Massage*, *Vibratory*. 2. A form of pneumomassage for the ear.
- Vibrometer** (*vi-brom'-et-er*) [*vibrate*; *μέτρον*, a measure]. A device for the treatment of deafness, by which rapid vibrations of the membrana tympani are induced.
- Vibrophone** (*vi'-bro-fon*) [*vibrate*; *φωνή*, sound]. A device for applying sound massage to the membrana tympani in treatment of deafness.
- Vibrotherapeutics** (*vi-bro-ther-ap-u'-tik-s*). The therapeutic application of vibration.
- Viburnum** (*vi-bur'-num*). A genus of the *Caprifoliaceæ*. The dried bark of *V. opulus*, cranberry-tree, cramp-bark, is official in the U. S. P., and is used in dysmenorrhea, scurvy, asthma, etc. The dried bark of the root of *V. prunifolium* or of *V. lentago* is official in the U. S. P., and is used in dysmenorrhea, threatened abortion, menorrhagia, etc. **V. opulus**, **Fluidextract of** [*fluidextractum viburni opuli*, U. S. P.]. Dose 1-2 dr (4-8 Cc.). **V. prunifolium**, **Fluidextract of**

(*fluidextractum viburni prunifolii*, U. S. P.).
Dose 1-2 dr. (4-8 Gm.).

Vicarious (vi-ka'-re-us) [vices, changes]. Taking the place of something else; of a habitual discharge occurring in an abnormal situation, as *vicarious* menstruation.

Vice (vis) [L., *vitium*]. 1. A physical defect, as a *vice* of conformation. 2. A moral defect; a bad habit.

Vichy Water (ve-she). A mildly laxative and antacid mineral water obtained from Vichy, in France, and used in rheumatic and gouty conditions and in disorders of the liver.

Vicq d'Azyr's Band, V. d'A's Stripes (vik-dah-zir). See *Buillanger's Layer*.

V. d'A's Bundle, a tract of nerve-fibers passing from the corpus albicans to the anterior nucleus of the optic thalamus. **V. d'A's Foramen**, the foramen osseum at the upper end of the median groove of the anterior surface of the oblongata.

Vidian Artery. A branch of the internal maxillary artery; it passes through the vidian canal and is distributed to the pharynx and eustachian tube. **V. Canal**, a canal of the sphenoid bone at the base of the internal pterygoid plate, opening anteriorly into the sphenomaxillary fossa, and posteriorly into the lacinated foramen. It transmits the vidian nerve and vessels. **V. Nerve**, a branch given off from the sphenopalatine ganglion.

Vieirin (vee'-rin). A principle from the bark of *Remima yellow*, one of the cupressarks. It is an amorphous white substance with an aromatic odor and bitter taste. It is soluble in alcohol and chloroform, and is used as a febrifuge instead of quinin. Dose 1-4 gr. (5-60 mg.) several times daily.

Vienna Paste (vee'-ah). See *Paste, Vienna*.

Vieussens' Annulus. A small nerve passing between the middle and lower cervical, or first dorsal, ganglia and forming a loop around the subclavian artery. Syn., *Annulus subclavi*.

V.'s Centrum ovale. See *Centrum ovale vagans*. **V.'s Ganglion**, the solar plexus. **V.'s Isthmus, V.'s Ring**, the annulus osseus. **V.'s Valve**. See *Valve of Ventricle*. **V.'s Ventricle**, the fifth ventricle.

Vigil (vig'-il) [L.]. Watchful wakefulness. **V., Coma**. See *Coma Vigil*.

Vigilambulism (vig-il-amb'-ul-izm) [vigil, ambulare, to walk]. Ambulatory automatism in the waking state.

Vigintinormal (vig-in-te-nor'-mah) [viginti, twenty, normal, rule]. Possessing one-twentieth of what is normal.

Signal's Cells. Embryonic connective-tissue (mesenchymatous) cells lying upon the axis-cylinders of which the fetal nerve fibers are made up. At first globular, these cells elongate and gradually fuse until they form a complete sheath around the axis-cylinder.

Vigoral (vig'-o-ral). A proprietary preparation of beef.

Vigouroux's Sign (vig-oo-roo). See *Sign, Vigouroux's*.

Villatte's Liqueur. A preparation used for

injecting into carious bones, consisting of zinc sulfate and copper sulfate, each, 10 gr. and subacetate solution, 4 dr., and dilute acetic acid, 3½ dr.

Villi (vil'-i) Plural of *villus*.

Villiferous (vil-if'-er-us) [villus, ferre, to bear]. Furnished with tufts of hairs or villi.

Villose, Villous (vil'-o-us) [villus]. Pertaining to a villus, covered with villi, characterized by the formation of villus-like projections.

Villosity (vil-os'-i-te) [villus]. 1. The state of being villous. 2. A proliferation of a membranous surface.

Villus (vil'-us) [L., "a tuft of hair", pl. villi]. 1. One of the minute club-shaped projections from the mucous membrane of the intestine, consisting of a lacteal vessel, an artery, and a vein, enclosed in a layer of connective tissue. 2. One of the vascular tufts of the chorion.

Vinasse (ve-nas) [Fr.]. Potash obtained from the residue of the wine-press.

Vinca (ving'-kah) [L., "perennate"]. A genus of plants, periwinkle. 1. *major* and 2. *minor* are astringent, vulnerary, and analgesic.

Vincent's Angina. Diphtheroid angina due to the bacillus of pseudodiphtheria. See *Liberibacterianus angrea*. **V.'s Sign**. See *Argyll Robertson Pupil*.

Vincetoxicum (vin-se-tox'-i-um) [vincere to subdue, toxicum, poison]. A genus of the order Asclepiadaceae. The root of *V. vineum*, swallowwort, indigenous to Europe, is used as an emetic and in menstrual disorders.

Vinculum (vin'-ku-lum) [L.]. A band. **Vincula accessoria tendinum**, the slender tendinous filaments which connect the phalanges with the flexor tendons.

Vinegar (vin'-e-gar) [Fr., vin, wine, acro, sour]. 1. An impure solution of acetic acid, obtained by acetous fermentation of wine, beer, cider, etc., or by the dry distillation of wood. It is used as a condiment. 2. A solution of a medicinal substance in vinegar or acetic acid. (Only two vinegars are official in the U. S. P., vinegar of quinine *aceticum*, U. S. P.) and vinegar of equal parts *aceticum*, U. S. P.)

Vinic (vin'-ik) [vinum]. Pertaining to wine, obtained from wine.

Vinous (vin'-us) [vinum]. Having the color of wine, containing wine.

Vinum (vin'-um) [L.]. A wine. See *Wine*.

Vioform (vio'-form). See *Isocoloration*.

Viola (vio'-oh-ah) [L., "violet"]. A genus of plants of the *Violaceae*, including *V. tricolor*, heart's-ease, *V. odorata*, *V. canadensis*, *V. odorata*, as well as other species, is used as a bronchitis.

Violet (vio'-let) [viola]. 1. One of the colors of the spectrum, very closely resembling the purple of violets and possessing the greatest refrangibility of the spectral colors. 2. A violet dyestuff. **V., Gentian**, a red anilin dye used for staining in histology.

and bacteriologic work. **V., Methyl-.** See *Methyl-violet*.

Violin (vi'-o-lin) [*viola*]. An emetocathartic alkaloid from *Viola tricolor*.

Violinist's Cramp, Violin-player's Cramp. An occupation-neurosis occurring in violin-players, and characterized by spasm of the fingers used in playing.

Viraginity (vir-aj-in'-it-e) [*virago*, a bold woman]. A form of sexual perversion in which the female individual is essentially male in her feelings and tastes.

Virchow's Bone-cells. The cells found in lacunae of bone. **V.'s Corpuscles.** See *Toynbee's Corpuscles*. **V.'s Crystals.** See *Crystals, Virchow's*. **V.'s Degeneration,** amyloid degeneration. **V.'s Disease,** leontiasis ossea. **V.'s Gland,** the jugular gland; a lymphatic gland situated behind the clavicular insertion of the sternomastoid. **V.'s Granulations,** granulations consisting principally of ependymal and neuroglia fibers, commonly found in the walls of the ventricles of the brain in progressive general paralysis. **V.'s Law,** the cellular elements of a tumor are derived from preexisting tissue-cells.

Virchow-Hassall's Bodies. See *Hassall's Bodies*.

Virchow-Robin's Space. An adventitious lymph-space found between the adventitia and media of the blood-vessels of the brain and communicating with the subarachnoid space.

Virgin (vur'-jin) [*virgo*, a maid]. A woman who has never had sexual intercourse.

Virginal (vur'-jin-al) [*virgin*]. Pertaining to virginity.

Virginity (vur'-jin-it-e) [*virgin*]. The condition of being a virgin.

Virile (vir'-il) [*virilis*, from *vir*, a man]. Pertaining to or characteristic of the man. **V. Member,** the penis.

Virility (vir-il'-it-e) [*virile*]. The condition of being virile; procreative power.

Viripotent (vir-ip'-o-tent) [*vir*, a man; *potens*, able]. Marriageable.

Virola-tallow. An oil or fat from the seeds of *Myristina sebifera*; a remedy for rheumatism.

Virose, Virous (vi'-rôc, vi'-rus) [*virosus*, poisonous]. Poisonous; having a poisonous taste or smell.

Virtual Focus (vur'-tu-al fo'-kus). See *Focus, Negative*.

Virulence (vir'-u-lens) [*virus*]. Malignity; noxiousness; infectiousness.

Virulent (vir'-u-lent) [*virus*]. Having the nature of a poison.

Virus (vi'-rus) [L.]. The poison of an infectious disease, especially one found in the secretion or tissues of an individual or animal suffering from an infectious disease. **V., Humanized,** vaccine-lymph taken from the vaccine pustule of a human subject.

Vis [L.]. Force; energy; power. **V. à fronte,** a force that attracts. **V. à tergo,** a force that pushes something before it. **V. formativa,** energy manifesting itself in the formation of new tissue to replace that which

has been destroyed. **V. medicatrix naturæ,** the healing power of nature apart from medicinal treatment.

Viscera (vis'-er-ah). Plural of *viscus*.

Visceral (vis'-er-al) [*viscera*]. Pertaining to a viscus. **V. Cleft.** See *Cleft, Visceral*.

Visceralgia (vis-cr-all'-je-ah) [*viscera*; *ἀλγος*, pain]. Pain in a viscus.

Visceromotor (vis-cr-im-o'-tor) [*viscera*; *motor*]. Conveying motor impulses to a viscus.

Visceripericardial (vis-cr ip'-er-ik-ar'-de-al) [*viscera*; *pericardium*]. Common to the pericardium and the viscera.

Viscero- (vis-cr-o-) [*viscera*]. A prefix denoting pertaining to the viscera.

Visceroinhibitory (vis-cr-o-in-hib'-it-o-re). Inhibiting the movements of viscera.

Visceroptosis (vis-cr-o-to'-sis) [*viscero*; *πτῶσις*, a falling]. Abdominal ptosis; (ilénard's disease).

Viscerosomatic (vis-cr-o-so-mat'-ik) [*viscero*; *σῶμα*, body]. Relating to the viscera and the body.

Viscid (vis'-id) [*viscidus*, sticky]. Sticky; adhesive; glutinous.

Viscidify (vis-id'-it-e) [*viscid*]. The state of being viscid. Same as *Viscidify*.

Viscin (vis'-in) [*viscum*]. A mucilaginous extract of mistletoe.

Viscose (vis'-kôs) [*viscum*]. 1. See *Viscosus*.

2. A gummy product of viscous fermentation.

Viscosity (vis-kos'-it-e). The state of being viscous.

Viscous (vis'-kus). Viscid.

Viscum (vis'-kum) [L.]. A genus of plants, including the mistletoe, of the order *Loranthaceæ*, growing as parasites upon trees. **V. album**, European mistletoe, and **V. flavescens**, or *Phoradendron flavescens*, American mistletoe, contain a viscid principle, *viscin*, which is the chief constituent.

Viscus (vis'-kus) [L.]. Any one of the organs inclosed within one of the four great cavities, the cranium, thorax, abdominal cavity, or pelvis; especially one within the abdominal cavity.

Visibility (vis-ib-il'-it-e). The state of being visible.

Visible (vis'-ib-l) [*vision*]. Capable of being seen.

Vision (vizh'-un) [*videre*, to see]. The act of seeing; sight. **V., Binocular.** See *Binocular Vision*. **V., Central,** vision with the macula lutea. **V., Direct.** See *V., Central*. **V., Double.** See *Diplopia*. **V., Indirect,** vision with other parts of the retina than the macula. **V., Solid, V., Stereoscopic,** the perception of relief or depth of objects obtained by binocular vision.

Visual (vizh'-u-al) [*vision*]. Pertaining to vision. **V. Purple,** a pigmentary substance in the retina reacting to light in a peculiar manner, and thought to be intimately connected with vision. See *Rhodopsin*.

Visuoauditory (vis-u-o-av'-dit-o-re) [*vision*, *audire*, to hear]. Pertaining to hearing and seeing; of nerve-fibers, connecting the visual and auditory centers.

Visuometer (vis-u-om'-et-er) [vision; mēsur, a measure]. An apparatus for determining range of vision.

Vital (vi'-tal) [vita, life]. Pertaining to life.

V. Capacity, the volume of air that can be expelled from the lungs after a full inspiration.

V. Statistics, statistics of births, deaths, marriages, and diseases in a community.

Vitalism (vi'-tal-izm) [see Vital]. The doctrine that ascribes the phenomena exhibited by living organisms to the action of a vital force distinct from mechanic or chemic force.

Vitalist (vi'-tal-ist) [see Vital]. A believer in vitalism.

Vitalli's Test for Bile-pigments. Add to the liquid a few drops of a potassium nitrite solution and then some dilute sulfuric acid. A beautiful green color will be produced, changing to red or blue, and finally to yellow.

Vitals (vi'-tals) [see Vital]. A vulgar term for the organs essential to life.

Vitellary (vit'-el-a-re) [vitellus]. Pertaining to the vitellus.

Vitellin (vit'-el-in) [vitellus]. A globulin found in egg yolk.

Vitelline (vit'-el-in or vit'-el-in) [vitellus]. Pertaining to the vitellus or yolk. **V. Artery**, an artery passing from the yolk-sac to the primitive aorta of the embryo. **V. Duct**, the omphalomesenteric duct. **V. Membrane**, the true membrane of the ovum, lying inside of the zona pellucida. **V. Veins**, veins returning the blood from the yolk-sac to the primitive heart of the embryo.

Vitellus (vit'-el-us) [L.]. A yolk; specifically, the yolk of the egg of the common fowl, *Gallus domesticus*.

Vitiliginēs. The linea albicantes.

Vitiligo (vit-il-i-go) [L.]. Pityriasis alba, a disease of the skin characterized by a disappearance of the natural pigment, occurring in patches and leaving whitish areas.

Vitiligooid (vit-il-i-go-oid) [see Vitiligo]. Resembling vitiligo.

Vitiligoidea (vit-il-i-go-oid-e-a) [vitiligo; eidos, like]. Naevus.

Vitodynamic (vi-to-di-nam'-ik) [vita, life; dynamis, energy]. Relating to vital forces.

Vitreocapsulitis (vit-re-o-kap-su-l'-tis). See *Hemitis*.

Vitreous (vit'-re-us) [vitrum]. Glassy. The vitreous humor (q. v.). **V. Chamber**, the portion of the globe of the eye posterior to the crystalline lens. **V. Degeneration**, hyaline degeneration. **V. Humor**, **V. Body**, the transparent, jelly-like substance filling the posterior chamber of the eye. **V. Table**, the hard, brittle, inner table of the skull.

Vitrescence (vit-res'-ens) [vitrum]. The condition of becoming hard and transparent like glass.

Vitric (vit'-rik) [see Vitrum]. Relating to glass or any vitreous substance.

Vitriol (vit'-re-ol) [vitrum]. 1. Sulfuric acid, more commonly called oil of vitriol. 2. Any crystalline salt of sulfuric acid. **V., Blue**, copper sulfate. **V., Green**, ferrous sulfate or copperas. **V., White**, zinc sulfate.

Vitriolated (vit'-re-ol-a-ted). Containing vitriol; containing sulfur or vitriol.

Vitriolation (vit'-re-ol-a-t'-shun). Conversion into glass or into a hyaloid substance.

Vitrum (vit'-rum) [L.]. Glass.

Vivification (viv-i-fik'-a-shun) [vivere, living; facere, to make]. The act of making something or of converting into living tissue.

Viviparity (viv-ip-ar'-i-ty) [vivere, living; parere, to bring forth]. The bringing forth of living offspring, the state of being viviparous.

Viviparous (viv-ip-ar-us) [see Viviparity]. Bringing forth the young alive; distinguished from oviparous.

Viviperception (viv-ip-er-sep'-shun) [vivere, living; percipere, to perceive]. The study of physiologic processes without dissection or vivisection.

Vivisection (viv-is-ek'-shun) [vivere, living; secare, to cut]. The dissection of a living animal, experimentation upon an animal while still alive.

Vivisectionist (viv-is-ek'-shun-ist) [see Vivisection]. A practitioner or defender of vivisection; a vivisector.

Vivisector (viv-is-ek'-shun) [see Vivisection]. One who practices vivisection.

Vlemingh's Solution. An application used in Austria and Germany for treating gonorrhea. Consists of lime, 1; sulfur, 2; water, 30. Along the line, add the sulfur, and boil 10 to 15 minutes.

Vocal (vo'-kal) [vox, voice]. Pertaining to the voice; pertaining to the organs producing the voice. **V. Bands**, **V. Cords**. See under *larynx*.

V. Fremitus, the thrill conveyed to the hand when applied to the chest during speaking. **V. Resonance**, the resonance produced by the voice as heard on auscultating the lungs.

Vogt's Point. The point selected by Vogt for trephining in cases of traumatic meningeal hemorrhage. It is found at the intersection of a horizontal line two finger-breadths above the zygomatic arch, with a vertical line a thumb's breadth behind the ascending oblique frontal process of the zygoma.

Vohsen-Davidsohn's Sign. See *Davidsohn's Sign*.

Voice (vois) [vox, a voice]. The sounds, especially articulate sounds, produced by the vibration of the vocal bands and modified by the resonance organs.

Void (MF, *voiden*, to void). To evacuate.

Voigt's Boundary-lines. The lines which divide the regions of distribution of two peripheral nerve-trunks.

Voilemier's Point. A point on the linea alba 6 to 7 cm. below a line drawn between the two anterior superior spines of the iliacs; the suprapubic puncture of the bladder is made at this point in fat or edematous subjects.

Voit's Nucleus. An accessory nucleus of the corpus dentatum in the cerebellum.

Vola (vo'-lah) [L.]. The palm of the hand or the sole of the foot.

Volar (vo'-lar) [vola]. Pertaining to the palm or the sole.

Volatile (vo'-at-il) [volatilis, from volare, to fly].

fly]. Passing into vapor at ordinary temperatures; evaporating. **V. Oils.** See *Essential Oils*.

Volatilization (vol-at-il-i-za'-shun) [see *Volatile*]. The act of volatilizing.

Volatilize (vol'-at-il-iz) [see *Volatile*]. To convert into vapor by means of heat, to pass into vapor.

Volkman's Canals. See *Canals, Volkman's*. **V.'s Deformity.** See *Deformation, Volkman's*.

Volley (vol'-e) [volare, to fly]. A series of artificially induced muscle-twitches.

Voltsella (vol-sel'-ah) [vellere, to pluck]. A forceps having one or more hooks at the end of each blade.

Volt (vôlt) [from *Volta*, an Italian scientist]. The unit of electromotive force, or the force sufficient to cause a current of one ampere to flow against a resistance of one ohm. **V.-ampere**, the amount of pressure developed by a current of one ampere having an electromotive force of one volt. Syn., *Watt*.

Voltage (vôlt'-aj). Electromotive strength measured in volts.

Voltagram (vôlt'-ah-gram). A faradic battery so arranged as to produce an almost continuous current.

Voltaic (vôl-ta'-ik). Described by or named after *Volta*, an Italian scientist. **V. Electricity**, galvanism.

Voltaism (vôl-ta'-izm). See *Galvanism*.

Voltameter (vôl-tam'-et-er) [volt; μέτρον, a measure]. An instrument for ascertaining absolute quantities of electricity by electrolytic decomposition.

Voltmeter (vôlt'-me-ter) [see *Voltameter*]. An instrument for measuring the voltage of an electric current.

Voltolini's Disease (vôl-to-le'-nê). Primary labyrinthitis: an affection of childhood, characterized by meningitic symptoms, followed by deafness, deaf-mutism, and a staggering gait.

Voltolini-Heryng's Sign. See *Heryng's Sign*.

Volumetric (vol-u-met'-rik) [volumen, a roll; μέτρον, a measure]. Pertaining to measurement by volume. **V. Analysis.** See *Analysis, Volumetric*.

Volumometer (vol-u-mom'-e-ter) [see *Volumetric*]. An apparatus used for the purpose of measuring changes in volume.

Voluntary (vol'-un-ta-re) [voluntarius, willing]. Under the control of the will; performed by an exercise of the will. **V. Muscle**, striped muscle.

Voluntomotory (vol-un-to-mô-ta-re) [voluntary; motor]. Pertaining to voluntary motion.

Volution (vol-u'-shun) [voluta, a spiral scroll]. A convolution; a gyrus.

Volvulus (vol'-vu-lus) [volvere, to roll]. A twisting of the bowel so as to occlude the lumen, occurring most frequently in the sigmoid flexure.

Vomer (vo'-mer) [L., "a plowshare"]. The thin plate of bone situated vertically between the nasal fossas, and forming the posterior portion of the septum of the nose.

Vomerine (vo'-mer-in) [vomer]. Pertaining to the vomer.

Vomerobasilar (vo-mer-o-bas'-il-ar). Relating to the vomer and to the basal part of the cranium.

Vomica (vom'-ik-ah) [vomicus, ulcerous]. A cavity formed by the breaking down of tissue; especially a cavity in the lung.

Vomucose (vom'-ik-ös) [see *Vomica*]. Purulent; ulcerative.

Vomit (vom'-it) [vomere, to vomit]. 1. To expel from the stomach by vomiting. 2. Vomited matter. **V., Bilious**, vomit stained with bile. **V., Black**, the characteristic vomit of yellow fever, a dark fluid consisting of blood and the contents of the stomach. **V., Coffee-ground**, vomit consisting of broken-down blood and the contents of the stomach; it is frequently seen in carcinoma of the stomach.

Vomiting (vom'-it-ing) [vomû]. The forcible ejection of the contents of the stomach through the mouth. **V., Cyclic**, vomiting recurring at regular periods. **V., Pernicious**, a variety of vomiting occasionally seen in pregnancy and becoming at times so excessive as to threaten life. **V., Stercoraceous**, the ejection of fecal matter in the vomit, usually due to intestinal obstruction.

Vomito nigro (vo-me'-to ne'-gro). Yellow fever.

Vomitary (vom'-it-or-e) [vomû]. 1. Any agent that induces emesis. 2. A vessel to receive ejecta.

Vomiturition (vom-it-u-rish'-un) [vomû]. Ineffectual attempt at vomiting; retching.

Vomitus (vom'-it-us) [vomû]. 1. Vomited matter. 2. The act of vomiting. **V. cruentus**, bloody vomit. **V. niger**, black vomit.

Von. For names with this prefix see the name itself.

Von den Velden's Test for Hydrochloric Acid in the Contents of the Stomach. Filter-paper dipped into a watery or alcoholic solution of tropeolin oo turns ruby red or brownish red on the application of free hydrochloric acid.

Voracious (vor-o'-shus) [vorare, to devour]. Having an insatiable appetite or desire for food.

Vorticose (vor'-ik-ös) [vortex]. Whirling. **V. Veins.** See *Vena vorticosa*.

Vox (voks) [L.]. The voice.

Vurometer (vu-er-om'-et-er). An apparatus for determining the distance of the eyes from each other.

Vulcanite (vul'-kan-it) [Vulcan, the god of fire]. Vulcanized caoutchouc.

Vulcanize (vul'-kan-iz) [see *Vulcanite*]. To subject rubber to the process of vulcanization, a process wherein it is treated with sulfur at a high temperature, and thereby rendered either flexible or very hard (*vulcanite*).

Vulneral (vul'-ner-al). A proprietary salve for wounds and ulcers.

Vulnerary (vul'-ner-a-re) [vulnus]. 1. Pertaining to wounds, healing wounds. 2. An agent useful in healing wounds.

Vulnus (*vul'-nus*) [L.]. A wound.

Vulpian-Prévost's Law. See *Prévost's Symptom*.

Vulsella, Vulsellum (*vul-sel'-ah, vul-sel'-um*). See *Vulsella*.

Vulva (*vul'-vah*) [*volvere*, to roll up]. The external organs of generation in the woman.

Vulval, Vulvar (*vul'-val, vul'-var*) [*vulva*]. Pertaining to the vulva.

Vulvitis (*vul-vi'-tis*) [*vulva*; *itis*, inflammation]. Inflammation of the vulva.

Vulvo- (*vul'-vo-*) [*vulva*]. A prefix denoting pertaining to the vulva.

Vulvouterine (*vul-vo-uter-in*). Relating to the vulva and the uterus.

Vulvovaginal (*vul-vo-vaj'-nah, vul-vo-vaj'-nah*). Pertaining to the vulva and the vagina.

V. Gland, a small gland situated on each side of the vulva near the vagina. See *Gland of Bartholin*.

Vulvovaginitis (*vul-vo-vaj-in-i'-tis*) [*vulva*; *vagina*; *itis*, inflammation]. Inflammation of the vulva and of the vagina existing at the same time.

Vutrin (*vut'-trin*). A concentrated powdered meat-extract.

W

W. The symbol of tungsten (*wolframium*).

Wachendorff's Membrane. The pupillary membrane which covers the pupil during fetal life.

Wachsmuth's Mixture. An anesthetic mixture of oil of turpentine 1 part, chloroform 5 parts.

Wade's Balsam. A compound tincture of benzoin.

Wafer (*wa'-fer*). A thin layer composed of moistened flour, and used to inclose powders that are taken internally.

Wagner's Corpuscles. See *Meissner's Corpuscles*. **W.'s Spot**, the germinal spot of the germinal vesicle.

Wagstaffe's Fracture. Separation of the internal malleolus.

(von) Wahl's Sign. 1 Distention of the bowel (fecal meteorism) above the point at which there exists an obstruction. 2 A scraping or blowing sound, synchronous with the cardiac impulse, heard over an arterial trunk immediately after the partial division, through injury, of the vessel.

Wahoo (*wa hoo'*). See *Euonymus*.

Walcher's Position. A dorsal posture with the hips at the edge of the table and lower extremities hanging.

Waldenberg's Apparatus (*wahl'-den-berg*). An apparatus constructed on the principle of a gasometer, and used for compressing or rarefying air, which is inhaled, or into which the patient exhales.

Waldeyer's Fossa. Mesentericoparietal fossa. See *Brooke's Fossa*. **W.'s Germinal Epithelium**, the single layer of columnar epithelial cells covering the free surface of the ovary.

W.'s Glands. See *Glands*. **Waldeyer's**. **W.'s Plasma-cells.** See *Cells*, *Plasma* (2). **W.'s Sulcus**, the sulcus spiralis of the cochlea. **W.'s Tonsillar Ring**, the ring formed by the two faucial tonsils, the pharyngeal tonsil, and smaller groups of adenoid follicles at the base of the tongue and behind the posterior pillars of the fauces. **W.'s Vascular Layer**, the internal or vascular layer of the ovary.

Wall-diseases. Those due to the presence of saltpeter by the penetration into the walls of the walls of houses of the *NaNO₂* of the soil, making the houses cold and unwholesome, especially in damp localities.

Wallerian Degeneration (*wal'-ler-ian*) [from *Waller*, an English physician]. Degeneration of a nerve consequent upon section, the process consisting essentially in segmentation of the neurin and subsequent disappearance of the latter, together with its axis-cylinder. **W. Law**, a nerve fiber undergoes degenerative changes when it is separated from its trophic cells.

Walleye. A colloquial name for leukema of the cornea or for divergent strabismus.

Walther's Arteriosclerotic Plexus. The cavernous plexus. **W.'s Ducts.** See *Ducts*.

Walther's. **W.'s Ganglion**, the ganglion impar or coccygeal ganglion. **W.'s Otolitic Ligament**, the ligamentous band extending from the external malleolus upward to its posterior surface of the astragalus.

Wandering (*wan'-der-ing*). 1. Moving about as wandering cells. 2. Abnormally movable as wandering spleen.

Warburg's Tincture. An antiperiodic and diaphoretic mixture used in pernicious form of malaria, consisting of: Aqueous extract of aloes, 28 gr.; rhubarb and argemone each, 448 gr.; cinchona, 224 gr.; fennel, each, 224 gr.; germen, redwood and cubeb, white agaric, camphor, and nutmeg each, 112 gr.; quinine sulfate, 1056 gr.; dilute alcohol, sufficient to make 8 pints.

Ward's Paste. Confection of black pepper.

Wardrop's Disease. See *Onchocerca*.

W.'s Operation. See *Operation*, *Wardrop's*.

Warehouseman's Itch. Palmar eczema occurring among the workmen in warehouses.

Warm-blooded. A term applied to animals that maintain a uniform temperature, notwithstanding the changes in the surrounding medium.

Warming Plaster. See *Plaster*, *Warming*.

Warren's Fat-columns. See *Fat-columns*.

of fatty tissue passing from the subcutaneous adipose tissue to the base of the hair-follicles. They are well developed over the dorsum of the body, particularly near the median line.

Wart [AS., *wearte*]. A hyperplasia of the papillas of the skin, forming a small projection. See *Verruca*. **W.**, **Anatomic**, **W.**, **Postmortem**. See *Tubercle*, *Anatomic*.

Warthin's Sign. Accentuation of the pulmonary sound in acute pericarditis.

Warty. Resembling a wart; covered with warts.

Wash. See *Lotion*. **W.**, **Black**, lotio hydrargyri nigra; mild mercuric chlorid in water and lime-water. **W.**, **Yellow**, lotio hydrargyri flava, mercuric chlorid in lime-water.

Washerwoman's Itch. Eczema of the hands occurring in washerwomen.

Washing Soda. Sodium carbonate.

Washleather-skin. A condition of the skin in which certain metals, especially silver, mark it with a black line.

Wasmann's Glands. The peptic glands.

Wasting Palsy. See *Progressive Muscular Atrophy*.

Watchmaker's Cramp. An occupation-neurosis occurring in watchmakers, and characterized by painful cramps of the muscles of the hands.

Water (*uaw'-ter*). 1. A transparent, inodorous, tasteless fluid, boiling at 212° F. (100° C.), and freezing at 32° F. (0° C.). Chemically it is hydrogen monoxid, H₂O. 2. A mineral water. 3. A solution of a medicinal substance in water, as *ammonia-water* (*aqua ammonia* U. S. P.), *chlorin-water* (*aqua chlori*, U. S. P.), etc. **W.-bag**, a rubber bag in which water of varying degrees of temperature can be introduced for topical application. **W.-bed**. See *Bed*, *Water*. **W.-borne**, of a disease, produced by contaminated drinking-water. **W. on the Brain**, hydrocephalus. **W.-brash**. See *Pyrosis*. **W.-cress**, the plant *Nasturtium officinale*. It is said to be a specific remedy for beriberi. **W. of Crystallization**, the water contained in certain crystals, to which their crystalline structure is due. **W.-cure**. See *Hydrotherapeutics*. **W.-glass**, a solution of sodium silicate. **W.-hammer Pulse**. See *Corrigan's Pulse*. **W.**, **Hard**, water containing soluble calcium salts and not readily forming a lather with soap. **W.**, **Javelle**, a solution of potassium hypochlorite, KClO. **W.**, **Mineral**, a natural water containing mineral substances in solution. **W. of Pagliari**, a preparation employed in France as a hemostatic, consisting of crystallized alum, 15 gr.; gum benzoin, 75 gr.; distilled water, 3 oz.

Watt (wat). See *Volt-ampere*.

Wave (*wave*) [AS., *wafan*, to waver in mind]. 1. A movement in a body which is propagated with a continuous motion, each particle of the body vibrating through a fixed path, usually a closed curve. 2. One of the curves in a series of curves representing a wave-like motion. **W.-length**, the distance between

corresponding points, usually the crests, of two adjacent waves. **W.**, **Tidal**, in the sphygmogram, the wave succeeding the percussion wave, and due to the volume of blood poured out from the heart reaching the arteries.

Wavy Respiration. Cog-wheel respiration, a type of breathing in which inspiration or expiration is not continuous, but jerky and interrupted.

Wax (*waks*). See *Cera*.

Waxing (*waks'-ing*) [ME., *waxen*, to increase]. Increasing in size. **W.-kernels**, enlarged inguinal and submaxillary lymph-glands in children.

Waxy (*waks'-e*). Pertaining to or resembling wax. **W. Cast**, a tube-cast composed of amyloid or similar material. **W. Degeneration**, amyloid degeneration. **W. Kidney**, **W. Liver**, amyloid kidney or liver.

Wean (*wen*) [AS., *uenian*, to accustom]. To cease to give suck to an infant by accustoming it to take food from sources other than the mother's breast.

Webbed Fingers, **W. Toes**. Union of adjacent fingers or toes by a thin band of tissue.

Weber (*web'-er*). Same as *Coulomb*.

Weber's Glands. Racemose glands situated in the posterior portion of the tongue and opening by several orifices on its border.

W.'s Law, the increase of stimulus necessary to produce the smallest perceptible change in a sensation is proportionate to the strength of the stimulus already acting. **W.'s Orbicular Zone**, that portion of the iliofemoral ligament which forms a loop around the neck of the femur. **W.'s Organ**, **W.'s Vesicle**, the sinus pularis of the male urethra. **W.'s Paradox**, a muscle when so loaded as to be unable to contract may elongate.

W.'s Suture, a fine groove or suture on the inner surface of the nasal process of the superior maxilla. **W.'s Symptom**, **W.'s Syndrome**, paralysis of the motor oculi nerve on the side of the lesion and of the facial and hypoglossal nerves and extremities on the opposite side, it corresponds anatomically to a lesion in the pedunculopontine or upper pontine region. **W.'s Test**. 1. When a vibrating tuning-fork is placed upon the vertex or the middle of the forehead, the sound is perceived equally by both ears. If it is heard only in one ear, a lesion exists in this. 2. For sensation: Determination of the smallest distance at which the two points of a pair of compasses, applied simultaneously and lightly to the skin, can be recognized as two separate objects. **W.'s Test for Indican in Urine**, heat to boiling 30 Cc. of the urine with an equal volume of hydrochloric acid and 1 to 3 drops of dilute nitric acid; when cold, shake the solution with ether. The ether will assume a red or violet color with a blue foam on it.

Wedl's Vesicular Cells. Large vesicular cells commonly found in the crystalline lens in cases of cataract, especially the senile and diabetic varieties.

Weeping Eczema. Moist eczema. **W. Sin-**
ew. See *Ganglion* (2).

Wegner's Disease of Bone. Epiphyseal
osteochondritis occurring in infants affected
with hereditary syphilis. **W.'s Sign,** in
fetal syphilis the dividing-line between the
epiphysis and diaphysis of long bones, which
under normal conditions is delicate and recti-
linear, appears as a broad, irregular, yellowish
line.

Weidel's Reaction for Xanthin Bodies.
Evaporate to dryness on the water-bath a

little of the substance dissolved in fresh
chlorin-water containing nitric acid. Treat
the residue to ammonia vapors under a
bell jar, and a red or violet coloration will be
produced in the presence of xanthin bodies.

Weigert's Fibrin-stain (art. 747) [Weigert
a German pathologist]. A stain for fibrin
consisting in the application of a solution
of gentian-violet, then one of saline in potas-
sium iodid, followed by one of a solution of
xylo. Fibrin is stained blue. **W.'s Method.**
1. A method of staining the myelin of nerve

TABLE OF WEIGHTS AND MEASURES.

TROY WEIGHT.

Grains.	
24 = 1 dwt.	
480 = 30 " = 1 oz.	
5760 = 240 " = 12 " = 1 lb. = 22.816 cu. in. of distilled water at 62° F.	

AVOINDUPOIS WEIGHT.

Drams.	Ounces.	
16 = 1	1 = 437.5 grains troy.	
240 = 16 " = 1 lb.	1 lb. = 12.013 lb. troy	
6,400 = 400 " = 25 "	" = 1 quarter	
25,600 = 1,600 " = 100 "	" = 4 quarters = 1 cwt.	
512,000 = 32,000 " = 2000 "	" = 80 " = 20 " = 1 ton	

APOTHECARIES' WEIGHT.

Grains.	
20 = 1 scruple	
60 = 3 scruples = 1 dram	
480 = 24 " = 8 drams = 1 oz.	
5760 = 288 " = 96 " = 12 oz. = 1 lb.	

APOTHECARIES' MEASURES

60 minims	= 1 fluidounce
8 fluidounces	= 1 fluidpint
16 fluidounces	= 1 pint
2 pints	= 1 quart
4 quarts	= 1 gallon

LIQUID OR WINE MEASURE.

Gills.	
1 = 7.68 cu. in.	
4 = 1 pint = 28.875 cu. in.	
8 = 2 pints = 1 quart = 57.75 cu. in.	
32 = 4 " = 4 quarts = 1 gallon	
2016 = 252 " = 252 " = 63 gallons = 1 hogshhead	
4032 = 504 " = 504 " = 126 " = 2 hogshheads = 1 pipe	
8064 = 1008 " = 1008 " = 252 " = 4 " = 2 pipes = 1 tun.	

SQUARE MEASURE.

Sq. Inches.	Sq. Feet.	
144 = 1	1 = 1 sq. yard.	
1296 = 9 " = 9 " = 30.25 sq. yards = 1 perch		
30,24 = 272.25 " = 1210 "	" = 40 perches = 1 rood	
1,500,000 = 13,500 " = 1340 "	" = 160 " = 4 roods = 1 acre	

LINEAR MEASURE.

Inches.	
12 = 1 foot	
36 = 3 feet = 1 yard	
72 = 6 " = 2 yards = 1 fathom	
108 = 9 " = 3 yards = 1 1/4 fathoms = 1 perch	
2,160 = 180 " = 225 " = 110 " = 40 perches = 1 furlong	
63,360 = 5280 " = 1760 " = 480 " = 320 " = 8 furlongs = 1 mile	

SOLID MEASURE.

Cu. In.	
1,728 = 1 cubic foot	
46,656 = 27 cubic feet = 1 cubic yard.	

DRY MEASURE.

Pints	
1 = 35.2 cubic inches	
2 = 1 quart = 70.4 cubic inches	
8 = 4 quarts = 1 gallon = 281.6 cubic inches	
16 = 8 " = 2 gallons = 1 peck = 563.2 cubic in.	
64 = 32 " = 8 " = 4 pecks = 1 bushel

fibers with hematoxylin. 2. A method of staining the neuroglia according to a modified Weigert's fibrin-method, after the tissue has been fixed in formalin, subjected to a mordant of copper acetate, acetic acid, and chromalum, and a reducing agent composed of potassium permanganate and a solution of sodium sulfite containing a chromogen derived from naphthalin.

Weight (wēht). The force with which bodies tend to approach the earth's center. **W.** **Atomic.** See *Atomic Weight*. **W.s and Measures.** the U. S. standard unit of weight is the troy pound, the standard unit of liquid measure is the Winchester wine gallon, containing 231 cubic inches. The imperial gallon, adopted by Great Britain, contains 277.274 cubic inches. The standard unit of the U. S. and British linear measure is the yard. The actual standard of length of the U. S. is a brass scale 82 inches long in the U. S. Treasury Department. The yard is between the twenty-seventh and the sixty-third inch of this scale. See *Tables*, pages 1030, 1031. **W.** **Molecular.** See *Molecular Weight*.

Weil's Disease (wēl). An infectious disease somewhat resembling typhoid fever, accompanied by muscular pain and grave disturbance of the digestive organs. **W.'s Syndrome**, unilateral hyperesthesia of the muscles, nerve-trunks and bones, sometimes seen in cases of pulmonary tuberculosis.

Weiland's Test. For the determination of binocular fixation. A vertical bar is interposed between the eyes and the letters to be read.

Weir Mitchell's Disease. See *Mitchell's Disease*. **W. M.'s Treatment.** See under *Mitchell*.

Weiss' Reflex. A curvilinear reflex on the nasal side of the optic disc, regarded as a prodromal sign of myopia. **W.'s Sign**, contraction of the facial muscles upon light percussion, it is noticed in tetany, neurasthenia, hysteria, and exophthalmic goiter.

Syn., Facialis phenomenon.

Weilbrecht's Cartilage. A fibrocartilaginous lamella frequently found interposed between the articular surfaces of the acromioclavicular joint. **W.'s Foramen.** See *Foramen Weilbrecht's*. **W.'s Ligament**, a rounded, fibrous bundle, extending from the outer portion of the coronoid process to the inner border of the radius, above the horizontal tuberosity. **W.'s Retinacula**, flat bands lying on the neck of the femur and formed by the deeper fibers of the capsular ligament, which are reflected upward along the neck to be attached nearer to the head.

Wells' Facies. The facies of ovarian disease. **Welt.** See *Welt*.

Wen. A sclerous cyst.

Wender's Test for Glucose. Make a solution of 1 part methylene-blue in 999 parts of distilled water. On rendering this solution alkaline with potassium hydroxide and heating with a glucose solution it becomes decolorized.

Werthof's Disease [P. G. Werthof, a German physician]. Purpura hemorrhagica.

Wernickink's Commissure. See *Commissure Wernickink's*.

Wernicke's Aphasia. Cortical sensory aphasia. **W.'s Center**, the auditory word-center in the posterior third of the first temporo-sphenoidal convolution. **W.'s Convolution**, the first temporo-sphenoidal convolution. **W.'s Disease**, poliomyelitis acuta hemorrhagica, acute superior encephalitis. **W.'s Fibers.** See *Cerebral Optic Radiations*. **W.'s Field.** See *W.'s Triangle*. **W.'s Fissure**, a nearly vertical fissure sometimes seen to divide the parietal and temporal lobes from the occipital lobe. **W.'s Reaction**, **W.'s Sign.** See *Reaction*, *Hemiparesis*, *Hyperreflexia*. **W.'s Triangle**, a triangular area formed by the decussation, at various angles of the radiating fibers of Cerebellum and the fibers proceeding from the external geniculate

body and pulvinar; it occupies the extreme posterior segment of the capsula.

Westphal's Nucleus. See *Nucleus, Westphal's*. **W's Paradoxic Contraction**, tonic contraction of the anterior muscles of the leg (especially the tibialis anticus) on passive flexion of the foot; it is occasionally seen in multiple sclerosis, paralysis agitans, tabes, alcoholism, and hysteria. **W's Sign**, absence of the patellar reflex; it occurs in lesions of the spinal cord at the level of the reflex center (e. g., tabes dorsalis, parietic dementia), neuritis, certain cases of cerebellar disease, etc. **W's Zone**, a zone in the posterior column of the lumbar spinal cord, which is bounded externally by the inner side of the posterior horn, internally by an imaginary anteroposterior line drawn through the point at which the posterior horn turns inward, and posteriorly by the periphery of the cord. It contains the afferent fibers concerned in the patellar reflex mechanism.

Westphal-Erb's Sign. See *Westphal's Sign*. **Westphal-Piltz's Reflex.** See *Gifford's Reflex*.

Wet-pack. See *Pack, Wet*.

Wetzel's Test for CO in Blood. Add to the blood 4 volumes of water and treat with 3 volumes of a 1% tannic acid solution. In the presence of carbon monoxid the blood becomes carmin red; normal blood gradually becomes gray.

Weyl's Reaction for Creatinin. Add to the creatinin solution a few drops of a dilute solution of sodium nitroprussid, and then, drop by drop, a few drops of sodium hydroxid. A ruby-red coloration results, quickly changing to yellow again.

Wharton's Duct. The duct of the submaxillary gland. **W's Jelly**, the gelatinous embryonic connective tissue of the umbilical cord.

Wheal (*hwél*) [AS., *hwæle*]. A whitish or pinkish elevation, developing suddenly upon the skin, and lasting usually but a short time. Wheals are produced by urticaria, the bites of insects, or the sting of a nettle. Syn., *Pomphus; Urtica*.

Wheat (*hwét*). See *Triticum*.

Wheelhouse's Operation. A perineal incision through the urethra for stricture.

Wheeze (*hwæz*). To breathe hard; to breathe with difficulty and with an audible whistling sound.

Whey (*hwéy*). The liquid part of milk separating from the curd. **W.-cure**, the administration of whey as a method of treating certain diseases.

Whiff (*hwif*) [origin obscure]. A puff of air. **W., Oral**, a peculiar sound heard during expiration from the open mouth, principally in cases of thoracic aneurysm.

Whip-worm (*hwip'-worm*). The *Trichocephalus dispar*.

Whirl (*hwurhl*) [ME., *whirlen*, to whirl]. To revolve rapidly. **W.-bone**. 1. The head of the femur. 2. The patella.

Whisky, Whiskey (*hwis'-ke*). See *Spiritus frumenti*. **W.-nose**. See *Acne rosacea*.

Whisper (*hwis'-per*). A low, soft, sibilant sound produced by the passage of the breath through the glottis without throwing the vocal cords into vibration.

Whispering Pectoriloquy. See *Pectoriloquy, Whispering*.

White (*hwit*) [AS., *hwit*]. 1. Having a color produced by reflection of all the rays of the spectrum; opposed to black. 2. Any white substance, as white of egg. **W. Cell**, **W. Corpuscle**, the leukocyte. **W. Commissure**, the anterior commissure of the spinal cord. **W. Lead**, basic lead carbonate. **W. Leg**. See *Phlegmasia alba dolens*. **W. Leprosy**, vitiligo. **W. Line**, the linea alba. **W. Matter**, the part of the brain and spinal cord consisting of medullated nerve-fibers, and having a white color. **W. Mustard**, sinapis alba. See under *Mustard*. **W., Pearl-**, bismuth subnitrate. **W. Pneumonia**. See *Pneumonia, White*. **W. Precipitate**, hydrargyrum ammoniatum. See *Mercury, Ammoniated*. **W. Softening**, softening of nerve-substance in which the affected area presents a whitish color, due to fatty degeneration following anemia. **W. Substance of Schwann**, the myelin sheath of medullated nerve-fibers. **W. Swelling**. See *Swelling, White*. **W. Vitriol**, zinc sulfate.

White's Disease. Keratosis follicularis. **W's Operation**, castration for cure of enlarged prostate.

Whites (*hwits*). See *Leukorrhœa*.

Whitlow (*hwit'-lo*). See *Paronychia*. **W., Melanotic**, a form of melanotic sarcoma simulating whitlow in appearance. **W., Painless**. See *Morvan's Disease*.

Whooping-cough (*hoo'-ping-kawf*). An infectious disease characterized by catarrhal inflammation of the air-passages and peculiar paroxysms of cough ending in a loud whooping inspiration. It is most frequent in children, and is probably due to a specific micro-organism. The disease begins with symptoms of coryza and bronchitis, which in from one to two weeks are followed by the so-called paroxysmal stage, characterized by a violent cough, at the close of which occurs a loud whoop and often vomiting. This stage lasts from three to four weeks and is succeeded by the stage of decline. Complications, such as catarrhal pneumonia, emphysema, atelectasis, hernia, cerebral hemorrhage, and others, may occur.

Whytt's Disease. Hydrocephalus internus a collection of fluid in the cerebral ventricles.

Wichmann's Asthma. Laryngismus stridulus.

Wickersheimer's Fluid (*wik'-ers-hi-mer*). A fluid employed for the preservation of anatomic specimens, consisting of arsenic trioxid, sodium chlorid, potassium sulfate, carbonate, and nitrate, dissolved in a mixture of glycerol, methyl-alcohol, and water.

- Wicking** (*wik'-ing*). Loosely twisted unspun cotton or wool; it is employed in packing cavities.
- Widal's Reaction.** The addition of a few drops of a culture of *Bacillus typhi abdominalis* (Eberth) to the serum of a typhoid-fever patient causes an agglutination and loss of movement of the bacilli.
- Wilde's Cords.** The transverse fibers of the callosum. **W.'s Incision.** See *Operation, Wilde's*. **W.'s Luminous Triangle.** See *Pulitzer's Luminous Cone*.
- Wildermuth's Ear.** A congenital deformity of the ear consisting in a prominence of the anthelix, the helix being turned downward.
- Wilkinson's Disease.** Paralysis agitans.
- Wilks' Disease.** Chronic parenchymatous nephritis. **W.'s Kidney,** the large white kidney. **W.'s Symptom-complex.** See *Erb's Disease*.
- Willan's Leprosy.** Psoriasis. **W.'s Lupus,** lupus vulgaris.
- Willard's Disease.** See *Lupus vulgaris*.
- Williams' Sign.** Diminished inspiratory expansion on the left side in adherent pericardium. **W.'s Tracheal Sound,** the peculiar resonance sometimes found in the second intercostal space in cases of very large pleural effusion. It is a dull tympanic resonance, becoming higher on opening the mouth, and arising from the vibrations of air in a large bronchus surrounded by compressed lung.
- Williamson's Blood-test for Diabetes.** Place in a narrow test-tube 40 Cmm. of water and 20 Cmm. of blood, add 1 Cc. of an aqueous solution of methylene-blue (1:6000) and 40 Cmm. of solution of potassium hydroxid. Place the tube in a water-pot, which is kept boiling. From the blood of a diabetic patient the blue color disappears in four minutes and becomes yellow. In blood that is not diabetic the blue color remains.
- Willis' Accessory Nerve.** The spinal accessory nerve. **W.'s Arteries,** the anterior and posterior communicating arteries of the brain. **W.'s Circle.** See *Circle of Willis*. **W.'s Cords.** 1. Fibrous trabeculas stretching across the lower angle of the superior longitudinal sinus. 2. See *Wilde's Cords*. **W.'s Disease,** diabetes mellitus. **W.'s Glands,** the corpora albicantia. **W.'s Ophthalmic Branch,** the ophthalmic division of the fifth cranial nerve. **W.'s Paracusis,** increased hearing power in the presence of a loud noise. **W.'s Valve.** See *Valve of Vieussens*.
- Willow** (*wil'-o*) [*AS., willu*]. *Salix*, a genus of trees of the order *Salicaceae*, the bark and leaves of which contain salicin. *Salix alba* and *Salix nigra* have been used in spermatocoele, neuralgia, and malaria.
- Wilson's Disease.** General exfoliative dermatitis. **W.'s Lichen,** lichen planus. **W.'s Muscle,** a nonconstant fasciculus of the compressor urethrae which is attached to the body of the pubis, near the symphysis.
- Wilson-Brocq's Disease.** See *Wilson's Disease*.
- Winckel's Disease.** An epidemic disease of children, characterized by cyanosis, jaundice, and hemoglobinuria.
- Windage** (*win'-daj*). The compression of air said to be produced by the passage of a bullet close to the body, and to give rise to an injury called *wind-contusion*.
- Windlass, Spanish.** A form of tourniquet consisting of a handkerchief tied about a part and twisted by means of a stick.
- Window** (*win'-dow*). 1. An aperture in a wall for the admission of light and air. 2. A small aperture in a bone. See *Foramen*.
- Windpipe** (*wind'-pip*). See *Trachea*.
- Wine** (*wine*) [*L., vinum*]. 1. The fermentable juice of the grape. 2. A solution of a medicinal substance in wine. Wines consist chiefly of water and alcohol, the latter varying from 6 to 22% (from 10 to 14% in the floral wines). In addition they contain volatile oil, ether, ether, grape-sugar, traces of glycerol, coloring matter, tannin, malic, phosphoric, carbonic, and acetic acids, potassium bitartrate, and calcium tartrate. Wine is used as a beverage in most civilized countries, and in medicine as a stimulant like alcohol. **W., Red** (*vinum rubrum*, U. S. P.), the fermented juice of fresh colored grapes. The most important varieties are claret, Bordeaux, and port. **W., White** (*vinum album*, U. S. P.), the fermented juice of grapes freed from seeds, stems, and skins. The most important varieties are sherry (*vinum xericum*), Madeira, Catawba, etc.
- Wineglass.** A measure holding nearly two ounces.
- Wing.** See *Ala*.
- Winkler's Test for Free HCl in the Gastric Juice.** Mix a few drops of the filtered gastric juice in a porcelain capsule with a few drops of a 5% alcoholic solution of alphanaphthol to which 0.5 to 1% of glucose has been added. On heating gently a bluish-violet zone appears, which darkens rapidly.
- Winslow's Foramen.** See *Foramen of Winslow*.
- W.'s Ligament,** the ligamentum posticum Winslowi, the posterior ligament of the knee-joint. **W.'s Pancreas,** the lesser pancreas. **W.'s Pouch,** the gastrohepatic omentum. **W.'s Stars,** capillary whorls which form the beginning of the vorticosae veins of the choroid.
- Wintergreen.** See *Gaultheria*.
- Winter-itch.** See *Pemphigus hiemalis*.
- Wintrich's Change of Pitch.** The tympanic sound of pneumothorax and of cavities communicating freely with a bronchus becomes higher in pitch when the mouth is opened and lower when the mouth is closed.
- Wirsung, Canal of** (*wir'-sung*). The excretory duct of the pancreas.
- Wisdom-tooth.** The last molar tooth, which is the last of all the teeth to appear.
- Wistar's Pyramide.** See *Bovine Bones of*.
- Witch-hazel.** See *Hamamelis*.

Witz's Test for HCl in the Contents of the Stomach. An aqueous solution of methyl-violet (strength 0.025%) is first colored blue, then green, and finally decolorized by dilute inorganic acids.

Woehler's Rings. See *Meyer's Rings*.

Wollez's Disease. Acute idiopathic congestion of the lungs.

Wolff's Law. Every change in the static relations of a bone leads not only to a corresponding change of internal structure, but also to a change of external form and physiologic function.

Wolffian Body. The mesonephron, an organ of embryonic life situated on each side of the vertebral column and consisting of a series of convoluted tubes opening into a lateral duct, which is connected with the common cloaca of the alimentary and genitourinary tracts. It disappears toward the end of the second month, leaving as a vestige the parovarium.

W. Cyst, a cyst of the broad ligament of the uterus, believed to be developed from vestiges of the wolffian body. **W. Duct,** the mesonephric duct; an embryonic duct of the mesonephron formed by longitudinal fission of part of the segmental duct. In the male it becomes the vas deferens, in the female it almost entirely disappears. **W. Tubules,** small tubes joining the wolffian duct at right angles.

Wolf-flaps. Whole skin-flaps without pedicles.

Womb (*woom*) [ME., *woombe*]. The uterus.

Wood. The hard part of trees; the part within the bark. **W.-alcohol,** methyl-alcohol. **W.-oil.** See *Gurjun Balsam*. **W.-sorrel,** *Oxalis acetosella*, a low, tender pubescent herb of North America, Europe, Asia, and northern Africa. It contains potassium binoxalate, which is sometimes obtained from it and sold as salt of sorrel. It has refrigerant and antiseptic qualities. **W.-spirit,** methyl-alcohol. **W.-vinegar,** vinegar obtained by the dry distillation of wood.

Wooden Tongue. See *Actinomyces*.

Wool-fat. See *Lanolin*.

Woolsorter's Disease. Anthrax.

Woorara (*woor'ar'ah*). See *Curara*.

Word-blindness. See under *Aphasia*.

Word-deafness. See *Deafness, Psychic*.

Working Distance. In a microscope the distance between the object and the objective.

Worm (*wurm*). A member of the class *Vermes*, of the division *Invertebrata*, especially one parasitic in man or animals. **W., Bladder-**, the *Tavia echinococcus*. See *Tape-worm, Dog*. **W., Guinea-**, **W., Medina-**, the *Filaria medinensis*. See under *Filaria*. **W., Pin-**, **W., Seat-**, **W., Thread-**. See *Oxyuris*. **W., Whip-**, the *Trichocephalus dispar*.

Wormian Bone (*wur'-me-an*) [Olaus Worm, a Danish physician, 1588-1654]. Any one of the small supernumerary bones found in the sutures of the skull.

Worm-Müller's Test for Sugar. A mixture of a 15 to 25% solution of cupric sulfate and an alkaline solution of rochelle salt is

added to the urine; on boiling, a yellowish precipitate of copper suboxide is formed.

Wormseed (*wurm'-sed*). 1. See *Chenopodium*. 2. See *Santonica*.

Wormwood (*wurm'-wüd*). See *Absinthium*.

Worsted Test. See *Holmgren's Test*.

Woulfe's Bottles. An apparatus consisting of a series of three necked bottles connected by suitable tubes and used for washing gases or saturating liquids therewith.

Wound (*woond* or *wound*) [AS., *wund*]. A solution of continuity of an external or internal surface of the body. **W., Contused**, one produced by a blunt body. **W., Incised**, one caused by a cutting instrument. **W., Lacerated**, one in which the tissues are torn. **W., Open**, one having a free external opening. **W., Penetrating**, one that pierces the walls of a cavity or enters into an organ. **W., Poisoned**, one in which septic materials are introduced. **W., Punctured**, one made by a pointed instrument. **W., Subcutaneous**, one with a very small external opening in the skin.

Wrightin (*ri'-tin*), $C_{14}H_{10}N_2$. An astringent and antihelmintic alkaloid from *Coccoloba* bark, *Wrightia zeylanica*.

Wrisberg's Ansa memorabilis. A loop formed by the right semilunar ganglion and the anastomosis of the right pneumogastric and great splanchnic nerves. **W.'s Cartilages.** See *Cartilages of Wrisberg*. **W.'s Ganglion.** 1. A ganglion frequently found in the superficial cardiac plexus at the point of union of the lower cervical cardiac branch of the left pneumogastric with the upper cardiac nerve of the sympathetic of the left side. 2. Intumescentia semilunaris. See *Ganglion, Gasserian*. **W.'s Lingula**, the filaments connecting the sensory and motor roots of the trigeminus. **W.'s Nerve.** 1. A small branch of the brachial plexus supplying the skin of the arm. See *Cutaneous, Lesser Internal*, under *Nerve*. 2. A small nerve arising from the medulla oblongata and coursing between the facial and auditory nerves. **W.'s Pars intermedia.** See *W.'s Nerve* (2).

Wrist (*rist*) [AS]. The part joining the fore-

LOWER END OF RADIUS AND ULNA, WITH TRIANGULAR FIBROCARILAGE (B. Hall)

1. Radius. 2. Ulna. 3. Interarticular fibrocartilage. 4. Articular surface of radius. 5. Membrana saciformis.

arm and the hand. See *Curvus*. **W.-elonus.** See *Fe'et, Wrist*. **W.-drop**, a paral-

ysis of the extensor muscles of the wrist and fingers causing a dropping of the hand. **W.-joint**, the articulation between the forearm and the hand.

Writer's Cramp. An occupation-neurosis occurring in those who write a great deal, and characterized by painful spasm of the fingers when an effort at writing is made.

SECTION SHOWING THE DISTRIBUTION OF THE CHIEF SYNOVIAL MEMBRANES OF THE WRIST JOINT.—(H. Shaw.) (The reflection of the membranes over the articular cartilages is erroneous. It should cover only the ligamentous structures.)

I Saciform membrane. II Second synovial membrane. III Third or large synovial membrane. IV Synovial membrane between the trapezium and metacarpal bone of thumb. That of the pisiform bone is not visible in this view. V Synovial membrane between ulniform and two other metacarpals. 1 Radius. 2 Ulna. 3 Internal lateral ligament. 4 External lateral ligament. 5 Carpaliform bone. 6 Semilunar. 7 Scaphoid. 8 Ulniform. 9 Os magnum. 10 Trapezoid. 11 Trapezium. 12 Interarticular fibro cartilage. 13 Metacarpal bone of thumb. 14 Metacarpal bone of little finger. 15 Interosseous metacarpal ligaments. Interosseous ligaments are also seen connecting the bones of each row of the carpus.

Writing Hand. A peculiar position assumed by the hand in paralysis agitans.

Wry-neck (*wri'-neck*). See *Torticollis*.

Wunderlich's Law. The ascending oscillations of the temperature-curve in typhoid fever.

Wundt's Tetanus. A prolonged tetanic contraction induced in a frog's muscle by zinc or the passage of a strong current.

Wurati (*wu'-rat-i*). See *Wurati*.

Wurster's Test for Hydrogen Dioxide. Paper saturated with a solution of tetramethylphenylenediamine turns blue on being exposed to hydrogen dioxide. **W.'s Test for Tyrosine.**

LIGAMENTS OF THE ANTERIOR ASPECT OF THE WRIST AND HAND.—(H. Shaw.)

1 Radius. 2 Interosseous membrane. 3 Annular ligament between the lower end of ulna and triangular fibro cartilage opening. 4 Square for anterior humeral artery. 5 External lateral ligament of wrist. 6 Lower end of ulna. 7 Annular ligament of wrist. 8 Internal lateral ligament of wrist. 9 Head of scaphoid. 10 Pisiform bone. 11 Trapezium. 12 Head of trapezium. 13 Articulation between magnum and first metacarpal. 14 Annular ligament of carpus. 15 Ligaments uniting metacarpals with one another and with carpus.

Treat a boiling aqueous solution of tyrosine drop by drop with a 1% acetic acid and a sodium nitrite solution. A red coloration results. 2. Add some dye solution to a hot aqueous solution of tyrosine. A deep ruby-red coloration results, lasting for 24 hours, and then changing to brown.

Wyman's Strap. An arrangement of straps for holding a violently insane person in bed.

X

Xanthalin (*zan'-thal-in*) [*zan'-thē*, yellow], $C_9H_7N_3O_2$. An alkaloid from opium, a white, crystalline substance forming yellow salts.

Xanthelasma (*zan'-thel'-as-ma*). See *Xanthoma*.

Xanthematin (*zan'-them'-at-in*) [*zan'-thē*, yellow; *hematin*]. A bitter yellow substance obtained by dissolving hematin in dilute nitric acid.

Xanthic (*zan'-thik*) [*xan-thik*]. Yellow. Pertaining to xanthin.

Xanthin (*zan'-thin*) [*zan'-thē*, yellow], $C_4H_4N_4O_2$. A heterocyclic compound found in seeds and the tissues and liquids of the animal kingdom, and also in many plants. It occurs in minute quantities in urine, also in guano. It is formed in the decomposition of nucleic by dilute acids.

It is a colorless powder, almost insoluble in cold water, but readily soluble in dilute acids and alkalis, and acts as a muscle-stimulant, especially to the heart. See *Hoppe-Seyler* and *Wiedel*.

Xanthinuria (*zan-thin-u'-re-ah*) [*xanthin*; *urine*]. The presence of xanthin in excess in the urine.

Xantho- (*zan-tho-*) [*ξανθός*, yellow]. A prefix meaning yellow.

Xanthochromia (*zan-tho-kro'-me-ah*) [*xantho*; *χρῶμα*, a color]. 1. A yellowish discoloration of the skin. 2. The yellow hemorrhagic discoloration of the cerebrospinal fluid, diagnostic of hemorrhage of the spinal cord.

Xanthocreatinin (*zan-tho-kre-at'-in-in*) [*xantho*; *creatinin*], $C_{11}H_{10}N_4O$. A leukomatin found in muscle, crystallizing in yellow crystals and resembling creatinin. It produces depression, somnolence, fatigue, frequent defecation, and vomiting.

Xanthocroous (*zan-tho-kro'-us*) [*xantho*; *χρῶς*, skin]. Yellow-skinned.

Xanthocyanopia, **Xanthocyanopsia** (*zan-tho-si-an-o'-pe-ah*, *zan-tho-si-an-op'-se-ah*) [*xantho*; *κύανος*, blue; *ὄψις*, sight]. A defect of color-vision in which yellow and blue are perceived, while red is imperceptible.

Xanthocyte (*zan-tho-sit*) [*xantho*; *κύτος*, a cell]. A cell secreting a yellow pigment.

Xanthoderma, **Xanthodermia** (*zan-tho-der'-mah*, *zan-tho-der'-me-ah*) [*xantho*; *δέρμα*, skin]. A yellow discoloration of the skin.

Xanthodontous (*zan-tho-don'-tus*) [*xantho*; *ὀδὴς*, tooth]. Having yellow teeth.

Xanthoma (*zan-tho'-mah*) [*xantho*; *δμα*, tumor]. Xanthelasma; a newgrowth of the skin occurring as flat or slightly raised patches or nodules from a pin-head to a bean in size, and of a yellowish color. The flat lesions (*xanthoma planum*) usually occur about the eyelids; the elevated or tubercular variety (*xanthoma tuberculatum*; *xanthoma tuberosum*) on the neck, trunk, and extremities. Histologically the lesions consist of connective tissue undergoing a partial fatty degeneration. **X. diabetorum**, a rare disease of the skin associated with diabetes mellitus, the lesions of which are denser and firmer than those of true xanthoma, and are dull red, discrete, and solid, with a yellowish point at the apex.

Xanthopathy (*zan-thop'-ath-e*). See *Xanthoderma*.

Xanthophane (*zan'-tho-jän*) [*xantho*; *φαίνω*, to show]. A yellow pigment found in the retinal cones.

Xanthoproteic (*zan-tho-pro'-te-ik*) [*xanthoprotein*]. Derived from or related to xanthoprotein. **X. Reaction**, the deep-orange color obtained by the addition of ammonia to proteids that have been heated with strong nitric acid.

Xanthoprotein (*zan-tho-pro'-te-in*) [*xantho*; *protein*]. A yellowish substance formed from proteids by the action of nitric acid.

Xanthopsia (*zan-thop'-se-ah*) [*xantho*; *ὄψις*,

vision]. Yellow vision; the condition in which objects look yellow.

Xanthosis (*zan-tho'-sis*) [*ξανθός*, yellow]. The yellow pigmentation sometimes observed in carcinoma.

Xanthoxylum (*zan-thoks'-il-um*) [*xantho*; *ξύλον*, wood]. Prickly ash, a genus of trees of the order *Rutaceæ*. The dried bark of *X. americanum* or of *Fagara clava-herculis* yields the xanthoxylum of the U. S. P.; it contains a crystalline principle, *xanthoxylin*, and is irritant, stimulant, and slightly diaphoretic. It is used in chronic rheumatism and as an emmenagog. Dose 10 gr-1 dr (0.65-2.0 Gm.). **X., Fluidextract of** (*fluidextractum xanthoxyli*, U. S. P.). Dose 1-1 dr. (2-4 Cc.).

Xeno- (*zen-o-*) [*ξένος*, strange]. A prefix meaning strange.

Xenogenesis (*zen-o-jen'-es-is*). See *Heterogenesis*.

Xenomenia (*zen-o-me'-ne-ah*) [*xeno*; *μηνῆς*, menses]. Vicarious menstruation.

Xenophthalmia (*zen-af-thal'-me-ah*) [*xeno*; *ὀφθαλμός*, eye]. Conjunctivitis due to injury.

Xenosite (*zen'-o-sit*) [*xeno*; *οἶκος*, food]. A parasite in an intermediate condition, organ, or host.

Xeransis (*ser-an'-sis*) [*ξηρανός*, a drying up]. The drying up or desiccation of a part or of a drug.

Xerantic (*ser-an'-tik*) [see *Xeransis*]. Having desiccative properties; drying.

Xerasia (*zer-a'-ze-ah*) [*ξηρός*, dry]. A disease of the hair marked by cessation of growth and excessive dryness.

Xero- (*zer-o-*) [*ξηρός*, dry]. A prefix meaning dry.

Xerocollyrium (*zer-o-kol-ir'-e-um*) [*xero*; *κολυρίον*, collyrium]. A dry collyrium; an eye-salve.

Xeroderma, **Xerodermia** (*zer-o-der'-mah*, *zer-o-der'-me-ah*) [*xero*; *δέρμα*, skin]. 1. An abnormal dryness of the skin. 2. A disease characterized by dryness and harshness of the skin, discoloration, and a fine scaly desquamation; by some it is considered a mild form of ichthyosis. **X. pigmentosum**, a rare disease of the skin usually beginning in childhood, and characterized by disseminated pigment-spots, telangiectasis, atrophy of muscles, and contraction of the skin, generally followed by the development of ulcers, and ending in death. Syn., *Angioma pigmentosum atrophicum*; *Atrophoderma pigmentosum*, *Kaposi's disease*; *Melanosis lenticularis progressiva*.

Xeroform (*zer'-o-form*). Tribromphenol-bismuth an odorless, neutral powder containing 49.5% of bismuth oxid and 50.5% of tribromphenol. It is an internal antiseptic, and is recommended as a specific against Asiatic cholera. Dose 7½ gr. (0.5 Gm.).

Xeroma (*zer-o'-mah*). See *Xerophthalmia*.

Xerophthalmia (*zer-af-thal'-me-ah*) [*xero*; *ὀφθαλμός*, eye]. A dry and thickened condition of the conjunctiva, sometimes following chronic conjunctivitis or disease of the lacrimal apparatus.

- Xerosis** (zer-oh'-sis) [*ἄρδς*, dry]. A state of dryness, especially of the skin (see *Xeroderma*) or of the conjunctiva (see *Xerophthalmia*).
- X. epithelialis**, **X. infantilis**, **X. triangularis**, xerophthalmia marked by a lusterless, grayish white, foamy, greasy, very persistent deposit on the conjunctiva.
- Xerostomia** (zer-oh'-stoh'-me-ah) [*xero-*; *stoma*, mouth]. Dry mouth, a peculiar condition characterized by suppression of the secretion of the salivary and buccal glands.
- Xerotes** (zer-oh'-tes) [*ἄρδης*, dryness]. Dryness, a dry habit of the body.
- Xerotic** (zer-oh'-tik). Characterized by xerosis; dry.
- Xerotripsis** (zer-oh'-trisp'-sis) [*xero-*; *tripsis*, to rub]. Dry friction.
- Xiphi-**, **Xipho-** (zif-i-, zif-oh-) [*ἕλπις*, sword]. Prefixes signifying relating to the xiphoid cartilage.
- Xiphocostal**. See *Xiphocostol*.
- Xiphisternum** (zif-iss-ter'-num) [*xiphi-*, sternum]. The xiphoid cartilage.
- Xiphocostal** (zif-oh'-kost'-tal) [*xipho-*; *costo*, a rib]. Pertaining to the xiphoid cartilage and to the ribs.
- Xiphodermus** (zif-oh'-im-us) [*xipho-*; *dermus*, double]. A double monster with united pelvic and thoracic cavities, two legs, and occasionally with a rudimentary third leg.
- Xiphodynia** (zif-oh'-din'-e-ah) [*xipho-*; *dyna*, pain]. Pain in the ensiform cartilage.
- Xiphoid** (zif'-oid) [*ἕλπις*, sword, *oid*, like]. Sword-shaped, ensiform. **X. Appendix**, **X.**

Cartilage, **X. Process**, the third process, ensiform process, of the sternum; it becomes osseous in mature age.

Xiphopagus (zif-oh'-pag-us) [*xiphi-*, *paga*, fixed]. A double monster united by the xiphoid cartilages.

X-ray Photography. Synonym of *Skinography*.

X-rays. See *Rays*, *Röntgen*.

Xylene (zif'-len) See *Xolol*.

Xylenin, **Xylenobacillin** (zif'-len-in, zif'-len-bas'-il-in) See *Xylenin*.

Xylo- (zif'-lo-) [*ξύλον*, wood]. A prefix meaning pertaining to or derived from wood.

Xylochloral (zif'-lo'-klor'-al). A crystalline compound of xylene and chlorine, prepared by heating with hydrochloric acid, used as a hypnotic.

Xylidin (zif'-lo'-din) [*ξύλον*, *idion*, like, C_6H_5NO]. A white insoluble substance obtained by the action of nitric acid on starch or various forms of woody fiber.

Xylol (zif'-loh) [*ξύλον*, *oleum*, oil, C_6H_5]. Dimethylbenzene, a volatile hydrocarbon used in microscopy as a mounting agent and as a solvent for Canada balsam.

Xylose (zif'-loz) [*ξύλον*, wood, $C_5H_{10}O_5$]. A glucose obtained by heating wood gum (gum, *Xylopia*, jute, etc.) with dilute acids.

Xysma (zif'-mah) [*ξύσμα*, scarrings]. The feculent pseudomembrane sometimes seen in the stools in diarrhea.

Xyster (zif'-ter) [*ξύστης*, a rasp]. A surgical rasp or scraping instrument.

Y

- Y**. The symbol of *yttrium*.
- Y-ligament**. The iliofemoral ligament.
- Yard**. A measure used in the United States and in England, equal to three feet.
- Yarrow** (yar'-ro) See *Achillea*.
- Yawning** (yaw'-ning) [*AS*, *gignan*, to yawn]. An involuntary stretching of the muscles accompanied by a deep inspiration, occurring during the drowsy state preceding the onset of sleep.
- Yaws** (yaws') See *Frambesia*.
- Yeast** (yest) [*AS*, *gist*]. The name applied to various species of *Saccharomyces*. Yeast acts as a ferment producing the alcoholic fermentation. **Y.**, **Beer-**, **Y.**, **Brewer's**, the *cerevisia fermentum* of the B. P., produced by *Saccharomyces cerevisia*. It is used as a stimulant and locally as a poultice and deodorant to gangrenous ulcers. **Y.-poultice** (*Saccharomyces fermenti* B. P.), a poultice containing yeast.
- Yellow** (yel'-oh) [*AS*, *reolo*]. Of a color like that of gold, producing such a color.
- Y. Fever**, an acute infectious disease of tropical and subtropical regions of America, and due to a specific organism dissemin-

ated by the *Stegomyia fasciata*. After a period of incubation varying from a few hours to several days the disease begins with a chill and pain in the head, back, and limbs. The temperature rises rapidly to from 102° to 105° F., vomiting occurs, the bowels are constipated, the urine scanty and albuminous. A remission follows, after which it recurs, and the temperature rises to its original height. Jaundice develops, and the vomited material becomes dark from the presence of blood (*black vomit*). Hemorrhages occur from the intestinal mucosa and elsewhere. The disease is very fatal, death occurring in the typhoid state or from uterine. **Y. Precipitate**, yellow oxid of mercury. **Y.-rust**. See *Hudensis*. **Y. Spot**, the macula lutea. **Y. Wash**. See *Wash*, *Yellow*.

Yerba Santa (yar'-bah san'-tah) See *Erodium*.

Yohimbé Bark. The bark of *Coccoloba yohimbe*, a tree of the Cameroonian region.

Yohimbol (yoh'-im-bol) A mixture of alkaloids from the bark of *Coccoloba yohimbe*, used as an aphrodisiac. Dose: 1/2 to 10 grains.

0.01 Gm.) 3 times daily and as a local anesthetic in 1% solution.

Yolk [AS., *geolca*]. 1. The nutritive part of an ovum, consisting chiefly of *yolk-cells* or *yolk-granules*. 2. The yellow portion of the egg of birds. **Y.-cells**, **Y.-granules**. See *Sphere*, *Vitelline*. **Y.-sac**, the umbilical vesicle, the sac containing the food of the embryo.

Young's Rule. A rule of dosage in children. The dose is obtained by adding 12 to the age and dividing the result by the age, and making the quotient the denominator of a fraction the numerator of which is 1. The fraction represents the proportion of the adult dose to be given to the child.

Young-Helmholtz Theory of Color-vision. Color-vision depends upon the presence in the retina of three different sets of fibers,

which respond to stimulation by a sensation of red, green, or violet respectively. All other colors are simply combinations of the three primary colors. The excitation of any one set is a matter of wave-length. The longest waves excite the red, the shortest the violet, and those of intermediate length the green fibers.

Yttrium (*it'-ra-um*) [*Ytterby*, in Sweden]. A rare metallic element. Symbol, Y. See *Elements*, *Table of* (*chemic*).

Yucca (*yuk'-ah*) [Am. Ind]. A genus of liliaceous plants. *Y. filamentosa*, Adam's needle, of the southern United States, is diuretic; its tincture is employed in urethritis.

Yvon's Coefficient. The ratio existing between the amount of urea and the phosphates in the urine, represented by $\frac{1}{2}$.

Z

Zaglas' Ligament. The portion of the posterior sacroiliac ligament that extends from the posterior superior spinous process of the ilium downward to the side of the sacrum.

Zahn's Ribs. The whitish, transverse markings often formed on the surface of a thrombus by the extremities of the columns of blood-platelets and leukocytes.

Zakavaska. The name given in Russia to the grains used as a ferment to produce kephir or kumiss.

(von) **Zaleski's Hepatin**. See *Ferratin*, *Schmiedeberg's*. **Z's Test for CO in the Blood**, add to 2 Cc. of the blood to be tested an equal volume of water and 3 drops of a one-third saturated copper sulfate solution. In the presence of carbon monoxid a brick-red precipitate is obtained, while normal blood gives a greenish-brown precipitate.

Zanaloin (*za-nal'-o-in*) [*Zanzibar*; *aloin*]. The aloin derived from Zanzibar aloes.

Zang's Space. The space between the two tendons of origin of the sternomastoid in the supraclavicular fossa.

Zanzolin (*zan'-so-lin*). A proprietary mixture of pyrethrum flowers, *Chrysanthemum coronariifolium*, and valerian root, *Valeriana officinalis*, used to combat mosquitos.

Zea (*ze'-ah*) [*'tzi*, a sort of grain]. A genus of grasses. The fresh styles and stigmas of *Z. mays*, maize, Indian corn, constitute the *zea* of the U. S. P. It has been used as a diuretic in cystitis, gonorrhea, and cardiac dropsy.

Zean (*ze'-an*) [*zea*]. A highly concentrated extract of corn-silk; a diuretic and urinary antiseptic.

Zedoary (*zed'-o-a-re*). The rhizome of several species of *Curcuma*. It resembles ginger, but is less agreeable and is seldom used in medicine.

Zeismus (*ze-is'-mus*) [*zea*]. Pellagra.

Zeiss' Glands. See *Zeissian Glands*.

Zeissian Glands. The sebaceous glands of the eyelashes. **Z. Sty**, hordeolum externum; a sty produced by suppuration of one of the zeissian glands.

Zeller's Test for Melanin in Urine. Treat the urine with bromin water, and in the presence of melanin a yellow precipitate is formed which gradually changes to black.

Zellner's Test-paper. Prepare by applying the coloring-matter employed as indicator, say fluorescein in solution, upon an underground, for which a neutral black coloring-matter is used. The fluorescein shows the minutest traces of alkali by a greenish color.

Zematone (*zem'-at-on*). A proprietary remedy for asthma said to consist of extractives of *Datura stramonium*, *Hyoscyamus niger*, each, 8 parts; *Grindelia robusta*, 15 parts; *Selenium nigrum*, 4 parts; *Atropa belladonna*, 6 parts; white agaric, 5 parts, poppy capsules, 5 parts; and potassium nitrate, 22 parts.

Zenker's Crystals. See *Crystals*, *Charcot's*. **Z.'s Degeneration**, **Z.'s Disease of Muscles**, waxy or hyaline degeneration of muscles occurring in acute infectious diseases, especially in typhoid fever. **Z.'s Paralysis**, paresis and disturbance of sensation in the lower extremities, the external popliteal nerve being most involved; it is caused by frequent and prolonged kneeling or squatting.

Zeoscope (*ze'-o-skop*) [*'tzi*, to boil, *skopein*, to view]. An apparatus for determining the alcoholic strength of a liquid by means of its boiling-point.

Zero (*ze'-ro*). 1. Any character denoting absence of quantity. 2. The point from which thermometers are graded.

Zestocausis (*zes-to-kaw'-sis*) [*'tzi*, boiling].

cauter, to burn). Cauterization with an instrument heated by steam; *atmocautia*.

Zestocautery (*zes-to-kaw'ter-ee*). A double-channelled intrauterine catheter, the outer unfenestrated tube of which is heated by steam and acts as a cautery.

Ziehl's Solution. A fluid employed to stain lepra and tubercle bacilli. It consists of a 5% aqueous solution of phenol, with one-tenth its volume of a saturated alcoholic solution of fuchsin. Heat the specimen in this for three minutes, and the entire specimen will be stained red. Decolorize with 20 or 30% of nitric acid, and the tubercle bacilli alone will retain the stain.

Ziemssen's Motor Points. Points of election in electrization of muscles, they correspond to the places of entrance of the motor nerves into the muscles.

Zimmerlin's Type of Progressive Muscular Atrophy. The scapulohumeral type, distinguished from Erb's type by the absence of secondary lipomatosis.

Zimmermann's Granules. See *Bizzozero's Blood-platelets*.

Zinc. A bluish-white metal (*zincum*, U. S. P.) having a specific gravity of 7.12, an atomic weight of 65.4, and a valence of 2. Symbol, Zn. In nature it occurs in two principal forms, as a sulfid, called *blende*, and as a carbonate and silicate, termed *calamin*. When melted and poured into water it becomes granular (*zincum granulatum*, B. P.). Zinc is used to prepare zinc sulfate and zinc chloride, and for generating hydrogen. The compounds of zinc are poisonous, and the slow ingestion of it produces a chronic intoxication resembling, but less severe than, that produced by lead. **Z. Acetate** (*zinci acetat*, U. S. P., B. P.), $\text{Zn}(\text{C}_2\text{H}_3\text{O}_2)_2 \cdot 2\text{H}_2\text{O}$, is used locally in ophthalmia and gonorrhea in solutions of from 1-2 gr. to the oz . (0.065-0.13 Gm. to 30 Gm.) of water. **Z. Bromid** (*zinci bromidum*, U. S. P., B. P.), ZnBr_2 , has been used in epilepsy. Dose 1-2 gr. (0.065-0.13 Gm.). **Z. Carbolate**, a white, antiseptic powder, slightly soluble in water or alcohol, used as a surgical dusting powder. **Z. Carbonate, Precipitated** (*zinci carbonas precipitatus*, U. S. P.; *zinci carbonat*, B. P.), $(\text{Zn}(\text{O})_2, \text{Zn}(\text{HO})_2)$, is used generally in the form of prepared calamin, as a dusting powder on excoriated surfaces or in the form of a cerate. **Z. Chlorid** (*zinci chloridum*, U. S. P., B. P.), ZnCl_2 , is used chiefly as an escharotic in carcinoma and spreading ulcers, as an injection in gonorrhea, and as an astringent in conjunctivitis. It is also employed as a disinfectant and for preserving anatomic preparations. **Z. Chlorid, Solution of** (*liquor zinci chloridi*, U. S. P., B. P.), used as disinfectant and preservative. *Barnett's disinfecting fluid* is a solution of zinc chloride. **Z. Cyanid**, ZnCN_2 , has been used in chorea, epilepsy, neuralgia, gastralgia, and uterine colic. Dose $\frac{1}{4}$ -1 gr. (0.016-0.066 Gm.). **Z. Ferrocyanid**, $\text{Zn}_2[\text{Fe}(\text{CN})_6] \cdot 4\text{H}_2\text{O}$, is used like zinc cyanid. Dose 1-4 gr.

(0.065-0.26 Gm.). **Z. Flowers of, zinc oxid**. **Z. Formate**, $\text{Zn}(\text{CHO}_2)_2 \cdot 2\text{H}_2\text{O}$, rhombic crystals, soluble in 24 parts of water, used in gonorrhea. **Z. Hypophosphite**, $\text{Zn}(\text{PH}_2\text{O}_2)_2 \cdot \text{H}_2\text{O}$, used as an anaphrodisiac, antispasmodic, and astringent. Dose $\frac{1}{4}$ -1 gr. (0.032-0.1 Gm.). **Z. Iodid** (*zinci iodidum*, U. S. P.), ZnI_2 , has been used in chorea, scrofula, and hysteria, and locally as an astringent, like the chlorid. Dose $\frac{1}{4}$ -2 gr. (0.013-0.13 Gm.). **Z. Lactate**, $\text{Zn}(\text{C}_3\text{H}_5\text{O}_2)_2 \cdot 2\text{H}_2\text{O}$, has been used in epilepsy. Dose 2-10 gr. (0.13-0.65 Gm.). **Z. Nitrate**, $\text{Zn}(\text{NO}_3)_2 \cdot 6\text{H}_2\text{O}$, used externally in 50% paste with oleo and water as an escharotic in carcinoma affections. **Z. Oxid** (*zinci oxidum*, U. S. P., B. P.), ZnO , is an amorphous white powder and is used internally in chorea, epilepsy, whooping-cough, and gastro-intestinal catarrhs, locally, as a disinfectant to excoriated surfaces in the form of powder or ointment. Dose 2-8 gr. (0.13-0.52 Gm.). **Z. Oxid, Ointment of** (*unguentum zinci oxid*, U. S. P., *unguentum zinci*, B. P.), an ointment composed of zinc oxid and benzoated lard. **Z. Permanganate**, $\text{Zn}(\text{MnO}_4)_2 \cdot 6\text{H}_2\text{O}$, used in aqueous solution (1:4000) as injection in gonorrhea and in 1:1000 or 2:1000 solution as a solution. It is incompatible with all reducing and easily oxidizable substances. **Z. Phenol sulfonate** (*zinci phenol-sulfonatus*, U. S. P.), $\text{Zn}(\text{C}_6\text{H}_4\text{SO}_3)_2 \cdot 8\text{H}_2\text{O}$, used as an antiseptic and astringent. Dose 2 gr. (0.13 Gm.). **Z. Phosphid**, Zn_2P_2 , used in medicine as a substitute for phosphorus. Dose $\frac{1}{32}$ gr. (0.006 Gm.). **Z. Phosphite**, $2\text{ZnHPO}_3 \cdot 4\text{H}_2\text{O}$, an antiseptic and tonic. **Z. Picrate**, **Z. Picronitrate**, $\text{Zn}(\text{C}_6\text{H}_3\text{NO}_4)_2 \cdot \text{H}_2\text{O}$, used as an antiseptic. **Z. Salicylate**, $\text{C}_7\text{H}_5\text{O}_2 \cdot \text{Zn}(\text{O})_2$, recommended as an antiseptic dusting powder, and wash in various skin diseases. **Z. Soroiodol**, **Z. Soroiodolate**, $(\text{C}_6\text{H}_5)_2\text{OI} \cdot \text{SO}_3$, $\text{Zn} \cdot 6\text{H}_2\text{O}$, used in 2% aqueous solution in gonorrhea and in nasal catarrh in 10 to 25% dusting powder. **Z. Stearate** (*zinci stearas*, U. S. P.), a very fine white powder, tasteless and having a slight odor resembling that of fat. **Z. Subgallate**, a compound of zinc and 44% gallic acid, etc., it is used as an intestinal antiseptic. Dose $\frac{1}{4}$ -1 gr. (0.016-0.066 Gm.), and externally on wounds, in gonorrhea, etc. **Z. Sulfate** (*zinci sulfas*, U. S. P., B. P.), $\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$, white nitrid, is tonic, astringent, and emetic. It is used in gastric catarrh as an emetic, and locally in ophthalmia, gonorrhea, leukorrhea, and as a caustic in ulcers, condylomata, etc. In ophthalmia it is a gastrointestinal irritant. Dose $\frac{1}{4}$ -1 gr. (0.016-0.066 Gm.), as an emetic, 10-15 gr. (0.65-1.0 Gm.). **Z. Sulfhydrate**, $\text{Zn}(\text{HS})_2$, a white precipitate, which decomposes on becoming dry. Recommended externally and internally in the treatment of chronic eczema, psoriasis, and bacterial dermatoses. Internally the dose is $\frac{1}{2}$ -2 gr. (0.032-0.13 Gm.), externally in ointment and in combination with lanolin and lard to 50. **Z. Sulfide**, *zinci*

$O_2 + 2H_2O$, used as an antiseptic in skin diseases. **Z. Sulfocarbonate.** See *Z. Phenolsulfonate*. **Z. Sulfoichthyolate**, a brown, tarry mass used externally as an antiseptic. **Z. Sulfophenate.** See *Z. Phenolsulfonate*. **Z. Tannate**, $Zn_2(C_7H_5O_2)_2$, a gray astringent powder used in diarrhea. Dose $1\frac{1}{2}$ –3–4½ gr. (0.1–0.2–0.3 Gm.) and externally in gonorrhea. **Z. Valerate** (*zinci valeris*, U. S. P., B. P.), $Zn(C_5H_9O_2)_2 \cdot 2H_2O$, is used in neuralgia, epilepsy, hysteria, and diabetes insipidus. Dose 1–2 gr. (0.065–0.13 Gm.). **Z.-white**, zinc oxid.

Zingiber (*zin'-jib-er*) [*ζῖγγερ*, ginger]. Ginger, a genus of plants of the *Zingiberaceæ*. The rhizome of *Z. officinale* is the *zingiber* of the U. S. P.; it contains a volatile oil, and is used as a stimulant and carminative in dyspepsia, flatulence, and intestinal atony; externally it is rubefacient. Dose 10–20 gr. (0.65–1.3 Gm.). **Zingiberis, Fluidextractum** (U. S. P.), fluidextract of ginger. Dose 10–20 min. (0.65–1.3 Cc.). **Zingiberis, Oleoresina** (U. S. P.), oleoresin of ginger. Dose 1 min. (0.065 Cc.). **Zingiberis, Syrupus** (U. S. P., B. P.), syrup of ginger. Dose 1 dr. (4 Cc.). **Zingiberis, Tinctura** (U. S. P., B. P.), tincture of ginger. Dose ½–1 dr. (2–4 Cc.). Ginger also enters into the composition of *pulvis aromaticus* (U. S. P.), *pulvis cinnamomi compositus* (B. P.), and *pulvis rhei compositus* (U. S. P., B. P.).

Zingiberin (*zin'-jib'-er-in*). The oleoresin of ginger.

Zinn's Artery. The central artery of the retina. **Z.'s Circle**, the plexus formed by small branches of the ciliary arteries within the fibrous layer of the sclera at the entrance of the optic nerve. **Z.'s Ligament.** See *Z.'s Ring*. **Z.'s Membrane**, the anterior layer of the iris. **Z.'s Ring**, *Z.'s Tendon*, the circular fibrous sheath formed by the common tendon of the internal, external, and inferior rectus muscles. **Z.'s Zonula**, *Z.'s Zonule*, the suspensory ligament of the crystalline lens. It is a thin, transparent membrane covering the ciliary processes and extending to the anterior capsule. A portion lies above the processes in folds, that covering the processes being smooth. Syn., *Zonula ciliaris*.

Zinol (*zin'-ol*). A mixture of zinc acetate and aluminol; used in solution in gonorrhea.

Zionist (*zi'-on-ist*). A follower of the faith-healer, Dowie.

Zittmann's Decoction. A drink used in old, obstinate cases of syphilis. It consists of sarsaparilla, 12½ oz.; water, 325 troy oz.; alum and sugar, each, 6 dr.; anise and fennel, each, 4 dr.; senna, 3 oz.; licorice root, 1½ oz.

Zn. The symbol for zinc.

Zoanthropy (*zo-an'-thro-pe*) [*ζῶον*, animal; *ἀνθρωπος*, a man]. A form of insanity in which the person imagines himself transformed into or inhabited by an animal.

Zoellner. See *Zöllner*.

Zooscope (*zo'-es-kōp*). See *Stroboscope*.

Zoetrope (*zo'-e-trope*) [*ζῶη*, life; *τροπή*, to turn]. A stroboscope.

Zöllner's Lines. A device to illustrate false estimates of direction or parallelism by intersecting lines crossing parallel lines at a certain angle.

Zomol (*zo'-mol*) [*ζῶμος*, meat-juice]. The plasma of raw beef. Evaporated to dryness it is used as a concentrated food. Dose 150 gr. (10 Gm.) daily.

Zomotherapy (*zo-mo-ther'-op-e*) [*ζῶμος*, meat-juice; *θεραπεία*, therapy]. Treatment of tuberculosis by means of a raw meat diet; the meat, finely hashed or scraped, is given in daily doses of 6 oz. (200 Gm.) with soup, etc.

Zona (*zo'-nah*) [L.]. 1. A belt or girdle.

2. See *Herpes zoster*. **Z. arcuata**, the inner zone of the basilar membrane, extending from the lower edge of the spiral groove of the cochlea to the external edge of the base of the outer rods of Corti. **Z. cartilaginea**, the limbus of the spiral lamina. **Z. ciliaris**, the ciliary processes collectively. **Z. denticulata**, the inner zone of the basilar membrane, together with the limbus of the spiral lamina. **Z. fasciculata**, the central portion of the cortex of the suprarenal capsule, composed of tube-like transverse bands. **Z. glomerulosa**, a part of the cortical portion of the suprarenal capsule, having a net-like appearance on section, situated near the surface of the organ. **Z. ophthalmica**, herpes zoster along the course of the ophthalmic division of the fifth nerve. **Z. orbicularis**, a thickening of the capsular ligament around the acetabulum. **Z. pectinata**, the outer portion of the basilar membrane, extending from the rods of Corti to the spiral ligament. **Z. pellucida**, the thick, solid, elastic envelop of the ovum, corresponding to the cell-wall of a cell. Syn., *Vitelline membrane*. **Z. tecta**, the inner portion of the basilar membrane, bearing the organ of Corti. **Z. terminalis.** See *Terna*.

Zonal (*zo'-nal*) [*zona*]. Pertaining to a girdle or to a band-like structure.

Zonate (*zo'-nat*) [*zona*]. Marked with concentric bands.

Zone (*zōn*). See *Zona*. **Z., Cornuradicular**, the external part of Burdach's column, abutting on the middle third of the internal border of the posterior horn, and representing approximately the posterior root-zone. **Z., Hypnogenous**, an area or tract, pressure upon which induces sleep. **Z., Hysterogenous**, a region, as the ovarian or submammary region, where pressure in hysteric women calls forth a hysteric attack. **Z., Neogenic**, the subcapsular layer of the kidney, so called because it is the one in which the most active processes are going on. **Z., Sclerotic**, a condition occurring in iritis, marked by a ring of anastomoses of deep conjunctival vessels around the periphery of the cornea, which perforate the sclerotic and anastomose with those of the iris and choroid.

- Zonesthesia** (zon-es-the'-ze-ah). See *Girdle-pain*.
- Zonular** (zon'-u-lar) [zonule]. Pertaining to or in the shape of a zone or band, as *zonular cataract*.
- Zonule** (zon'-ul) [zonula, a little zone]. A small band. *Z. of Zinn*. See *Zinn's Zonula*.
- Zonulitis** (zon-u-lis'-tis). Inflammation of Zinn's zonule.
- Zoo-** (zo-o-) [zōon, an animal]. A prefix meaning animal or pertaining to an animal.
- Zoamylon** (zo-o-am'-il-on) [zoo-, amylin, starch]. The ternary substance allied to starch and glycogen found in the cytoplasm of certain sporozoa.
- Zoobiology** (zo-o-bi-ol'-o-je) [zoo-, biology]. Animal biology.
- Zoochemia, Zoochemistry** (zo-o-ke'-me-ah, zo-o-ke-m'-is-tee) [zoo-, *χημία*, chemistry]. The chemistry of animal life and tissues.
- Zoocyst** (zo'-o-sist) [zoo-, κύστις, cell]. A variety of encysted rhizopods resembling a sporocyst, except in the thickness and number of the protective layers.
- Zoocytium** (zo-o-sit'-e-um) [zoo-, κύτος, cavity]. The gelatinous matrix secreted by certain infusoria.
- Zoodermic** (zo-o-der'-mik). Pertaining to or taken from the skin of some animal other than man, applied to a form of skin-grafting.
- Zoodynamics** (zo-o-di-nam'-iks) [zoo-, δυνάμις, power]. Animal physiology.
- Zoogenesis** (zo-o-jen'-e-sis) [zoo-, γένναι, to beget]. The generation of animal forms.
- Zoogenous** (zo-o-jen'-en-us) [see *Zoogenesis*]. Developed or derived from animals.
- Zooglea** (zo-og'-le-ah) [zoo-, γλίς, a sticky substance]. A stage in the life-history of certain bacteria in which they lie embedded in a gelatinous matrix.
- Zoograft** (zo'-o-graft) [zoo-, graft]. A graft of tissue derived from an animal.
- Zoografting** (zo'-o-graft-ing) [see *Zoograft*]. Grafting with tissue taken from the lower animals.
- Zooid** (zo'-oid) [zoo-, εἶδος, like]. 1. Resembling an animal. 2. Any one of a series of more or less independent forms resulting from the development of a single ovum.
- Zoolak** (zo'-ol-ak). A commercial name for matzoon.
- Zoology** (zo-ol'-o-je) [zoo-, λόγος, a treatise]. That branch of biology treating of the form, nature, and classification of animals.
- Zoomagnetism** (zo-o-mag'-net-izm). Animal magnetism.
- Zoonomia, Zoonomy** (zo-o-nō'-me-ah, zo-on'-o-mē) [zoo-, νόμος, law]. The principles or laws of animal life; zoobiology.
- Zooparasite** (zo-o-par'-as-it) [zoo-, parasite]. An animal parasite.
- Zoopathology** (zo-o-path-ol'-o-je) [zoo-, pathol-og-]. The science of the diseases of animals.
- Zoophagous** (zo-af'-ag-us) [zoo-, φάειν, to eat]. Subsisting on animal food.
- Zoophobia** (zo-o-fō'-be-ah) [zoo-, φόβος, fear]. Morbid dread of certain animals.
- Zoophyte** (zo'-o-fit) [zoo-, φυτόν, a plant]. A member of the lower invertebrates.
- Zoosperm** (zo'-o-sperm). See *Intermedusaria*.
- Zoospore** (zo'-o-spore) [zoo-, σπορῶν, sowing]. A motile spore.
- Zootomist** (zo-ol'-o-mist) [zoo-, τέμνω, a cutting]. One who dissects animals, a comparative anatomist.
- Zootomy** (zo-ol'-o-mē) [see *Zootomist*]. The dissection of animals.
- Zootrophotoxism** (zo-o-trof-otok'-izm) [zoo-, τροφή, nourishment, τροχία, power]. Poisoning with infected animal food. *Z., Gastric, Z., Intestinal*, that occurring through ingestion of spoiled flesh, milk, or cheese and marked by cholera nostras, cold, diarrhea, fever, cramps, progressing to cyanosis and cyanosis. *Z., Tropic, Zootrophotoxismus tropicinus, zootrophotoxismus* due to ingestion of poisonous sausage and similar food accompanied by symptoms similar to those of tropicism.
- Zoster** (zos'-ter). See *Herpes zoster*.
- Zouchlos' Test for Albumin**. A reagent consisting of 10% of potassium sulfate and solution and 20 parts of acetic acid added drop by drop to an albumin solution, produces a marked cloudiness.
- Zuckerland's Convolution**. The gyrus subcallosus, the peduncle of the commissure it is located in the mesal aspect of the cerebrum and extends from the chiasm to the nucleus.
- Z's Dehiscences**. See *Dehiscences, Zuckerland's Z's Vein*, a small branch of the ethmoid veins through which the rips of the lateral wall of the nose communicate with the cerebral veins.
- Zwenger's Test for Cholesterolin**. See *Liebermann Buchard's Test*.
- Zyg** (zi'-guf) [zygon]. Yoked, applied to cerebral fissures consisting of two pairs of branches connected by a stem.
- Zygapophysis** (zi-gap-ol'-is-is) [zygon, σφαγ-ysis]. The articular process of a vertebra.
- Zygalabialis** (zi-gal-be-ah'-is) [zygon, labium, a lip]. The zygomatic major et minor. See under *Muscle*.
- Zygoma** (zi-go'-mah) [ζύγωμα, the cheek-bone]. The arch formed by the union of the zygomatic process of the temporal bone and the malar bone.
- Zygomatic** (zi-go-mat'-ik) [zygoma]. Pertaining to the zygoma. *Z. Arch*, the zygoma.
- Zygomatico-** (zi-go-mat'-ik-o-) [zygoma]. A prefix meaning relating to the zygoma.
- Zygomaticoauricular** (zi-go-mat'-ik-o-aur-ik-ul-er) [zygomatico-, auricularis of the ear]. Pertaining to the zygoma and the ear.
- Zygomaticoauricularis** (zi-go-mat'-ik-o-aur-ik-ul-er) [see *Zygomaticoauricular*]. The attrahens aurum muscle. See under *Muscle*.
- Zygomaticofacial** (zi-go-mat'-ik-o-fa-shal) [zygomatico-, facies, face]. Pertaining to the zygoma and the face.
- Zygomaticotemporal** (zi-go-mat'-ik-o-temp-oral) [zygomatico-, temporal]. Pertaining to the zygoma and the temporal bone or to the

Zygomatous (zi-go-mat'-ik-us) [zygoma]. One of several small subcutaneous muscles arising from or in relation with the zygoma. See under *Muscle*.

Zygomaxillary (zi-go-maks'-il-a-re). See *Jugomaxillary*.

Zygon (zi'-gon) [ζυγόν, yoke]. In the cerebrum, the bar that connects the two pairs of branches of a zygial fissure.

Zygoneure (zi'-go-nūr) [zygon; νεῦρον, nerve]. A nerve-cell joining other nerve-cells.

Zylenin, Zylenebacillin (zi'-len-in, si'-len-o-bas'-il-in). A toxin from tubercle bacilli.

Zym (zim) [ζύμη, leaven]. An organized ferment. Cf. *Enzym*.

Zymase (zi'-mās). 1. See *Microzym*. 2. The unorganized ferment or enzyme to which the fermentive activity of the yeast-cell is due. *Z.*, Buchner's, that expressed from dried yeast, yeast-cell plasma.

Zyme (zim). See *Zym*.

Zymic (zi'-mik) [zyme]. Of or pertaining to organized ferments.

Zymin (zi'-min) [zyme]. 1. A pancreatic preparation used in the treatment of diabetes mellitus. See *Zym*. 2. Sterile dried yeast; mixed with sugar and water it is used as an application in leukorrhea of gonorrheal origin.

Zyminized (zi'-min-izd) [zym]. A term applied to milk in which a fermentive change has been induced, comparable to peptonization.

Zymo- (si-mo-) [ζύμη, leaven]. A prefix meaning pertaining to or produced by fermentation.

Zymogen (zi'-mo-jen) [zymo-; γέναι, to produce]. The substance existing in the glands secreting a digestive juice, and which, when set free, splits into a ferment (enzyme) and a proteid.

Zymogenic (zi-mo-jen'-ik) [zymogen]. 1. Causing fermentation. 2. Pertaining to or producing a zymogen.

Zymohydrolysis (zi-mo-hi-drol'-is-is) [zymo-; ὕδωρ, water; λύνω, to loose]. Hydrolysis produced by the cleavage action of enzymes.

Zymoid (zi'-moid) [zymo-; εἶδος, like]. Resembling an organized ferment.

Zymoidin (zi-moid'-in). A proprietary wound antiseptic said to be a mixture of oxids of zinc, bismuth, and aluminium with iodine, boric acid, salicylic acid, phenol, gallic acid, etc.

Zymology (zi-mol'-o-je) [zymo-; λόγος, science]. The science dealing with fermentation.

Zymolysis (zi-mol'-is-is). See *Zymosis* (1).

Zymoma (zi-mo'-mah) [ζύμμα, a fermented mixture]. Any ferment, fermented mixture, or culture.

Zymometer (zi-mom'-et-er) [zymo-; μέτρον, a measure]. An instrument for measuring fermentation.

Zymophoric, Zymophorous (zi-mol'-or-ik, si-mol'-or-us) [zymo-; φέρω, to bear]. Exerting a fermentive action; bearing specific fermentive properties.

Zymophyte (zi'-mo-ft) [zymo-; φυτόν, a plant]. A microorganism producing fermentation.

Zymose (zi'-mās). See *Enzym*.

Zymosimeter (si-mo-sim'-et-er). See *Zymometer*.

Zymosis (zi-mo'-sis) [zyme]. 1. Fermentation, the result of the vital activity of certain microorganisms, organized ferments, or zyms. 2. The condition of one affected with a zymotic disease. 3. An infectious disease. *Z. gastrica*, organacidia gastrica in which the organic acids are due to the presence in the stomach of growing, sporulating, budding yeast.

Zymotic (si-mol'-ik) [zymosis]. Pertaining to zymosis; produced by zymosis. *Z. Disease*, an infectious disease.

Zymotoxic (si-mo-toks'-ik) [zymo-; τοξικόν, poison]. In the side-chain theory, relating to the hemolytic action of the toxophore group.
